In two substantial volumes the Carnegie library of Pittsburgh has brought its "Classified Catalogue" down to the end of 1906, from July 1, 1902, the termination date of the three volumes issued last year. The whole work is a model of cataloguing, and the brief descriptions added to titles not sufficiently explained by the table of contents render it useful to the scholar of various fields.

Though bristling with technical terms—and the technical terms of prosody are about the most repulsive in the language—Prof. Paul Shorey's paper on "Choriambic Dimeter and the Rehabilitation of the Antispast," in the Transactions of the American Philological Association (Vol. XXXVIII.) is of broad literary interest. Without following the argument into details, we may say that it is a rather savage attack on those leaders of the "new metric," who for a flexible scansion corresponding to a universal rhythmic feeling are substituting a scholastic schematization. Professor Shorey starts from the only assumption that can lead to any comprehensible conclusion, *i. e.*, that the rhythm is not a linguistic puzzle, but is based on an unchangeable physical sense, and he assumes that no one is qualified to speak of the rhythms of the ancients who has not trained his ear to a nice sensitiveness by careful reading aloud of the moderns. Other papers in this issue of the Transactions are "Notes on Stoning Among the Greeks and Romans," by Dr. A. S. Pease; "Indications of a Consonant-Shift in Siamese since the Introduction of Alphabetical Writing," by Prof. C. B. Bradley; "Rusunia," by Prof. E. W. Martin; "The Criticism of Photius on the Attic Orators," by Prof. La Rue van Hook; "The Theatre as a Factor in Roman Politics under the Republic," by Prof. F. F. Abbott; "A Knight Ther Was," by Prof. J. M. Manly; and "The Distribution of Oriental Cults in the Gauls and the Germanies," by Prof. C. H. Moore.

A pamphlet of 183 pages contains the Proceedings of the American Society of International Law at its second annual meeting, held in Washington, on April 24 and 25, 1908. Secretary Root opened with his paper, "The Sanctions of International Law." George Turner of Spokane, United States Senator from Washington, took up the question whether, for the protection of foreigners whose rights of person and property we undertake to guarantee by treaty, the general government might not legally, and should not, make provision, by national legislation, especially in view of our experience in the Mountain Meadows (Wyoming) massacre in 1885, and the lynching of Italians in New Orleans in 1891. The discussion was continued by various speakers. Another important question, on which Secretary Oscar Straus spoke first, was: How far should loans raised in neutral nations for the use of belligerents be considered a violation of neutrality? During the late Russo-Japanese war large Japanese loans were negotiated and publicly raised in this country, and large Russian loans publicly advertised and raised in France and Germany. Other subjects discussed were Arbitration at the Hague Conference, the Codification of International Law, and the Organization, Jurisdiction, and Procedure of an International Court of Prize.

In "Introductory Economics" (New York: School of Liberal Arts and Sciences for Non-Residents), Alvin S. Johnson has prepared an elementary text of 338 pages to bring the essentials of economic theory down to the comprehension of those students of mature mind who cannot readily betake themselves to the ordinary instruction of the class-room. His exposition is clear, lively, and attractive. He has chosen to treat of certain essential portions of theory rather than to organize his work into a closely compacted whole. If any criticism is to be passed upon his work it is that it is confessedly eclectic rather than hewn from a single quarry. Moreover, the atavistic tendency of the newly-fledged professor to reproduce the tenets of a favorite master is distinctly in evidence. One who does not accept the subtle concept of capital to which the genius of John B. Clark has given such wide currency will doubt whether Clark's view of capital is not a rather stiff dose for the beginner. To conceive of capital as an abstract "sum of productive wealth, invested in material things which are perpetually shifting," which "lives as it were, by transmigration" (p. 153), which is always arising, Phœnix-like, from the ashes of its erstwhile material embodiment, and which is of necessity productive, is a hard task for many an economic gray-beard. The treatment of wages is good, except that their being the discounted value of labor's product, marginally viewed, is not properly insisted on. In the field of banking, the author has confessedly followed Dunbar, and no one is a safer guide. The treatment of money is good, but rather cursory. Foreign trade is admirably discussed under the safe guidance of the classical writers. Capitallzation is presented much in the method of Fetter (misspelled *Felter* in preface). The absence of an index is inexcusable.

It is good to see "M. Antoninus Imperator ad Se Ipsum" in the beautiful type of the Oxford Library of Classical Authors. The text has been edited by I. H. Leopold, who adds the usual brief critical notes and references for quotations.

We could wish P. S. Allen's "Selections from Erasmus" (Henry Frowde) might be used in our colleges as extra reading to bring a touch of modern life into the class-room. The extracts, mostly from the letters, are all entertaining, and the style is easy. The editor has made some changes in the text in order to straighten out errors in the use of moods and tenses and other grammatical slips due to the rapidity with which Erasmus wrote. Considering the purpose of the book, we have no objection to this process, but it would have been better if the corrections had been indicated at the bottom of the page. The notes show that the work was prepared for very young scholars in England; it will serve better in this country as sight reading for older classes.

If any one wishes a plain account of the prominent French novelists and their work he can easily get it by turning to Winifred Stephens's "French Novelists of To-day" (John Lane Co.). The book makes no pretension to criticism. But it contains a list of each author's writings and sufficient comment to give a pretty good idea of his scope and the general estimate in which he is held at present. In addition, the biographical treatment makes the volume altogether a handy source of information.

Carl Schmitt has published an analysis of modern German fiction in "Der moderne Roman; Ein Beitrag zur Literaturgeschichte" (Osnabrück: Pillmeyer). He has collected a good deal of interesting data on the subject, but it is not always clear what his literary canons and principles are. The book, however, is, in many respects, readable and suggestive.

C. H. Beck, Munich, has begun to publish a popular collection of many kinds of literature, under the general title, Statuen deutscher Kultur. The latest issues are Vol. XIV., "Dichter und ihre Gesellen," by Eichendorff; Vol. XV., "Gedichte," Eichendorff; Vol. XVI., "Gedanken und Gedichte," Philipp Otto Runge.

Pastor Hans Spieser, a resident of Alsace, has in his recent "Elsass-Lothringen als Bundesstaat" (Berlin: C. A. Schwetschke & Sohn) produced evidence that the hopes of the Germans, including Bismarck in 1870, that the new generation would be exponents of German thought and culture, were sadly mistaken. The French is still the language of the educated classes; and rather singularly, the immigrating Germans have taken it up because they desire to give their children, particularly their daughters, a bilingual education. These educational ideals the author terms *Bildungsschwindel*, because when educated in two languages a child really has no *Muttersprache*.

In the Geographische Monographien (Leipzig: Velhagen & Klasing), Vol. XXII. has just appeared, "Die Vogesen," by Eduard Grucker, with 130 illustrations.

"War Abraham eine historische Persönlichkeit?" is the title of a detailed investigation by Fritz Wilke (Leipzig: Dieterich). The author, after examining critically the sources of the Abraham stories, and rejecting the astro-mythological interpretation, concludes that substantially the Old Testament accounts are historically correct, although the introduction of *Sagen* is not denied. Abraham himself is the founder of a religion in contrast to certain Canaanitish creeds; but the question of his being a contemporary of Hammurabi is left unanswered.

Parts ii. and iii. of Vol. I. of Professor H. von Soden's "Die Schriften des Neuen Testaments in ihrer ältesten erreichbaren Textgestalt hergestellt auf Grund ihrer Textgeschichte" (Berlin: A. Duncker) carry this piece of New Testament criticism from page 706 to 1,648. The first part appeared as early as 1903. The delay in publication has been caused by the immense mass of detail to be handled; and even as it is, these three parts give only the textual history of the Gospels; that of the Acts, which is to complete the first volume, is still unfinished. The author regards all the manuscripts extant as representative of distinct text recensions, and he first of all seeks to determine the different recensions, classify the manuscripts according to these, and thus determine what the original readings of the New Testament books were. His determination of the different recensions is based chiefly on inner evidences. Whether his conclusions are accepted or not, his vast collection of new matter makes his work a monument of scholarship.

Fr. Spitta in his "Streitfragen der Geschichte Jesu" (Göttingen: Vandenhoeck & Ruprecht) proceeds from the conviction that the extreme emphasis put upon Mark as the chief or sole basis for the reconstruction of the life of Jesus has led to dangerous skepticism. Accordingly, by a reëxamination of the sources the author reaches the conclusion that Luke often stands nearer the common source of the Synoptics than do Matthew and Mark, and that Luke often in a remarkable manner agrees with the Joannine tradition.

Conservative churchmen of Germany have united to publish a new series of popular, yet scholarly, discussions of present religious problems under the title Brennende kirkliche Fragen (Helmstedt: J. C. Schmidt). The series opens with Dr. J. Boehmer's "Das Reich Gottes in Schrift und Kirchengeschichte." This series seems in scope and purpose to be not unlike that edited by Dr. J. Rump (Gütersloh; C. Bertelsmann) under the title Für Gottes Wort und Luthers Lehr. Of this latter series six pamphlets have been published.

The *Statistische Korrespondenz* has published an instructive comparison of the teaching force at the twenty universities of Germany as it is now with what it was a decade ago. The total increase has been from 2,445 to 3,090, or 26.38 per cent. Since for every one hundred *ordinarii* there are 61.33 *extraordinarii* (only 51.06 ten years ago) and 87.08 privat docents (only 67.74 a decade back), it is evident that the prospects of advancement have become less; and in this repect the case is more serious in the non-Prussian universities than in the nine Prussian.

The comparative popularity of our authors in foreign lands is an interesting study. Though partly a matter of chance, it undoubtedly affords some evidence of universality of appeal on the one hand and of national tastes on the other. We have long been aware of the world-wide vogue of "Uncle Tom's Cabin," the Leatherstocking Tales, and the "Psalm of Life." In Germany and England, Washington Irving and Mark Twain have found hosts of readers; and in England and France, Whitman and Poe are at home. The Italians, who seem to have taken especially to Stowe, Cooper, and Longfellow, have by no means neglected Poe. There have been several translations of his stories, some from the English, some from Baudelaire's French. The older attempts are, however, quite eclipsed by a new version due to Prof. Filippo Orlando of Florence, well known in his own country as the director of the *Giornale di Erudizione* and as the editor of various rare and curious works of literature. His volume of "Racconti straordinarj," just issued (Florence: Nerbini), comprises eleven of the tales, well chosen to represent different types. The translation combines intelligent fidelity to the original with a pure, idiomatic Italian style. Two of the poems, "The Palace of Thought" and "The Conqueror Worm," are turned, verse for verse, into semi-rhythmic prose. It is instructive, as well as entertaining, to note how cleverly the thought is rendered in a medium so remote from our own. Romeo Costelli's weird, almost grotesque, illustrations, which adorn the attractive book, are entirely in the romantic vein. Professor Orlando intends to translate all of Poe's stories and some of his other prose works.

The suite of apartments at 82 Rue du Faubourg St. Honoré, Paris, where Sully-Prudhomme lived, is to be kept as a memorial of the poet.

The Rev. Francis Tiffany, a Unitarian clergyman, died at Cambridge, Mass., September 3. He was born in Maryland in 1827, and was graduated from Harvard in 1847. Among his books are: "Life of Dorothea Lynde Dix," "Bird Bolts," "Life of Charles Francis Barnard," and a volume of travels, "This Goodly Frame, the Earth."

The death is announced, in his sixty-third year, of C. A. J. Fritz Schultze, professor of philosophy and pedagogics in the Technical High School of Dresden. His works include "Geschichte der Philosophie der Renaissance," "Stammbuch der Philosophie," "Philosophie der Naturwissenschaft," "Kant und Darwin," and "Psychologie der Tiere und Pflanzen."

Henri Edmond Harduin, whose clever articles, "Propos d'un Parisien," in *Le Matin*, attracted considerable notice, has just died, at the age of sixty-two. He was a journalist of long standing, and had been connected with a number of Parisian journals.

Domenico Zanichelli, professor of jurisprudence in the University of Pisa and of constitutional law in the Institute of Social Sciences at Florence, died recently. He was one of the most eminent Italian specialists of his time. He published a large number of studies on international law and jurisprudence and contributed frequently to *La Nuova Antologia*. He is best known outside of his specialty for an analytical monograph on Cavour (1904). He was a son of the founder of the famous publishing house at Bologna, and was about fifty years old.

A CRITIC AND STATESMAN.

Critical Miscellanies. By John Morley. Vol. IV. New York: The Macmillan Co. $1.50.

Readers who began nearly forty years ago to admire the essays of John Morley—it takes time to think or speak of the lifelong radical as *Lord* Morley—will rejoice that he has collected into a volume another sheaf of essays. Two of these are on Renaissance Italians, one criticises the Positivist Calendar, one commemorates John Stuart Mill, another makes Frederic Harrison's "Theophano" the text for a definition of the part played by the mediæval Greek Empire in the drama of civilization, and two deal with democracy. The contents, it will be seen, give scope to the historian, the literary critic, and the statesman who make up Morley's genius and have worked together so effectively through his later career.

The essay on Machiavelli, which stands first, is the Romanes Lecture for 1897, widely commented on then, and likely to be long discussed; for it is the best analysis in English of the character and doctrines of the author of "The Prince." In setting this value on it, we have not forgotten Macaulay, nor Symonds, nor Lord Acton's preface. Macaulay's essay, indeed, although written when he was under thirty, with only such critical helps as the time afforded him, displays a remarkable faculty of divination and other qualities, by right of which—after a generation of comparative neglect, or at least of disesteem—he is coming again to be regarded as a great historian. But Morley's analysis, the product of ripe intellect, goes deeper and puts in our hands the clues to farther-reaching implications than Macaulay's possibly could. He devotes much attention to Machiavelli's life, which was the background, if not the determining cause of his opinions. Morley's reference to "The Prince" itself, though brief, is searching. He calls it "the most direct, concentrated, and unflinching contribution ever made to the secularization of politics." It "brings into a full light, never before shed upon it, the awful manichæism of human history, the fierce and unending collision of type, ideal, standard, and endeavor." Pregnant is his paraphrase of Machiavelli's criticism of Christianity, which "calls for strength in us to suffer rather than to do." "This seems to have rendered the world weak"—a suggestion in which the gospel of Nietzsche lies as in a seed. On Machiavelli's purpose in writing "The Prince," a theme which

refuses to cease from troubling, Morley makes the following comment, which will satisfy most of his readers:

> The view that he rejected moral elements of government for a scientific purpose and as a hypothetical postulate, seems highly doubtful. Is he not more intelligible, if we take him as following up the divorce of politics from theology, by a divorce from ethics also? He was laying down certain maxims of government as an art; the end of that art is the security and permanence of the ruling power; and the fundamental principle from which he silently started, without shadow of doubt or misgiving as to its soundness, was that the application of moral standards to this business is as little to the point as it would be in the navigation of a ship. The effect was fatal even for his own purpose, for what he put aside, whether for the sake of argument or because he thought them in substance irrelevant, were nothing less than the living forces by which societies subsist and governments are strong (pp. 50, 51).

The essay on Guicciardini has more novelty for English readers than that on Machiavelli, because Guicciardini has been little discussed by our modern writers. He was not, like the imaginary Johnny Keats, "snuffed out" by an article, but he has been the victim of an epigram almost as damning as that which Pope flung at Bacon. Recently only Symonds, so far as we recall, has given him a respectful survey; but Symonds, whether in depth, calibre, or maturity, is not Morley. This essay will do much to rehabilitate Guicciardini, and to show why it was that Cavour said that "he really knew affairs, and knew them far better than Machiavelli." Morley quotes liberally from his maxims, which reveal the political philosopher, and does justice to the "History," in which appear traits that are supposed to be peculiarly modern. Perhaps the characteristic which most widely separates Guicciardini and Machiavelli from political writers to-day is their lack of cant. We have become so used to hearing wicked acts referred to under pious aliases that we are amazed at those Renaissance observers who gave each act its proper name.

Of the essay on the Positivist Calendar we need only say that it tests Lord Morley's catholicity, and gives him a fair excuse for venting a little sarcasm on the doctrinaire who omitted Wordsworth, Calvin, Chatham, Wesley, and Rousseau from a calendar of nearly 600 great men, among whom are included Penn, Francia, and Tibullus. The *causerie*, as the author calls it, on John Stuart Mill blends criticism and reminiscence, and brings into the foreground some of the qualities which made Mill a great force for over fifty years. Morley has not outgrown his master on the ethical side, but he has annexed to his own province fields in which Mill never even roamed. In hinting at Mill's limitations, he still makes it perfectly clear where his strength lay.

The charm and value of these essays depend largely on the fact that they are the product of a rich mind, which has thoroughly digested its knowledge, and has tested books by experience. So we come at random upon passages which touch many subjects. In the review of "Theophano," for instance, there is a brief refutation of Prof. J. B. Bury's assertion that "history is not a branch of literature," since "history is a science," and the historian must not "transgress the province of facts." "Perhaps some of Professor Bury's more youthful listeners, with the presumption of their years, may have asked themselves whether the historian is to present all the facts of his period on his subject; if not, whether he will not be forced to select"—which he cannot do "without some guiding principle, conception, or preconception." This is *lèse-pedantry* in the first degree; but it is also truth, pointed with raillery, which Morley perfects by concluding with the remark that Professor Bury "is the most readable and enjoyable" of Byzantine historians, "*if I may say so without offence*" (pp. 231-34). We might cull scores of passages in which in like manner great themes and small are summed up, or we might cite *obiter dicta* on men and books, all of which would show that these essays are noble specimens of criticism. The critic is, we take it, the irreducible personage in John Morley's make-up: he might never have been a statesman or a biographer; but he was born a critic. The critic prevails, and prevents him from becoming a doctrinaire. He has his causes, dear to him as life, but they make him neither unjust nor narrow. Only such a critic could write the essay on "Democracy and Reaction," in which he reviews the questions which now perplex civilized men. We commend it alike to those who, despairing of democracy, retreat on one side to paternal government in any of its forms, or plunge, on the other side, into Socialism. In addition to penetrating analysis, the review shows poise in the writer—and poise is probably the most needed and the scarcest virtue among the champions of any of these parties to-day. Lack of poise utterly vitiated Lecky's book on "Democracy and Liberty," which is here pilloried by Morley with an energy which at times almost strains his habitual good humor. These two papers, especially the first, ought to have the widest reading. Nowhere should they be more welcome than in this country, whose undemocratic practices have furnished the most awful examples to the enemies of democracy, and whose populations to-day have reached the parting of the ways.

We have attempted merely to call attention to some of the striking points in this remarkable volume. We cannot close without reëmphasizing their amplitude. Here erudition is unpedantic; here knowledge is made human; here maturity is mellow, and not crabbed. In his construction and style, Morley has grown more and more limber. These essays approach Sainte-Beuve's *Causeries*—loose, sinuous, lively, and suited, like the best conversation, to digressions and asides. This was the method of Montaigne, seemingly so casual, if not spontaneous. Whoever will compare Morley's earlier studies—on Pascal, or Vauvenargues, or De Maistre, for instance—with this later yield, will see what we mean. The difference is important, for it indicates that years have not caused in Morley's case that intellectual sclerosis, that hardening of the arteries of thought and feeling, that are so painful to witness. And his convictions he holds with a perfect steadfastness which does not preclude urbanity. He has looked too many creeds in the face to be disconcerted by the newest; he has followed the course of too many movements throughout history to be deceived by day-dreams. And he communicates to his readers the tonic of a moral nature which, having seen so much and blinked nothing, declares that "life is too short for depression."

CURRENT FICTION.

The Firing Line. By Robert W. Chambers. New York: D. Appleton & Co.

Mr. Chambers's scene is here removed from Fifth Avenue to Palm Beach and a certain Luckless Lake in the northern mountains; but his people are the same, and his appeal as ever is to the mob which reads the "society" column and hovers about the awnings of the great. His unctuous delight in the festivities and extravagances of the rich does not fail. That lavishness which has recently darkened the mournful brow of Upton Sinclair fills him with an eager approbation. He loves the spectacle of immense wealth flowering into stupendous luxury, and he chants the material glories of Gotham with the simple (or is it sly?) art of a Scheherezade busy with her Baghdad. He has been accused of writing for the shop-girl; but he is undoubtedly read also by the "smart." If there is one fact made clear by, let us say, the incidental testimony of the fashionable novelist and the fashionable divorce-court, it is that the moral and intellectual codes of "smart" people are of almost infantine simplicity. The heroes and heroines of Mr. Chambers are differentiated only by manners and dress and sumptuous setting from the humbler Damons and Phyllises who adore them.

The "young Hamil" and "Shiela" of this story are an insignificant pair—the usual pair of juvenile fiction. He is a landscape architect in the middle twenties, and she is the adopted daughter of a multi-millionaire. The multi-million-

aire is doing great things in Florida with the aid of young Hamil, who falls in love with Shiela. Her unknown parentage is understood to be a disgrace in itself, and she is further disqualified, so far as young Hamil is concerned, by an existing though secret and nominal marriage. To keep the husband, Malcourt, in the foreground for general purposes of discomfort, until it is time for him to be removed, is a familiar and well-tested recipe. It cannot, however, fairly be charged that Mr. Chambers retains him only as a convenience; Malcourt, with his dark grace, his cynical speech—the sum-total of his undergraduate Byronism—is a person for whom his creator has an obvious regard.

The Last Voyage of the Donna Isabel. By Randall Parrish. Chicago: A. C. McClurg & Co.

This is a good yarn, reeled off with considerable spirit. It owes much to Clark Russell, as is almost inevitable, and its characters are hardly more than the good old stock-puppets—the young gentleman forced by strange circumstances into command, the lone lady of marvellous beauty (this time discreetly chaperoned by a maid), the hypocritical villain, here somewhat reminiscent of that prince of canters, old Tom Turnpenny of "Redgauntlet," the miscellaneous, semi-mutinous crew. But a good deal of ingenuity is shown in getting the hero into his uncomfortable situation; the story is interesting, and the descriptions of the Antarctic seas are unusually, almost distressingly, vivid. Mr. Parrish's style is fair, in spite of an occasional lapse. The Spanish treasure-ship seems rather archaic in build for 1753, and might just as well have been a hundred or two years older; centuries cost nothing and add to the effect. The book is agreeably illustrated "in full color."

The Brotherhood of Wisdom. By Frances J. Armour. New York: John Lane Co.

To all who have longed to slip this muddy vesture of decay—temporarily—this story should serve as a warning that the experience may prove more than a spiritual holiday. Professor Jackson, a scientist of the traditional type, has discovered a fearful and wonderful combination of chemistry and electricity that can liberate the astral body. The body of flesh lies in a stupor while its impalpable counterpart, unhindered by the forces of nature, explores at leisure the hidden places of the earth. Should the excursion be unduly prolonged, however, the spirit is likely to be left homeless by the death of the deserted body; it is also a defenceless prey to any spirits of stronger volition that it may encounter. A fine theme for a pithy short story has been stretched by divers expedients to the dimensions of a novel; and shows its resentment, as ideas will, by declining to infuse with any of its own life the mechanical effects that have been forced upon it.

White Rose of Weary Leaf. By Violet Hunt. New York: Brentano's.

> Is joy thy dower or grief,
> White rose of weary leaf,
> Late rose whose life is brief, whose loves are light?

This snatch of Swinburne supplies an unusually apt title. Whether joy or grief is the sum of Amy Steevens's brief life, and, as such matters are judged, light love, is the query which remains at the end of this narrative. Its manner is modern—a hard brilliancy which extenuates nothing. Its matter is, up to a certain point, familiar enough. The general situation is Brontesque: a youngish woman who has been thrown upon her own resources becomes an inmate of an English country-house as a species of lady-factotum. The master of the house, past middle age and something of a Turk, presently makes determined love to her. Without going further into the plot, we may say that it is a disconcerting tale, not to be commended to readers of tender sensibility. But distressing as the facts of the story would sound if baldly stated, they are not, under the given interpretation, to be dismissed with a mere gesture of disgust. What might be a situation of sheer vulgar bathos is invested with certain elements of tragedy. Amy Steevens is a strong as well as appealing figure; and even the real criminal is not altogether ignoble.

The Grey Knight. By Mrs. Henry de la Pasture. New York: E. P. Dutton & Co.

"The Grey Knight" will appeal to precisely the class of readers which would experience the keenest discomfort in reading "White Rose of Weary Leaf." Here is again the same general situation—the country-house, the lady errant, the domineering Briton. But matters are minced to the taste of the most exacting sentimentalist. The wooing is attended by no circumstance more distressing than naturally follows upon her old-style meekness and his old-style pride. She nurses him through an attack of pleurisy, and he, being thirty years her senior (after the habit of Mrs. de la Pasture's heroes), falls madly in love with her. With the complications which lead to separation and reconciliation we shall not deal. Enough to say that, when he eventually restores her to his bosom, like a wounded dove, it is with that air of conscious magnanimity with which, if the story-writers are to be credited, the fine old crusted British gentleman ceases to be a brute. Mrs. de la Pasture writes always sweetly and amiably, and if she has nothing in particular to add to our criticism of life, she knows well how to compound a drowsy syrup of sentiment which is palatable to the many persons who, for one reason or another, shrink from that heady liquor of romance which abides in things as they are.

The Well in the Desert. By Adeline Knapp. New York: The Century Co.

To the misfortunes and ingenuities of Robinson Crusoe add the luck of Monte Cristo, substitute for the latter's vengefulness a lofty moral purpose, and then let Arizona furnish a few desert scenes and some picturesque oaths; the result will be something much like this book. Gabriel Gard, a convict serving time for another's crime, escapes from prison in an advanced stage of tuberculosis, and is carried by a succession of marvellously timed miracles to a desert fastness, where he finds health, religion, and a gold mine. The one and only wild American camel (guaranteed genuine in a footnote) comes to his rescue, as do two cloudbursts. The purpose of the book, so far as one exists, is to show that a man, in three years of utter solitude, can learn to love his fellows even to the point of forgetting old grudges. From this it must not be inferred that the chapters are adorned with psychological analysis; on the contrary, all the characters move in a stream of events. The book, viewed as a collection of exciting anecdotes of life in the Southwest, is readable.

The Life of Sir Halliday Macartney. By Demetrius C. Boulger. New York: John Lane Co. $6 net.

Sir Halliday Macartney does not belong among the most distinguished men who have served in the Far East, but he fulfilled highly important functions. He was unfortunate perhaps in doing his work in the service of a foreign country instead of for his native land, and in never attaining the height of his ambition, but his life is well worth studying by those who desire to know the inner history of China for the last fifty years.

Born in 1833, he entered Edinburgh University in 1852 with the intention of becoming a doctor; but before his studies were completed he went to the Crimea, where he gained his first experience of foreign lands in connection with the medical staff of the Anglo-Turkish contingent. At the close of the war he returned to Edinburgh, finished his course, and in 1858 was appointed third assistant surgeon in the Ninety-ninth Regiment. He started at once for India, then in the final stages of the great mutiny. At the end of the same year the regiment proceeded to China, where Sir Halliday was to find his career. It was

in the time of the Taeping Rebellion and the British were aiding the government. Macartney, from his entrance into China, had given himself to the study of the language, and when opportunity offered he resigned his position in the British Army and began his lifelong employment as a servant of the Chinese. In the beginning, he attached himself to Li Hung Chang. Having thrown in his lot with the Chinese, he took for his wife a Taeping princess and lived in semi-Chinese fashion, though extending from his home in Nanking a generous hospitality to foreign visitors. When Li Hung Chang was appointed Viceroy Macartney undertook the establishment of an arsenal. Without experience or any special technical knowledge, he proved that his Scotch common sense was equal to the occasion and brought the arsenal at Nanking to a high degree of efficiency. Finally, Macartney was appointed English secretary of the newly established Chinese Legation in London and for the remaining thirty years of his life was in the thick of the diplomatic transactions between East and West. His wife died at the beginning of his new career and he married an accomplished French woman.

It is beyond our scope to go further into the details of his eventful life, but it may be interesting to record his judgment of the Chinese themselves. From an early period he had desired to attain a position of exceptional influence with the Chinese Court, and had hoped to take a place with the great Emperors similar to that occupied long before him by the French missionaries, but this project proved impossible. At times he seemed on the point of realizing his ambition, but he was always thwarted through the treachery of the mandarins. It throws light upon present conditions to note that in the beginning he found among the Chinese no aversion to foreign inventions or to foreigners, for the prejudice and hatred which belonged to the latter part of the nineteenth century had not manifested themselves in the '60's and '70's. Everywhere, he tells us, the foreigner "was honored and respected." But ready as the Chinese were to honor the foreigner, they were not ready to follow his advice beyond a certain point and nothing could be allowed to interfere with universal and unimpeded graft. The Chinese soldiers and sailors were of excellent material and could be trained so as to equal their fellow of any race, but the officers had a far different character. Sir Halliday's Chinese colleagues with a few exceptions blocked him at every turn, and other foreigners had a like experience. Thus in 1896,

> Commander Dundas, R. N., a very capable officer, went out to China imbued with the importance of his task, and full of energy for its accomplishment . . . and the Peking authorities, quarrelling among themselves or madly hoping to get rid of foreigners altogether by the Boxer movement, turned a deaf ear to his requests. He was breaking his bodily and mental strength only to find that the Chinese were still devotees of make-believe or the grand sham.

After all the years which had passed and all the opportunities which had come to the Chinese, and all the devoted labors of their foreign servants, when the war came with Japan, China was still wholly unprepared. Sir Halliday "blamed Li Hung Chang exclusively for the whole fiasco, first for having signed the Convention with Marquis Ito, secondly for having neglected to make adequate preparations for war. China, he often said, made a better fight of it in 1860 against England and France than she did in 1894 against Japan alone. Li Hung Chang, he declared, must be either in his dotage or dull to all sense of patriotism by his excessive cupidity." And Sir Halliday does not hesitate to call his old friend "traitor." The famous Chinese Ambassador to Great Britain, the Marquis Tseng, almost alone escapes the damaging criticism of Sir Halliday. Had Marquis Tseng lived or had he found worthy successors and colleagues, the course of history in China for the last fifteen years might have been far different.

It is the fashion in certain quarters to praise the businesslike honesty and common sense of the Chinese in comparison with the Japanese. A book like this shows how much foundation there is in fact for such an opinion. China, we are told, is at last awake and is starting upon a career of national regeneration. If that career is to be a success or to have any result other than those attained since 1860, it can be only by a thoroughgoing change of heart in the officials who control the destiny of the Empire. It is not new inventions or new programmes which China needs, but a new set of men with at least a fraction of the honesty and clear-sighted patriotism of the group of statesmen who have transformed Japan. The course of events in China from 1859, compared with the course of events in Japan from the same date, gives us the measure of the comparative integrity and wisdom of the men who are in charge of the two great empires of the Far East.

The Optimism of Butler's "Analogy." By the Rev. Henry Scott Holland. New York: Henry Frowde.

All students of Bishop Butler's works will cordially subscribe to an appreciation of his sterling qualities, the openness and candor of his mind, its vigor and breadth of sympathy in dealing with a wide range of subjects. But while the spirit in which he wrought will always challenge admiration, it is quite another matter to suppose that, as Canon Holland suggests in this Romanes Lecture, "he may, once again, be drawn into the central currents of our intellectual life." And the "Analogy," on which this hope is based, is that portion of his philosophical writings least fitted to survive. Few read it; no one studies it. In contrast with the neglect into which this book of our fathers has fallen, the moral theory of Butler, chiefly given in a few of his sermons, still receives serious attention at the hands of students of ethics.

The reason for the decadence of interest in the "Analogy" is not far to seek. Butler's theological views were too closely linked with a conception of the world that has passed away to retain vitality for the present age. Gladstone's devotion to the "Analogy" was highly significant. He could have given no clearer proof that he had wholly failed to grasp the meaning of the great currents of scientific and philosophical thought of the nineteenth century, Butler's argument for revealed religion could only be effective with those who accepted, on the basis of natural religion, as did both the orthodox believers and the deists of Butler's own day, the existence of "the God of Design and Purpose." This being had fashioned the world as a watchmaker constructs a watch, and, equally with the watchmaker, remained outside of what he had created. This absent deity possessed, however, certain infinite attributes, the boundlessly extended transcripts of the nobler intellectual and moral qualities of man. But the moment the protesting intellect of a later age declared that nature yielded no evidence for the existence of that sort of deity, Butler's argument fell of its own weight, and a fundamental reconstruction of religious ideas became necessary. Perhaps it is the unwillingness to undertake the difficult and self-renouncing task of such reconstruction that renders so large a portion of contemporary apologetics singularly unconvincing, even though their authors are possessed as is Canon Holland, of the graces of literary style and a general acquaintance with modern scientific and philosophical thought.

The Cradle of the Deep. By Sir Frederick Treves. New York: E. P. Dutton & Co. $4.00 net.

The imposing size—and price—of this volume, its fair, large print, its fifty-four illustrations, its four maps and careful index, most of all, its distinguished authorship, prepare the reader for a much more important and valuable work than he finds. If, however, he takes it up for what it is, a rambling descriptive account of a recent voyage in the West Indies, written at leisure and with great gusto and packed with historical and romantic anecdote, he may spend a very pleasant hour.

Sir Frederick's style is flowery to the

last degree; he lays on purple patches with joyous profusion. For describing tropical scenery such a style has its advantages, especially as the writer's color-sense is keenly discriminating as well as vivid, and his descriptions brilliantly specific. Here is one that is all color:

> Here . . . the sea assumes strange and unexpected tints; it may be violet, purple, or maroon, with streaks of lettuce-green or forget-me-not-blue, or may show a stretch of brilliant lustre, such as shines on a beetle's back, or may shimmer into a lake of lapis lazuli. In calm days the water over the reef will be lilac- or even claret-colored, or may take the hue of the nether side of a mushroom, while within the reef is that vivid green which can be looked down into from the stern of a steamer among the coiling eddies thrown up by the screw.

Sir Frederick is also unfailingly lively, with a sense of humor that sometimes degenerates into mere silliness, as when he says of the Earl of Leicester's search for gold in Trinidad:

> After a sleepless night, devoted to the contemplation of the high calling of a millionaire, Robert, the tourist, resolved to take possession of this gold mine which Providence and the "salvage" had placed in his hand.

Our author revels in the patriotic and the piratic history of the Caribbean, and tells with much imaginative detail a score of exploits of the great sea-dogs of old, but his reading seems to have its limitations, to judge by his reference to "one Samuel Champlain—a Frenchman with an English-sounding name—" whom he describes as "merely an early tourist, inquisitive and fond of making boyish maps." It is pleasant, on the other hand, to note that on one of the very few occasions when he speaks with authority, this great surgeon says of Col. Gorgas's work on the Isthmus:

> To his undying credit he has made this most unpromising strip of land a model of applied hygiene, and has shown, on a scale never before paralleled, what preventive medicine, under an enlightened and liberal direction, is capable of doing.

Grant's Campaign in Virginia, 1864 (The Wilderness Campaign). By Capt. Vaughan-Sawyer, Indian Army; with maps and plans. New York: The Macmillan Co. $1.60 net.

It was Colonel, now Major-General, Maurice of the English army, who declared that the Germans in part had succeeded, and the French failed, in 1870-71 because the first had studied the campaigns of our Civil War and the second had not. This declaration seems to have borne fruit, for of recent years we owe to European critics some valuable contributions to our own military history. Thus in the Special Campaign Series two out of eight volumes are devoted to our campaigns. The work in hand treats of the struggle of 1864 in Virginia, the beginning of the end.

We have seldom seen a book disgraced by such glaring errors. Names of places are wrongly spelled over and over again; *e. g.*, Reans Station (correct on map), Chancellorville, Murfreesburg, Chikamauga, Pinney Branch (which on the map masquerades as Pinney French), Khanawka (on map) though correct in the text. Many important places mentioned in the text do not appear on the maps, the general map of operations, May and June, 1864, for example, having thirteen omissions. The Sixth and Eighteenth Corps are transposed on the Cold Harbor map. Gen. Grant appears as H. S. Grant, the only time his initials are given, and Gen. (Edward) Johnson of the Confederacy always as Johnston, except on the map. A Briton who might correct these mistakes would still be confused by reading (p. 20) of "an expedition of 30,000 men under Banks to the town of Mobile near the mouth of the Mississippi"; and by learning (p. 71) that the Potomac had got south of Fredericksburg, (the *Po* being intended), that Grant (p. 73) had sent Sherman on a cavalry raid, and that Sheridan, returning from this raid, had (p. 74) "rejoined Lee." On p. 97 Gen. Sigel is reported defeated by a Federal force, and on p. 127 the Confederate army is again called Federal. Gen. Lee (p. 174) moves the corps of Anderson and Hill to cover Washington instead of Richmond. The Orange and Alexandria Railway (p. 94) is made to run northwest. The cardinal points again seem to embarrass the author, when (p. 109) he ascribes to Butler orders to "thrust himself through to the *east* of Richmond," that general being already considerably to the east of Richmond, in what became afterwards his justly celebrated "bottle." Moreover, a better set of maps and plans should be furnished. Some topography, at least, should appear on military maps, but these are nothing but sketches of roads, places, and streams. The general map of the Confederacy is the most useless thing of the sort we have seen. No State lines are given, and the Alleghanies appear as a single gigantic elongated ant-hill.

But all these errors and defects could easily be removed should a second edition be brought out, for, apart from them, this account of the campaign is really a good one, clear in arrangement, and impartial. The author sticks closely to the axis of events, and has resisted the temptation to overload his text with the multifarious detail that makes the reading of some military texts such wearisome business. His corrected book would be useful to those who wish a compact review of this campaign, and still more so to those who are looking for an introduction to its exhaustive study. His comments, though sparing, are judicious, and his analysis, with all its briefness, to the point.

A Family Chronicle: Derived from Notes and Letters Selected by Barbarina, the Hon. Lady Grey. Edited by Gertrude Lyster. New York: E. P. Dutton & Co. $5 net.

This is a series of desultory family chronicles extending over three generations. At the outset, we are introduced to the Ogles, the Wilmots, and others who had contact with Garrick and his circle. Then we come to Lady Dacre, an interesting personage who, during the early part of the nineteenth century, had a high reputation as a "literary luminary." She wrote introductions "by a Lady of Quality" to volumes of aristocratic prose and verse; she translated Petrarch; her *placet* was worth (once at least) £500 to a young author whom she helped; and her own works attained to the dignity of a collected edition. But what is interesting to us to-day is the picture of life under George the Third and Fourth, which her correspondence affords. Sydney Smith and his brother Bobus, Charles and Fanny Kemble, Chantrey, the Hollands, Bulwer, and many others whose name or fame still survives, flit in and out of the pages. Here too are Joanna Baillie, "Shakespeare's sister," and Miss Mitford, the friendly and talented writer, who, we feel, was loaded to the gunwale with an assorted cargo of virtues. Lady Dacre's daughter married Admiral Frederick Grey, and her papers carry the family story on almost to the end of Queen Victoria's reign. Besides personal, social, and literary matters, they furnish vivid sights of the Crimean War, where Grey served on the Hannibal, and of Cape Colony, to command which station he was appointed in 1857; and there are extracts from Lady Grey's diary during a visit to Mauritius and Madagascar. We end with an account of a conversation between Matthew Arnold and Fanny Kemble, shortly before Arnold's death. The fortunes of the Sullivans, Lady Grey's parents, help to fill out the picture, as her father was a rural rector.

Such a volume is naturally desultory; therein lies much of its charm. This one gives us, however, some interesting side-lights on historic events; the state of mind of the upper Whig society at the time of the Reform Bill, for instance, and a glowing description of the Queen's coronation, at which Mrs. Sullivan (like other spectators) sat in Westminster Abbey from 6 A. M. till 5:30 P. M. A good many stories, some of them hitherto inedited, crop up here and there. None is better than this of Lady Holland, the widow of Macaulay's patron:

> She was at Lord Radnor's, and they could not get rid of her. Lord Radnor thought of unroofing the house, but tried first what

prayers of a Sunday evening would do. She was highly pleased (very gracious, Lady Morley said, because she knew they longed to get rid of her), and said she would go down for prayers. Whether she was ill I do not know, but it seems she had to be carried downstairs, and wrapped herself up in cloaks, etc. In the midst she called out for more cloaks, which were brought to her. When she went up to the drawing-room again, she said to Lord Radnor (he having finished with the Lord's Prayer): "I like that very much, that last prayer you read. I approve of it, it is a very nice one—pray whose is it? (p. 203).

The following memorandum by Lady Dacre would seem to settle the authorship of a literary puzzle over which discussion has been kept up since 1820:

Found among my old hoards, February 3, 1846, Catherine Fanshawe's "Riddle on the Letter H," in her own handwriting, given to me forty years ago at least, and before Lord Byron was heard of. (p. 21).

Science.

SCIENCE AND SPIRITISM.

A large proportion of the higher, and many of the lower, animals display instinctive interest in anything that is new to their experience, evidently gaining satisfaction in the mere fact that they are in touch with what is unrecognized. This same trait is exhibited in man; but he, finding pleasure connected with the discovery of the unexplained, passes beyond the habit of his animal cousins and actually reaches out in search of this unexplained merely for its own sake. It is thus that we find so many people fascinated by, and actually seeking, the unknown and the mysterious. For example, we try to guess the name of a correspondent before opening the envelope, and deliberately contrive a puzzle whose answer may be had for the asking, if we choose. The showman learns that "the public likes to be fooled"; and this same inclination accounts for the success of the "magician," for the perennial enjoyment of ghost stories, and for such recurrent interest in "spiritism" as is indicated by the flood of articles on the subject in current newspapers and magazines.

The collecting of wonderful tales by the Society for Psychical Research in England, and by similar associations in France, Italy, and elsewhere, seems likely to continue indefinitely; for the process is not in the least affected by occasional revelations, by such men as Hodgson, Abbott*, and Evans†, of fraud where none had been expected, nor by largely successful attempts like Podmore's‡ to explain a great variety of the phenomena in terms of natural science. As noted above, the majority of those interested in these phenomena are quite satisfied to allow them to remain mysterious; elucidation would indeed take away a source of delight, and such robbery is resented. There are other persons, however, of more serious temperament, who honestly believe that in these phenomena we are dealing with highly significant discoveries, and who protest against all attempts to "naturalize" them. Such believers are wont to attack the scientific man and the psychologist and philosopher who neglect the subject; and the larger mystery-loving public, although ignorant of the nature of science, psychology, or philosophy, joins with these believers in berating the devotees of learning as wilfully ignorant of, and prejudiced against, what is really of great importance to the advance of knowledge.

It is to be acknowledged frankly that few trained men are willing to devote much time to these so-called mysteries; but this is not because of ignorance or prejudice; rather is it because scientists, for reasons to be referred to later, are not convinced of the importance of these phenomena, and because such knowledge of them as every man can acquire shows that the most distinctive of these happenings are of a kind with which scientific training does not accustom one to deal. The scientist in his work aims so to control conditions as to eliminate all possible causes but one; and such elimination, as Podmore well says, is impossible, in relation to the phenomena here considered; impossible also is implicit reliance upon the accuracy of the records. This latter point is of great moment. In the investigations of the scientist lack of candor never enters as an element to be reckoned with; but in the field of spiritism which the scientist and philosopher are urged to explore, thoroughgoing fraud is admittedly frequent; attempts at deception in collateral matters are common even where no fraud can be detected in regard to the subject itself; and all sorts of obstructions are regularly placed in the way of clear observation. The scientifically trained man gains what may almost be called an instinctive ability to discern at a glance the type of investigation which is likely to yield results valuable to his work; and finding numberless grave problems which call for all his time and strength, he all but automatically saves himself by avoiding the irrelevant. He cannot be blamed for refusing to bother with phenomena which have so frequently been fraudulent, when innumerable other questions demanding research are free from this disadvantage, and are far more interesting. No one will deny that certain facts relating to mediums (or "psychics," as they now ask us to call them), to "thought transference," etc., have not been explained in terms of the conceptions of physical and mental science; but within our own generation many facts looked upon by spiritualists of an earlier day as evidence of supernatural control (*e. g.*, automatic writing) have been accounted for in terms of known laws the operation of which had often been obscured by clever tricks. One is therefore warranted in believing that for most of those phenomena of the same general nature which still remain unsolved similar explanations will be forthcoming.

Such is the attitude of the trained student. There remain the questions how far the scientist, and the philosopher, or psychologist, are really concerned with these matters, and whether the subject is as important as many people imagine.

As for the student of natural science it seems clear that if "thought transference" can occur without physical intermediation, then the phenomenon can have no significance to the naturalist; and if it had, he himself would probably long since have discovered the potency involved, through the vitiation of certain of his calculated results. Many of his experiments are based upon the record, made by one of two co-workers, of resultants of actions by the other who is keenly aware of what is hoped for. The scientist does not find it necessary to take precautions to prevent knowledge of the thought of one of the co-workers being gained by the other; yet were this hypothetical thought transference possible, such precautions would be essential to the perfection of his experiment. An astronomer who has calculated the moment of occurrence of the occultation of a certain star and who is eager to see his calculation verified, need not hesitate to be in the presence of his assistant, who observes, and signals, the actual occultation. Similar considerations lead to a like conclusion in regard to the unimportance of "clairvoyance."

If, on the other hand, "telepathy" means communication between individuals by physical means which are at present unrecognized, then the telepathic theory is a matter with which the physicist may properly concern himself; but even so, he may well hold that he is not called upon to surrender his precious hours to such happenings, for instance, as those set forth in the Proceedings of the Society for Psychical Research; for he is confident that, if such unrecognized physical activities occur, or such undetected physical forces exist, he is more likely to discover them by an extension of his knowledge with instruments of precision in directions familiar to him, than by deserting the task for which he is trained in favor of another for which he is not fitted.

The theory of spiritism pure and sim-

**Behind the Scenes with the Mediums* and *The History of a Strange Case.* By David P. Abbott. Chicago: Open Court Publishing Company.

†*The Old and the New Magic.* By Henry Ridgely Evans. Open Court Publishing Company.

‡*The Naturalization of the Supernatural.* By Frank Podmore. New York: G. P. Putnam's Sons.

ple the naturalist may of course refer without hesitation to the philosopher and psychologist; but certain of its modifications, which are mere forms of an emasculated materialism, assume, as belonging in a sense to the mediums, "certain astral bodies" and "pseudopodia" which embody "ectenic forces"; and these, if they exist, involve the modification of certain postulates dear to the physicist and therefore seem to call for investigation by him. He, however, is warranted in holding that the hypothetical mysterious forces are likely to be but transformations of forces already well recognized; for were they different he is confident that their influence would be felt in some easily recognizable modification of well-known physical stimuli in the presence of the mediums, as is not proved to be the case. He observes also that the "psychics" through whose mediation these hypothetical "ectenic forces" are displayed employ practically the same materials and modes of procedure (e. g., the "levitation" of tables) which are commonly used in a fraudulent manner. If the physicist takes time to consider the experiments with the now famous Eusapia Paladino in Italy, he acknowledges that certain of them cannot be explained as they now stand; but just because she has devised some modifications of her former methods, he cannot think it his duty to attend to the antics of a woman whom so expert a magician as Richard Hodgson once examined and declared to be a thorough fraud. Of the investigations made since Hodgson's death Podmore well says:

> It cannot be said that these recent researches have done much to strengthen the case for Eusapia's genuineness. The phenomena are still of the same indeterminate kind; they take place still under the same dubious conditions, and for their substantiation we still have to trust to the accurate observation of the witnesses, working under conditions not of their own choosing.

If these "ectenic forces" did exist as distinct from all forces now recognized by the physicist, and if they were effective upon matter, the physicist feels sure that he would have discovered them under normal conditions where no fraud could be suspected.

Enough has been said, perhaps, to justify the common attitude of those engaged in the study of natural science, and we pass on to the philosopher and psychologist. The psychologist notes that if the hypotheses of telepathic or other thought transference, and of clairvoyance are correct, the evidence would be even more likely to appear in the disturbance of his own experiments than in those of the naturalist above referred to, and of such disturbance he finds no proof. He notes that the possibility of illusions of memory, to be discussed below, is persistently overlooked. He notes also that in studies of thought transference and clairvoyance attention is seldom paid to the sources of the thoughts in the minds of the medium and of the inquirer; that no attempt is made to determine what aroused the given thought in the inquirer's mind, which indeed is a fundamental point. For the investigation of the elusive sub-attentive consciousness ("subconscious mind"), which the psychologist holds to be of the same nature as the systematized attentive consciousness, convinces him that in all probability physical stimulations which are often unrecognized but which affect both medium and inquirer, may account for the appearance of the same or similar thoughts at the same time in the attentive consciousness of each. Walking with a friend, deep in the discussion of a difficult problem, the attention of the writer was attracted to a man who passed, and the thought, "How much he resembles Larned," appeared in mind for an instant, to disappear at once as the current of discussion again occupied his attention. The argument being ended, my friend presently remarked, "What has become of Larned? I wonder why I happened to think of him." My friend's sub-attentive consciousness had been affected as my own attentive consciousness had been. If, however, at the time of the meeting, I had been as deep in thought as my friend, I should have been as ignorant as he, and I might well have replied, "Why, I too have just been thinking of Larned; the believers in telepathy would take this to be a piece of favorable evidence."

On the whole, the psychologist, like the student of natural science, is likely to become convinced that if these powers exist, they are not likely to throw light on the serious problems as to the nature of consciousness which appeal to him for solution, and that therefore he is not justified in spending his time in attempts to verify these hypotheses.

As to "discarnate" spirits, the psychologist notes that "poltergeist" phenomena, "spirit-rappings," and appearances of "levitation," so far as they seem to indicate a so-called "ectenic force," do not concern him unless he deserts his field for that of the physicist; but he calls the attention of the latter to the wide variety of illusions of perception which have become familiar to him in his psycho-physical laboratory experiments, and suggests that the existence of illusions of this type is not given sufficient weight in the usual judgments from experiments in relation to these hypothetical spirit manifestations. "Ghosts" and "voices" are nowadays so generally accounted for as types of visual and auditory hallucinations that he feels warranted in disregarding them as evidences of spiritism; and this leaves for his consideration the "messages" supposed to come through mediums, through "premonitions" in dreams, and otherwise. He observes the astonishment, the emotional excitement, and the expectant attitude of those who tell of the receipt of these "messages"—the very conditions in which human judgment is generally admitted to be untrustworthy. He furthermore sees, what is usually overlooked, that these "messages" are strongly characteristic of the mental natures of the medium and of the recipient, not of the dead who are supposed to be laboring. under "suffocating conditions," to present proof of their individuality. Under such circumstances the psychologist is inclined to believe that the fuller knowledge of the nature of the consciousness of living human beings, which he is striving to gain, will in the end explain these unusual phenomena.

He also points to the sub-attentive consciousness, which appears to be systematized like the attentive consciousness; and he suggests that this fact, which explains "unconscious cerebration" so mysterious to our fathers, is likely to be at the bottom of many of the occurrences which, to the excited recipient of the "messages," are so startling.

Nor is the psychologist satisfied that sufficient heed is paid to the common occurrence of coincidences in everyday life; nor that the defenders of the spiritistic or telepathic hypotheses, can rely certainly upon our imperfect calculation of probabilities. But especially he emphasizes the exceeding frequency of illusions of memory, the relation of which to all the phenomena here discussed is so persistently overlooked. The average honest man will assert under oath that he remembers circumstances and situations which can be proved never to have existed, and acts which can be shown never to have occurred. Mr. Podmore, in referring to the alleged messages from the dead, well says (p. 50):

> In any case, with the lapse of time the picture preserved in the memory is liable to be unconsciously brought more and more into conformity with the narrator's conception of what ought to have happened. One by one irrelevant details drop out and confirmatory touches are added to heighten the tints. As the years pass any interval which may have existed between the vision and the death tends to disappear, and the two events coalesce, like a binary star, into one. . . . No process is more difficult to detect and guard against, because it is, for the most part, instinctive, and involves no conscious departure from good faith. The ability to tell the exact truth can only, as a rule, be acquired by a severe process of mental discipline.

Such discipline, we may add, the psychic research investigators are seldom willing to undergo.

When we turn to the significance of these phenomena in the eyes of one who takes what we may broadly call the philosophical view, we note, with Prof.

F. J. E. Woodbridge, that if we consider the matter historically, "spirits" have very seldom if ever really been looked upon as actually "discarnate"; and we are led to ask what real meaning the phrase "discarnate" spirit can have to men whose whole experience of individuals is confined to their direct or indirect relation with natural objects. We can, to be sure, think of a disembodied spirit, but we can do so only by such an effort of the imagination as that which affords us the notions of the unicorn or of the centaur. The philosopher acknowledges, with Fechner and other masters before and after him, that there may be forms of consciousness far different from those to which we are accustomed; but he finds himself unable to look upon these hypothetical consciousnesses as "discarnate"; rather he must think of them as parts of what is ordinarily, in the language of Prof. Josiah Royce, an "uncommunicative nature"—so differently embodied, and so differently conscious, that "we men cannot adjust ourselves to a live appreciation of their inward fluency." Such conceptions, however, are in a realm altogether apart from that considered by the modern spiritist, and have little relation to his thought.

It is thus that the student of natural science, of psychology, and of philosophy, while wholly willing to accept any well accredited facts which reveal the nature of the universe, and while maintaining a thoroughly open and unprejudiced mind, refuses to allot much of his time and energy to the phenomena discussed by the spiritist and by the devotees of so-called "occult science."

H. R. M

A volume of occasional addresses by Dr. W. Osler of Oxford is soon to be published by Henry Frowde, under the title of "An Alabama Student and Other Biographical Essays." The greater part of the book deals with the life of physicians in the United States. There are also chapters on Sir Thomas Browne, Harvey and his discovery, John Locke as a physician, Keats the apothecary poet, and Oliver Wendell Holmes.

A volume which adds distinctly to our knowledge of embryology is "The Work of John Samuel Budgett," a collection of his zoölogical papers, with a biographical sketch by A. E. Shipley, and contributions by Richard Assheton, Edward J. Bles, E. T. Browne, J. H. Budgett, and J. Graham Kerr (G. P. Putnam's Sons). Budgett was a martyr to science. He made three unsuccessful trips into the heart of Africa in his untiring search for the eggs of polypterus, and at last discovered them and watched the development of this most interesting animal. But shortly after he had completed a series of drawings of the external changes in the development of the eggs he was seized with a fatal attack of malaria and fever. The eggs and embryos secured under these circumstances have been carefully studied by Professor Kerr, and the results are presented in this volume. Certain of the conclusions are of unusual interest; for example:

The general phenomena of development in polypterus show frequent striking resemblances with what occur in dipnoans and in the lower amphibia. I believe these resemblances are sufficient by themselves to indicate the probability that the teleostomes, the dipnoans, and the amphibians have arisen in phylogeny from a common stem, which would in turn probably have diverged from the ancestral selachian stock.

The breeding habits of the primitive bony-fish Gymnarchus niloticus were first discovered by Mr. Budgett, and many of the eggs, looking like "amber beads," were secured. These have been given to Dr. Assheton, who has furnished a second memoir of equal interest with that by Professor Kerr.

Dr. Armaingaud has presented to the Académie de Médecine of Paris a critical examination of recent statistics, showing the decrease in mortality from pulmonary tuberculosis in great cities during the last twenty years. He accepts a decrease of 21 per cent. for Paris; 23 for London; 35, Berlin; 41, New York; 45, Vienna. While the decrease in Paris is comparatively too small, it does show an improvement in general hygiene and a beginning of efficiency in the direct struggle with tuberculosis. After removing such causes of error as change in disease nomenclature and reception of non-Parisian cases in Paris hospitals, Dr. Armaingaud shows that mortality from tuberculosis in general has diminished twice as fast among children under four years of age as among the rest of the population. Extra-pulmonary, particularly visceral, tuberculosis has increased slightly among adults.

Dr. Jean-Baptiste-Étienne-Auguste Charcot, leader of the French expedition to the Antarctic regions, expects to reach the ice, about five hundred miles south of Cape Horn, about December 15, and he plans to be absent two years. One of his objects is to bring back samples of the fossils to which Dr. Nordenskjöld has directed attention. He intends to transport them to one of the open ports of the Antarctic continent, either Port Lockroy or Port Charcot, and then to go on to Loubet Land to begin his exploration of the regions to the south. Dr. Charcot's staff includes M. Bougrain, who will make the astronomical observations; M. Rouch, specialist in meteorology and oceanography; M. Godefroy, who will study the hydrography of the coast and the tides; M. Gourdon, geologist, and Dr. Jacques Liouville, marine zoölogist and botanist. The commander himself is a good bacteriologist. Dr. Charcot's ship, the Pourquoi Pas, has a tonnage of 800.

On October 15 the University of Bern will celebrate the two hundredth anniversary of the birth of the physiologist, botanist, and poet, Albrecht von Haller. Prof. Theodor Steck will deliver an address on the personal characterstics of Haller, Prof. Hugo Kronecker will discuss Haller's method of working, and Prof. Eduard Fischer will treat of Haller's relations with the scientific men of his time, and especially of his relations with Linnæus. On October 16 a monument to Haller's memory will be unveiled on the ground facing the new university buildings. Haller was elected a Fellow of the Royal Society of London, and Prof. Arthur Gamgee will present, in the name of that society, a Latin address to the University of Bern.

Drama.

That Victor Hugo originated a style, or type, of dramatic character, no one would dream of disputing. His Didier, Hernani, and Ruy Blas are his own. And an attempt to analyze and determine this dramatic type—as compared, for instance, with Corneille's or Racine's—is no doubt worth while. To student and critic alike, and even perhaps to general reader, Hugo's methods of dramatic conception and execution must be of interest. But aside from this, it is difficult to believe in the reality of Hugo's personages apart from the action which animates them. They are essentially convention; and Prof. James D. Bruner's "Studies in Victor Hugo's Dramatic Characters" (Ginn & Co.) hardly persuades us otherwise. In any case, it is always a *procédé*, a conception which the critic has to study—not a genuine human being. And the pretension to take such creatures seriously at the author's exact evaluation, to treat them like independent entities apart from the medium in which alone they live, to anatomize them like the subjects of actual experience—this seems to us to be the negation of criticism. The sort of writing this study does, as a matter of fact, produce, may be seen by a brief quotation from Professor Bruner's dissection of Ruy Gomez, who, he tells us, is a "complex individual man, having contradictory qualities. He is represented in the drama as a man of varied experience and of numerous characteristics. He is proud, bombastic, loquacious, inquisitive, impulsive, melancholy, jealous, revengeful, inexorable, avid of fame, loverlike, sympathetic, courteous, loyal, given to hospitality, and possessed of a high sense of honor. We are also informed as to his age, physical qualities, political position, and social standing. He is more than sixty years old, and has not enough hair on his head to fill the hand of the executioner." But, enough. This kind of thing is neither criticism nor scholarship; it is merely a watery prose solution of the drama itself. It can have no pretensions, either as an objective study of Hugo's dramatic work, its strength and weakness, or as a divination of the spirit of that drama.

The centenary (birth) edition of the complete works of Jules Barbey d'Aurevilly is a sign of the veering of fame back to this author. His personal influence over young writers was great during his lifetime, but he has been scarcely more than a legendary plumed knight of authorship for the quarter of a century since his death. A similar phenomenon in literary renown occurred with Stendhal, and for like reasons. These two writers thought ahead of their times. Barbey d'Aurevilly is now just in time for the two-fold reaction away from the bald, prosaic radicalism which triumphed in literature and politics at the close of the nineteenth century. This first volume of his works, with a preface by Lucien Descaves, begins the first series of Barbey d'Aurevilly's "Théâtre contemporain" — truly trenchant criticisms of the Paris stage

from 1866 to 1868, stormy years of the Empire's dissolution. Such independent thought on contemporary life has long been exercised in the weekly theatrical *feuilleton* of serious Paris journals by the greatest writers of France. In spite of a certain pose and dash as of a bravo of literature, Barbey d'Aurevilly had a mind highly trained to look before and after, essentially lofty emotions, and a metallic thrust and parry of direct style which is like the rapier's ringing on chain armor. The more general reader can make acquaintance with these qualities in a compendious volume, just issued by the "young men" of the *Mercure de France*—"L'Esprit de Barbey d'Aurevilly"—thoughts, traits, and portraits, and critical judgments selected from his works.

If Hubert Henry Davies's play, "The Mollusc," now running in the Garrick Theatre, does not attain to the full measure of popular success which it secured in London, the responsibility for any comparative failure will rest upon the management, which has made an unfortunate distribution of parts. It is not a piece of deeply thrilling interest, or great dramatic significance, but it is one of those rare things—a genuine comedy of contemporaneous life, in which the dramatic complication and its solution grow naturally out of the inter-action of character upon circumstance. Without being especially brilliant, it is a thoroughly veracious and artistic little work, written with humor, observation, and insight, and singularly free from the conventional methods and trickery of the theatre. Only four personages are introduced in the story, which is unfolded in a single scene. The mollusc is Mrs. Baxter, a charming, but indolent, selfish, and whimsical young woman, who has been converted into an inexorable domestic tyrant by the weak indulgence of her husband, who is the slave of her imaginary ailments. The poor man can neither speak nor act without conjugal instruction, but is happy in his servitude, partly because he finds a congenial companion in a pretty governess. Mrs. Baxter, by her tenacious insistence upon universal compliance with her wishes, has practically extinguished opposition, when her brother, Tom Kemp, fresh from the backwoods of Canada, arrives on a visit, and resolves to bring her to her senses. At first her amiable but resolute resistance defeats his most adroit plans, and almost ruins his chance of winning the governess, with whom he has fallen in love. But finally he succeeds in rousing her from her apathy by an appeal to her jealousy. It is a wholesome and lifelike sketch, but in stage representation it requires a degree of histrionic skill commensurate with its own finish and delicacy. This it does not receive, unfortunately, at the Garrick, at the hands of the male performers, who lack both polish and perception. The ladies, Miss Carlisle and Miss Forbes Robertson, are much more competent.

Cicely Hamilton's "Diana of Dobson's," which under the management of Lena Ashwell was very successful in London, was received with only moderate favor in the Savoy Theatre on Saturday evening. It is cleverly written in parts, shows some originality in invention, and is not devoid of intelligent motive, but as a play is of inconsiderable value, being puerile in construction and conventional in design. The story is of a shop-girl who, having inherited an unexpected legacy of $1,500, resolves to have one luxurious revel. In European hotels she enjoys a brief social triumph and, being taken for an heiress, secures an offer of marriage from an aristocratic wastrel, whose income of $3,000 a year can no longer support his extravagances. She reveals the truth to him, and the wooing ends in a lively scene in which she tells her lover that he is utterly incapable of making his own living, while she can support herself by honest work. The captain is so piqued that he vows to exist upon the labor of his head and hands for the next six months, and the upshot of it all is that, in less than half that period, he and she, both reduced to the last stages of destitution, meet by chance at midnight upon the Thames Embankment. His resolution melts before the sight of her distress, and, after explanations, they agree to get married and live quietly and comfortably upon his despised income. It is unnecessary to dwell upon the glaring improbabilities of such a tale; but the plot is the weakest part of the play, which contains several vigorous passages directing attention to the hardships endured by some of the young women employed in great dry goods "emporiums," smart satire on social distinctions, and pointed ridicule of the so-called education of the higher classes. The dialogue, here and there, is exceedingly effective. Doubtless the London representation was superior to that at the Savoy, where Miss Carlotta Nillson gives a monotonous and commonplace interpretation of the part of the heroine, which is capable of a much more dashing, varied, and passionate embodiment.

No elaborate consideration is needed for "Glorious Betsy," Miss Rida Johnson Young's "new American play," which Miss Mary Mannering presented, for the first time in this city, in the Lyric Theatre, Monday afternoon. The fact that she used it successfully in different parts of the country all last season is a sufficient proof that it has characteristics of a popular nature, but of serious literary or dramatic merit it is practically destitute. It is a pleasant enough entertainment, in its simple way, for the unsophisticated crowd, and has a sympathetic part for the star, but as a quasi-historical piece, dealing with the men and manners of a given period, it is utterly insignificant. The theme is the romance of the famous beauty Elizabeth Patterson and Jerome Bonaparte, but no attempt at accuracy is made even in the leading details. Miss Mannering is exhibited as an alluring little minx, with John C. Calhoun, Henry Clay, and other suitors at her pretty feet; as a scorned beauty; a spoiled child; a happy affianced bride; a lovely model of heroic and unselfish devotion, and a vision of rapturous felicity, conditions which she illustrates with unfailing personal charm. The French characters concerned are totally ignorant of their own language. Napoleon, judging by his accent, is of Hibernian descent.

At the Lyceum Theatre in this city during the coming season a course of lectures will be given to show the value of the drama as a potential educative force. Among the subjects are: "The Activity of the Dramatic Instinct During Pre-Adolescence and Adolescence," "The Development of the Humanities in the Greek Drama," "The Shakespearean Drama and the Modern Poetic Drama," and "The History of the Theatre in its Relation to Education." Among the lecturers will be President G. Stanley Hall of Clark University, Prof. George P. Baker of Harvard, Percy Mackaye, Franklin Sargent, and Dr. James J. Walsh of Fordham University. The course will be under the auspices of the Educational Theatre for Children and Young People.

"Samson Agonistes" is to be revived next December in London in connection with the Milton tercentenary. This play was, apparently, acted for the first time in April, 1900, when it was produced for the Elizabethan Stage Society in the Lecture Theatre of the Victoria and Albert Museum. The performance was under the direction of William Poel, who will again be responsible for the stage management. Representations of the tragedy will also be given in Oxford, Cambridge, Liverpool, and Manchester.

Miss Lena Ashwell will begin her autumn season at the Kingsway Theatre, London, on October 9, with a new play by W. T. Coleby, the title of which is still undecided.

Music.

GERMANY'S MUSICAL PROLETARIAT.

Charles Booth asserts in his book, "The Life and Labor of the People of London," that the organ-grinders who perambulate the streets of that city earn from eighty cents to $5 a day. Germany gives less encouragement to that kind of musician; her musical proletariat is the orchestra player. His average income is about that of the English eighty-cent-a-day organ-grinder, while $5 a day is a goal to which he cannot aspire. The two leading men in the Royal Orchestra of Berlin get about $1,250 a year, but this is far above the usual salaries. The highest pay for any member of the opera orchestra in Vienna is 3,600 crowns ($720) a year, or less than $2 a day. The players in the orchestra of the Hamburg Stadttheater get only $350 a year, and in smaller cities like Nuremberg, Würzburg, Rostock, although the musicians have to be sufficiently expert to play Wagner and Richard Strauss, the pay is from $20 to $25 a month. A libel suit by the conductor, Schneevoigt, against five members of the Kaim Orchestra, recently tried in Munich, has given the newspapers occasion for dwelling on the deplorable situation of the orchestral player. Members of this, one of the most famous orchestras in the country, get $31 a month, and at the same time they are so steadily engaged either in Munich or on the road that they cannot earn an extra penny by teaching. Conditions of their contract regarding illness, etc., were pronounced positively "inhuman." The sea-

son for most orchestral players—there are about 50,000 of them in Germany—is nine months; and as it is quite impossible for them to save a penny during this time, they have to scramble for a place in a hotel or summer resort band. If they are so lucky as to find one in a famous resort, like Kissingen or Homburg, they may earn from $27.50 to $40 a month; but in a less favored place they are lucky if they get $25 a month.

It is acknowledged that a crisis has been reached, and that something must be done at once. Two books have appeared on the subject: "Die sociale Lage der deutschen Orchestermusiker," by Paul Marsop, and "Die Lage der Orchestermusiker in Deutschland," by Heinrich Waltz. The matter was also discussed recently at a meeting of the Musikpaedagogische Kongress in Berlin. It is a vital question for German art. While the Vaterland has contributed a fair share of the world's best singers, pianists, and violinists, her chief glory has been the production and the model performance of orchestral works—the overtures, symphonies, and symphonic poems of her great masters. Herein no other country has even remotely approached Germany. But can she hold this record much longer if she refuses to pay the players living wages? On this point Paul Busching says:

> The majority of German orchestral players belong to-day to the proletariat. Many an instrumental player is, so far as the amount and the certainty of his income are concerned, no better off than a dock laborer on the Hamburg quays, or a day laborer in the building trade.

If he is starved out altogether, what is to become of Germany's orchestral glories?

The situation is peculiarly difficult to deal with. Twenty years ago eminent conductors, like Richter, Mottl, and Levi, earned little more than an orchestral leader of the violins gets to-day. Now they command $10,000 a year or more, thanks to competition. The salary of the leading singers also has been raised considerably by the same means. But for the players there lies no hope in competition. There are from fifty to a hundred or more of them in each orchestra, and it is for this reason that any increase to the individual, however slight, looks formidable and forbidding in the manager's eyes. Competition, indeed, is what is hurting the orchestral player more than anything else, and preventing him from getting the increase in pay corresponding to the rise in the price of living. There are in the German Empire 18,000 military musicians, who, with their popular programmes and gaudy uniforms, compete with the concerts that are given by the orchestral players to eke out their incomes. Nor are these the only competitors.

Paul Marsop declares that in return for the quality and quantity of their work, and in view of the general cost of living to-day, the members of the orchestras in the larger cities are entitled to fully double the salary they now get. But how is the increase to be obtained? The royal subventions are already so large that little or nothing can be hoped for in that direction. Nor is it possible to charge more for tickets of admission and seats, the prices being already a strain on the public's devotion to music. Marsop's suggestion is that retrenchment should be practised in other departments. In the first place, there is the ballet: who wants a ballet nowadays? It may be an essential feature in the performances of operas by Spontini, Meyerbeer, and other composers of their time; but nearly all of these operas have fallen into neglect, and the operas written at the present time do not include ballets. In an emergency, it is suggested that trained members of the chorus might, for extra pay, do such dancing as may seem needful. The public has certainly lost its interest in operatic ballet-dancing, and would not protest if it were abolished altogether.

It is otherwise with another of the suggestions for economy made by Marsop. He inveighs against the lavish expenditures on scenery now customary, and sees there great opportunities for saving in behalf of the starved players. It may be true that some operas that have practically no scenery are popular, but operas of the spectacular school, and Wagner's, too, certainly draw better if they are sumptuously presented, and economy in this line would therefore defeat its object. The musicians will probably have to place their hope chiefly in the municipal governments and the generosity of wealthy individuals. On the latter, Marsop does not count much; to his knowledge there have been so far in Germany only three important gifts to orchestras, which he contrasts sadly with the munificence displayed in America and England. But that the rulers of German cities will eventually municipalize orchestras, giving players the rank of officials, and claim to a pension, Marsop is firmly convinced. A good beginning has already been made in Cologne, Düsseldorf, Aachen, Leipzig, and Freiburg.

"Musiciens d'autrefois," by Romain Rolland, seeks the origin of modern music in the "pre-opera" invented by the Renaissance and influenced in its evolution by the lyric art of Tasso. The main part of the book proceeds from the first opera in Paris—the "Orfeo" of Luigi Rossi—through Sully, Gluck, and Grétry, to Mozart, in artistic rather than formally historic order. The author is the Paris University lecturer on the history of music, whose tetralogy of musical fiction, "Jean Christophe," has all but transported music into literature.

Art.

My School and My Gospel. By Sir Hubert von Herkomer. Illustrated. New York: Doubleday, Page & Co.

Everybody has heard of Professor von Herkomer's famous art school at Bushey, at which, in the course of twenty years, a number of artists of some subsequent distinction received their education. Many people will therefore be interested to know what were the principles relied on and the methods of teaching. On the whole, these inquirers will find the present book somewhat disappointing. It is rather discursive, and it takes careful reading to make sure just what the "gospel' 'of Bushey was.

The cardinal tenet is indeed sufficiently clear—that the effort of the teacher should be bent to the development of individuality. This is the great modern doctrine to which most teachers of to-day would subscribe. The question is *how* individuality in the student is to be descried and encouraged, and on this point Sir Hubert affords us very little light. We may, perhaps, admit that he succeeded in such encouragement, yet his system seems, from his own description, as rigid, in its way, as the familiar academic system which he hated. It is full of prohibitions. For black and white work he "only permitted the use of charcoal and pencil." Apparently, he would not allow drawings without backgrounds, because the "practice of leaving out the background . . . deadens the faculty for seeing tone." He "directed the students to paint each part of the figure . . . *alla prima*" without regard to the "mass of white canvas that surrounded the part they were painting"; and he tells, at some length, of the silent suppression of a student who was audacious enough to experiment with an underpainting of monochrome. In short, it soon becomes evident that the cultivation of personality was to be within somewhat narrow limits. The aim was to make painters, in the modern sense, rather than artists. There was to be no "discipline of mind," and there was no provision for any one whose personality or temperament might lead him to a predominant love of form or to a tendency to expression by line. It is characteristic that the author's own designs for the monthly title-pages of the school paper, the *Palette*, are almost all reproduced from monotypes. Even in book decoration linear design is banished. It might seem, at first, that the ideal of an unacademic education was to find out what is done in academies, and insist upon the reverse.

Yet Sir Hubert's *alla prima* method of painting is exactly that of the schools of Paris thirty years ago, where anything but "direct painting" was un-

known and underpaintings and glazings were regarded as almost criminal. His great demand was for "quality," meaning, we suppose, material beauty of workmanship; and he apparently places it before truth of representation, holding it to be "of great importance when those two factors [tonality and values] come without apparent effort, or as a result of a search in the direction of quality." But this quality is to be attained only by the use of solid pigment laid directly on the canvas, without any knowledge of the different properties of opaque and transparent color or of the infinite variety of surface and texture to be secured by the old traditional methods of painting. For "no second touch in oil color ever equals the first on the white canvas for purity."

But there are even more significant omissions in Herkomer's scheme of artistic education: there seems to have been no provision for training either the invention or the memory. Of course, one cannot teach invention, and it is even doubtful if one can effectively explain to the student the principles of composition—one can only point out faults, not create merits. But this is true of most teaching in art; and one can assuredly encourage the student to attempt original composition—one can even require him to do so. As for the training of the memory, it is perfectly possible, and the greatest fault of modern artistic education is the general lack of this training. In the Bushey school, as in most others, the student was expected to work always direct from the model, and there seems to have been no attempt to find out how much he had really stored up in memory by requiring him to reproduce his work with nothing before him but a sheet of blank paper. Still less was there any attempt at that work from a memory, not of the previous drawing, but of nature itself, which is the staple of Japanese education in art. One of the consequences of this lack of memory-training Sir Hubert has himself pointed out in his remarks upon the landscape painting of figure painters:

> I cannot call to mind a landscape by the hand of a figure painter that could be called monumental, or a consummation of the art of landscape painting. . . . The work of the figure painters in this domain has seldom transcended the poetic transcript of "a bit of nature."

If this statement be confined to modern painters, it is very nearly true, and one of the reasons for this state of affairs—the principal reason in our view—is that the figure painter "needs nature for every touch." The landscape painter *has* to train his memory; the figure painter, "who is accustomed to his model, and to having nature always before him, has by his habits of work become unfitted" to do so. What surprises one is that Sir Hubert has not seen that this same reliance on the model is as fatal in the higher walks of figure painting as it is in landscape; that anything truly "monumental" or possessing nobility of style is as rare in modern figure painting as it is in figure-painters' landscape. Invention is but the combination of accumulated memories and the abandonment of work from memory has paralyzed invention. Style is the modification of an immediate impression by the result of many previous impressions, and the habit of working always from nature has abolished style. Hence the relative triviality and inferiority of so much modern figure painting and the superiority of modern landscape.

Gradually one gets to see the reason of the grave omissions from Herkomer's scheme of teaching; it is a kind of skepticism as to the value of any teaching whatever. Since we are bent on the cultivation of personality, and since each personality will inevitably work out its own method of expression; since technical methods are infinitely various and one is supposed to be as good as another; why teach anything? But if you must teach—for a student must start on something—let us "endeavor to make that something a form of work that he will not find difficult to shake off." Place him in front of the model and leave him, as nearly as possible, alone. Reduce your teaching to the irreducible minimum. That is, after all, the logical outcome of our modern respect for individuality, and it brings us to the fundamental question whether or not we are justified in that respect. Is modern art the better for "the extraordinary variety of types of art work . . . owing to the absence, in this age, of all conventional restraint"? Were great individualities rarer when all art-training was rigidly traditional and the young painter was taught his trade as the master practised it, being no more expected to invent a new way of laying on colors than a carpenter's apprentice was expected to find a personal method of planing a board? Is not a true personality what Sir Hubert himself calls it, an "indestructible framework"? If so, why this fear of destroying it?

> Even the tyrannical priesthood . . . did not succeed in preventing Giotto from developing his natural bent. Michael Angelo broke away from traditional art, and evolved a new one . . . the outcome of his *nature*.

Well, is there not something to be said for a training which produced Giottos and Michael Angelos? Even the much less complete academical training of France produced its Millets. Ah! but there is the "student of average talent" who is "crushed." If he is crushable, is there any great harm in crushing him? If we had more good workmen, knowing their trade thoroughly, and fewer feeble "personalities" striving frantically for self-expression in an unmastered medium, our art would be in a less chaotic and a healthier state.

No, the trouble with the modern art school is that it teaches too little, not too much. Academic or non-academic, our schools are all tarred with the same brush. They place the student before nature and let him flounder, with a minimum of guidance. The academic school does, indeed, try to teach him a little about form—the free school does not teach him even that. No one teaches him to point. No one teaches him to think, to compose, to arrange, to cast a drapery, or to draw a line. The one thing not taught in art schools is art. We give the student a little, a very little science—some notion of what nature looks like. He must trust his own raw individuality for the rest. We turn him out into the world with no conception of what is to be done or knowledge of how it has been done by others—God help him!—let him sink or swim. And if he fails to do anything better than the life-studies he has been doing in the schools, we think he has been crushed by too much training. The trouble with all of us is our lamentable lack of any true and sound education, and we shall not improve matters by doing away with what little of such education is still to be had.

"The Charm of the English Village," by P. H. Ditchfield (imported by Charles Scribner's Sons), is an attractive collection of descriptions and comments, illustrated by photo-engraved pen-drawings by Sydney R. Jones, of village scenes, unusually well selected for effective composition. Perhaps they are almost too effective—just a little suggestive of posing for city people and for American tourists; but doubtless the vast amount of notice accorded them must make even thatched roofs and mouldering towers a bit conscious. The effect is heightened, too, by the method of illustration, in which each white gable or bank has a black background of foliage to accentuate its form. This, and the unavoidable hardness of black lines, fall short of presenting the English village in the subtle and delicate phase which the word "charm" would imply. But the pictures do illustrate and the text successfully describes the elements—the composition—of the village, its usual features and their special interest; and, as in a treatise on botany, the proper attention to detail excuses the lack of deeper sentiment. The volume also is full of suggestions as to the grouping of rural buildings, and of reminders of available material for architecture and gardening of that sort.

The first volume of the second tome of the "Répertoire de la statuaire grecque et romaine," by Salomon Reinach, contains 416 pages—an indication of the extent of the work. Its scientific character and completeness may be gathered from the reputation of the author.

"Histoire du paysage en France" is one of those large, discursive, handsome books of art history which are so common in France. Twelve authors, with more or less

claim to specialties, have had a hand in its making; and Henry Marcel, administrator-general of the Bibliothèque Nationale, contributes a preface. The volume has 324 pages, with 24 inset plates.

The Metropolitan Museum of Fine Arts has received as a gift from Mrs. Robert K. Nuttall a collection of old lace which will, according to the statement of Sir Caspar Purdon Clarke, the director, make the Metropolitan's collection the finest in the world. The museum has purchased one of the four pedestals of the famous Peacock Throne of Delhi—marble beautifully inlaid with malachite and agate.

The National Gallery at London has recently purchased for £25,000 from Lord Talbot de Malahide a Portrait Group by Frans Hals. The picture, which is described in the *Athenæum* as "highly important," is 4 ft. 11 in. by 8 ft. 4½ in. It has never been exhibited, and till recently it seems to have been unknown. There are some ten figures, all done with a skill which, it is said, "belongs to the period of Hals's full maturity, and is probably unmatched outside Haarlem."

Arthur Evans has contributed to the London *Times* an account of the excavations in Crete during the spring and summer. At Knossos the work has been chiefly an exploration of what he calls the "Little Palace" (with a frontage of 114 feet), connected by a paved road, "the oldest road in Europe," with the palace proper. The date of this building he fixes in the late Minoan age, say, 1700 B. C. The discoveries include a number of painted vases and ritual vessels in black steatite—notably one modelled in the form of a bull's head, inlaid with shell and with rock-crystal eyes. There are also fragments of crystal bowls and boxes, a gold-mounted lapis lazuli intaglio, part of a placque, with a griffin seizing a bull, modelled in relief, silver bowls, and jugs, sacred axes, ewers, basins, and a bronze saw—all of wbich Dr. Evans describes as "an epitome of tbe whole later civilization of the Minoan lords." In the south-western extension, opened last year, a stone of "early Minoan" pottery has been dug up. On Mochlos, according to Dr. Evans, an American explorer, Dr. Seager, has found in some tombs a number of works in gold and stone, including a fine bowl of Egyptian workmanship, closely resembling a bowl discovered in the tomb of King Sneferu.

The plan of forming a "monumental zone" in Rome before 1911, the jubilee of the Unification of Italy, is being pushed forward with great energy. According to this project, a large pleasure-ground extending from the Forum and the Palatine to the Porta S. Sebastiano, on the one side, and to the Porta S. Paolo and Circus Maximus on the other, will enclose all the ancient buildings on the site; and all modern buildings in the district will be expropriated and pulled down. The committee which has been appointed to carry out this plan has decided to begin by laying out an avenue 100 metres wide, which will lead from the Church of S. Nereo and Achille to the Palatine, and thence past the Colosseum to the Strada in Miranda. Three smaller avenues, each 50 metres wide, will lead from the main avenue to the three gates, Porta Latina, Porta Metronia, and Porta San Sebastiano. Apart from the improvement which these pleasure grounds will effect in this important part of old Rome, it is hoped that interesting discoveries will be made.

Tbe death is announced of Hugh Hutton Stannus, architect and writer. He was born, in 1840, at Sheffield, Eng., where he began practice as a decorator. He next lectured on architecture and applied art at South Kensington Museum. His principal publication is an elaborate study of "Alfred Stevens and His Work."

Finance.

ADJUSTING RAILWAY EXPENDITURE TO EARNINGS.

The business reaction, now in progress for nearly a year, has had a somewhat unequal effect on various industries. The volume of iron production, as every one knows, has been barely one-half that of a year ago. The United States Steel Corporation's report for the second quarter of 1908 showed shrinkage of 55 per cent. in net earnings. In other lines the falling off in sales appears to have ranged from 25 to 50 per cent. A typical dry-goods enterprise, the Associated Merchants' Company, capitalized at $20,000,000, and owning and operating half a dozen large and long-established department stores in New York, Baltimore, and Buffalo, reported last week, for the six months ending August 1, net earnings smaller by not quite 25 per cent than in the same period last year, and this was generally regarded, in the mercantile trade, as a better showing than other houses could make. In fact, the statement of the H. B. Claflin Company of New York for the first half of the year actually showed receipts to have been $7,000 less than expenses, where the result for the first half of 1907 had been $454,000 surplus profits. In another important trade, metal-refining, the American Smelting Company last week confessed to a decrease of 33 per cent. in net earnings for the fiscal year ending April 30.

It is the railways, however, whose losses have for various reasons been more conspicuous. The most complete compilation of gross receipts of American companies indicates a shrinkage from 1907 of 12½ per cent. in January, 11¾ in February, 13⅜ in March, 18⅞ in April, 22⅝ in May, 17½ in June, and 17⅛ in July—the total falling-off, for the seven-months' period, being no less than $172,000,000. The reasons why more was made of the railways' case than of that of other enterprises were, first, that shares of these companies are more generally lodged in the private investor's hands; second, that the collapse in earnings came at the moment when an enormous increase in debt and charges had been, and was still being, incurred. Some railways confessed insolvency; a few, like the Erie, were saved by advances of capital by the "inside interests." All indulged in a season of futile talk about a general advance in transportation rates for the traffic that was left, and all set to work on the most drastic policy of economy. It was some months before these savings in routine expenditure began to affect the monthly net results—largely because the covert threat of President Roosevelt had blocked the natural expedient of lowering wages. Up to June, the percentage of shrinkage in net earnings was larger than in the gross; the ratio of loss being 30 per cent. in January and 25 per cent. as lately as May, while the net results for the whole first half of the year ran $63,500,000, or nearly 25 per cent. below the same period last year. In June, however, the new economies began to show in figures. As against the 17½ per cent. decrease in June gross earnings, the net declined only 9⅜ per cent. Operating expenses had been cut down 21 per cent.

The July statements, now coming to hand, bear still more noteworthy evidence that expenditure is under control. With a loss of $3,318,000 in gross compared with July of 1907, the Pennsylvania, for instance, reports decrease of only $817,000 in net. The Southern Railway converts a decrease of $642,000 gross into an increase of $413,000 net. It will naturally be asked how this extraordinary reduction in operating expenses was effected. Increased operating efficiency has accomplished something, but the larger saving has been through reduction of maintenance expenditures. The classified statements to the Interstate Commerce Commission show this. Out of the Pennsylvania's cut of $2,500,000 in July operating expenses, compared with 1907, $1,600,000 was saved in maintenance of way and equipment, against $1,475,000 saved in transportation expenses. This is fairly typical; it explains how, in July, operating expenses on the Southern absorbed only 71.3 per cent. of gross earnings, compared with 83.6 last year; on the Atchison 62.3 per cent., against 67 per cent. last

year; on the Baltimore and Ohio, 64.6 per cent., against 69.6.

The answer to the question how long this policy of keeping down maintenance appropriations can continue without serious injury to roadbed and equipment depends on the condition of the plant at the time retrenchments began. A rock-ballasted bed with heavy rails, such as the Pennsylvania's, could easily stand a year of the strictest economies. Other roadbeds, after twelve months of such treatment, would be fairly knocked to pieces. For all of them, the time cannot be far distant when continuance of sharp retrenchment would interfere with the proper running of the railway.

Will business remain slack long enough for this? Railway men have been generally inclined to predict that the "corner was turned" during July. How quickly recovery will come, if it come with the autumn trade, and how soon the lost ground will be retraced, are matters for conjecture. In the panic period of 1893, the heavy drop in railway earnings began in July, and the steady series of decreases was not interrupted until January, 1895. Following the financial depression of 1903, earnings began to show shrinkage in October. There were months of small gains in both gross and net, but the general trend was downward until September, 1904. From that time on, the increase was rapid; before the middle of 1906, the income of transportation lines was running beyond the early figures of 1903.

"Portraits de financiers," by André Liesse, is made up of studies of the decisive action of certain men in France in the great events in which they had a part—of their mind, character, ideas, and opinions, and how they came by them. Ouvrard, Mollien, Gandin, Baron Louis, Corvetto, Laffitte, and Villèle—the men who shaped French life by directing the finances of France from the end of the Directory to King Louis Philippe—are the subjects of these portraits. And they are object-lessons to other not more rapidly changing nations which may be inclined to believe that financiers, like poets, are born and not made by experience. It should be added that the author is a professor of the École des Sciences Politiques, a well-known writer on financial history, and an esteemed disciple of Léon Say.

Insect Stories

By Vernon L. Kellogg, author of American Insects, etc. (*American Nature Series, Diversions from Nature*) Illustrated. $1.50 net.

Primarily for children and certainly for those grown-ups who like to read things discriminatingly to their children—finding all the time something of point of view or suggestion which is more for themselves than for their children.

The Nation: "Places Professor Kellogg in the short list of scientific writers of distinction who can interest the popular mind. . . . vivid narratives of entomological jaunts. . . . The manner of wasps, bees, dragon flies, May flies, spiders, ant-lions, galls, and ants have never been more graphically described. And yet all is accurately told by one who has full knowledge of the facts, as well as the literary temper and touch. . . . No intelligent youth can fail to read it with delight and profit."

NOW READY

Chaucer's England

By G. G. COULTON

With many illustrations. 8vo. $3.50 net.

This book is designed as a picture of Chaucer the man, with a background of the world in which he lived. The age of Edward III. is scarcely less picturesque and important than that of Elizabeth. It is the period of England's greatest military glory, of political, social, and religious progress almost as remarkable. We have for this century an unusually rich mine of materials in the works of Chaucer, Gower, Wycliffe, Froissart, and the last great English chroniclers; and it is hoped that a picture of fourteenth century English life derived from these and similar sources may prove the best handbook to Chaucer's poems.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 17, 1908

The Week.

Mr. Bryan's claim to the heritage of Roosevelt policies is thrown out of court by the only competent judge, Mr. Roosevelt himself. Conrad Kohrs of Helena, Montana, had written to his good friend the President asking about the matter, and the President kindly replies in a reassuring letter of about three columns. Mr. Taft, he says, is "the man who I feel is in an especial sense the representative of all that in which I most believe in political life." Mr. Taft is the "true foe of abuses." "He and I have on every essential point stood in heartiest agreement, shoulder to shoulder." After all this Mr. Bryan must find it rather difficult to pose as the original Roosevelt man. And from the point of view of practical politics there is something to be said for a campaign of more vigorous opposition than Mr. Bryan is making. If the Democratic party really stands for no important principles but those laid down by Mr. Roosevelt, a good many Democrats will frankly say that they prefer Taft. He is obviously firmer and more steady-going than Mr. Bryan. Then, too, the election of Mr. Taft will save us from the disturbance of overturning the Administration. If Mr. Bryan can promise us nothing better than we have had under Roosevelt, or than we should have under Taft, why should any one want to make him President?

When Vermont's vote was unfavorable to the Democrats, Mr. Bryan easily found reasons to prove that it was of no significance. Now that Maine, torn with dissensions over the liquor question, gives the tiny Republican majority of 7,700, Mr. Bryan promptly hails the result as proof of his impending election. It is well to remember, however, that in 1880 the foes of the Republicans actually carried Maine by 189 votes; but in the national election of that year Maine's Republican electors were chosen by 8,633 votes. It is, of course, true that the prohibition issue has figured in other campaigns when the State was an accurate barometer; but this year, as last, when the vote was but a trifle larger, the dissatisfaction with the existing conditions has been uncommonly acute. Nevertheless, Mr. Bryan can draw some encouragement from the figures; and he will doubtless ring every change on the fact that this vote in Maine is nearly 5,000 less than that of 1892, which foretold Mr. Cleveland's second election.

William Van Amberg Sullivan, formerly a United States Senator from Mississippi, began the practice of law in 1875, and definitely ceased the practice of lawfulness last week Tuesday night, when he organized and led a mob which stormed a jail and lynched a negro prisoner. If the press dispatch from Oxford, Miss., quotes Mr. Sullivan correctly, the lynchers' chief deserves no little praise for having put the issue of public murder squarely before his fellow-citizens. Heretofore the lynching problem has been confused—at least speciously—by the unwillingness of individual offenders to confess their participation, and again by their plea, when caught, that they were swept away by "crowd hysteria." Mr. Sullivan will not resort to these cowardly evasions. He is reported to have told newspaper correspondents:

> I led the mob which lynched Nelse Patton, and I'm proud of it. I directed every movement of the mob, and I did everything I could to see that he was lynched. Of course, I wanted him lynched. I saw his body dangling from a tree this morning, and I'm glad of it. When I heard of the horrible crime, I started to work immediately to get a mob. I did all I could to raise one. I roused the mob and directed it to storm the jail. I don't care what investigation is made, or what are the consequences. I am willing to stand them. I wouldn't mind standing the consequences any time for lynching a man who cut a white woman's throat. I will lead a mob in such a case any time.

The State of Mississippi is fortunate in having a bold, honest man relieve its judges of every uncertainty as to the facts, motives, and deliberateness of an atrocious murder. The verdict in the case will tell unequivocally whether the commonwealth prefers mob rule to the reign of law. The country has long been waiting for just such a clear-cut answer as must be forthcoming.

Emperor William's speech of peace at Strasburg, with its sequel in the form of a new crisis over Morocco precipitated by Germany's action, is still fresh in mind. Hence Chancellor Von Bülow's declarations of German good-will towards Great Britain will be received with more skepticism than they deserve. For at bottom Von Bülow's statement is a straightforward formulation of Germany's intention to remain strong while it remains friendly. Fairly little is left to the imagination when the Chancellor says:

> Should other nations, bolder than Germany, challenge the world's sense of right and wrong, Germany would not shrink from the ordeal, though with the certainty that her fleet would be annihilated.

It is obvious, of course, that the only nations capable of annihilating the German fleet are Paraguay and San Marino. So this latest official pronouncement is but the reiteration of the old formula: "Germany wants peace, but with honor." And there is no denying that thirty-seven years of peace in a nation's life is prima facie evidence that she likes it. But why, then, that unfortunate manner, that policy of alternate amiability and bluster, upon which the world has come to base its fear of German intentions? The just and tenacious man, according to Horace, no storms or tyrant's wrath can disturb.

A congress of German Social Democrats without a conflict between the old, orthodox radicalism and some young conservative heresy or other, is nowadays inconceivable. The main subject of contention before the congress which assembled at Nuremberg Monday involves the continuance or abandonment of the hostile attitude hitherto maintained by parliamentary Socialism towards financial legislation on the part of the various German governments. The Socialists in the Imperial Reichstag, as well as in the separate diets, were till recently a unit in refusing to vote the annual government budgets. Regarding itself entirely as a body of protest until such a time as it might conquer the powers of state at one blow, the Social-Democratic party has made a particular virtue of withholding its sanction from a budget which was, from its point of view, inequitably raised, since it pressed heaviest on the working classes; and was inequitably expended, in that it went to support

huge armaments instead of being devoted to the needs of the same working classes. But the poison of compromise which Eduard Bernstein and others have injected into the body of German Socialism has spread. As a result, the Socialist Deputies of Baden and Bavaria, contrary to orders, voted for the government budget at the last session of their respective diets. Their action, apparently destructive of Socialist doctrine and discipline, has aroused violent discussion in the party press, and Bebel, as the champion of the old-established tactics, is to fight it out at Nuremberg with the supporters of this latest apostasy.

Guilty of an "abuse of the right to strike"—this is the decision of a French court which has just sentenced M. Pataud, secretary of the Electricians' Union, to pay a fine for injuring two music-hall performers by calling a strike last June. The strike closed the theatre and the complainants could not perform, hence they sued. To Mr. Gompers and our other American labor leaders this action of the court must seem purely anarchistic. We venture to say that if the decision had been rendered here, Mr. Gompers would be appealing to both parties for a Constitutional amendment declaring that there is no such thing as an abuse of the right to strike. According to the contention of the unions, labor may strike at any time and as often as it pleases, irrespective of how much injury it causes to employers or public, and with this sacred privilege no one shall interfere. In the Paris case the court laid down the principle that the strike was wholly unwarranted, because it was purely sympathetic, or rather an act of revenge because of the killing of strikers at Vigneux by troops who fired upon them. If this decision is sustained by the higher courts, we believe that the "strike of protest" will promptly fall into disuse in France. Towards this reform we Americans have made but little progress.

That the former Danish Cabinet minister, Alberti, who has confessed to the misappropriation of some $2,500,000—an enormous sum for such a little country as Denmark—should have held for seven years the portfolio of justice, only adds to the irony of an incident that reflects no credit on the standards of Danish public life. The dispatches err in saying that until his resignation a few weeks ago Alberti enjoyed an "untarnished reputation." As a matter of fact, his looseness in financial matters has been a matter of public debate for years. The radical wing of his own party has charged him on the floor of Parliament with personal dishonesty and with the manipulation of a highly perfected spoils system. But Alberti's personal following and his influence at court made it impossible for any prime minister to exclude him from the Cabinet. There is a certain broad popularity which politicians may always acquire through the lavish use of stolen money. Such has been the experience of the Italian ex-minister, Nasi, whom a sentence in jail for embezzlement has only confirmed in his position as "uncrowned king" of his native Sicily. In the art of bleeding corporations Europe is, of course, far behind us. Its dishonest politicians are consequently driven to more direct methods of looting.

Like Russia during the famous "forty days of freedom" that followed the constitutional manifesto of October 30, 1905, and like Turkey of the present moment, revolutionary Persia has witnessed a marvellous growth of newspapers and periodicals. A recent dispatch spoke of 300 publications in Teheran alone. This may not be exaggerated, if we include the fugitive broadside which, so a writer in *La Revue* of Paris asserts, has attained exceptional popularity in Persia. These *Shab-nameh*, as they are called, "night-leaflets," are rough circulars, run off on copying presses, in defiance of government censorship, and surreptitiously distributed. Such sheets usually represent the extreme revolutionary position. Of the regular dailies, Teheran, according to our authority, had no less than twenty-four a short time ago. Yet even these more substantial papers appear and disappear with startling rapidity. The reason for such lack of permanence is that few of the Persian journals are carried on for purposes of gain. A number of men having certain opinions in common will contribute to the maintenance of a press organ which they know will sooner empty their purses than fill them. When the contents of the common purse have been emptied, and with them, perhaps, most of the projectors' ideas, the journal is allowed to die. Of trained journalists there are, of course, very few in the country. But who, in revolutionary times, is not qualified to discuss fundamental problems of politics and society at a moment's notice?

When the Minas Geraes, of the Brazilian navy, slipped into the water at Newcastle-on-Tyne last week, the most powerful warship ever built raised a surge whose ripples are stirring all the coasts of Europe and America. Moreover, two sister vessels will also be launched very soon. A few weeks ago some Argentine legislators, panic-stricken at the thought of Brazil as a great naval Power, tried to rush through a stupendous appropriation for Dreadnoughts. The bogey mongers of England and Germany are no less backward in making the most of Brazil's venture. While the radicals of the *Flottenverein* are soberly content to argue that the Fatherland must keep its shipyards busy, even if new Imperial taxes have to be levied, the more expert English shriekers discover terrible complications for John Bull. A recent article in the *Nineteenth Century*, entitled, "Dreadnoughts for Sale or Hire," smears fresh war paint on the face of a favorite old jack-in-the-box:

> These Brazilian Dreadnoughts are of new and ominous significance. And not less so are the Austro-Hungarian ships, which, though not for sale, may be said to be on hire as reinforcement for the navy of a Power with which it is convenient to Austria-Hungary to ally herself. From our point of view, and from that of the Americans and the Italians also, the uncomfortable feature is that for twenty years to come we shall always have to take the Minas Geraes and her sisters into account in estimating our naval needs, even if they should remain for the greater part of that time under the Brazilian flag. When the outbreak of war has become a matter of months, as, for example, it was in September, 1903, the payment of £5,000,000 or so for a reinforcement of three first-class ships will be the merest drop in the bucket of expenditure to be incurred. The stronger Power, even if it does not want the ships, will be compelled to buy them to keep them out of the enemy's hands.

The worst of all this is that it is true, so long as any nation persists in the ruinous game of battleship building.

Sir Oliver Lodge, according to reports published in the newspapers some months ago, is persuaded that messages are received from the dead. The detail-

ed proof on which his belief rests is now published in the *Journal* of the Society for Psychical Research. The excerpts cabled to this country are presumably the most impressive; and though it is not safe to pronounce final judgment on the basis of such brief summaries, we may at least say that Sir Oliver still seems an easy man to convince. The message—through the usual medium—is presumably from Frederic W. H. Myers, author of "Phantasms of the Living" and "Human Personality and Its Survival of Bodily Death." In his lifetime he was an essayist of unusual delicacy of taste and precision of style. John Morley has characterized his work as "distinguished as much by insight as by admirable literary grace and power." As a poet he wrote for the few, but the volume of his collected verse, published in 1882, is certainly not mediocre. Arthur Sidgwick, in the "Dictionary of National Biography," speaks of the "many passages of striking beauty." It is painful, therefore, to ascribe to Mr. Myers these lines:

Friend, while on earth with knowledge slight,
I had the living power to write;
Death tutored now in things of might,
I yearn to you and cannot write.

And this from a man "of rare intellectual gifts, original, acute, and thoughtful"! Had Mr. Myers while still alive foreseen this falling off of his powers, he would surely have preferred that death should end all.

THE RENOMINATION OF GOV. HUGHES.

The renomination of Gov. Hughes must be reckoned as one of the most significant political events of the last quarter century. It is a sheer triumph of naked principle, and as such it must mightily strengthen the forces of good government. On the incidents which have led to this result we cannot dwell in detail, but we may speak of a few of those salient features of Gov. Hughes's career which have rendered him so irresistible.

He belongs to a class whom the crawling politicians have always despised—the highly trained and high-minded professional man; and he was once a college teacher—a member of the very caste that is notable as a breeder of political doctrinaires. When first nominated he had had no experience in the school of practical politics, and the Republican leaders openly sneered at him as a hopeless and helpless amateur. The only thing that recommended him to the voters was his extraordinary skill as a lawyer and his inflexible integrity. These qualities he had displayed so signally in the gas and insurance investigations that the people turned to him instinctively and elected him alone of all the Republican ticket. They did not know whether he had executive ability; their ideas as to his policies were rather vague; but they said: "Here is a man too keen to be hoodwinked, too brave to be browbeaten, too upright to be corrupted. We will try the experiment of choosing him Governor."

That experiment has succeeded beyond all expectation. Gov. Hughes has discharged his duties with an eye single to the welfare of the State. By this course he has inevitably alienated the machine politicians, whose interests are diametrically opposed to those of the public, but he has at the same time won the hearty admiration of the honest and intelligent voters of all parties. He has violated all the precedents set by astute and managing Governors, who have prided themselves on their skill in controlling the Legislature and securing measures dear to their hearts. As the classical example of his method we may take the case of Otto Kelsey, Superintendent of Insurance. When Mr. Hughes recommended that Kelsey be dismissed as incompetent, the friends of Kelsey, in the Senate and out, the professional officeholders from Montauk Point to Buffalo, rallied to resist the assault upon their sacred order. Gov. Hughes then held in his hand a whip that might have brought them all to heel. Had he chosen to play the game as Gov. Hill played it, or Gov. Roosevelt or Gov. Odell, he might easily have driven Senator Raines and the other adherents of Kelsey into line. Some of the advisers of Mr. Hughes pointed out that the threat of a few removals in the various departments and commissions and of half a dozen vetoes judiciously distributed would make him absolute master of his petty opponents. But he replied in effect that the use of patronage or of the veto power to compass such aims was contrary to the fundamental theory of democratic government; and that the issue should be the bare merits of his cause, uncomplicated by other considerations. The Senators, of course, took advantage of this idealism, and, secure from flank attack, voted for Kelsey. But that apparent defeat for the Governor was really one of his substantial victories. He had convincingly demonstrated his inflexible devotion to principle. He would not sacrifice it to immediate ends, however desirable they might seem. Thus it is that from the day when the Senate first rejected the charges against Kelsey the Governor has been the trusted champion of the people against the hirelings of the machine. Again and again he has appealed from the legislators to their constituents. We need not enumerate his achievements—the passage of the most important laws which he has urged, and the outcome of the two special sessions in which, backed by the whole electorate, he has beaten the corruptionists and forced the Legislature to do the right. This record of solid results is almost unmatched in our political annals.

More striking still is the submission of the Republican Convention at Saratoga. Mr. Hughes had not intended to run for Governor a second time, because, not being a rich man, he can ill afford to surrender the income from his practice. But he was strongly urged by the better element of his party, and he himself wished to complete his plans of reform, and in particular to secure the enactment of a direct primary law which should break the power of the bosses. Naturally, Timothy L. Woodruff, Herbert Parsons, William L. Ward, William Barnes, jr., Francis Hendricks, J. Sloat Fassett, and their kind have been bitterly hostile. In the State Committee Mr. Hughes could hardly have mustered five votes. Then, too, he is not a personal favorite of the President; for when Mr. Roosevelt ostentatiously demanded the resignation of a Federal official who worked for Kelsey, Mr. Hughes coldly let it be understood that he did not desire to have the Federal patronage, any more than that of the State, prostituted even for a commendable purpose. But the politicians of all classes, from the President down, have been compelled to swallow their grudges. They have discovered that Mr. Hughes is the one man who enjoys such popular confidence that he can command the independent vote, carry the State, and by his immense

BERLIN PUBLIC LIB.

prestige strengthen the national ticket not only in New York, but also in the West.

And the secret of this extraordinary ascendancy has been a combination of high intelligence and rigid adherence to principle. Others have made louder professions of virtue; none have surpassed him in actual performance. Most of our politicians, consciously or unconsciously, still follow the old rule that to be practical is to be base. Their belief is exactly that which Lord Morley, in his last volume of "Miscellanies," ascribes to Machiavelli—"that the application of moral standards to this business is as little to the point as it would be in the navigation of a ship." But the mass of our citizens, who have no selfish interest in maintaining bad laws or serving a party machine, are ready to uphold the cause of morality whenever the issue is fairly presented. For they are convinced that the ethical factors which the politicians are so prone to discard, are, to quote Morley again, "nothing less than the living forces by which societies subsist and governments are strong."

THE OLD BRYAN AND THE NEW.

Mr. Taft, we are glad to see, has trained his guns on the real point of attack opened up by the candidacy of Mr. Bryan. There has been a surprising disposition, among many sincere persons who detested the favorite "Bryan doctrines" of 1896 and 1900, to pass a sponge over that part of Mr. Bryan's political history, and accept him now at his own valuation, as if he were an entirely different man from the candidate of eight or twelve years ago. Every reader of this article must have heard from his own acquaintance the argument that Bryan has "broadened" since 1896; that he has "seen the world"; that he has "grown safe"; that, in short, he is a "new Bryan."

Now we submit that a public man who appeals for votes on the tacit understanding that his past is buried, owes something more to the voter than a refusal to mention his own vagaries of a few years ago. History supplies abundant instances of statesmen who have broken with their political past, and have invited public support from quarters where their earlier policies had been bitterly opposed. But if memory does not fail us, the really great occasions when such acceptance of new policies has appealed to the electorate have been marked by recantation. The public is lenient with a man who frankly declares that he was wrong in his old opinions, and that he now sees the light. Sir Robert Peel, transformed from a protectionist into the leader of the Corn Law movement, announced in Parliament that he had been mistaken in the past, and that his former foes had convinced him of his error, and the English voter sustained him at the polls. Mr. McKinley, an old-time advocate of the free coinage of silver, tried for a week or two in 1896 the plan of saying nothing on the question, until it was pretty plain that, as matters stood, his fight was lost. It was not until he openly repudiated the doctrines for which his earlier votes were cast, declared his firm adherence to the gold standard, and gave his reasons, that sentiment moved to his side. Mr. Gladstone, who perhaps, in his long career, maintained more conflicting policies than any statesman of our day, had invariably the courage of his new convictions, and never hesitated to declare, in the face of angry or jeering criticism, that his belief had changed, and why.

Such a course was quite as open to Mr. Bryan as to the other men we have mentioned. He either believes to-day in the free coinage of silver, or he does not; he either believes in government ownership of railways, or he does not; he either believes in replacing bank-note currency by government paper issues, or he does not. At one time or another, in the course of what Mr. Taft justly described as a "twelve years' hunt for an issue on which he can be elected President," Mr. Bryan has proclaimed adherence to every one of these economic theories. There is not one of them which may not, under conceivable circumstances, become an issue in the near or distant future. How does Mr. Bryan stand in regard to them to-day? He refuses to tell us. He is "bound by the platform," and, as he gravely remarked in his letter of acceptance, "a platform is binding as to what it omits, as well as to what it contains."

We have been asked, on what grounds, as political reformers and tariff reformers, we can fairly refuse support to Mr. Bryan. Our answer from the start has been that, if one is to judge the candidate—as candidates, in default of public recantation, must in all reason be judged—by his own record, Mr. Bryan is a wholly unsafe and untrustworthy political reformer; and that his present warm advocacy of tariff reform is for the purpose of this particular campaign. Mr. Bryan's career has been in the main made up of ardent propaganda for half a dozen propositions, most of which now stand condemned by the course of events and the judgment of the world. By no sign or word has he abandoned them; in regard to every one of them, he stands obstinate, silent, and apparently unrepentant.

This being so, it must be manifest that the vote cast next November for the "new Bryan" is also cast for the old Bryan. The case is in reality no different from that of 1900, except that the Populist nomination, which Mr. Bryan deemed it advantageous to solicit, forced him to speak on some things regarding which he is now dumb. It was, if we remember rightly, a "new Bryan" whom we were invited to inspect in 1900—possibly not so "new" as the Bryan of 1908, but still a "broadened" statesman. The Populists, however, found a way to extort from him comment on inconvenient issues; and the new Bryan had to tell them, in his letter of acceptance, that, although the campaign "for the immediate restoration of silver by the independent action of this country at 16 to 1" was defeated in 1896, "that did not end the discussion"; and that "there will be time enough to discuss the redeemability of the greenback when the greenback itself is saved from the annihilation which now threatens it." We seem also to remember an attempt to talk silver in the West, during that last campaign of Mr. Bryan, and to talk anything but silver in the East. Here, we were treated to the candidate's belief that the reason the standing army was increased "is to build a fort in this city and use the army to suppress by force the discontent which ought to be cured by legislation"; that investors in German treasury bonds should be denounced because they did not invest in Illinois lands instead, and that a President was recreant to his trust who "sends messages of condolence on the death of kings, but has none to send on the death of two republics." For Mr. Bryan's own sake, we heartily share the hope that he has "broadened" since those days of trans-

parent demagogy and nonsense; but we suspect that there is opportunity for a good deal more broadening, not least in the line of honest statement of his own beliefs and purposes, before his canvass will rightly commend itself to thoughtful citizens.

THE "COMMODITIES CLAUSE."

The decision of the Federal Circuit Court, declaring unconstitutional the famous "commodities clause" of the Hepburn Railway Act of 1906, is in some respects limited in scope, in others very sweeping. This clause forbade railways to carry across the border of a State any commodity manufactured, mined, or produced, directly or indirectly, by the railway, excepting timber and timber products, and articles necessary for the use of the railway in its ordinary operation. It was understood by every one, during the Congressional debate upon the bill, that this restrictive provision was primarily aimed at the "coal roads," and these carriers accepted the challenge and carried the case into court. The Reading Railway, for example, owns and operates through a subsidiary company upwards of 90,000 acres of productive anthracite mining property. The Lehigh Valley Railroad owns or leases in perpetuity some 17,000 acres of similar lands, and earned $15,000,000 from their output in 1907. The Lackawanna, the Pennsylvania, the Delaware and Hudson, the Erie, and the Jersey Central are similarly engaged in the mining and transportation of coal from their own properties.

In drafting the "commodities clause" two points were kept in mind. One was that the railway companies had been long engaged in coal mining, under the sanction of State charters. The other was that the several companies were believed, on pretty strong evidence, to have formed a quiet combination, through which the price of their product could be maintained, or, if desired, advanced. The railway holdings of anthracite mining property made up so large a proportion of the total of such lands in operation that the railways were easily able to control the market. It was this condition which the Hepburn Act, through its "commodities clause," undertook to alter. Were that clause to remain in force, the companies would have to dispose of their coal lands. Transfer of the property to independent companies, capitalized by the existing owners of the railways, was the recourse generally expected.

The railway companies, however, contested the law on the main ground that the powers of the Federal government were being used to destroy a business in which the companies had long engaged with the full permission of the State authorities, in which much capital was invested and in which there was nothing criminal, immoral, or dangerous to the public welfare. On these contentions the majority of the Circuit Court strongly upholds the position of the companies. Judge George Gray sums up in these words the state of affairs created, in his view, by the commodities clause as applied to railways which had enjoyed the mining privileges before the law was passed:

> To these defendants, thus innocently and lawfully engaged in transporting coal which they own, or are interested in to the extent and under the circumstances hereinbefore set forth, comes this act of Congress and declares that this whole business is unlawful, and that the future exercise of a vested right of ownership, which they have heretofore and for long periods of years enjoyed, under the belief that it was an ordinary right of property enjoyed innocently by all citizens of the State alike, and inviolable as such, is a crime, and punishable as such.

And his conclusion is:

> The enactment in question is not a regulation of commerce within the proper meaning of these words, as used in the commerce clause of the Constitution, and therefore not within the power granted by that clause.

This seems to be sound law, regardless of the question whether the companies have or have not used their advantage as coal miners and carriers for the purpose of restraining trade. Judge Gray is careful to point out—indeed, it is an essential part of his reasoning—that if the laws of State or nation, applying to restraint of trade, are violated by these companies, there is a remedy in the penalties prescribed by those laws, without recourse to a dangerously strained construction of the Federal government's authority to regulate commerce between the States.

Judge Gray's opinion is specifically limited to the case of the railway companies before the court, all of which had been engaged in the mining industry before the Hepburn Law was passed. The judges, he states, "intimate no opinion either way as to cases where property has been acquired by the carriers subsequent to the passage of the act." This is why we said to begin with that the scope of the decision is limited. Yet it cannot be denied, by any one who observes with care the language and reasoning of the decision both of Judge Gray and of his associate, Judge G. M. Dallas, that the opinion leans against the constitutionality of the "commodities clause" in all its aspects. Nothing could be much stronger than Judge Gray's declaration that, "from every point of view from which we have been able to approach the question, the unreasonableness and consequent invalidity of this so-called 'commodities clause' is apparent," unless it be Judge Dallas's comment:

> The achievement of no presently desired end, however salutary, can justify the infraction of our fundamental law or warrant its perversion by insidious construction.

The Federal Supreme Court has yet to pass upon the question, but it is not too early to point out at least one moral of the incident—that which concerns the hit-or-miss attempts of the recent Congress to reach a given end, regardless of the means employed. No one will deny that for many reasons it is undesirable for a common carrier to be engaged in mining or manufacturing; and yet, granted all that, such assertion of the fundamental restrictions of the Constitution as the Circuit Court has just made is of the greatest value in its proof that property and private rights still have an anchor against the momentary whim of a legislature or executive. That the courts will uphold the government in a legitimate effort to abate the perils of capital and monopoly run wild, the Northern Securities decisions are sufficient witness. What we are learning now is, that the courts will not permit the legislative branch of government to overstep the bounds of its constitutional authority, even to accomplish what may be a genuine reform.

THE FIGHT AGAINST CANNON.

Close on the heels of Mr. Gompers's attack upon Speaker Cannon in his own home town, Danville, Ill., on Labor Day, comes news that the legislative committee of the Temperance Society of the Methodist Church will endeavor to prevent the Speaker's return by combating him in his own district. Mr. Cannon is reported to have gazed with lacklustre

eyes upon the labor-union procession as it passed in front of his house, and to have spent the day peacefully on his piazza, as if the head of organized labor were not berating him a few blocks away. Beyond doubt, a single speech of Mr. Gompers does not make a political summer—or fall. His attempt to punish Congressman Littlefield, for example, two years ago ended very disastrously. Mr. Bryan's retort upon Cannon may rob him of more votes than anything Mr. Gompers could say; for Mr. Cannon has not yet answered those searching questions: 'What has he been selling? To whom has he sold it? How much did he get for it? Moreover, people have not forgotten that in the House of Representatives on August 28, 1890, he was guilty of speech so foul as to be unprintable. That outburst interrupted his career by a defeat for a single term. This autumn the Democrats, who have an excellent candidate in Henry C. Bell, profess to entertain hopes of repeating their success of eighteen years ago. It must be admitted, however, that, despite the possible alienation of the labor vote and the Methodist vote, despite profanity, coarseness, and "reactionary" tendencies, Mr. Cannon is still very popular among his constituents. Illinois seems to be proud of "Uncle Joe." His long service in Washington was recognized by the action of the Republican State Convention in electing him chairman last week.

Outside of his own district and State some political straws are blowing which may give the Speaker concern. There is a growing number of persons who believe with Mr. Gompers that the Speaker "is the worst enemy of economic, social, and political reform that the people have." In Wisconsin, for instance, under Senator La Follette's guidance, the voters feel rather strongly about Mr. Cannon. In the Republican primary on September 1 the fact that Representative John J. Jenkins was one of Cannon's most trusted lieutenants resulted in his defeat by La Follette's disciple, Irvine L. Lenroot. The opponents of Mr. Jenkins had no trouble in showing that, as chairman of the House Judiciary Committee, he has stood as an impassable barrier against some of Mr. Roosevelt's proposed measures. Whether the desired legislation was good or bad; whether Mr. Jenkins's conservatism was justified or not, were irrelevant questions. It was enough to say that Mr. Jenkins was opposed to the will of the majority in Congress, and that Cannon backed him in holding up one bill after another because of its unconstitutionality—and Mr. Jenkins's long career in Congress is at an end. In Kansas, they have an even greater grudge against the Speaker, whose picture as a reactionary and an enemy of the all-wise President is portrayed in glaring colors. Joseph L. Bristow, lately nominated for the Senate, took occasion to announce that he had nothing in common with the Speaker; and at least one Congressman-elect achieved success by pledging himself, if sent to Washington, to rebel against the Cannon ring.

In addition to these assaults from within his own party, the great Methodist Church is actively at work against the Speaker, not merely in his own district, but throughout various parts of the West. In Nebraska, for example, every Methodist pastor has, according to newspaper reports, received a circular letter which he is asked to read from his pulpit before election day. It censures Mr. Cannon for his opposition to the proposed amendment to the Interstate Commerce law, drawn to stop the delivery of alcoholic liquors in prohibition localities and States. Both Mr. Jenkins and Mr. Cannon were against the measure on the ground that it was unconstitutional; but this argument is denounced as a subterfuge, and all good Nebraska Methodists are urged to choose only Congressmen who will promise to vote against Mr. Cannon's reëlection as Speaker. In other States similar campaigns are under way; and, as is well known, the Methodists possess enormous influence.

That the new and militant Republicanism now coming out of the West should be opposing Mr. Cannon is but logical. It is useless to elect "new-idea" Congressmen and Senators if all their fine proposals can be choked off by a single arbitrary personage who is impervious to reason, indifferent to attacks upon himself, and apparently secure in office for life. Thirty Senators of the "advanced" type are now reported as ready to attack the Cannon-Aldrich combination, and no doubt they can accomplish much if they, or even a few of them, earnestly essay the task of freeing Congress from the corporation control represented by the respective managers of the two houses. But "Uncle Joe," who has been dubbed the "most persistent, unimaginative, lovable, racy, and virile of American politicians," can be deprived of the Speakership only by the pressure of constituencies upon their Congressmen. He has so remarkable a hold on the affections of those who have sat under him that if the Republicans in Congress had had a free hand to nominate their candidate for the Presidency, the honor would have gone to Mr. Cannon.

One of the first problems Mr. Taft will have to face, if elected, will be his attitude toward the dictator of the House. In a speech last week he again emphatically avowed his intention of "clinching the Roosevelt policies." He cannot begin unless Mr. Cannon permits. That eminent "standpatter" and life-long opponent of the merit system in the civil service has come to see, with Sereno E. Payne and other high-priests of protection, the handwriting on the wall, and has consented to a revision of the tariff—by himself, Mr. Payne, Mr. Dalzell, and a few other devotees of the Dingley schedules. "We cannot escape from the fact that it was no credit to the Republican party of the House that Mr. Cannon of Illinois should be one of its leaders," said Theodore Roosevelt on March 6, 1891; and the statement is even truer now than then. To believe this, one does not need to be a Republican, or even a believer in the Roosevelt policies. One can recognize that the Speaker has often been a useful brake upon unwise legislation, and yet ardently wish for a new Speaker who is less of a Czar and who has more respect for the decencies of life and the aspirations of the people.

THE CATHOLIC CHURCH AND POLITICS.

In spite of Marconi, Wright, and Delagrange, we are reminded now and then that the world does not move so fast after all. To hear that Protestant England was much stirred by the prospect of the Catholic Host being carried through the streets of London, that this feature of the procession was virtually forbidden, and that even then the mob hooted the marching clergy—to hear this is to catch an echo from bygone centuries. Catholicism in England labors under no official threats. Catholic prelates may

openly express hope that the kingdom will yet return to the Roman fold, and they may work to that end within the legitimate sphere of missionary propaganda. But even the moderate London press was afraid that the public veneration of the Eucharist might rouse the "latent fanaticism" of London's Protestant masses. When such latent fanaticism is a disgrace both to its country and its age, it is a question whether it were not best to rouse it and dispose of it once for all. In any case, it remains a striking anomaly that Great Britain, the home of representative government, should cling to a policy of petty distrust of a large section of her people, and make her King subscribe to a coronation oath that outrages the religious feelings of 6,000,000 of his subjects in the United Kingdom.

Even in this land of toleration we are, to a certain extent, in no position to throw stones. It is not so long ago that many of us were quite sure that the Catholics were drilling at night in preparation for another St. Bartholomew. Yet it would be unfair to say that all anti-Catholic feeling in this country or in Europe is based on such mad survivals of seventeenth-century bigotry. In politics we do not now believe with the subjects of William III. of England that Rome upholds the "damnable doctrine and position that princes excommunicated or deprived by the Pope, or any authority of the See of Rome, may be deposed or murdered by their subjects or any other whatsoever." But we do speak nowadays of progress and reaction. And in many quarters the question is raised whether the Catholic Church stands for reaction or for progress in political and social life. In this country the question has been answered in favor of the Church. There are, to be sure, people who still profess fear of its unrivalled organization and discipline, but Methodists have little to learn from Roman Catholics in making their political influence felt. The point is that the Church has not tied up its fortunes with any one political party. Its organization and discipline are undoubtedly employed for its own interests, but people in general do not believe that such interests have wrought harm to the principles of democratic government.

Has England, therefore, any reason to fear the Catholics? The wisdom of the leaders of Catholicism may be depended upon to recognize that an alliance with the forces of reaction must prove in the end fatal to their cause. The recent history of the Church in France, as contrasted with its fortunes in other countries of Europe, offers a valuable object-lesson. In France, there can be little doubt that the Church was enlisted on the side of reaction, as we look upon it. The Third Republic never had the warm sympathies of Rome. Catholic Deputy was synonymous, and is still largely synonymous, with Orleanist Deputy, or Bonapartist, or Legitimist. In the Catholic schools there was certainly no excess of zeal in preaching loyalty to the republican régime. What the outcome has been, the world, and the Church, too, to its cost, knows. If the French government, as Rome asserts, has fallen into the hands of Freemasons and unbelievers, it is because the Church supplied its enemies with a powerful weapon against itself. In the height of the Dreyfus crisis, Waldeck-Rousseau formed his ministry of "republican concentration." Waldeck-Rousseau was no enemy of the Church, but in self-defence he was driven to enact the celebrated Associations Law of 1901, which his successor Combes was to develop into an entire code of anti-clerical legislation. Was Combes a persecutor? It may be. But the Church had been too badly tarred with the brush of anti-republicanism to expect fair treatment at the hands of men who came into power on an anti-Catholic wave. And France, whatever changes may have come over her feeling for Catholicism as a religion since the Separation Law, still dwells in mistrust of the Church militant. An appeal to the sentiment against Rome is still good for large Radical majorities.

Crippled for years to come as a political force in France, because of its reactionary tendences; an unimportant factor in Italian politics, because of its sulky refusal to compromise with national sentiment; compelled to witness in Spain the growth of Freemasonic and infidel influence, because of its opposition to progressive legislation, the Church holds a commanding position in politics in precisely those countries where it has allied itself with the cause of political and social progress. The German Centre party, the most powerful party in the empire, does not owe its prestige solely to Catholic discipline and organization. The Centre, however, has supported remedial legislation for the working classes, has organized unions of its own to combat the Socialists, has been heard in protest against colonial misgovernment and inflated militarism—has pursued its interests, in other words, by a policy which recognizes that the modern world moves towards greater democracy, and not away from it. So in the Austrian Parliament the Catholics are strong, not through the ultra-montanists who, by their silly attempts at thwarting free speech in the universities, only strengthen opposition, but through the Christian Socialists, who, with all their faults, have the common sense to recognize that Catholicism will not thrive by puling back towards mediævalism. Where the Catholic Church has interpreted its rôle as a conservative force to mean a wise conservatism that knows the signs of the times, it has prospered. Where it sets itself definitely against progress, it takes perilous chances.

A MOHAMMEDAN RENAISSANCE.

The problems that await the new régime in Turkey take on deeper significance when we bring them into connection with what is going on in Persia, in Morocco, in Egypt, and among the Mohammedan population of India. In view of the fact that nearly all of Islam is now astir with the forces of change, the question becomes not so much whether Turkey specifically or Persia specifically can adapt itself to the civilization and governmental institutions of the West, but whether the peoples of the Koran as a whole possess that fitness for progress in the Western sense which we have hitherto been inclined to deny them. We have denied them the essential qualifications for democracy because they are Orientals, and because they are Moslems. The East has hitherto meant immobility; the followers of the Prophet have been trained into unquestioning obedience. How, then, can we reconcile absolute quiescence and acquiescence with the bustle and self-assertion which is Western culture? But concerning the immobility of the Orient we have been of late vastly enlightened. Are we destined to be undeceived on the second point? Events point that way. The manner in which the Young Turks

speak of Abdul-Hamid shows no particular reverence for one who still remains the Commander of the Faithful. Morocco exchanged one Sultan for another when it grew dissatisfied with the first. The East, after all, is human, and when elemental human needs come into conflict with absolute power, the latter will yield in the Orient as it does elsewhere.

Is, then, a progressive Islam probable? In *Le Figaro* the Italian historian, Guglielmo Ferrero, argues, *a priori*, that it is. If some thinker of the ancient world, Aristotle, for instance, were to come back to earth and were asked what he thought of the Turks, he would probably reply that of all the European peoples, the Turks seemed to him most deserving of liberty and best fitted to attain it. The old writers always maintained that liberty, or self-government based on elective principles, was possible only among a people of simple manners, moderate wealth, and a spirit of national conservatism strong enough to resist the disintegrating influence of foreign ideas. These essential virtues, says Ferrero, you find pre-eminent among the Turkish population:

> All those who know the real Turk, unspoiled and uncorrupted by the cosmopolitan and huckster atmosphere of Constantinople, have lauded his simplicity, his austere habits, his honesty, his sane regard for tradition and family. Yet those very qualities are now made the basis of European skepticism as to the future of the new Ottoman constitution. Nowadays we hold that liberty is impossible in a land where industry is undeveloped, where the railways and banks are under European management, and the low state of general culture makes the penetration of new ideas extremely difficult.

But Ferrero insists that, in view of the general *malaise* that besets civilized society, in view of the growing conviction that parliamentary institutions and representative government in general are being swamped by the vast complexity of modern life, Turkey may yet render service to the world by solving the problem of combining liberty with simplicity and content.

Such speculation, however, is no more than speculation. We cannot think of progress in the Mohammedan world as moving in other paths than those Europe has trod before. So eminent an authority as Prof. Arminius Vambéry goes much farther. He maintains that the Mohammedan peoples can work out their salvation only under European guidance. "The thing that has harmed Islam, *i. e.*, that has made it stand still and retrograde"—we quote Vambéry's "Western Culture in Eastern Lands"—"was not the spirit of its doctrine, but the tyrannical caprice of its princes." And again:

> It is due to the boundless tyranny of the Moslem rulers alone that the people of Asia have so far not attained liberty of thought. . . . The still independent Moslem countries will sooner or later have to buy their moral and material union with modern culture at the cost of their political independence, and the transit from one culture to another will have to be accomplished under foreign rule.

But Vambéry wrote this about three years ago, before the present stirring in the Mohammedan world had strongly manifested itself. Egypt was just beginning its vehement National agitation; the Mohammedans of India were quiet; above all, Persia and Turkey had not shown that constitutionalism is possible in an independent Moslem nation. As the world stands at present, it would appear that not even Morocco will have to lose its body of independence to gain the soul of Western culture. But though European domination may be avoided, European influence must play a leading rôle in the rejuvenation of Islam. In spite of Ferrero, the people of Turkey, to gain their liberty, must render themselves susceptible to foreign ideas. It was Japan's victory over Russia, and the influence of the revolution within Russia, that hastened the overturn in Persia. In Morocco Mulai Hafid may owe his elevation to his anti-foreign policy, but in the end European influence must establish itself in the last refuge of militant Islam. Turkey is fortunate in that her ruling classes are so largely Europeanized, but more in the fact that within the walls of her Parliament Christian will meet Moslem and supply that Giaour stimulus and guidance which Islam must have if it is to become a vital factor of modern life.

AN EDUCATIONAL PARADOX.

A European would be put to his wit's ends by the recent Chicago dispatch announcing that a professor of philosophy is about to exchange his university chair for one in a theological seminary, in order to enjoy greater academic freedom. "America is more topsy-turvy than China!" the bewildered foreigner might ejaculate. "A university is the very citadel of intellectual liberty; a theological school, dogma's safest stronghold." Reference to catalogues would not clear his mind. The university in question declares that it "was not established with a view of forcing on the attention of students the creed of any particular church, but for the promotion of learning under influences conducive to the formation of manly Christian character." Its charter "carefully provides that no particular religious faith shall be required of those who become students at the institution." Surely, then, if students are not to be reminded of any doctrine, their instructors cannot be expected to insinuate one into their professional utterances. In the seminary, on the other hand, teachers and learners are supposed to accept at least the broader Christian dogmas and to centre their studies about them. Can the European, noting such facts at long range, be blamed for distrusting the whole story? The paradox may well confuse even our own countrymen who have not been following contemporary tendencies in school and church. Prof. George A. Coe's reported difficulties with the Methodists at Northwestern University, and his acceptance of a chair at Union Theological Seminary, are anomalous products of two conflicting movements in the educational and religious worlds—movements which may, in the course of years, lead to still more curious situations.

The transfer of Andover Theological Seminary to Cambridge, and the approaching shift of Union Theological Seminary to Morningside Heights, in this city, reflect a yearning for university affiliations, born partly of intellectual discontent and partly of necessity. Unlike the college freshman, many theological professors and most theological students have felt the power of modern science and thought, and the weakness of dogmatics, apologetics, and Hebrew grammar as defenders of their faith. Not long ago, one of the largest seminaries in the country was peremptorily ordered by its students to modernize its curriculum; and, on every hand, the demand is being made that religious opinions be left to individuals, and that the seminary teach biology, psychology, history, ethics, hygiene, and social reform. The result, at this hour, is incongruous in the extreme. While one element in the universities is crying, "Let the seminaries come to us, that we may be spiritualized!" theologi-

cal students ask for a chemical laboratory that they may be trained in modern scientific method. But the incongruity is, after all, natural. The forces of intellectual conservatism reside in the masses; they make themselves felt most acutely in the ordinary college simply because the latter is the meeting-place of culture and the Average Man. In the seminary, though, and particularly in those which have lived through an open controversy between dogma and liberalism, a handful of cultivated churchmen, half secluded and full of doubts, are seeking to square their beliefs with modern knowledge and their practices with the needs of modern life Their own perplexities and their remoteness from the unschooled laity make them liberals. No wonder, then, that a training school for Protestant ministers may welcome a philosopher obnoxious to a nominally unsectarian university.

One of these movements appears in colleges, the other in theological schools. The former, especially marked through the Middle West, has for its goal the evangelizing of the students and the creation of a "religious atmosphere" in the school. While some of the power behind this agitation is drawn from the excellent desire to improve college morals, much of it is a sharp reaction of the religious masses against the anti-dogmatic attitude of faculty members. For all his lip enthusiasm over religious and academic freedom, the ordinary church member is still prone to identify his own creed with ultimate truth, and thence to infer that professors traversing it are neither truly religious nor well informed. This reaction gathers strength through the most democratic features of our higher educational system—the admission of the "plain people" to college, and the faculty's meek deference to the opinion of sophomores, their papas, the ministers of the town, and, in the case of State universities, the politicians in the Legislature. When the child of some orthodox villager enters his freshman classroom, he begins to hear things which rudely disturb his literal belief in his creed; but he may seek peace in his own sect's "student league," which generally is under the patronage of some venerable professor. The organization is aided by funds drawn from many a little congregation anxious about the welfare of its boys and girls. Teachers are even engaged to give courses and public lectures calculated to offset the pernicious theories officially voiced on the campus. And, in more than one great Middle Western university, instructors have been openly attacked and their retirement sought. In spite of a growing academic solidarity and the spread of liberal ideas, such college denomination societies are not decreasing in number and aggressiveness even in non-sectarian institutions. A strong effort is being made to group theological schools about State universities, a result already accomplished in California. And the effort may soon succeed, thanks to a radically different trend in theological circles. This movement is the second of the two which make Professor Coe's case paradoxical.

Both parties to the paradox are inconsistent: a school which imposes no creed upon its students and professes to teach science honestly cannot rationally "make it uncomfortable" for an investigator who takes an un-Methodist view of religious conversion; neither can a theological seminary keep within the letter of the law if it promulgate facts at variance with its creed. But consistency is a lesser virtue than progress; and because the two conflicting movements are helping to bring about a better order, we cannot censure either side for its broken word. The liberalism of theologians will some day deliver the Church from empty formulas. The zeal of students' religious organizations, while sometimes harassing teachers and awakening fanaticism, will serve to diffuse the very knowledge which is now anathema and press home to college faculties their neglected responsibility for the moral education of the undergraduate. In return for this latter service, we may well afford to view tolerantly the excesses of young bigots and old.

COLLEGES AND DEMOCRACY.

With the opening of college, the "rushing" of freshmen for the Greek letter fraternities begins, and again begins the endless discussion of the ill effect of such societies in a democratic institution. The subject has even attracted the attention of foreign observers. For example, the "occasional correspondent" who has been writing an interesting series of letters from America to the London *Times*, has recently presented his views under the caption "Colleges and Democracy." After pointing out the tendency of fraternities "to emphasize social distinctions and foster cliques," he asserts that American universities are less democratic than the German, and that the greatest need in our schools of higher learning "is a purer and better democracy in which there shall be neither need nor place for the present social organizations and combinations which reproduce the class distinctions based chiefly on wealth which are arising in all parts of the country." The "occasional correspondent" maintains that the fraternities "have increased in number and strength, in spite of persistent opposition, because the colleges have failed to make proper provision for the social life of the students." He then mentions various attempts to deal with the problem, such as President Wilson's proposal for quadrangles at Princeton.

The evils of which the Englishman complains are patent; they cry aloud for remedy. Yet we are not in the least helped by confusing our terminology or ignoring underlying facts. Men frequently assume, for example, as does the writer in the London *Times*, that the theory of democracy, or of political equality, implies also social equality or equivalence. This notion, which crops up in one form or another every day, is wholly fallacious. The bootblack and his patron are political equals, but they are not social equals, unless their tastes, habits, and characters fit them to enjoy each other's society. In intelligence and breeding the bootblack may be far superior to the millionaire who tosses him a dime, and in that case the two men are plainly enough socially unequal—or dissimilar, which in practice amounts to the same thing. The Southern whites, in particular, have suffered from this fallacy of social equality. They constantly talk as if giving the ballot to the negro would make him a social equal; but nothing will make the white man and the black social equals except the common possession of such qualities as make two white men social equals. The white street-sweeper, who can vote, does not invariably marry the mayor's daughter. The confusion of our ideas is due in part to the fact that we have no official grades of society, in part to the fact that in many places, especially in the rural districts, social equality has chanced to accompany po-

litical equality. In a community where men are neither rich nor poor, neither highly educated nor very ignorant, where the population is homogeneous, social equality is inevitable. But diversification of industries, and that growth of wealth which produces wide differences of education, aptitude, and mode of life, are certain to break a town or city into social sets. This cleavage appears in the college, just as it appears in the church. Boys, like their parents, prefer to associate with those whose point of view and whose inclinations make them agreeable companions.

The distinctions are doubtless becoming sharper, especially in the big colleges. Large groups of men fall apart of their own weight, and this tendency is hastened by the very range of interest and talent that a great university attracts. The quiet, refined youth, no matter how much money he can spend, will not make his friends among the rich vulgarians. Birds of a feather will always flock together. Moreover, it is not unnatural that our colleges should be in some respects less democratic than the German. Through the public schools we draw from every stratum of our population, but from many German universities the sons of workmen are excluded, and by this very provision a certain class unity is at once established within the cloister. Nor can we say that in American colleges a common intellectual ambition must form a basis for social equality. Many of the students have no intellectual ambition whatever, and there is but small meeting-ground between them and the men who care for books. The forces, then, that tend to separate our American students into cliques are numerous and potent. The roots of this disintegration strike deep into the structure of human nature and the whole complex of our American life; and the Greek letter fraternity may often be nothing more than an outward, superficial sign of a movement that originates far below the surface.

Admitting all this, we cannot deny that in many colleges—perhaps in all—the secret societies magnify distinctions which might better be minimized, and even create divisions where none might otherwise exist. The students who follow their bent and confine their acquaintance to a narrow circle lose much that college might give them; and any agency which confirms them in this unhappy way is in so far forth destructive of the ends of liberal education. We doubt, however, whether the crushing out of the fraternities by sheer force will carry us very far toward the desired goal; for the underlying causes, which will still remain beyond reach, may easily produce other, and possibly more objectionable forms of social distinction. So far as our observation goes, one of the most effective methods of combating a spirit of petty exclusiveness is to establish such large student clubs as exist at the University of Pennsylvania, at Harvard, Brown, and elsewhere. The Harvard Union and kindred organizations provide a social centre where boys are steadily reminded that good manners, intelligence, and character are closer bonds than knowledge of some silly secret or possession of a curiously shaped pin.

THE "NOVELIZED" PLAY.

For many years our novelists have been having things their own way. The best-seller has been turned into a play to swell still further the superabundant popularity and profits. This was taking the bread out of the mouth of the professional playwright, but ours is no age of sentiment. The unfit cannot survive, and the man who thought that writing for the stage meant practising more or less the methods employed by Shakespeare, Molière, and Sardou, sat confuted when the muse of comedy in two continents assumed, for any number of hundreds of nights, the aspects of "Mrs. Wiggs of the Cabbage Patch." Out of the profits of a best-seller an author might buy himself a Venetian palace and an automobile. But only dramatic rights in addition could make town and country houses and steam yachts possible. The invasion of the stage by the novelist is prompted by the same brutal passion for unlimited conquests that has made the huge industrial Trusts. It has been another phase of the great American discovery of creating dividends out of by-products. When you have spent a million dollars in advertising canned beef, you might as well go into the glue and fertilizer business. When you have sold everybody a copy of "When Knighthood Was in Flower," you can sell it to them over again in the form of a play, and once more in the form of a moving-picture show.

But now the playwright has his innings. "Novelized by Smith" is the advertising phrase of the day. Venetian palaces, automobiles, and steam yachts will now be within the reach, or at least within the legitimate aspiration, of the humblest playwright. In its very latest phase, the business of "novelizing," like many other vast industrial enterprises, has had a lowly origin. The yellow evening papers made a beginning only a few years ago, when, having turned the drama of real life into fiction on their front pages, they proceeded to turn the drama of the theatre into fiction on their "magazine" pages. The competition has gone on furiously; as many as three or four plays a month have been thrown into the ravening maw of the fiction-loving public, which has swallowed George M. Cohan's drama of the star-spangled banner and the buck-dance, together with the drama of the race-track and the Wild West, and the play that has aimed at and attained higher things. Concerning the quality of the fiction purveyed by our evening dailies little need be said. The "novelizer" not only tried to address himself to fairly elementary intelligence, but to readers who were in a hurry. His novel was not much longer than the play he dealt with. Hence it was only a question of inserting "he seized her arm violently and hissed," or "she drew herself up scornfully."

But the "novelizer," whose ambitions run beyond so many columns of newspaper copy, gives us the story in actual book form. Such a volume, gorgeously bound, profusely illustrated, now lies before us. And in the preface our author formulates his higher conception of the rewritten play. His book, he tells us, "is more than an attempt merely to 'novelize' a popular play; it is the result of a desire to translate into the form of fiction the flavor of ——'s acting and the charm of ——'s stage. It has been for both the artist and the writer a labor of love—an effort to make some grateful record of the work of a wonderful actor and to catch in print and pictures the atmosphere of a beautiful play." This conception of the art would make the "novelizer" work with the traditional methods of fiction, as our author plainly declares:

> It is the first condition of such a pious undertaking that the fiction shall stand on its own interest independent of the theatre —that it shall not attempt to reproduce the acting and the stage, but to translate

them—that it shall have its own inherent emotions and the appeal of its own art. To that end are all the differences designed which exist between this story and the play on which it has been founded. They are not differences in degree, but in kind.

We think of the "dramatized" novels that have been thrust down our throats, those dreadful things of scissors and paste that carried neither meaning nor force, nothing but a popular "star's" and a best-seller's reputation, and we welcome, vindictively, we confess, this counter-shock of intelligent invasion.

For we may note that the chances of success are far greater on the side of the "novelized" play than of the dramatized novel. In the first place, our book-plays have been for the most part dreary wastes of so many thousand words clipped out of so many tens of thousands. In the successful play, on the other hand, the "novelizer" has the immense initial advantage of a story with "go" in it. And if "go" doesn't make successful literature among us, what does? In the second place, it is a question of the wider market. The play, as a play, cannot go everywhere; even with half a dozen companies on the road, there must be a vast number of places that are never visited by theatrical companies, and there are millions of Americans who, on principle, do not go to the theatre. To them the "novelized" play should be a welcome compromise.

AN OXFORD VIEW OF THE AMERICAN RHODES SCHOLARS.

"Now do just tell me, Master," said a smart young lady once—so at least the story runs—to Benjamin Jowett, sometime Master of Balliol, "do just tell me. What do you really think about God?"

"My dear young lady," was the Master's characteristic reply, "that matters very little; what matters is what God thinks about me."

And there was something of Jowett's humor in the remark which a Rhodes scholar from America made to me not long since. "We seem," he said, "to have all written to the papers to tell them what we think of Oxford. Perhaps it is about time that some one told what Oxford thinks of us." Well, and perhaps it is.

It has been interesting to us in Oxford to see what Rhodes scholars have had to say. It may be that the writers have been in most cases too near the events or influences which they have been describing to see things just in their right proportions. But if so, we have been the gainers thereby, not the losers. And we cannot but be pleased at the generous appreciation which they have on the whole shown for our city and university. There has been criticism, of course, as well as appreciation. That is only natural. We expected it; and we are not afraid of it. We are only glad to think that on a balance the appreciation outweighs the criticism. From the other side, however—from the side, that is, of Oxford—less has been heard; indeed, scarcely anything. And yet there must be plenty to say. So great an experiment as that of the Rhodes scholarships cannot have been in operation for four years and more without Oxford having something to say about it, something, at any rate, to think about it. And in the Rhodes experiment the American is, after all, a large factor. Indeed, of 190 possible Rhodes scholars, just over half are American. This is an appreciable addition to a society numbering in all less than three thousand, and can hardly have failed to attract attention, stimulate curiosity, challenge criticism. And it is the purpose of this article to formulate, in so far as that is possible, public opinion in Oxford on the subject of the American Rhodes scholars; to give the upshot of the criticism to which they may have been at one time or another subjected; and to indicate the directions in which their influence is commonly supposed to tell.

Well, it may be said at once that university opinion as a whole accepts the Americans as an element of real value. It is, I suppose, undeniable—at any rate, from hearing it so often, we have come no longer to deny it—that we are, as a university, slow to welcome the larger changes. And it was not to be expected that there would not be some among us who viewed with regret the cosmopolitan expansion which has marked the last few years. For all that, among the many with whom I have spoken, few have really wished to put the clock back in this regard. Most of those whose opinion counts see in the new element a force which they would not now willingly be without. It has often been said, and with some justice, that Oxford and Cambridge have tended in the past too closely to resemble, in tone and sentiment, the schools from which they have been mainly fed; that they have not offered that variety of type, and freshness of outlook, upon which so much of the educational value of a university, as opposed to a school, depends. It may perhaps be admitted that, in our eyes at least, our English public-school boy is, at his best, an attractive type. We are frankly proud of him. But, with it all, he is essentially limited, even provincial; and we know it. He cannot but be the better, we should most of us agree, for being brought to realize that there are other ways of doing things than those to which he has been accustomed, and other points of view than those from which alone he has hitherto regarded the world and himself. It is to learn this lesson that he comes to the university. And, in point of fact, to the influence which Oxford does to-day exert upon him in this direction the Americans make no small contribution. That is one reason why they are welcome.

And the influence which they exercise is not merely fresh, and so stimulating. It is in itself healthy. The American Rhodes scholar is, as a rule, sincere and robust; he is, on the average, older than our English undergraduate; he knows better what he wants, and is more strenuous in trying to get it; he is more independent in his judgments; and he has more perspective. Doubtless, he has his own conventions and shibboleths; but, as they are different from ours, he commonly gets the credit of being less hampered by such things than we are. This may be an illusion; but it counts. One way or another he comes to be regarded—in the end by undergraduates as well as dons—as a person with stuff in him, and interesting; comes, not necessarily to be understood, but commonly to be respected; to be genuinely liked; to be, in actual fact, very welcome. There are in Oxford twenty different colleges. The accommodation at the disposal of these is strictly limited, and the competition for admission is increasing every year. Under the circumstances, it is encouraging that the colleges should continue—as with very few exceptions they do continue—to give to the Americans a generous welcome. It means, one is justified in saying, not merely that they are anxious to give Mr. Rhodes's experiment every chance—though that certainly is some part of the explanation—but also that the American element approves itself to them.

If we turn to the purely scholastic side, and ask how the American Rhodes scholars are estimated from the point of view of scholarship and mental equipment, it is not perhaps easy to arrive at a satisfactory generalization. On the whole, however, the prevailing opinion would seem to be that they have shown themselves alert and versatile, quick to take a point and alive to the interest of things, but wanting in thoroughness. To put it in its baldest form, the criticism most often heard in Oxford common rooms is that the American student, while keener, perhaps brighter even, and more generally informed, than our average undergraduate, is at the same time more often superficial, and is more easily satisfied. "They don't seem to understand," one tutor complained to me, "what it is to *get a subject up*." The explanation of this last criticism—which I give for what it may be worth—is perhaps to be found, in part at least, in the difference between the normal A.B. course in

an American college and the system which prevails here in our so-called "honor schools." In these a man cannot learn his subjects, or take his examination, in bits. He selects at the start whatever subject attracts him—history, it may be, or theology, or law, or what not—he studies it for two or three years, and he is tested at the end in a single final examination, which extends over a week and aims at covering the whole field of the subject which he professes. Whatever defects this system may have, it does at least force a man to hold things together in his head; it gives him an opportunity of getting a view of his subject as a whole; and it makes "cramming" difficult, if not impossible. If it is the case that the education in the majority of American colleges, so far at any rate as the A.B. courses are concerned, is more broken up than ours into stages and compartments, this difference may help to account for the impression which seems to prevail here that the American college man, while he is conspicuously intelligent, and knows something about a good many subjects, is deficient in grasp of any one subject, and not sufficiently exacting in his standards. American Rhodes scholars themselves have indeed before now told me that they recognize some truth in this criticism; that they have in their own cases found it difficult, on first coming here, to adjust themselves to a system which makes, so they have said, larger demands on memory and mental grasp than they have been accustomed to. It is, however, in the literary and linguistic departments that one chiefly comes across this criticism. In the departments of natural science and of law one hears it less frequently.

And there is, in spite of this criticism, and alongside of it, much sympathetic appreciation of the intellectual vitality, the acumen, the independence, which distinguish so many of the young men whom America sends us. The best tutors like to have them as pupils. It may be that they are not, as a rule, such profitable stuff from the point of view of examination results as Englishmen of the same age and ability would be; for the Americans, by reason of differences of early training, fit less easily into our traditional curriculum and system of examination. It may also be that they are capable on occasion of shocking, by their very freshness and independence, tutors who are looking for docile pupils and accepted methods. There may be moments, perhaps, when the don is tempted to think them a nuisance, and to dub them "unteachable." But if so, one may be sure that that is towards the end of term, when his work is accumulating, and his nerves wearing out. At other times he finds the virgin keenness, yes, and even the independence, of the American mind a stimulus and a refreshment. "It is a relief," said one of them in my hearing recently, "to have to do with men who know their own mind." And this is characteristic of the attitude of the great majority of Oxford teachers. They are prepared to criticise the American as a pupil—to criticise his training, his methods, even his intellectual ideals—and, when he goes too obstinately his own way, to growl a little at him; but at bottom they respect him; like him; are glad to teach him.

So far as actual results in examinations are concerned, the performance of the Americans has been very creditable. It would be pleasant to use a stronger word; but creditable is the right one. We are inclined to think of Rhodes scholars as men picked deliberately from a crowd of eager and distinguished competitors; as coming, in fact, weighted with a whole State's learning and prestige. And when we compare their ultimate performance with this somewhat fanciful picture of the conditions under which they have been selected, we feel, perhaps, at the first, just a tiny shock of disappointment. We had hoped, unreasonably, for so much more. We had pictured to ourselves nothing but First Classes. What as a fact we find, is a fair array of Firsts, a considerably longer list of Seconds, and an equally long list of Thirds. We have known even Fourths or worse. And this is all quite natural—I had almost said proper. To any one who understands the situation—understands, that is, the conditions under which American students become candidates, the conditions under which they approach their work here, and the special difficulties which hamper them—the results actually obtained are, I will not say entirely proper, but adequate and encouraging; are certainly very much better than they have the air, upon paper, of being. The chief Oxford distinctions won by American Rhodes scholars, it may be interesting to note, are as follows: One First Class in the B. C. L. examination (a rare honor); 9 First Classes in the Final Honor Schools; 7 degrees awarded for definitely post-graduate work; 2 demonstratorships at the Museum; 1 senior scholarship (corresponding to what in the States would be known as a fellowship). A careful review of these statistics prompts me to remark: first, that it would have been unreasonable at this stage to have looked for any greater success; secondly, that we shall not be content, and shall not have to be content, with this amount of success in the future; and, thirdly, that we shall never adequately gauge our real success so long as we look only to class lists and academic prizes.

And with that perhaps we may pass from the question of scholastic performance to that of the part which the American scholars play in the general life of Oxford. To what extent do they, as an element in the place, fuse with other elements? Are they genuinely absorbed, or do they remain, after all, outside the real life of the college—sympathetic, but detached? To this question there is not a straight and easy answer; for there is not unanimity among the men from whom the answer would have to come. In some cases, even in some colleges, the absorption has been more complete than in others. The fact, indeed, is—and what more natural?—that some of our scholars have found it easy to throw themselves wholeheartedly into English life, and open themselves to English friendships, while others have found it difficult. That is, however, and must remain, a matter largely of temperament. There have been, no doubt, cases in which Rhodes scholars have, for one reason or another, held unnecessarily aloof from the corporate life of their college; but these cases have been the exception. It is hardly to be expected that the Americans over here should in normal cases find their primary sympathies anywhere but among their fellow countrymen. This, however, is quite consistent with their becoming living members of the actual society in which they find themselves. The American Rhodes scholars have tried to do this; with varying measure of success, no doubt; but, on the whole, fairly and honestly. They have certainly created, and done much to maintain, a healthy public opinion amongst themselves on this question; and if in individual cases men have withdrawn themselves unduly from the ordinary college life, they have done so, not in sympathy with, but actually in the face of, the prevailing American sentiment.

Life in an Oxford college has many points at which it may well "offend" men who have been accustomed to the greater freedom of a non-residential university. It would have been but natural if Americans had kicked against many of the customs and regulations of the place. It is to their credit that in this respect there has been so little to complain of. Occasions of complaint there have been; but there might so easily have been many more. Indeed, in this as in other respects, our American scholars may be said to have "played the game" very squarely. For which, surely, we may be grateful. It would be a bad day for the Rhodes scholarships did the colleges once come to regard the Americans as material which they could not comfortably assimilate. Bad for the scholarships. Yes; and scarcely less bad for the colleges. They would be sacrificing much. They would be losing from their midst an influence which is as a breeze which a man meets upon a summer's day; which strikes

him, it may be, in its sudden freshness, almost rudely, as with a touch of early spring. He gathers, perhaps, his coat about him; but his step is lighter than before, and the streets seem less weary. "It is good," he says, "to have met the breeze." F. I. Wylie.

Oxford, August, 1908.

NEWS FOR BIBLIOPHILES.

The late E. Dwight Church, whose death was noted in the *Nation* of September 3, began collecting rare books about thirty years ago. Works illustrated with Bewick's wood cuts first interested him, and he brought together a notable lot. From books illustrated by Bewick to those illustrated by the Cruikshanks was an easy step, and though his series is far from complete, he acquired many of the more interesting Cruikshankiana. About 1886 he began his collection of Americana, when the death of Henry Stevens afforded an opportunity to acquire some of his nuggets. Mr. Church had not begun collecting when the Brinley library was dispersed, nor was he a liberal buyer at the Barlow sale in 1890. The next year, however, he secured many of the most desirable items from those two libraries at the Brayton Ives sale, and others he acquired later when C. S. Bement of Philadelphia disposed of his Americana privately. Many of the best books in the Kalbfleisch and Lefferts libraries also found their way later into tho Church collection. It is for Americana that the Church library is chiefly distinguished. The catalogue of this portion, edited by George Watson Cole, was completed a few months ago; it is in five imperial octavo volumes, with facsimiles of practically every title-page, and with extended collations—a monument of painstaking and accurate work.

Of the seventeen known editions of Columbus's first letter, Mr. Church secured six, and all the known copies of all the others are in public libraries. There are nineteen editions of works containing the letters of Vespuccius, including a thick paper copy of the famous "Paesi Novamente Retrouvati," 1507, and a unique copy of a hitherto undescribed German edition, "Von den nüwe Insule[n] und la[n]den so yetz Kürtzliche[n] erfunden synt durch den Künig von Portugall," with the colophon dated 1505. The sets of De Bry's and of Hulsius's Voyages were brought together by Mr. Stevens. Both are fruits of a lifetime of collecting, and are probably the most complete in private hands. The small quarto Hariot of 1588, the first book in English to describe any portion of the country now the United States, one of the most interesting pieces of English Americana, is the Drake-Kalbfleisch-Lefferts copy, the only one to come upon the market in more than thirty years. Of Brereton's "Briefe and True Relation," the first book on New England, Mr. Church secured copies of both of the 1602 editions. Of the first, only two other copies are known, one from the Hardwicke collection, now in the John Carter Brown Library, Providence, the other, lacking title-page, in a private library in this city. Mr. Church's second edition of Brereton is the Isham copy, entirely uncut, afterwards in the Kalbfleisch and Lefferts collections. The three little Frobishers, 1577-78, and the small book by Sir John Hawkins, 1569, bound up together by Humphrey Dyson, more than three hundred years ago, and sold at Sotheby's, London, March, 1907, are the most important recent additions to the early English voyages.

Practically all of the early printed pamphlets on Virginia, New England, New York, Pennsylvania, and New Jersey which have come upon the market in the past fifteen years have gone to Mr. Church. The Bay Psalm Book, 1640, the first book printed in British North America, was Bishop Hurst's copy, acquired privately from the bishop a year or two before his death. From John Boyd Thacher Mr. Church got three out of the four unique early almanacs for 1647, 1648, 1649, and 1650, printed by Stephen and Matthew Day, and offered at the Brinley sale. The Almanac for 1649 is in the Lenox Library. Of the first four New York Almanacs for 1694, 1695, 1696, and 1697 only one copy is known to be elsewhere. The recently discovered unique Massachusetts Laws of 1648, the first book printed by Samuel Green, is in the Church collection; and the first New York Laws, Bradford, 1694, the most valuable New York book, is the Vanderpoel-Thacher copy, the finest extant.

Mr. Church's Shakespeare collection is also very rich. George Daniel's copy of the "Sonnets," the most desirable of the known copies (bought at Daniel's sale in 1864 by Almon W. Griswold of New York, and one of the last books which Griswold parted with), was obtained by Mr. Church about twenty years ago and was the beginning of his pursuit in this field. The purchase of the Rowfant library, desired primarily for the Shakespeare quartos, made the Church collection, so far as rarity and condition go, the finest (with the possible exception of the Duke of Devonshire's) in private hands. The Spenser collection, though small in bulk, contains some of the choicest rarities—the first, second, third, and later editions of the "Shepherd's Calendar," as well as the exceedingly rare "Amoretti" of 1595. Of more modern authors Charles Lamb was Mr. Church's favorite, and the Lamb collection is probably the best ever brought together. Though not a buyer of manuscripts, Mr. Church has a few important items, chief among them the original draft, in Franklin's autograph, of his "Autobiography."

Most of Mr. Church's books are in excellent condition. When opportunity offered, he was generally willing to purchase the better copy and dispose of his duplicate. Thus for several years he owned the Rice-Menzies-Ives-Bement copy of Eliot's Indian Bible, one of the best specimens in America, but later he procured the Hardwicke-Kalbfleisch-Lefferts copy. Mr. Church was extremely quiet and unostentatious, and was loath to have his name appear in the newspapers. Though he disliked to show his library to the mere curiosity seeker, he was always considerate of a genuine student with a definite purpose. The present writer is indebted for many favors of this kind. His books have been frequently referred to in this column, but, at his special request, his name has seldom been mentioned.

The Ladies' Association at Mount Vernon has recently made an important addition to the collection of Washington relics there—the "Mary Washington Bible," the family Bible of Washington's parents. The book, which is well authenticated, is much worn from long usage, and the title and some other leaves are missing. The manuscript record of births and deaths, partly in the early handwriting of George Washington, is pasted down upon a leaf of text. This record begins:

Augustine Washington and Mary Ball was Married the Sixth of March 17, 30-31. George Washington Son to Augustine & Mary his Wife was Born ye 11th Day of February 17 31-2 about 10 in the Morning & was Baptised the 15th of April following Mr. Beverly Whiting & Capt. Christopher Brooks Godfathers and Mrs. Mildred Gregory Godmothers.

The latest event recorded is the death of Washington's sister Betty, who "Departed this life the 31st of March 1797 at 4 o'clock." After the death of Mary Washington the Bible passed into the possession of her daughter Betty, who had married Fielding Lewis.

Correspondence.

NEW LIGHT ON DEFOE'S LIFE.

To the Editor of The Nation:

Sir: Since I published in these columns my last instalment of "Bibliographical Notes on Defoe" (see the *Nation* of June 6, July 11, and August 29, 1907), I have had the opportunity, thanks to the kindness of the authorities of the Bodleian, to examine with some care sixty-six volumes of the great Nichols Collection of Newspapers. The search yielded a good deal of bibliographical information about Defoe and other writers which I hope to make use of later. Here I wish merely to note a few facts that possess interest to students of Defoe's life.

It has generally been thought that the pamphleteer's imprisonment in Newgate on account of his famous "Shortest Way with the Dissenters" stretched from February, 1703, to August, 1704. Compare, for example, the title of a chapter in one of the biographies, "In Lob's Pound (18 months)." A letter from Defoe to William Paterson, first published in 1897, made it clear, however, that the fugitive author was still at large in April, 1703, and it had before been known that on May 25 of that year the Earl of Nottingham wrote to Godolphin in order to secure the payment of the proper reward to the person on whose information Defoe had been arrested. Informers usually apply for their money not long after they become entitled to it; therefore, a search in the newspapers published shortly before May 25, 1703, would have been in order. Such a search would not, I think, have yielded many details, but it would have saved biographers from positive error. The London *Post* for May 21-24, 1703, contained the following item:

On Thursday last [the 20th.] Daniel de Foe, author of the Shortest Way with the Dissenters, for which he has ever since Absconded, and for whose apprehension a Proclamation was published, promising a Reward of 50l. was seized by 2 Messengers at a French Weaver's House in Spittlefields.

The *Post Man* for May 22-25 added the detail that, after being examined, the prisoner was committed to Newgate.

Early in November, 1703, an item occurs which would have been of considerable importance but for the publication by the Historical Manuscripts Commission of a mass of materials that threw light upon Defoe's career. Since 1897 it has been clear that Defoe was not kept in Newgate until August, 1704, but that he was at liberty some time in November, 1703. The editor of the Harley Papers did not get the matter straight in his introduction to Volume IV., but in 1902 E. S. Roscoe in his biography of Harley stated the facts correctly. There was really no excuse, however, for nearly two centuries of ignorance and for affecting comments upon the high spirit and perseverance displayed by the intrepid journalist who could found his great newspaper, the *Review*, while he was undergoing an unjust imprisonment. The slightest search of the Nichols Newspapers would have brought to light some remarks made in the Tory sheet, *Heraclitus Ridens*, for November 2-6, 1703. One of the interlocutors, *Jest*, says: "Every one is not a *Daniel de Foe* that has a Party to pay a Fine for him." *Earnest* replies:

> Now you talk of the Prophet, what's become of him? I hear that he is Bail'd out, he must have a great Interest indeed, that he could find four sufficient Bail for his good Behaviour for seven Years.

We need not assent to the conclusion of the chagrined Tory partisan that it was a good thing in those days to be a Whig; but we must certainly admit that Defoe did not spend much more than five months in Newgate. We must also admit that, if a narrower search had been made in the pages of Defoe's own organ, the *Review*, his biographers would not have kept him so long in prison. On June 3, 1704, the printer of the paper gave as an excuse for a long list of errata the fact that the editor, or author, as he was then called, was out of town. Certainly a prisoner, no matter how gifted in realistic imagination, would scarcely have ventured on such a bit of invention; and if he had been temporarily at large through the connivance of his jailers—a phenomenon not unknown in those days—it is not likely that the fact would have been advertised in his own newspaper. We may leave this topic with the remark that probably the next person who has occasion to discuss Defoe's volume on the famous storm of the end of November, 1703, will not feel it to be his duty to point out that the details of personal observation given therein must be regarded as preliminary exercises of the author's inventive faculty.

The next fact worthy of note is partly biographical, partly bibliographical. Defoe was regarded by Lee as a model of Christian charity and forbearance, but he surely had an extraordinary turn for exasperating his fellow journalists and for getting into unbecoming quarrels. One of his first squabbles was with the London *Post*, in the spring and early summer of 1704, and it began with what I cannot but regard as a barefaced attempt on his part to disown a pamphlet published over the initials "D. F." by Harris, the printer of the *Post*. Unless all signs fail, this tract, "Moderation Maintained," was Defoe's handiwork, and Harris's paper had abundant excuse for criticising him; but the important point is that within less than a year Defoe and the London *Post* were on such good terms that it was currently reported that he was writing for the paper a certain department entitled "Truth and Honesty." This report was denied in such a way as to make me suspect that it was true; at any rate, "Truth and Honesty," about the beginning of 1705, displayed a readiness to champion our Ishmaelite journalist which was very rare at that period. The question at once arises whether the practice of writing for more than one paper at a time, which Defoe carried to a fine art between 1717 and 1724, was not begun by him ten or twelve years earlier than has ever been suspected. The Harley correspondence proves that before the summer of 1714 he endeavored to ingratiate himself with one of the most hostile of all the Whig journals, the *Flying Post;* and I think it can be shown that, whenever a newspaper was violent against him, he was very likely to try, in his own words, "to take the edge off" the unfriendly sheet. It is, at least, a little curious to find him charged with doing this as early as 1704-5, but I have not sufficient confidence in my methods of stylistic analysis to affirm that precisely this and not that column of the London *Post* came from his pen. Neither am I able to bring forward irrefragable proofs that in 1711, while he was receiving Harley's bounty, he attacked his patron in the columns of a short-lived Whig newspaper, the *Protestant Post Boy;* but I can prove that this charge was made against him, and I can point to numerous issues of the paper in which his hand appears to be as clearly visible as it is in many of the articles which Lee excerpted from *Mist's* and *Applebee's*, and unhesitatingly—and in my opinion correctly—ascribed to his hero. I can prove furthermore that Defoe was charged with editing a Tory paper, the *Monitor*, a folio half-sheet, which appeared between April 22 and August 7, 1714, and has never to my knowledge been included among his journalistic experiments (cf. the *Flying Post*, June 26-29, and December 4-7, 1714). That many numbers of the *Monitor* were written by Defoe is, I think, as demonstrable by internal evidence as almost any other point in his complicated bibliography, but what I am most concerned with here is the fact that the Nichols Newspapers show that he was regarded as a very versatile and a very mercenary journalist long before the period at which he made his bargain with Lord Townshend—a bargain in my judgment quite as disgraceful to the peer as it was to the man over whose head an indictment had been hanging—to serve as a spy in the office of the Jacobite newspapers.

In the fall of 1711, Defoe was bitterly scored for his support of Harley's measures looking toward peace with France, and I have come across a curious and amusing bit of scandal which serves to show in what odium Defoe was held, and to confirm in a measure the stories he told in the *Review* about the threatening letters he received and the attempts that were made to bully him. I may observe also, that if the earlier biographers had gathered this bit of gossip they would have learned that one of Defoe's brothers-in-law bore the name of Tuffley, and that if, following out this clue, they had discovered this brother-in-law's will, they would have abandoned the notion that Defoe married a daughter of his pastor, Dr. Annesley, thus becoming a brother-in-law of John Dunton, and would have forestalled George A. Aitken in some of the most interesting of his many discoveries with regard to Defoe.

My bit of scandal relates to a quarrel which was forced upon Samuel Tuffley because Defoe in the *Review* had criticised the officers of the City Trained Band for insulting Queen Anne by ordering their men to play "The King Shall Enjoy His Own Again." I say that the quarrel was forced upon Mr. Tuffley, but I must confess that between the contradictory accounts of the affair given by the *Supplement* and the *Flying Post* it is only a very sapient or a very foolish person who will choose without misgivings. The Tory *Supplement* of September 12-14, 1711, gave its readers to understand that Mr. Tuffley challenged a certain Captain John Silk, and that in the duel that followed on the 10th, the officer disarmed his antagonist and gave him his life. The paper then asserted that Tuffley struck Silk, and for his pains was heartily threshed, and it gave as a reason for this extraordinary conduct the fact that the victorious captain would not return to the defeated party "his cowardly Weapon (a Flaming Sword, suppos'd to be his Brother Daniel's, which is daily expos'd to the great Disgrace of the Whiggish Party)."

This Tory version could not be allowed to pass uncontradicted; so the *Flying Post* for September 18-20, 1711, published a Whig account. It seemed that "one Captain S——k, a Pewterer and Muster-Master," took offence at the *Review's* reflections on the City Band, and "meeting one Mr. Tuftley, of *Kingsland*, Brother-in-law to Mr. *De Foe*, falls upon Mr. *Tuftley* with the usual High Church Dialect according to his Breeding; calling Mr. *De Foe* a great many ill names behind his Back. Mr. *Tuftley* often bid him be quiet, it was nothing to him, if he had anything to say to Mr. *De Foe*, why did he not speak it to himself, who was able enough to answer him?" Such mild replies could not turn away the muster-master's wrath. He abused the innocent brother-in-law of the provoking Daniel on at least two later occasions, on one of which he pursued his victim to Bishopsgate, "shaking his Cane at him on the open Street, Damning and Cursing, and calling Billingsgate Names." Mr. Tuffley had only his horseman's sword, and was not prepared for a duel, but his adversary forced him into a tavern, where the drinking of "3 Pints of White Wine for a Whet" resulted, alas! in the pious Daniel's representative "becoming very much Disorder'd." Whereupon the High Church champion insisted that the duel should take place immediately. So they took coach and drove to the Fields, the valiant Silk lolling out of the vehicle and making a noise in order that he might draw a crowd to witness the combat. A full description of this duel of two hundred years ago is unnecesary. Suffice it to say that the Whig paper had to admit that, Tuffley's foot slipping, Silk was able to disarm him, but it went on to show that the victor presented the victim's sword to a bystander, and bade him bear it away. This last insult was more than

even the disordered Tuffley could stand. He closed with Silk, secured the latter's cane, and broke his head with it "as he very well deserved." This is the true version of the affair, said the *Flying Post*. It is needless to add that the *Supplement* for September 24-26, 1711, while admitting that there had been some drinking, contradicted practically every statement of what it called, in the Tory fashion of the day, the *Lying Post*.

This contemptible bit of resurrected gossip illustrates well the truth that the biographer and the historian can afford to despise no source of possible information. As I have said, these newspapers of 1711 would have furnished a clue to the mystery that long surrounded Defoe's marriage, and they would, to a certain extent, have substantiated his complaints of the misusage to which he was exposed. We observe also that even the *Flying Post*, in a way, bears testimony to the fact that he was regarded as capable of defending himself, and I may state here that, although there was no more heartily despised, roundly abused, and violently threatened journalist in England during the first quarter of the eighteenth century than Daniel Defoe, I have yet to find any proof, or if my memory and my notes be not at fault, any charge that he ever suffered corporal correction at the hands of any private person. He tells us that he wore his sword for show only, and that he disdained to carry a heavy oak stick, such as his rival Tutchin brandished, and we have plain proof that he went night after night to receive his orders from Harley. But when his enemies waylaid him, they were careful to have bailiffs and constables along with them. I have a shrewd suspicion that, whatever Defoe's defects may have been, lack of physical courage was not among them. We may pass to another topic with the remark that the Tuffley-Silk duel illustrates excellently the temper and the manners of the times, as well as the difficulty the student has in threading his way through a labyrinth of charges and counter-charges.

Following my rule of confining myself to the newspapers, I shall pass over the plain proof furnished by the Harley Papers that Defoe could not have "resided" at Halifax for several months at the close of 1712—one biographer keeps him there for five months, an unconscionably long period of quiescence for so restless a genius—and I shall conclude this paper with a few remarks upon what seems to have been Defoe's second imprisonment on account of his indiscretion as a journalist-pamphleteer. The occasion was the partisan and foolish prosecution to which he was subjected in the spring of 1713, by some disgruntled Whigs, themselves under the displeasure of the government. The prosecution was based upon the supposedly treasonable character of his ironical tracts, "Reasons against the Succession of the House of Hanover," "And What if the Pretender should Come," and "An Answer to a Question that nobody thinks of—viz., What If the Queen should die?" but his imprisonment was the result of his having reflected—so it was averred—in two numbers of the *Review* upon the conduct of Chief Justice Parker. It is difficult to discover the reflections, and it is still harder for modern eyes to preceive why that exalted personage should have felt it necessary to defend his own or the bench's dignity in the fashion adopted. Many of the details of the prosecution of Defoe before this occasion have long been known, and many others were furnished by the Harley Papers. But with regard to his imprisonment there has been a singularly varied and a large amount of misapprehension. One latter day biographer immures Defoe in Newgate from April to November, 1713—almost seven months. Perhaps the biographer acted on the principle that, as one of his predeccssors did not mention the incarceration at all, it would be interesting to keep the journalist confined as long as possible—that is, until he was pardoned by the Queen. It might have been worth while for these more modern students to have condescended to prove that Chalmers was wrong in stating that Defoe made a proper submission, and was soon released. They might also have observed that Lee straightened matters out a bit by showing that Defoe did not have a second experience of Newgate hospitality, but underwent his second confinement—however long it lasted—in the Queen's Bench prison. Yet there was no need of relying on Chalmers or Lee. A short search in the newspapers would have brought to light this little item in the *Weekly Packet* for May 2-9, 1713:

> Mr. *de Foe* having made his Submission in Court and begged Pardon for his Offence, was fin'd but *3s. 6d.* and has given Bail for his farther appearance.

If he was sent to prison on April 22, his confinement for contempt of court cannot have lasted much over two weeks, a fact which might have been ascertained, though less definitely, from the rare last volume of the *Review* which for some years has been accessible at the British Museum.

Defoe's own explanation of the tracts he was stupidly accused of having written in the interest of the Pretender, and his description of how his enemies contrived on false pretences to extract damaging evidence against him from his printer, would have furnished interesting materials to the biographers. The expeditions made to Newington by the printer's boy and journeymen and the Lord Chief Justice's tipstaff, the choice of Saturday for the arrest, since on that day bail would be hard to secure; the procession back to London, Daniel being allowed to ride on horseback, in view of his being indisposed, and the rest following on foot, sometimes a quarter of a mile behind; scathing attacks upon George Ridpath of the *Flying Post*, one of the most virulent of his enemies, who, unlike Defoe, fled from justice, perhaps because he had no such influential patron as Harley—these and other not uninteresting details of De foe's biography have been awaiting the student for nearly two hundred years.

Returning in conclusion to the item in the *Weekly Packet*, I may say that the smallness of the fine imposed, the details given by the Harley Papers, and the probability that Defoe was needed as editor of the new paper, *Mercator*, which was soon to be published in the interest of the Bill of Commerce, tempt me to believe, not only that there was an accommodation with the court arranged through the good offices of influential parties, but that it was consummated with all the speed possible. Some day I may beg to show that there is a probability that at this crisis in his life Defoe passed for a short while into the charmed circle created by the influence of Bolingbroke; here I can only say that in the Harley-Defoe correspondence there are few more interesting letters than those in which Defoe described how his Whig enemies came to prosecute him as a Jacobite for pamphlets obviously written against the Pretender, and in which he himself outlined to Harley the clever tactics by which a trial was finally avoided. Defoe, I am afraid, was nothing like the martyr he represented himself as being—two weeks to seven months of imprisonment is a very good ratio to keep in one's mind when one is reading his "Appeal to Honour and Justice," or his eulogistic biographers—but I have at no time in the course of my investigations been tempted to believe that he was anything less than the most versatile, most energetic, and most keen-witted man of his interesting age.

W. P. TRENT.

Hermanville-sur-mer, August 28.

Notes.

The following publications of the Cambridge University Press are announced by G. P. Putnam's Sons, the American agents: "Principles and Method in the Study of English Literature," by William MacPherson; "The Roman Law of Slavery," by W. W. Buckland; "Reports of the Cambridge Anthropological Expedition to Torres Straits, Vol. VI., Sociology, Magic, and Religion of the Eastern Islanders"; "Characters and Passages from the Note Books of Samuel Butler" (Cambridge English Classics); "The English Grammar Schools to 1660: their Curriculum and Practice," by Foster Watson; "Studies in French Education from Rabelais to Rousseau," by Geraldine Hodgson; "A History of Classical Scholarship, Vols. II. and III.," by John Edwin Sandys; and "The Thoughts of Pascal," selected and translated by Moritz Kaufmann.

A new series of biographies is to be brought out in London by Sir Isaac Pitman & Sons, entitled Makers of National History. The object is to deal with the lives of such men as Cardinal Beaufort, Archbishop Parker, Castlereagh, and Atterbury, who have hitherto been neglected.

Andrew Lang, having cast aspersions, justifiable no doubt, right and left on Anatole France's life of Jeanne d'Arc, is now about to publish his own "Maid of France" through Longmans, Green & Co.

The fourth volume of Frederic Harrison's collected essays will be issued by the Macmillan Co. this month under the title "Realities and Ideals—Social, Political, Literary, and Artistic."

We are to have the Collected Works of Ambrose Bierce in ten octavo volumes, from the Neale Publishing Company.

Silver, Burdett & Co., have issued an enlarged edition of Prof. Charles J. Bullock's "Introduction to the Study of Economics." It contains, among other additions, a new chapter on railway transportation.

The sixth volume of the "Index of Economic Material in Documents of the States of the United States," issued by the Carnegie Institution of Washington, is devoted to Massachusetts, and was prepared by

Adelaide R. Hasse of the New York Public Library. The Index is now complete for New York and New England except Connecticut, one volume being devoted to each State. This most recent quarto covers only printed reports of administrative officers, legislative committees, and Governors' messages, all for the period 1789-1904. A list of collected documents of Massachusetts, covering fifteen pages, precedes the topical analysis of nearly 300 pages. The work will prove of essential help to the student of various phases of industrial life, although it is far from being an exhaustive source-index; for statutes are not included. It is to be hoped that this bibliographical project will not be abandoned, as some other Carnegie bibliographies have been, for its value is largely dependent upon its being completed. At the same time one questions whether anything but the princely income of the Carnegie Institution would have allowed the prosecution of such a work. Like Dickens's old gentleman who learned the alphabet at eighty and made no further use of it, one is bound to ask in all seriousness of this bibliographical venture whether it was "worth so much to get so little."

The London Municipal Society has produced a handbook with which to equip speakers for a popular attack on Socialism, "The Case Against Socialism" (The Macmillan Co.). The title-page, while innocent of the compiler's name, boasts a "prefatory letter" by the Rt. Hon. A. J. Balfour. The letter in question is addressed to Capt. Jessel, and is fairly comparable to the traditional commendatory letter given by President Lincoln to the book agent: "For people who like this kind of book, this is the kind of book they like." The compiler or editor of the volume has taken for his guiding principle the axiom that any stick is good enough to beat a dog, and a great many sticks of various strength serve him to thwack the socialistic Cerberus. That Socialism does not venerate the Throne, nor care for the Army, nor the State Church may be a good argument *ad hominem britannicum*, but is not very forcible outside the tight little island. Moreover, Socialism has many vulnerable points on all of which this book falls with invariable fury. One does not expect a judicial pronouncement from a campaign handbook, and in this respect the present treatise will not disappoint expectation.

"Spanish America on the Eve of Emancipation: The Southern Colonies in the Last Half-Century of their Dependence," by Prof. Bernard Moses of the University of California (G. P. Putnam's Sons), is one of the first indications that American scholars are beginning to make use of the great fund of valuable and hitherto untouched material which the history of Latin-American institutions offers. In one of his earlier works ("The Establishment of Spanish Rule in America," Putnam, 1898) the author presented an analysis of the conditions under which Spanish rule was established in America. In this book he gives us a sketch of social conditions in South America during the period immediately preceding the severance of relations with the mother country. The most interesting chapters are those dealing with the characteristics of the colonial city and the development of social classes under Spanish rule. Although Professor Moses does not attempt comparisons with the North American colonies, his material is so carefully and systematically marshalled that the contrasts immediately present themselves to the reader. The absence of the spirit of co-operation amongst the Spanish colonists, the endless controversies and petty jealousies which divided them into warring factions, were the fatal weaknesses of colonial society, and explain the failure of the colonists to secure a gradual recognition of their rights—thus preparing the way for self-government. The work of Professor Moses throws a flood of light on some of the weaknesses of the Latin-American peoples, and should be carefully read as an introduction to the study of Latin-American institutions.

Under the title "The Kingdom of Canada, Imperial Federation, The Colonial Conferences, The Alaska Boundary, and other Essays" (Toronto: Morang & Co.), John S. Ewart, the Canadian lawyer and publicist, has brought together in a volume of some 370 pages a number of public addresses and several essays—all devoted to the large problems of Canada's political destiny. Independence is not the goal toward which Mr. Ewart would point the way—that is to say, not independence in the sense of political separation from the British empire. Mr. Ewart's views are perhaps best summed up in his concluding address, "The Future of Canada," delivered before the Canadian Club of Ottawa:

> Canada's future will most probably be one of the five following:
> (1.) Union with the United States;
> (2.) An independent republic;
> (3.) Union with the United Kingdom;
> (4.) An independent monarchy with a Canadian King;
> (5.) An independent monarchy with the same sovereign as the United Kingdom.

While admitting the impossibility of foretelling the ultimate result, Mr. Ewart examines these choices one by one in the light of prevailing sentiment. He finally rejects the first, second, third, and fourth, and concludes that Canada is to be what the father of Confederation, Sir John Macdonald, intended it to be, "a great British monarchy in connection with the British empire, and under the British Crown, . . . recognizing the sovereign of Great Britain as its sole and only head."

In "The Later Years of Catherine de Medici" (E. P. Dutton & Co.) Miss Edith Sichel has made a noteworthy addition to her group of sympathetic historical essays. The book covers the reigns of Charles IX. and Henry III., with all their horrors and their imbecilities, and illustrates by abundance of citation from contemporary writers the thoughts and feelings of that strange time. Miss Sichel declares in her preface that she has detected no error in accepted dates, made no discovery of an actual fact, but there is plenty of room in the world for the kind of work that she does. She has her material well in hand and makes it serve a natural gift for the analysis of human motives. In style and general conception her book may owe something to the "Femmes de la Renaissance" of Maulde de la Clavière.

An admirable general survey of the problems involved in juvenile delinquency is given in Thomas Travis's "The Young Malefactor" (Thomas Y. Crowell & Co.). The writer does not pretend to any great originality, either in the facts he brings together or in his theories about them. Eight main theses are defended with material known to most penologists. He finds that not more than 10 per cent. of first offenders are abnormal; that environment, particularly home life, explains the great majority of crimes; that Lombroso's theory of criminal stigmata has little or no foundation; that guidance by a strong personality in a good home is the best treatment for normal delinquents; and that sequestration under the charge of specialists is the proper course to take with the abnormal. The volume will be chiefly useful as a handbook for parents and school teachers. It contains much trustworthy information usually couched in simple, direct language, and seldom swamped under the purposeless erudition which Mr. Travis occasionally displays—as, for instance, when he devotes seven pages to an enumeration of the Hindu, Arabian, Hebrew, Greek, and Italian sources from which modern criminology has sprung.

It cannot be said that the small type and pocket size of the Universal Library (E. P. Dutton & Co.) are likely to draw new readers to the "Essays" of Mark Pattison, which now appear in two volumes of that edition. Yet with all Pattison's inefficiency, there is good reading here. It is, for instance, interesting to go through the essay on English religious thought in the eighteenth century with Leslie Stephen's treatise on that subject fresh in the mind. Pattison is far less brilliant than Stephen, but he goes to the heart of matters in a way that the other could never do. It would be impossible, one thinks, for Pattison to misinterpret any author so completely as Stephen does Shaftesbury. And Pattison is even better, perhaps, when he deals with the lives of the great Renaissance scholars, such as Scaliger and Huet. The volumes are disfigured by an unusual number of misprints.

Directors of psychological laboratories need to be warned against encouraging crude and worthless "original investigation" no less than directors of graduate study in philology. The immediate text for this remark is a paper from the Columbia Archives of Psychology, No. 10, "Time in English Verse Rhythm," by Dr. Warner Brown. Typical verses read by several assistants were recorded by an apparatus essentially like one of Rousselot's. On this graphic record the time-relations of syllables, as expressed in linear relations, were measured, and thereby all previous notions of English verse rhythm triumphantly proved erroneous. But the author himself points out fatal defects in the record, which does not indicate the place of the stress, and not always the division between syllables. To this must be added other serious faults of method and much confusion of mind on fundamental concepts. With a parade of accuracy in small things, essentials are treated loosely. Dr. Brown knows the work on rhythm done in psychological laboratories; what has been done elsewhere he does not know, or tosses aside. Hence he is not aware that the few grains of fact that emerge vaguely in his

measurements have been anticipated by his "unscientific" predecessors.

"The Art of Reconnaissance," by Col. D. Henderson of the English army (New York: E. P. Dutton & Co.), will be of small use to those who are merely cramming for examination, for there is not a numbered paragraph in the book. On the other hand, to those who are studying the subject, so far as it can be studied from texts, what Col. Henderson has to say must commend itself. Reconnaissance, of course, is as old as war itself, so that we can hardly expect anything new to be said on the subject, but Col. Henderson, who, by the way, served in South Africa as a staff officer, occasionally comes very near novelty. The virtue of the book is its shining good sense, the objective, *i. e.*, the enemy, is never lost sight of. This would seem to be an obvious matter, but for the temptation to substitute topographical for hostile information. Col. Henderson's style is notably good.

Col. G. P. Scriven has done well to bring together in "The Transmission of Military Information" (Governor's Island, N. Y., 1908) various papers published by him on the subject in the *Journal* of the Military Service Institution. His book, after an opening chapter of general scope, deals wholly with the organization of signal troops, and with the various instrumental means of transmission, both for mobile armies and for coast defence. The work is technical, but not beyond the powers of the layman, for whom indeed it should prove of interest. With a field wireless kit, Napoleon might have recalled Grouchy; and if Sadowa, but for the successful ride of a single officer, might have been a severe Prussian defeat, we may believe that in the future, the issue of a pitched battle may turn on keeping one's contacts clean.

Shaikh Muhammad Iqbal probably did not seek advice from his teacher, Prof. T. W. Arnold, before undertaking to write "The Development of Metaphysics in Persia" (London: Luzac & Co.). His effort to contribute to the history of Muslim philosophy lands him squarely between two stools. A book of less than two hundred small pages of large print, which carries the reader from pre-Zoroastrian philosophy to Bahism, can be intended only for the general reader; neither Orientalists nor philosophers could use such a brief sketch of twenty-seven centuries of speculation, whose chief results have long since been chronicled by several good writers. But the general reader who turns to Iqbal for light will enter a wilderness of stiff translations from Persian and Arabic manuscripts, faintly relieved by excerpts from standard histories. The author tries to escape censure by announcing in the introduction that "the object of this investigation is to prepare a ground-work for a future history of Persian metaphysics. Original thought cannot be expected in a review, the object of which is purely historical." But this does not excuse the insufferably dull tabulation of interesting facts. It is Iqbal's misfortune to have assumed a task requiring a combination of learning and delicate appreciation possessed, it may be, by no living man. Persian metaphysics can be interpreted only by somebody who is at once Orientalist, philosopher, and master of literary expression. The author of this booklet does not seem to be such a genius.

It is just two centuries and a quarter since the victory of John Sobieski and his German allies under the walls of Vienna (September 12, 1683) freed Europe from the terror of Turkish aggression. From that time the Ottoman Empire has been going to pieces, but one has to journey no further eastward than formerly in this part of the globe to come to the lands of Islam. In the concluding chapter of "A travers l'Autriche-Hongrie," a book of travels, by the novelist and musical critic, Georges Servières (Paris, 1908), we are told that Serayevo, the capital of Bosnia, in spite of the blocks of tall houses, electric tramways, telegraph-poles, etc., still presents from without the aspect of a Turkish city, with its "hundred slender, pointed minarets," and that the Mussulman women go about much more strictly veiled than the women of Constantinople. "Austria has had the good sense," says M. Servières, "to respect the religion of the inhabitants, which is in very great part Mohammedan."

With the appearance of the second half, from *Meistern* to *zwölf*, the second edition of Hermann Paul's "Deutsches Wörterbuch" (Halle: Max Niemeyer) has been completed. It is a solid work of 700 pages, intended "to give the different meanings of the words in their historical and psychological connection, and in the case of all words that have different meanings to exhibit the different usages and their relation to each other." This second edition is fully one-fifth larger than the first.

Arthur Bonus has supplemented his "Rätselbuch" by a second volume, "Zur Biologie des Rätsels" (Munich: Callwey). This may be regarded as an introduction to his collection of riddles. It discusses the riddle as a form of literature, its purpose, and connection with life.

Alfred H. Fried of Vienna, well known as an advocate of international peace, has just published (Tübingen: J. C. B. Mohr), "Die Grundlagen des revolutionären Pacifismus."

The Jewish rabbi. M. Gaster of London, has published in the *Zeitschrift der deutschen morgenländischen Gesellschaft*, Heft 2, of the current sixty-second volume (1908) what he believes to be an ancient Hebrew recension of Joshua in a Samaritan form, which the editor secured from the Samaritan church authorities themselves. In the literary introduction Gaster insists that this is a genuine document, belonging probably to the second century before Christ, and antedating Josephus; and that both the Massoritic and the Samaritan texts of Joshua are based upon a common, very ancient original source, with which both agree almost literally. These claims, however, are finding opposition of equal vigor. Dr. G. Hölscher of the University of Halle, publishes the results of his researches in the *Allgemeine lutherische Kirchenzeitung* of Leipzig, No. 32, and asserts that both in content and form the work shows the influence of Islam and must be placed later than 1,000 after Christ; and also that the document does not even profess to be anything else than merely a Samaritan chronicle. Hölscher admits that it is the best chronicle of this kind, because it is based on the Samaritan recension of Joshua, which once actually did exist, but which has not yet been discovered.

The new series entitled Studien zur Geschichte des neueren Protestantismus, edited by H. Hoffmann and Leopold Zscharnack (Giessen: Töpelmann) begins with "Luther in den Wandlungen seiner Kirche," an instructive historical estimate of Luther by Hort Stephen, *privatdozent* in Marburg. This is not only a chapter in church history, but in the history of civilization in general, especially as Luther has been claimed by the advocates of radicalism—both in church and politics.

"Ist Gott tot? Gott? Welt? Mensch? Drei Kernfragen der Weltanschauung, naturwissenschaftlich beantwortet" (Stuttgart: Max Kielmann) is the somewhat startling title of a work recently issued by one of Germany's leading apologetical writers, the editor of *Glauben und Wissen*, Dr. E. Dennert. The purpose of the book is to answer the chief objections made by scientists to the fundamental teachings of Christianity on theology in the narrow sense of the term, cosmogony and anthropology. The author is not a theologian but a scientist.

The second and third sections (*Hefte*) of Volume I. of the new Mythologische Bibliothek, published for the Gesellschaft für vergleichende Mythenforschung (Leipzig: Hinrichs), contain a lengthy investigation by Ernst Böklen, "Adam und Kain im Lichte der vergleichenden Mythenforschung." This author, like others in this department, yields to the fascination of the moon hypothesis; Adam means red, *i. e.*, the moon; the rib of Adam is the moon crescent.

H. Bungeroth has recently published (Leipzig: G. Strübig) two works on the Apocalypse. The larger is entitled "Die Offenbarung Johannis unter dem Gesichtspunkte einer Theodicee"; and the smaller is "Schlüssel zur Offenbarung Johannis, einem Meisterwerke göttlicher Kunst, voll Trost und Kraft."

The National Society for the Promotion of Industrial Education will hold its annual meeting at Atlanta, Ga., November 19, 20, and 21. Among the speakers will be: Elmer Ellsworth Brown, United States Commissioner of Education; the Hon. James Wilson, Secretary of Agriculture; Andrew Carnegie, Carroll D. Wright, president of Clark College; President E. A. Alderman of the University of Virginia, Mrs. Frederick Nathan of New York, vice-president of the National Consumers' League; the Hon. G. Gunby Jordan, president of the Eagle and Phenix Mills, Columbus, Ga.; John Mitchell, vice-president of the American Federation of Labor; Robert C. Ogden of New York, president of the Southern Education Board; and L. D. Harvey of Menomonie, Wis., president of the National Education Association. An exhibition of trade school work from all parts of the United States, prepared under the direction of Prof. K. G. Mathewson, president of the Georgia School of Technology in Atlanta, will be one of the features of the convention.

Dr. Max Falk, the Hungarian journalist and publicist, died at Budapest September 10. He was born in 1828 at Pest, and attended the university there and the Polytechnikum at Vienna. For many years he was active in journalism, as a Liberal, and

he also served as a member of the Relchstag. Among his writings are: "Die Krönung des Königs von Ungarn," "Die fürstliche Familie Esterhazy," and "M. Bachelll" (published in the twelfth German edition of Galletti's "Allgemeine Weltkunde").

The report comes by cablegram that on Tuesday of this week John Churton Collins, professor of English literature in the University of Birmingham and noted critic, was found dead in the woods near Lowestoft. Professor Collins was born in 1848, and was a Balliol College, Oxford, man. After his graduation in 1872 he took to journalism, lecturing, and essay writing, and made himself generally feared as a scourge of indolent and false writers. He was always trenchant and unsparing, and his precise memory of the substance of classical and modern literatures gave him an advantage over careless critics. On the side of constructive criticism he accomplished not so much, his chief contribution in this field being his arguments to prove that Shakespeare was far from the little-read man he is commonly held to be. His list of publications is a long one, including: "Sir Joshua Reynolds as a Portrait Painter" (1874), "Bolingbroke" and "Voltaire in England" (1886), "Study of English Literature" (1891), "Illustrations of Tennyson" (1891), "Dean Swift" (1893), "Essays and Studies" (1895), "Ephemera Critica" (1901), "Studies in Shakespeare" (1903), "Essays in Poetry and Criticism" (1905). Besides these original studies he published critical editions of Cyril Tourneur, Lord Herbert of Cherbury, Robert Greene, Dryden's "Satires," Pope's "Essay on Criticism," Tennyson, More's "Utopia," and Matthew Arnold's "Merope."

ANCIENT ENGLAND.

English Society in the Eleventh Century: Essays in English Mediæval History. By Paul Vinogradoff. New York: Henry Frowde. $5.25.

This work immediately suggests two others, the same author's earlier book, "Villainage in England," and the late F. W. Maitland's "Domesday Book and Beyond." This is a broader work than Maitland's, drawing its material from all available sources, rather than from the great Exchequer volumes alone, and approaching its subject as a problem of general social conditions rather than as an interpretation of one particular group of facts. It need hardly be said, however, and it is certainly no depreciation to say, that this book lacks the humor, the constant vivacity, and the sudden flashes of illuminating insight which marked "Domesday Book and Beyond," and indeed all of Professor Maitland's work. He has lifted all subsequent writing in his field into a higher and more human plane, but none of his contemporaries or immediate successors has so far proved to be gifted in just the same way as he. The volume under review is a sort of sequel to "Villainage in England," if that term may be applied to a study of conditions that lie earlier rather than later in time. Professor Vinogradoff has been engaged for many years in the study of social conditions in mediæval England, especially as they are approached from the legal side, and these two books represent the ripened results of his study. This later work is divided into two essays, one on government and organized society, the other on the tenure and use of land, the various classes of the population, and the relations of people and land. Under these general headings are ranged some fifteen chapters of detailed investigation, with concrete summaries at the end of each section, and two admirable chapters stating his general conclusions.

The significance of the eleventh century as a period of beginnings of more settled conditions is found in the fact that it is the time of fusion of three systems of law and society, the Anglo-Saxon, Anglo-Danish, and Norman-French. The first two had, it is true, been long in conjunction and partial union, but the effect of the complete Norman mastery was to combine both with the institutions now imported from abroad and to subject both to the influences of a dominant government and ruling class of foreign origin. The prominence given to the Danelaw and its distinctive customs is one of the marked characteristics of Professor Vinogradoff's book. He speaks in various forms of "a distinct stream of Scandinavian principles and practices," and of "the Saxon south, . . . and the Scandinavian north." He tells us:

> The fundamental difference between the compact estates of the south and the numerous free holdings of the Danelaw could not but exert an influence on the introduction of the feudal military system.

So in discussing legal procedure, public, private, and criminal law, the formation of gilds, sokes, and manors, military service, and many other subjects, the author constantly reverts to the differences between the law and custom of the more purely Saxon and Anglian portions of the country and of those in which Scandinavian institutions had become dominant or at least influential. Professor Vinogradoff makes numerous original contributions of fact or explanation that we cannot here discuss in detail. In general he points out that the social change brought about by the Norman conquest was a defining of vague or unsettled arrangements, a combination of men of many different degrees of freedom and status into a few legally and socially recognized classes, a frank recognition of the superiority and claims of the privileged land-holding and military class.

This author does not yield to any in his respect for the fundamental significance and cataclysmic character of the Norman Conquest. At the opening of his second chapter he begins his study of English land law with a phrase about "the general collapse of the old order in consequence of the Conquest." And yet the cumulative effect of a large number of instances in which conditions before the Conquest remain but little changed and in which changes are in the line of development rather than complete alteration, and the numerous analogies between later and earlier eleventh-century forms of social organization—all these things tend to make on the mind of the reader an impression of continuity rather than of breach of development. The fact is that the days have now passed by when the Norman Conquest could be looked upon as a single event with immediate, simple, and clear-cut effects. The crude statements that feudalism was or was not introduced into England from France, or that manors were or were not created by the Norman conquerors, or that villainage did or did not exist before the Conquest, must evidently give way to a careful investigation and measurement of just what changes were in progress on the eve of the Conquest, just what new elements were introduced at that time, and just what various effects this combination of forces produced. Moreover, all England cannot be regarded as a unit. It must be understood that each part of the country, often each shire, had its characteristic differences.

It is to this analysis that Professor Vinogradoff has now made a scholarly and important contribution. His methods are most careful, his learning wide, his spirit patient and fair, and his conclusions usually convincing. His book is not always easy reading. The matter is necessarily detailed and often technical. The use in some cases of sources belonging to a later period as parts of an argument from analogy is slightly disconcerting, or at least requires careful reading if one is to discriminate between such analogies and direct arguments. On the other hand, the book as a whole is more clearly written and more skilfully constructed than his earlier work, and the chapters which give his general surveys and conclusions are simple, concrete, and interesting. The work well fulfils the promise of its title by giving on the whole much the best account that we possess of the organization and classes of the English people in the critical eleventh century.

CURRENT FICTION.

The Testing of Diana Mallory. By Mrs. Humphry Ward. New York: Harper & Bros.

One explores anew this latest of Mrs. Ward's "serial successes" for the secret of her immense popularity with American readers. In part it has always seemed to lie in the intensity of her Britlcism. She has Trollope's faculty of transferring us bodily and sympathetically to the gardens, the drawing-rooms, the Parliamentary hustings and lobbies of the

governing class. And we like her the better for taking her England seriously, for not being content, after our own fashion, with representing the follies and extravagances of high society. Britannia ruling the wave is always the stately figure in the background of her romance. Yet romance is the main thing with her—the interplay of human character and action as visible to an eager and sensitive mind, a feminine mind equipped with reverence, if not with humor.

Diana is another of her ardent, quivering, flame-like creatures, doomed in the nature of things to be snuffed out or to be enclosed in some dark-lantern of endurance or compromise. Her race, her parentage, her breeding, conspire to render her vulnerable, and she is wounded indeed. It is hard to be patient of her patience. The story of Griselda has always needed interpretation; surely, it was not a mere brutish and unreasoning endurance which won her back her Walter. There is something servile in Diana's allegiance to a man who has cast her off from the most sordid of motives; our respect for her is put under an almost intolerable strain. Are such people quite worth presenting to us on so large a canvas? Oliver Markham is a pusillanimous person; the best we can say for him is that he is a romantic hero of long standing. Rather than give up his inheritance, he sacrifices in cold blood the girl whom he has just induced to confess her love to him. It seems that his usefulness to his party, his future in Parliament, depend upon his securing the huge income which his mother (classic figure!) has it in her power to withhold. So he decides to take it, and the girl is permitted to remove herself from the scene, presumably with a broken heart. His falseness in love is followed by a selfish duplicity in politics; both are visited upon him in the end by an outraged constituency; and the ruin of his public career is a little theatrically sealed by means of a partisan brickbat. To him, almost on his death-bed, hastens Diana, tender and true to a degree almost distressing. She saves him in the article of death, saves him for herself; but how shall we congratulate her? He is a weakling, a traitor to whom treason is far too natural to be a matter of tragic import. As for her fidelity: it is mere pathetic fact; and however well pathetic fact may serve the purposes of realism, it cannot at all serve the purposes of romance.

Fate's a Fiddler. By Edwin George Pinkham. Boston: Small, Maynard & Co.

The hero of this autobiography tells us that of all the books he devoured in childhood by the light of a tallow candle, "best loved and most revered" were those of "the master, Dickens." He says that he is on the whole glad to see the "very superior criticisms" of Dickens he has read in later life, for they send him flying in hunger to revel in his favorites, as if he were once more a boy in the vault under his father's bookshop. In support of this tribute he has made his book frankly in the Dickens style, a book of plot and of manners, or rather of habits; of rascals with and without good points, of madmen and lost wills, of grandiose visionaries. There walk through his pages delightfully squabbling boys, merry girls, tender women, the well-known shrivelling commercial clerk, the fairy god-father merchant. There flourish kind hearts and simple faith, comical folk, and melodramatic adventure. That the scene is America, even to Charlestown under the shadow of Bunker Hill, Swampscott, St. Louis, and the Ozark mining country, does not avail to destroy the Dickens atmosphere. A sentence describing a crowded social meeting will illustrate:

> Instant and simultaneous protest from every one that there was plenty of room, Mr. Mungiven observing, that where there was room for the heart to beat there was room enough among friends. A sentiment generally thought to be rather neatly put and highly creditable to Mr. Mungiven.

The form of the story is more than suggestive of "David Copperfield."

But the imitation is frank homage, not servility, and it would be unfair not to give the author credit for individual touches of a humor of his own and of an America presumably also his own. The hero's father, for example, objecting to his wife's naming the boy Sumner, after a rich uncle, suggests a happy compromise:

> *You* shall name the boy, my love, after your uncle, and *I* shall name him after the greatest of—er—Massachusetts' great sons,—the—er—matchless intellect which so long represented her in the—er—most august legislative body in the world, and whose recent death has left a void in the heart of the nation which even Massachusetts cannot fill!

To revive a wholesome type of story even on a reduced scale is a thankworthy deed. Mr. Pinkham has done so, and has suitably, humorously, and cleverly added of his own.

The Open Window: Tales of the Months. By "Barbara." New York: The Macmillan Co.

This is the Barbara of "The Garden of a Commuter's Wife," "People of the Whirlpool," and other books in the same amiable vein. Her pleasant humor has endeared her to many readers; she has the graceful affectionate manner of the feminine diarist, the faculty of chronicling the small beer of experience without seeming impertinent or dull. These tales, slight enough in substance, are wholesome and palatable. They bear their graceful testimony to the theory that all's well with the world, and leave one, as your work of domestic sentiment should, with a momentarily quickened sense of creature comfort.

Eine Liebesnacht. Von Maria Janitschek. Leipzig: Verlag von B. Elischer Nachfolger.

From this title one might expect to find another variation upon that old theme of intrigue, of passion, illicit or licit, which in these days is the raw material for too much of the German and other fiction. But this is far from being one of those French novels "made in Germany"; cheap and clumsy imitations of deftly wrought, abominable Gallic models. It is a serious and high-minded attempt to describe the conflict between growing Christianity and lingering and strongly rooted Paganism in the hearts of the people of Neustria and of Mercia in the sixth century—the time of the wretch Chilperic and his atrocious queen Fredegunde. The *Liebesnacht* was a night of vigil, when Soissons in its illuminated houses and in its Basilica of St. Medardus awaited the second coming of the Lord. A stubborn, self-willed heathen, Rauhulf, a man of many possessions in the nearby country, wandered into the brilliant temple; and there he was suddenly overcome by the knowledge that Christ was higher and nobler than his god Odin. From that hour his was a different life; and there followed in consequence strange changes in the linked lives of many others.

The chief figure in the tale is the fierce, wild, pure maiden Diarmon, a stray from a land unknown, grown up among free peasants in Neustria. She is a Diana of the Dark Ages, but not at all a gentle Una; in her harebrained adventures she needs no protecting lion: she defends herself with wits, tongue, teeth, and knife, all of the sharpest. Very cleverly suggested is the difference she feels between herself and her childish peasant companions, with all the sisterly affection she has for them. Beyond sisterly affection, and a liking for kindred spirits, her fierce virgin heart never goes. Man's love never touches her. As one grows to know her, one would not have this otherwise. There are other well presented characters, from the decadent Roman, Severus, to Welsh and Irish bards.

The story, which is sometimes disconnected, contains striking episodes, some of them extravagant and incredible, but happily this is a romance, not a realistic novel of commonplace life. There are some passages of dubious taste; no impurities. The style, on the whole, is simple, clear, and dignified; often with a real poetic *schwung*.

The Growth of Modern Nations: A History of the Particularist Form of Society. Translated from the French of Henri de Tourville, by M. G. Loch. New York: Longmans, Green, & Co. $3.50.

This volume contains a translation of a series of articles contributed by the late Henri de Tourville to the journal called *Science Sociale*, from February, 1897, to February, 1903, under the title of "Histoire de la formation particulariste." This title indicates very exactly the purport of M. de Tourville's contribution. The work is, in fact, an attempt to interpret history according to certain dicta laid down by what the author constantly calls "Social Science," that is, an infallible set of doctrines furnishing the key and the only key to the interpretation of the past. The point of view of this book can best be stated in the author's own words:

These records [of the past] have, as a matter of fact, preserved innumerable features of a state of society which Social Science can accurately reconstruct . . . in accordance with the unchanging laws of social transformations. In this case the procedure of verification is similar to that which enables us to recognize the existence of certain animal or vegetable species, no longer found to-day, by means of impressions left in the earth's strata. They actually did exist because they can be scientifically reconstructed according to the permanent laws of zoölogy and botany. This method of verification can be applied to history, and is one of the finest achievements of Social Science. Historical criticism may actually rescue a document from the dust of Time, may neatly prune away from it all foreign elements, and determine with certainty its growth, its date, and its place of origin; but when it is a case of extracting from that document a knowledge of the social organization to which it belongs, historical criticism is confronted by all the uncertainty and confusion arising from popular or personal notions of what society is. Historical criticism has failed to examine methodically the various forms of modern society, nor has it subjected them to "comparative anatomy," nor discovered in them "the law of the correlation of the forms of their different parts," and it has not, therefore, been able to reconstruct in a scientific manner the organism of an ancient society, by piecing together its scattered features which are to be found preserved in documents. Social Science has furnished us with *the* complete and indispensable method which historical criticism lacked.

We have no quarrel with the writer of these chapters, nor any inclination to do otherwise than read with respectful attention what he has to say, but he alienates the reader almost at once by his exaggerated claims for "Social Science" and by his foolish flings at historical scholarship. We can turn against him his own words when he writes:

Our modern savants, who have the unfortunate habit of twisting the evidence of history so as to fit in with the ideas of human society which they have formed to suit their own prejudices, have not been able to accept this fact. . . .

Not the least of the author's peculiarities is the ease with which he bends each bit of evidence to conform to his theory. As a theory there is nothing remarkable in his contention that a particularistic state of society, that is, society founded on the single family and the private and independent estate, was more stable than the patriarchal form which it overthrew; but no writer ever danced more lightly over difficult historical problems or made more unwarranted assumptions in the interest of his cause. More than that, he is seemingly ignorant of all recent historical literature. He aims his terrible battery of criticism at writers half a century old; for example, his only authorities for early English history are Thierry, Guizot, Montalembert, and Lingard. What would his brother scientists think of a palæontologist who was content with the discoveries of 1850? Quite apart from any question as to the tenableness of his views, we must lay it down as a fundamental criticism of this work that its author is ignorant of the subject, and that even the infallibility of "Social Science" cannot pronounce judgment where knowledge is wanting. In view of this fact we are the more astonished that a work of so many eccentricities in matters of detail, so many unproved assertions, and fantastic renderings of opinion should have found a translator, and much more a publisher. For those who will value what it contains, it will be, we fear, a case of the blind leading the blind and both falling into the ditch.

It is difficult to write tolerantly of some parts of this book. The chapter on the United States is childish in its ignorance. Take, for example, this account of the settlement of the colonies:

Each great group that landed in America *made its own distinct constitution*, just as each Saxon invasion did in past times. They were *all* agricultural emigrants. They went under the *direction of a lord* or one of the élite of the gentry. They founded *isolated* estates. They *appointed* an assembly. (Italics ours.).

There is scarcely a correct statement in any of these sentences, and they deserve to stand with another instructive paragraph, a little further on, which asserts that the colonies "were purposely founded independently of one another, . . . in order that each should include only persons of similar opinions: the Puritans, under Sir William Penn in Pennsylvania; the Universal Tolerants, the followers of Roger William (*sic*) in Rhode Island; the Catholic Tolerants, under Lord Baltimore in Maryland, etc." After such a series of statements may we not feel somewhat reluctant to join in the pæon of praise to "Social Science" with which the book closes:

Let us pay homage, as a finale to Social Science, which like sciences in general, enables us to grasp so firmly the admirably simple causes of the most powerful phenomena. Could Social Science have revealed anything simpler, or in a more precise manner, than the causes of greatness of the most powerful human race the world has yet seen?

Cardinal Newman and His Influence on Religious Life and Thought. By Charles Sarolea. New York: Charles Scribner's Sons. $1.25.

Notwithstanding the profound influence of Cardinal Newman on English religious life, it is a fact that he has always been regarded by the average Englishman with distrust. This is not merely because he became a Catholic, but because he seems to such an Englishman (as he seemed to Charles Kingsley) a juggler with the truth. Yes, the Briton will say, he wrote a beautiful style (that is tradition), but there was something elusive and slippery about his mind; at bottom he had no clear ideas. Now, it is curious that, as his power has waned in England, it has in France gained enormously. He is today probably the most influential religious writer in Paris, the subject of countless theses; in the opinion of leaders like Loisy, he is even the greatest Catholic theologian of the century. It is appropriate, therefore, that the writing of his life for the World's Epoch-Makers should have been entrusted to a man of Belgian, if not French, birth and training, who is now a lecturer in the University of Edinburgh.

Dr. Sarolea's work is non-partisan and shrewd. He is sufficiently acquainted with English church history to give some background to his work; he is sufficiently French to see the relation of Newman to the larger currents of thought. If his book fails—and it does, we think, in the end just fail—to be a first-rate contribution to religious history, it is owing to a weakness of psychological insight. Take his summing up of Newman's character:

Newman is an ascetic, and at the same time he is an artist, a literary epicure, appreciating beauty of style, even as in his youth he would be asked to taste and to select the vintages of his college. He is affectionate and reserved. He has the imagination of a mystic and the corrosive intellect of a skeptic. He delights in intellectual difficulties and yearns for certainty. He is sincerity incarnate, and possessed of a subtlety which the greatest casuist might have envied. He is disinterested to the verge of self-abdication, he has sacrificed everything to enter the Roman Church, and, having once entered it, he accepts twenty-five years of disgrace and suppression with admirable resignation; and at the same time he is egotistic, introspective, of an almost morbid subjectivity. He is timid and aggressive. He loves solitude, and yet no man in this century has

drawn to himself so many hearts. Indeed, after having striven for ten years to solve the riddle of the sphinx, I am inclined to admit that the riddle is insoluble, and that the safest attitude with regard to Newman is to admire without trying to understand.

That is true, no doubt, as every personality is in the end insoluble; but it should seem that an acquaintance with the saints of other times and lands would at least have made some of these apparent contradictions less peculiar to Newman. Certainly he was not the first mystic to unite the contemplative and the practical temper, subtle introspection and strong power of dominating other minds. At bottom the deficiency of Dr. Sarolea's method is just this: that, dealing with a mystic, he does not quite grasp the mystic's heart. He is able to follow Newman through his fifteen years of searching, and to exonerate him from the double-dealing that was so often cast in his teeth. Newman, he rightly says, became a Catholic because his was a soul *naturaliter catholica*. He emphasizes the importance of Newman's theory of development, and shows how naturally the Modernists, who seek to introduce into religion the conceptions of evolution, symbolism, and vital immanence, connect themselves with the author of that theory. The younger generation, he says, has turned away from the problem of Pascal and is giving its allegiance to Newman (the statement is true, with important reservations); and yet, he adds, though Newman was a Modernist unwittingly in many aspects of his teaching, he was consciously and systematically a religious reactionary. Dr. Sarolea's final judgment is that the religion of the future will read Newman's ideas in its own fashion and get from them its own inspiration, but that in reality there is in them no true foundation for the Modernist movement or the "New Theology," or for the amalgamation of these two which apparently he expects to supplant the old dogmas and reconcile the feud of Catholic and Protestant.

We are inclined to think that Dr. Sarolea's statement of this complicated relationship is correct, barring his forecast of the future, which is mere guessing. But he does not set the real nature of the underlying sympathies and antipathies in a sufficiently clear light. Pascal made a sharp distinction between the immutable infinite and the changing finite. Now, if there is any one dominant tendency in modern thought, it is the desire to solve this antinomy or to deny that any such antinomy exists. As Prof. William James remarks in a recent contribution to the *Hibbert Journal*, "the line of least resistance" leads us to believe that God is also finite like ourselves, and this is but a reflex of the popular philosophic thesis that absolute *being* is but another aspect or development of universal *becoming*. Naturally, therefore, Pascal no longer has a serious message for those who are attempting to adapt religious creeds to the new mode of thought. The theory of development, fitting so neatly with scientific evolution, is seized upon greedily by these innovators, who failed to see or who slur over the fact that Newman is still on the side of Pascal rather than of the new philosophy, that he confined his theory of development strictly to what was Pascal's world of change, and would have shrunk back in abhorrence from any hint of breaking

> . . . the pillours of Eternity,
> That is contrayr to Mutabilitie.

It is the all-absorbing consciousness of this ever-present contrast between infinite changelessness and finite change that makes the mystic, whether he be an ancient recluse in a cavern of the Himalayas or a modern priest torn between the claims of the Anglican and the Roman confession of faith. Superficially, Newman is thus a philosopher of the evolutionary school, fundamentally a mystic of the old unvarying stamp. The curious question is to know what France will do with him.

Some African Highways: A Journey of Two American Women to Uganda and the Transvaal. By Caroline Kirkland; with an introduction by Lieut.-Gen. Baden-Powell. Illustrated. Boston: Dana Estes & Co. $1.50.

One of the most fascinating and unique tours in the world is described by Miss Kirkland in this book. With her mother she went to Uganda and thence, stopping at various places on the African coast, to the Transvaal. The points of interest in this journey she sketches with quick perception, and accuracy of touch; and, as she had near relatives in both countries, she gives her readers, as no chance traveller could, vivid glimpses of the lives of those pioneers who are striving to develop the resources of the Dark Continent. The picture which she draws of the rose-bowered home at Entebbe in Uganda, though not without its shadows, is so charming that one marvels at the skill with which the English turn a wilderness into an orderly, habitable place. An interesting event was a visit at Dar-es-Salaam, the capital of German East Africa, where Miss Kirkland was a guest of the Governor. She describes his residence as a "veritable palace out of the Arabian Nights Tales, set in the loveliest tropical garden I ever saw." The impression left by the fine roads and pretty houses in the town and its environs was of an "intensely energetic, ambitious community, whose overmastering desire is to outdo the English in their hitherto undisputed field as the world's chief colonizers." The account of her travels in the Transvaal contains little of especial interest, except that part relating to the Rand Chinese, whose condition she describes as far better than anything they had ever known in any previous condition of life. Her route homeward was by rail from Johannesburg to the Indian Ocean, and thence, with a stop at Zanzibar, to Naples, which she reached just at the beginning of the great eruption of Vesuvius in April, 1906, "our final excitement," as she calls her chapter descriptive of it. Among the noteworthy incidents of her adventurous trip was seeing from the car-window on the Uganda Railway "a huge lioness, bounding along not seventy feet away, keeping up easily with the train, which was proceeding in leisurely fashion. As she seemed so interested in us, the train drew to a standstill, and at this the lioness crouched down in a little clump of grass, her great, powerful head and shoulders in full sight of all the passengers." Miss Kirkland evidently made a special study of the sleeping-sickness, which has ravaged Uganda, and she devotes a chapter to it. The closing chapter contains useful hints to any who may be inclined to follow her steps. Lieut.-Gen. Baden-Powell contributes an appreciative "foreword."

Science.

The North-West Passage: Being the Record of a Voyage of Exploration of the Ship Gjöa, 1903-1907. By Roald Amundsen; with a supplement by First Lieut. Hansen; 139 illustrations and three maps. 2 vols. E. P. Dutton & Co. $8 net.

It is remarkable, considering the number of large and well-appointed expeditions which have attempted to make the North-West Passage, that the problem should have been finally solved by an old Norwegian herring-boat of 47 tons burden, with a crew of seven men, including the commander. The Gjöa sailed from Christiania on June 16, 1903, with a five-year outfit—the gift largely of the present King, his father, and the Norwegian government—and in September reached a sheltered harbor in King William Land. Since one of the principal objects was to secure magnetic observations, and since this place was only ninety miles from the Magnetic Pole and particularly suited for a fixed magnetic station, an observatory was built. For nineteen months uninterrupted observations were made, the results of which it will take some years to work out in detail. Explorations were

also made for the purpose of charting the neighboring coast and islands, and sledge journeys taken, one to the Magnetic Pole and one by Lieut. Hansen with one of the crew, along the unknown eastern coast of Victoria Land, an account of which he gives in a supplement. On August 13, 1905, the Gjöa left the harbor, aptly named Gjöahavn, and by August 17 had sailed through the hitherto untraversed part of the North-West Passage. Nine days later the explorers met the first vessel coming from the west, a San Francisco whaler. A little later they established winter quarters at a harbor twenty miles east of Herschel Island, a rendezvous of the American whaling fleet. Here they made unexpectedly an important discovery, that, owing to the proximity of the Mackenzie River, "the sea-water was quite fresh, and excellent in every respect, both for drinking and cooking." During the winter Capt. Amundsen accompanied the mail-carrier to Eagle City, Alaska. As soon as the condition of the ice rendered navigation possible, sail was set and on August 31, 1906, Nome was reached. At this point the narrative ends.

The success of the expedition was due, of course, partly to the peculiar fitness of the vessel for navigating shallow waters and to an unusually favorable season, but principally to the excellence of the crew, all but one of whom had had previous experience in the Polar seas. On the eve of their departure from their prolonged winter station and when they had for more than two years shared unnumbered perils and hardships, their captain writes:

> We all knew that we were going to have a rough time of it, but the splendid relations which had always existed between us so strongly united us that, although we were only seven, we were not easily discouraged.

The devotion of the men to their duties, their geniality, their love of humor, and their making the best of everything characterize the narrative from beginning to end. The main feature of this account of their three years' experiences is its vivid and entertaining picture of life in the Polar regions, both that of the explorers and that of the Eskimos with whom they came in contact; and in this respect the book takes the lead in Arctic literature. Many of the details are exceedingly trivial, but perhaps they are all essential to a complete picture. One cannot fail, however, to enjoy every one of the numerous little pleasantries by which the wearisome monotony of the daily duties was lightened. The impression of the Eskimos left by the narrative is, on the whole favorable, as to their intelligence and trustworthiness—especially of those whom intercourse with Europeans had not demoralized. They are industrious; even "little tots of five to six years sat with their fishing lines, often through the whole night, and made very good catches, sometimes more than their own weight." Their amusements, and they are a very merry people, consist of gymnastics, in which men of all ages take part, conjuring, singing, and dancing. Of their religious belief and practices comparatively little is told, but of their customs, dress, and method of building and furnishing their snow huts the most minute details are set down.

The work of the English translator, whose name is not given, is excellent. Indeed, it is difficult to realize that the book is a translation, so easy is the style. Only one mistake, concerning which the publisher has issued a memorandum, need be noted: the statement in regard to Bellot Strait (Vol. I., p. 59), "where McClintock lay for two years waiting for a chance to get through." The translation reads: "At 8 A. M. we passed through the strait," instead of "We passed the strait," not *through*. There is a full index; the maps are good; and numerous reproductions of photographs of the crew, their vessel, native companions, and their habitations, as well as of scenery (several taken by moonlight) are impressive. The general interest in the work, it may be added, is so great that it is also being published in Norwegian, Swedish, Finnish, Russian, German, and Italian. It may very likely captivate the imagination of some youthful reader as the story of Franklin did that of the author when he was a boy of eight or nine, and made the ideal of his life the accomplishment of the North-West Passage.

The Cambridge University Press (G. P. Putnam's Sons, American agents) will soon publish: "The Elementary Theory of the Symmetrical Optical Instrument," by J. G. Leathem; "Invariants of Quadratic Differential Forms," by J. Edmund Wright; "A First Course of Pure Mathematics," by G. H. Hardy; "Modern Geometry," by C. Godfrey; "Thomas Linacre," by William Osler; "Conditions of Life in the Sea; A Short Account of Quantitative Marine Biological Research," by James Johnstone.

Moffat, Yard & Co. are about to publish a volume of "Surgical Memoirs," by Dr. James G. Mumford of the Harvard Medical School. The chapters, which are for the general reader, give biographical studies of Hippocrates, Galen, Vesalius, Pare, Haller, John Hunter, Lister, Cooper, Brodie, J. C. Warren, and Bigelow.

The scope of "Biology and Its Makers," by Prof. William A. Locy (Henry Holt & Co.), is fairly indicated by the following paragraph:

> In the progress of science there is an army of observers and experimenters, each contributing his share, but the rank and file supply mainly isolated facts, while the ideas take birth in the minds of a few gifted leaders, either endowed with unusual insight, or so favored by circumstances that they reach general conclusions of importance. These advance-guards of intellectual conquest we designate as founders. What were they like in appearance? Under what conditions did they work, and what was their chief aim?

Some ten epochs of biological progress are recognized, with Aristotle, Vesalius, Harvey, Leeuwenhoek, Linnaeus, Cuvier, Von Baer, Müller, Buffon, Lamarck, and Darwin as the principal characters. Part I. treats of the sources of all biological ideas except those of organic evolution. Here we have glimpses of the lives and activities of the men who have been concerned in the study of microscopy, anatomy, physiology, embryology, heredity, and palæontology. These 340 pages are the most original and interesting portion of the volume. Whether the reader be a layman, or a college student to whom the names of Eustacius, Fallopius, and Malpighi will suggest organic structures recently dissected, or a biologist whose life-work is nearing completion, this summary of achievements will be an inspiration. One realizes as never before that, to the scientist, politics and nationality do not exist:

> Only those have produced permanent results who have interrogated nature in the spirit of devotion to truth and waited patiently for her replies. The work founded on selfish motives and vanity has sooner or later fallen by the wayside.

The numerous portraits, together with reprints of drawings and photographs of early and crude instruments, add value to the text. Part II. treats of the evolution of evolution, the rise and development of the various theories which culminated in the work of Darwin and Wallace, and the vast army of enthusiastic workers of the present day. Recent volumes, such as H. F. Osborn's "From the Greeks to Darwin" and Vernon L. Kellogg's "Darwinism To-day," have covered this same field, but Professor Locy introduces us in a charming way to the human side of the scientists. The drawback to the division into two parts is the necessity of cross-references and repetitions, for no phase of biological progress can logically be separated from the doctrine of organic evolution. At the end of the book is a well-chosen "reading list," giving, in twelve pages of fine print, several hundred accessible books and articles. There is also an excellent index.

Dr. Charles Harrington, for many years a member of the faculty of the Harvard Medical School, died in London, September 11. Born in Salem, Mass., in 1856, he attended Bowdoin College, Harvard College, from which he obtained the bachelor's degree in 1878, and then the Harvard Medical School. After studying at Leipzig, Strasburg, and Munich, he returned to the Harvard Medical School, in 1883, as an assistant in chemistry. In 1906 he was appointed professor of hygiene. He had been chemist to the State Board of Health of Massachusetts, secretary of the same body, and chief of the Bureau of Milk Inspection. He had contributed articles to various medical journals, and he was author of "Practical Hygiene," which has run through several editions.

Gardner Dexter Hiscox, a writer on scientific subjects, died September 13 at East Orange, N. J. He was born in Elizabethtown, N. Y., eighty-six years ago, and although without college training had devoted his life to scientific and technical work. He was best known as the author of "Compressed Air and Its Application,"

"Modern Steam Engineering" and "Hydraulic Engineering.". He was an authority on heating and ventilating.

Drama.

MALONE SOCIETY PUBLICATIONS.

Two new publications of the Malone Society now make a record of six volumes in all for its first year of activity. One is a literal reprint, in modern type, of "The History of King Leir" from the edition of 1605. According to the Registers of the Stationers' Company there was an earlier edition of 1594, but no copy of this is now known to exist. The title page of the 1605 edition bears the words: "As it hath bene diuers and sundry times lately acted"—an attempt probably to palm the work off on the public as Shakespeare's "King Lear," which was then popular. The other volume issued by the Society is the first of its "Collections," which are to be brought out in parts with continuous pagination until enough has appeared to make a substantial volume, when preliminary matter and an index will be added. So far we have tables of matter illustrative or corrective of the earlier issue of "Wealth and Health"; a fragmentary morality, "Love Feigned and Unfeigned," discovered by Arundell Esdaile in a copy of Johannes Herolt's "Sermones Discipuli," Strassburg, 1492; a fragment of another play, "The Prodigal Son," printed probably by John or William Rastell between 1516 and 1534, and found in the binding of a Paris octavo of 1542; the chronology of "The Elizabethan Lords Chamberlain," compiled by E. K. Chambers, correcting errors in the "Dictionary of National Biography" and giving material of the first value in compiling a history of the stage; and "Dramatic Records of the City of London: The Remembrancia." This last section has a curious interest, and the material, though, of course, not hitherto unknown, has never been brought together in this convenient form. The documents are taken from a series of books in which were entered letters from the Queen's Majesty and her counsel to the Lord Mayor, with the answers. The period, with some omissions, is from 1579 to 1640, and 1660 to 1664. Here we have selected all those letters that refer to the stage or stage-players. Their almost constant theme is the disorder caused by the crowds in and about the theatres, the loose habits of the players themselves ("a very superfluous sort of men"), and the general ungodliness of all these sports, the pious court of the city seeming to have made no distinction between bear-baiting and legitimate acting. Part of one of the sturdiest protests we will quote. It was sent by the Lord Mayor to Lord Burghley, Lord High Treasurer, November 3, 1594, and is an appeal to prevent the erection of a new playhouse, probably the Swan, although we have no evidence that this was actually built until 1598. The writer admits that "the people must have some kind of recreation," but continues:

> Whearto may bee answeared (wch yor good L. for yor godly wisedom can far best judge of) that as honest recreation is a thing very meet for all sorts of men so no kynd of exercise beeing of ltself corrupt & prophane can well stand wth the good policie of a Christian Comon Wealth. And that tbe sayed playes (as they are handled) ar of that sort and woork that effect in such as ar present and frequent the same may soon bee decerned bv all that haue any godly vnderstanding & that obserue the fruites & effects of the same conteining nothing ells but vnchast fables, lascivious divises shifts of cozenage & matters of lyke sort. wch are so framed & represented bv them that such as resort to see & hear the same beeing of the base & refuse sort of people or such yoong genntlemen as haue small regard of credit or conscience draue the same into example of imitation & not of avoyding the sayed lewd offences. Wch may better appear by the qualitie of such as frequent the sayed playes beeing the ordinary places of meeting for all vagrant persons & maisterles men that hang about the Citie, theeues, horsestealers, whoremoongers coozeners connycatching persones practizers of treason & such other lyke whear they consort and make their matches to the great displeasure of Almightie God & the hurt and annoyance of hir Maties. people both in this Citie & other places about, wch cannot be clensed of this vngodly sort (wch by experience wee fynd to bee the very sinck & contagion not only of this Citie but of this whole Realm) so long as these playes & places of resort ar by authoritie permitted.

One sees from this how early and how common was the English prejudice against the stage, and one sees, too, the society and atmosphere in which Shakespeare grew up, and the public life which bred his public manners.

W. T. Price, possessed by the delusion that "play writing is an art in the nature of an exact science," has written and published at his own charges a book, bearing the cumbrous title "The Analysis of Play Construction and Dramatic Principle," which he apparently believes to contain every secret necessary to the production of stage masterpieces. It is a portentous volume, remarkable for its bulk, its assurance, its habitual confusion of the obvious with the profound, and its laborious and perfectly unconscious futility. Mr. Price, it appears, has organized a school for the production of dramatists and specifies "Tbe Clansman" as one of the results of his system of tuition. This claim need not be disputed, being entirely reasonable on its face, but it is not easy to divine the motive for making it. Briefly—it would be sheer waste of time and space to try to follow Mr. Price in detail—his theory is that dramatic genius, unsupported by mastery of technical laws, is comparatively powerless to make a good play—which has a certain measure of truth in it—and that the requisite technical knowledge must be obtained by minute analysis of standard pieces in order to discover their constructive principles. As models for dissection he selects five plays, "Ingomar," "The Lady of Lyons," "Camille," "Still Waters Run Deep," and "A New Way to Pay Old Debts"—of which only one, "Camille," is really notable for artistic composition. He quotes selected passages to prove that they were written with particular intent—which, of course, is true—and in accordance with his own prescribed order of procedure, which is not true at all, except in special instances. Undeniably there is more or less general resemblance in the main features of well-built plays belonging to the same class—in five-act tragedies, for example. But the notion that any prescribed formula can be invented to insure the best results of dramatic imagination is ridiculous. It is almost as wild as the assertion of Mr. Price that the same laws of technique are observed by Shakespeare and Ibsen. What he means, presumably, is that there are fundamental dramatic laws, of universal acceptance, which both obey. Fine technique, as everybody knows, is an art which has grown with the development of stage resources. Confidence in his judgment of it is somewhat shaken by his discovery of it in the works of Paul Potter and Bartley Campbell, mere theatrical scene-makers. But his untrustworthiness as a teacher is manifested, not so much in his exaggeration of the importance of mere mechanism as compared with that of matter—much of what he says about technique is sound enough, though tediously trite—but in his utter failure to offer any suggestions of practical value to the budding dramatist. All the real instruction in his ponderous volume could be put with better effect into a thin pamphlet for use as a primer.

The character of the Tudor Facsimile Texts (London: T. C. & E. C. Jack) has been so fully set forth in commenting on earlier issues (See the *Nation*, April 16 and June 1) that we need do no more than mention the four new volumes now published. They are all interludes, quarto volumes in black letter. The earliest in date is "The Nature of the Four Elements," author unknown, from the unique copy in the British Museum, which was printed between 1510 and 1520. "The Disobedient Child," by Thomas Ingelend, is from the copy in the British Museum dated by the Museum authorities 1570, but by the present editor "1560 or thereabouts." A copy of this rare work turned up in the Irish find of 1906, and is now held for sale by Quaritch at £284—some indication of the value of these reprints. The third play is "The Trial of Treasure," which was twice printed by Thomas Purfort in 1567, the present reprint being from the British Museum copy. The fourth is "New Custom," written to aid the Reformation, and published in 1573. Only four or five copies are known to exist, the one used for the present edition being in the British Museum. As with the earlier volumes, J. A. Herbert, of the manuscript department of the British Museum has compared these collotypes with the originals and finds them practically perfect. The photographic reproduction is in some cases slightly more blurred than the original,

but the editor, John S. Farmer, proposes to obviate this defect in future issues by using a harder paper.

Rémy de Gourmont publishes in Paris "Les plus belles pages de Cyrano de Bergerac." The book rectifies rather than corrects Rostand's legend of the man who invented prose comedy in French literature, and should remain a shining light in the constellation that reaches from Rabelais to Anatole France. In his imaginary philosophic "voyages" Cyrano showed himself a studious disciple of Descartes and Gassendi. His public life was concerned with real duels and wounds, but with neither drink nor woman. And Rostand has relighted his star.

There is little in "Jack Straw," the first comedy of the new English dramatist, W. S. Maugham, to be produced in this country, to justify the high praises bestowed upon his work in the English press. The piece tells an entertaining story, and shows a certain facility in the invention of stage situation, but the mechanism is very slovenly in places, while the dialogue, although full of the calculated humor which so readily commands the laughter of the ordinary audience, is by no means brilliant. The intrigue, however, is full of comic interest. A wandering grand duke, in pursuit of a ballet girl, masquerades as a waiter. Then a friend, who has known him in another capacity, asks him to impersonate a foreign nobleman, in order to humiliate a woman, whose vulgarity equals her vast wealth. Being in love with this person's daughter he consents, taking his own title. At a fête held in his honor, he is denounced as an impostor, and great are the confusion, wrath, and humiliation of his hostess. This is the climax of the piece, and is exceedingly effective, especially as it is interpreted at the Empire Theatre, where Miss Rose Coghlan gives a most vivid and humorous impersonation of the enraged parvenue. The play ends with the establishment of the duke's identity, and the success of his love suit. John Drew is only moderately successful as the hero, lacking the necessary youth, distinction, and romantic fervor, but he once more exhibits his skill as a finished light comedian. The play promises to be popular, but is in no sense a first-rate work.

It seems to be the general opinion of London critics that J. M. Barrie is seen at his best in his latest comedy, "What Every Woman Knows," which has recently been produced at the Duke of York's Theatre in London. In the first act old Aleck Wylie and his three sons sit up to catch a burglar, who turns out to be an ambitious young railway porter, whose only object is to study the books which the Wylies own but cannot themselves read. There is a family conclave, and finally it is agreed that the Wylies will help Shand, the porter, to complete his education on condition that he will marry Maggie Wylie at the end of five years. Shand goes ahead amazingly, enters Parliament, and is soon recognized as a coming man. But he redeems his pledge to Maggie, who is the possessor of rare humor—a quality of which he is entirely destitute—and soon proves herself of inestimable value by putting the needed spice of wit into his speeches. When he is about to become a cabinet minister, he falls in love with a fine lady, who responds to his passion, and little Maggie is temporarily neglected. But she leaves the lovers to their own devices, and Shand soon discovers that in losing his wife he would lose all. So a reconciliation is effected between them, and Maggie tells him the secret that every woman knows, namely, that Eve was made, not out of Adam's rib, but his funny-bone. Miss Hilda Trevelyan played the part of Maggie with great success. Next favorite to her was Gerald Du Maurier.

The present success in this city of F. Molnar's play, "The Devil," is a striking illustration of the value of advertising, although it does not reflect much credit upon the discrimination of the community. The piece is not distinguished in anything except its audacity in disregarding the limits of good taste. One would have to search closely, indeed, in this clumsy, juvenile attempt to enlarge upon the Faust legend, to discover any evidence of psychologic insight or any special knowledge of human nature. The whole romance—stripped of its cheap diabolic mechanism—is of the commonest and tawdriest order. Nor are the defects of the play atoned for by any special excellence of performance. On the contrary, the actors in both representations are, with one or two exceptions, of very poor quality.

H. B. Irving, has engaged the Shaftesbury Theatre, London, and will begin a season there in October. His first play will be "The Lyons Mail," followed by Justin Huntly McCarthy's new piece, "Cæsar Borgia." Mr. Irving is still giving his leading feminine characters to his wife, Dorothea Baird.

"Bellamy the Magnificent" is the title of a new comedy by Roy Horniman, which Sir Charles Wyndham promises to produce very soon.

Ludwig Stahl, court actor of Dresden, has died in his fifty-third year. Among his best-known rôles were Dr. Rank in "Nora" and Fürt Schuiski in "Demetrius."

Music.

Methodik des Klavierspiels. Von Xaver Scharwenka und August Spanuth. New York: Breitkopf & Härtel.

As long ago as 1841 Liszt wrote an essay on Paganini in which he declared that with that dazzling violinist the epoch of the virtuoso had come to an end, to be superseded by that of the interpreter. The instrumental acrobat has, however, continued to exist side by side with the interpreter of the masters, but his days seem now to be numbered. The piano acrobat, in particular, can no longer hold his own with the instruments of the pianola type which enable everybody to execute the most difficult music with a smoothness he cannot hope to rival. He is perforce compelled to become an interpreter, in which capacity the mechanical instrument, in its present state of development, is still easily surpassed. The piano teacher, too, must mend his ways. It no longer suffices to teach pupils the tricks of technique; they must be initiated (as few now are) into the secret rites of the great artists who make execution a mere means to the expression of emotions.

The pianoforte "methods" of the future will be affected by the altered situation; they will give less space to five-finger exercises and more to a consideration of those things which make playing worth while. The "Methodik" of Scharwenka and Spanuth shows which way the wind is blowing. While questions of technique are by no means ignored, they are subordinated to problems of expression. The "Methodik" is obviously intended chiefly for teachers who wish to keep abreast of the times. The authors, in view of the fact that "mere technical bravura for bravura's sake scarcely finds a public any more, while, on the contrary, the mental element in piano playing is decidedly favored," take pains to indicate how the mind must be brought into play from the beginning. The engagement of a cheap, second-rate teacher for beginners may prove fatal to the pupil's chances, because, as the authors make clear (p. 125), a certain attitude of attention, of using the mind, must be taught from the very first lesson. As a matter of course, they strongly condemn the practice (though it has been sanctioned by Kalkbrenner and D'Albert) of reading a book while the fingers play their exercises. Even athletes, they point out, know that mere mechanical bending and stretching of the limbs does not strengthen the muscles, but that there must be behind each movement an intense wish to attain such a result. How much more, then, is an alert, attentive mind needed in piano playing, where the muscular movements are so much more complicated and subtle.

A poor teacher is he who does too much for his pupils. They should be accustomed, nay, forced, to use their own mind every moment. The best way to do this—and at the same time to mitigate the monotony of technical practice—is to give them a mere skeleton of the exercises, compelling them to fill out the details themselves. They should be made to try to find the correct pace for each piece unaided, to study the music away from the piano; in short, to "spiritualize the technical practice":

> If there are still persons who think that long hours of practising tend to stupefy the mind, it is because they have not learned to use the mind while exercising.

If in the vast army of players there were more who knew how to practise, more would attain to the rank of colonels and generals. The most encouraging thing about the incessant practice required by a pianist is that if he has learned his scales and passage work so thoroughly that they have become part and parcel of his muscles and nerves, he can thereafter give his attention

chiefly to the fugues of Bach, the études of Chopin, Liszt, and other masters, which entertain the mind while providing an unsurpassed sporting ground for nimble fingers.

To the uninitiated the act of producing a tone on the piano seems as simple as that of hitting a nail with a hammer; and so it is, if it is done without an admixture of brains. With brains it becomes an act so complex and subtle that it reveals the personality of the player almost as plainly as the face does. With the aid of the pedal, the correct and subtle use of which is also a function of the brain—"the study of a lifetime," as Chopin said—the modern pianist gifted with a varied touch can recall the tones of orchestral instruments and even suggest their volcanic power in combination. It was not always so. When Philip Emanuel Bach wrote his "Essay on the True Way of Playing the Piano" (1753) he devoted nearly one-half of it to what were called *Manieren*, that is, ornaments. These ornaments were needed as a substitute for the fulness of tone which the tinkling instruments of that time lacked. As the pianos improved, the tone grew not only fuller, but louder or softer, as desired. And this brings us to what is perhaps the most suggestive and important section of the book we are reviewing. The authors emphatically repudiate the notion so often advanced that the increasing loudness of modern music is an indication of the coarsening of taste. It is just the other way. The greater the tone volume of an instrument, the greater also are the possibilities of shading; and in the utilization of these infinite gradations of tone lies one of the greatest advances of modern music over that of the centuries preceding the nineteenth. On this subject the authors discourse eloquently and persuasively, as also on the corresponding change which has taken place in the utilizing by modern composers and players of the infinite gradations and modifications of tempo. The often misrepresented tempo rubato is not sufficiently discussed; nor is the magic of the pedal. But apart from that, we have nothing but the highest praise for the volume.

The Metropolitan Opera House will open November 16 with a performance of "Aïda." The season will last twenty weeks. The new operas will be D'Albert's "Tiefland," in German; Catalani's "La Wally," Puccini's "Le Villi," and Tchaikovsky's "La Dame di Picche" in Italian; Laparra's "Habanera," in French; and Smetana's "Die Verkaufte Braut," in German. The revivals will be Massenet's "Manon," in French, and Mozart's "Le Nozze di Figaro" and Verdi's "Falstaff," in Italian. In addition it is also the intention of the management to give grand opera in English. For this purpose the sole rights have been secured to Frederick S. Converse's "The Pipe of Desire," Engelbert Humperdinck's "Children of the King," and Carl Goldmark's "The Cricket on the Hearth." During the year there will be special performances on Tuesday and Saturday evenings, consisting principally of revivals of the works of Mozart, Beethoven, and Wagner. Parsifal will also have two or three representations. Gustav Mahler and Alfred Hertz will again head the list of conductors. In addition, Arturo Toscanini of the Teatro alla Scala, in Milan, has been engaged, and Francesco Spetrino of the Imperial Opera House in Vienna. The orchestra will be enlarged by the addition of fifty-five musicians to the already established organization of seventy-five players. Jules Speck, for many years the stage director of the Grand Opera in Paris, will have charge of the French and Italian operas; Anton Schertel of the German operas. The singers are:

Sopranos—Ester Adaberto, Frances Alda, Emmy Destinn, Emma Eames, Geraldine Farrar, Rita Fornia, Olive Fremstad, Johanna Gadski, Bernice James, Felicie Kaschowska, Marie Mattfeld, Berta Morena, Marie Rappold, Marcella Sembrich, Lenora Sparkes.

Mezzo-sopranos and contraltos — Clara Boehm, Marianne Flahaut, Maria Gay, Louise Homer, Helen Mapleson, Matja van Niessen-Stone, Mary Ranzenberg, Henrietta Wakefield, Paula Woehning.

Tenors—Angelo Bada, Julius Bayer, Alessandro Bonci, Alois Burgstaller, Carl Burrian, Enrico Caruso, Stephen Delwary, Rinaldo Grassi, Carl Jörn, Walter Koch, Riccardo Martin, Ariodante Quarti, Albert Reiss, Erik Schmedes, Giuseppe Tecchi.

Baritones—Pasquale Amato, Bernard Beque, Giuseppe Campanari, Otto Goritz, Fritz Feinhals, Eduardo Missiano, Adolph Muhlmann, Jean Note, Antonio Scotti, Walter Soomer.

Bassos—Paul Ananian, Robert Blass, Enzo Bozzano, Adamo Didur, Allen Hinckley, Conretto Paterna, Giulio Rossi, Erik Schubert, Herbert Waterous, Herbert Witherspoon.

The season at the Manhattan Opera House, under the management of Oscar Hammerstein, will open November 9, with "La Tosca." Mr. Hammerstein promises to produce the following operas:

In French—"Salome," "Thaïs," "Pelléas et Mélisande," "Louise," "Les Contes d'Hoffman," "Grisélidis," "Princesse d'Auberge," "Le Jongleur de Notre Dame," "Manon," "Samson et Dalila," "Les Pêcheurs de Perles," "Faust" and "Carmen."

In Italian—"Othello," "Falstaff," "Aïda," "Les Huguenots," "The North Star," "Dolores," "Siberia," "Andrea Chenier," "Lucia di Lammermoor," "Rigoletto," "La Traviata," "La Sonnambula," "The Daughter of the Regiment," "The Barber of Seville," "La Bohême," "La Tosca," "Madama Butterfly," "Linda di Chamounix," "A Masked Ball," "Il Trovatore," "Ernani," "Crispino e la Comare," "Pagliacci," and "Cavalleria Rusticana."

The full list of the singers as announced in the prospectus is:

Sopranos—Melba, Tetrazzini, Garden, Labia, Espinasse, Agostinelli, Tancreda, Trentini, Ponezano, Zepilli, Severina, Koèlling, and Eva Campanini-Tetrazzini.

Mezzo-sopranos and contraltos—Gerville-Réache, Doria, and Mariska-Aldrich.

Tenors—Zenatello, Dalmores, Taccani, Vallés, Colombini, Paroli, Venturini, and Montanari.

Baritones—Renaud, Sammarco, Gilbert, Dufranne, Perier, Polese, and Crabbe.

Bassos—Arimondi, Vieulle, and de Segurola.

Signor Cleofonte Campanini will again be in charge of the productions, and will have the same assistants as last season—Parelli and Charlier. On the first night "La Tosca" will serve to introduce to the New York public Mme. Labia, who has made such a hit in "Das Tiefland" in Berlin. Mlle. Gerville-Réache will be the Dalila and M. Dalmores the Samson in the first production on November 11, of Saint-Saëns's "Samson et Dalila." For this event Mr. Hammerstein promises the full choral strength of both the Manhattan and the new Philadelphia Opera House, with an augmented orchestra of 100. A production which is certain to be of interest is that of Massenet's "Jongleur de Notre Dame," with Mary Garden in the title part originally arranged for a tenor, and with Renaud, Gilibert, and Hector Dufranne as the three monks. Besides the operas in which she was heard last season, Mme. Tetrazzini will sing in "The North Star," "The Barber of Seville," "The Daughter of the Regiment," and "La Sonnambula." About the middle of December Mme. Melba will appear as Desdemona in "Otello." Zenatello will sing the title rôle, and Renaud will make his first appearance in New York as Iago.

Herman Klein has arranged an elaborate series of concerts at the Deutsches Theater in this city, beginning October 4, and ending March 21. Thirty-one singers have been engaged, twenty-two pianists, eleven solo violinists, eight solo 'cellists, and the Adamowski, the New York, and the Maud Powell trios; and the Altschuler-Bernstein, the Flonzaley, the Hugo Herrman, the Lekeu, the Olive Mead, and the Schubert quartets. Among the pianists will be Mme. Fanny Bloomfield-Zeisler, Miss Augusta Cottlow, Mr. and Mrs. Josef Lhévinne, and Mme. Antoinette Szumowska. The violinists include: Timothée Adamowski, Willy Hess, Miss Olive Mead, Mme. Maud Powell, and Mr. and Mrs. Petschnikoff and Albert Spalding.

Sixteen Sunday afternoon concerts have been planned for the New York Symphony Orchestra, under the direction of Walter Damrosch, and the eight evening concerts will be given on Tuesdays instead of Saturdays. There will also be a Beethoven cycle on six Thursdays, beginning February 4. The nine symphonies will be played. The hundredth birthday of Mendelssohn will be celebrated January 30 and February 3.

Plans for the fifty-first annual festival of the Worcester, Mass., Musical Association in Mechanics Hall, September 28 to October 2, are completed. The choral works to be presented are Saint-Saëns's "Samson et Dalila," and Sir Edward Elgar's dramatic cantata "Caractacus." Among the artists engaged are: Soprano, Mme. Jeanne Jomelli; mezzo-soprano, Miss Lilla Ormond; contralto, Mme. Louise Homer; tenors, George Hamlin and Daniel Beddoe; baritones, Emilio de Gorgoza and Reinald Warrenrath; bass, Frederic Martin; pianist, Miss Augusta Cottlow; violincellist, Miss May Mukle. Franz Kneisel will conduct the Boston Symphony Orchestra, of sixty pieces, and Dr. Arthur Mees will conduct the choral works.

Max Fielder, the new conductor of the Boston Symphony Orchestra, will bring from Hamburg several musical novelties, among which is an overture by Max Reger, which will be performed for the first time in this country by the Boston Orchestra.

Louis Varney, a composer of comic operas, has died in Paris at the age of sixty-four. He studied with his father, Pierre-Josepb-Alphonse Varney, also a composer, who set to music the "Cbant des Girondins," by Dumas. The younger Varney began his career in 1876, and since then he has been very prolific. His best known work is probably "Les Mousquetaires au Couvent." His three-act operetta, "Les Forains" (Paris, 1894) was given at Vienna as "Olympia" (1895) and at Berlin as "Die Gaukler" (1895). Other productions of his are "Le Pompier de service" (1897) and "Les Demoiselles des Saint-Cyriens" (1898).

Justin Clérice, the French composer of light operas and ballets, died at Toulouse September 10. He was born in Buenos Ayres in 1863 and studied at tbe Conservatoire de Paris. He composed "Le Meunier d'Alcala" (1887), "Figarella" (1887), "M. Huchot" (1889), "Au Pays noir" (1891), "Les Hussards" (1894), "Pbrynette" (1895), "Léda" (1896), "Vercingétorix" (1900), "Fête à Rome" (1900), "Les Petites vestales" (1901), "Ordre de l'empereur" (1903), "Au Temps jadis" (1905), "Mimosa" (1905), "Les Filles Jackson & Cie," (1906), and "Timbre d'or (1906).

Art.

Historic Houses and Their Gardens. Edited by Charles Francis Osborne. Philadelphia: The John C. Winston Co. $6.

This work, comprising chapters by many authors, offers a variety that is almost magazine-like. Not only are examples presented from the ends of the earth—India and Spain, England and Mississippi—but the points of view are widely different. The limitations of the title also permit the history of old families and the entertaining gossip which goes so naturally with the pictures of palaces in P. H. Ditchfield's articles.

It is curious to note how these old buildings lead the observer to history, whether he be writer or reader. It is this suggestion, and the perception that the charm of old places is a subtle product of time and growth, that brings one to a better understanding of their art. The greatest value of such a work as this lies, indeed, in an aspect of its subject which is almost incidental. The demand for these books upon houses and gardens comes from people who are interested in the old art, because they are ambitious for new efforts. They want to make houses and gardens of their own, and are not so much concerned with the family records of the Verneys or of Philip II. of Spain as they are with the marvellous expression which, in the course of years, perhaps centuries, of construction and reconstruction, such old families managed to procure for their thoughts and feelings. These desires of the reader are recognized by Frank Miles Day in an interesting introduction. He goes directly to the theory of the garden, and points out in these illustrations certain valuable principles. The relations between house and garden are, in fact, well exemplified here; and some of the chapters deal very helpfully with the problem both of things to be expressed and methods of expression. Anne H. Dyer, for example, in describing the Iris Garden at Horikiri, gives an excellent comment upon what she terms the "significance" of the garden and of the expression of that significance in conventional terms. The articles by E. B. Havell upon the gardens of the Taj Mahal and Indian gardens, and that by A. D. F. Hamlin upon ancient Roman country houses are notes by expert observers of garden art. The "Gardens of the Villa Lante," by George Walter Dawson, is also a good description fortified by intelligent comment, in which the art of garden-making is well distinguished from imitation of nature. There are thus scattered through the volume many welcome suggestions; and the appreciative reader may find in this rather bewildering abundance material for deductions which a work of narrower scope would not afford. The use of terraces and steps, shelters and balustrades, pools, fountains, and conventional walks, brilliant color in artificial groups contrasted with masses of simple natural foliage; above all, the need of ideas and of symbolic expression of them—all these things, illustrated in a variety of examples, will appeal to the reader who can draw inferences.

Some of the articles which do not involve the problems of the garden are also noteworthy. Even when the mansion or palace may be too exceptional to serve as a precedent, the matter may still be stimulating. The illustrations are half-tones, which make no pretence to artistic value of their own, but which are the most sympathetic and suitable means of illustrating this subject.

Charles H. Caffin has done a very good piece of work in his "Cbild's Guide to Pictures" (The Baker & Taylor Co.). It is an attempt to explain the artist's point of view—what he means by composition, tone, values, etc.—what he is really trying to do apart from the illustration of a subject. And this attempt, in spite of an imperfect sympathy with the more formal side of art as compared with its picturesque qualities, is so well carried out that one feels inclined to advise Mr. Caffin to submit his book to some slight revision—relieving it of an occasional air of condescension which reminds one of the "now my dear children" of tbe Sunday school superintendent—and address it to an older audience which might well profit by a study of it. There are few adults, not professional artists or closely associated with art, who know all that Mr. Caffin tells the children—few that would not find tbeir appreciation of the real qualities of painting stimulated and clarified by close attention to what be has to say. Of such slight defects as we have observed we shall note but a single case, where the fault is presumably that of the publisher ratber than tbe author. It is a pity that Mr. Caffin's very intelligent and appreciative remarks on Millet's Sower should be illustrated by a reproduction not of the painting, but of a drawing or pastel wbich differs widely from the definitive composition. The discrepancies are sure to puzzle all but the initiated.

The latest issue of George Newnes's series of Drawings of the Masters (imported by Charles Scribner's Sons) is devoted to "The Drawings of Rembrandt." Tbe fifty-one plates are well reproduced and well selected, though, of course, one misses many old favorites. Plate vi., in which a Raising of Lazarus has been scrawled over and altered into an Entombment bas a special interest. Here we bave one vision of the great seer superimposed upon and obliterating another. Another drawing that has been much altered in the course of execution, though without change of subject, is that reproduced in Plate xxix., and bere called, we know not on what authority, Christ Restoring Sight. Assuredly it represents Job and his Friends, and it has been published under that title. It is much to be regretted tbat no indication is given of the whereabouts of the originals—a negligence that makes identification difficult and sometimes renders it uncertain whetber the drawing reproduced is the same as that mentioned in the text by Malcolm Bell, especially as he deals with the general subject ratber tban witb particular designs.

"Die Kleinmeister," by Hans Wolfgang Singer, is the latest addition to tbe Künstler-Monographien, edited by H. Knackfuss (Leipzig: Velhagen & Klasing).

The four pictures bequeatbed by tbe late Martin Colnaghi to the National Gallery of London are now in place: Tbe Virgin and Child, with St. Jerome and St. Antbony of Padua, signed and dated "Lorenzo Lotto 1521"; Philip Wouwerman's Tbe Bobemians, which fetched £105 at the Pourtalès sale in 1826; Gainsborough's Tbe Bridge; and Aart van der Neer's Dawn. Mr. Colnagbi left an estate tbe personalty of which is valued at £79,880. The residue of his property goes to his wife, and on her death to the National Gallery—for purchasing pictures with tbe income.

A number of pictures from tbe collection of the late Charles Drouet have by his bequest gone to the art galleries of Paris. Tbe Louvre bas received Murillo's Le Prisonnier, five landscapes by Constable, six by Turner, a Venice scene by Bonington, and various Japanese works. The Luxembourg gets a Whistler and a Carolus Duran; the Print Department of the Bibliotbèque Nationale, bis portrait *à l'eau-forte* by Wbistler; and the École Nationale des Beaux-Arts, bis collection of drawings by old masters.

Raphael's Transfiguration has been removed from its place in tbe Vatican Pinacoteca, wbere it was placed by Pope Pius VII. in 1815, to the fine suite of rooms recently set aside by the present Pope to be used as a new gallery. Heretofore not more than fifty visitors were admitted:

at once to see the masterpiece in its cramped quarters. It is now in an excellent position.

Archibald D. Reid, Scotch painter of landscapes and portraits, has died at the age of sixty-four. His art education was at the Royal Scottish Academy and under Julien in Paris.

Prof. Lodovico Seitz, director of the Vatican museums, died at Albano, September 10.

Finance.

THE DECLINE IN THE COST OF LIVING.

On July 1, 1897, average prices of commodities touched the lowest figure of our times; on June 1, 1907, they touched the highest figure. The London *Economist's* "index number" for the one date was 1,885; for the other, 2,601. The "index number" for September 1 was 2,168, and a moment's comparison will reveal the fact that in the fifteen months since June, last year, more than half of the average enhancement of values since 1897 has been cut off.

This somewhat sensational result may possibly appear more important than it actually is; for the September "index number," although much lower than that of June, last year, is nevertheless no lower than that of as recent a date as midsummer, 1905, and represents a much higher level of prices than had prevailed before that time. In other words, any study of decline in commodity prices, since the reaction of 1907, must take into account the abnormal rise during the era of speculation which began in the middle of 1905 and did not culminate until early in 1907. It has often been pointed out that the advance in average prices, in that two-year period of extravagant living and turbulent markets, was as great as in the whole of the eight-year period which preceded. In this respect, the rise after the middle of 1905 resembles the similar rise in the two-year interval just before the panics of 1873 and 1857. On both those occasions, as in the case of 1907, it was rash speculation in the necessaries of life, undue pressure upon consumers, and consequent exhaustion of capital resources, which brought about financial collapse and widespread industrial readjustment. People who nowadays talk, as E. H. Harriman has lately been doing in his speeches on the Pacific Coast, about the "senseless panic of last October," and who explain that the foolishness of a few bank depositors was the only cause of it, merely display their own ignorance of economic law.

But whether the decline in prices since June of 1907 be regarded as a setback in a prolonged and general movement towards higher cost of living, or whether it merely means that the bubble of industrial inflation is pricked, the essential fact remains that this month's "index number" showed reduction, in the forty-seven commodities from which it is compiled, of 14 per cent. from September, 1907, and of nearly 17 per cent. from the June maximum of that year. Yet most people will ask whether cost of living, to the average man, has declined as much as that. The average man, except where he is buying less in quantity, finds household expenses very close to what they were a year ago.

But if this is so, then what becomes of the 14 per cent. decrease? The answer is, that prices have fallen in lines of merchandise of which the average consumer purchases little, and have not declined at all in lines where he buys much. At present iron is 21 per cent. below last September; tin, 20 per cent.; copper, 25 per cent. But these commodities do not figure largely in monthly household bills. Flour, however, is nearly 9 per cent. higher than a year ago this month; beef nearly 25 per cent.; corn, 31 per cent.; and even oats sell only a trifle below the abnormally high price of last September. Clearly, the bills of the householder will be affected more by a change in price of these food products than of the basic metals. Cheap copper may help an electrical factory or a street railway enterprise, and cheap iron may make construction of bridges or machinery or city buildings much easier. But the plain consumer benefits only indirectly.

The reason why the food-products referred to, and with them meats and vegetables in general, have actually advanced while commodity values as a whole have been falling rapidly, is plain enough. Despite the inflation of commercial markets in 1905 and 1906, the world produced such unprecedented cereal crops that in that direction the rise was at least arrested. Since 1906, however, nature has not been kind to us. The world's yield of wheat in 1907, for instance, was nearly 10 per cent. short of 1906, and was much the smallest harvest in five years. The abnormal weather which brought about these conditions affected nearly all other food products; the result was not only a higher range of prices for such commodities during 1907, but so scanty a supply is left over from last year, that only a very abundant yield in 1908 could have sufficed to restore equilibrium. Instead of such ample yield, the whole world's wheat crop is now estimated as smaller even than that of 1907. Of the prime necessities of life, almost the only one the price of which has followed that of the raw materials of the metal trades is cotton and cotton goods. Cotton sells to-day on the open market more than 25 per cent. lower than a year ago; print cloth, the basic fabric of the trade, is lower by 40 per cent., and wholesale dry goods merchants have for months been reporting cuts of 25 to 50 per cent. in the price of dry goods generally. How much of this reduction has been allowed to filter through to the buyer of clothing for himself and family is a question which perhaps the autumn trade at the department stores will answer.

BOOKS OF THE WEEK.

Alcott, Louisa M.: Spinning Wheel Stories. Silver Pitchers. Proverb Stories. Garland for Girls. Illustrated by Ethel Pennewill Brown. Boston: Little, Brown & Co.

Our Library Service

We have recently supplemented our service to Libraries, by endeavoring to procure Out-of-Print and Scarce Books, and by importing foreign books.
Our general stock is the largest in the center of the book market and we quote prices on request.
Our Educational Catalogue contains a full list of Supplementary Reading, indicating the grade to which each title is adapted.
Our Clearance Catalogue contains overstock at special prices, and an alphabetical arrangement by authors of all cheap editions of Recent Popular Fiction and Standard Library 12mos in one list.
Our Library Catalogue of 3,500 approved titles, following A. L. A. lines, is of great convenience to small libraries.
Our Monthly Bulletin notices promptly every new book of importance.
These Catalogues are sent on request.
Three notable features of our service are: Promptness, thoroughness, and low prices.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 24, 1908

The Week.

In the West, Mr. Bryan was at pains to prove that he was Mr. Roosevelt's sole heir. In the East, he is now arguing that the inheritance is not worth having. "What has the President done?" was the note to which Mr. Bryan tuned his Buffalo speech of Monday. Has he imprisoned a "Trust magnate"? Has he "disturbed the Steel Trust"? Has he "done anything to punish the Standard Oil"? Can he, in short, "escape his own record"? Mr. Bryan apparently foresees the answer and the inference. If *he* is sent to the White House, "Trust magnates" will languish in chains, and no Trusts as yet "undisturbed" will be allowed to rest in fancied security. How will he do this with a necessarily hostile Senate? First, by that simple and easy plan of prohibiting corporations from controlling more than 50 per cent. of the country's output; second, by showing triumphantly, to the Republican Senate, that "'Shall the people rule?' is declared by our platform to be the overshadowing issue in this campaign." No Senate, he argues, would dare to defeat a measure that was so urged. This strikes us as mere buncombe, and the only really significant thing about it is Bryan's plain declaration of his own intended rôle as the arch-agitator. President Roosevelt, it seems, has done nothing at all; and to the best of his ability Mr. Bryan undermines ex-Secretary Olney's argument that, whatever happens, the Republican Senate will stand in the way of Bryan's schemes.

Richard Olney's statement on the issues of the campaign, in the New York *World* of September 17, is largely an argument that the reckless and radical policies of the Republican party call for rebuke, and for the transfer of power to the Democrats. On this proposition, taken alone, we hardly need say that Mr. Olney's reasoning is strong. But when he affirms that the defeat of Mr. Taft and the election of Mr. Bryan would "do much toward bringing to their senses the ultra-radical elements of both parties," we wholly fail to follow him. Mr. Olney himself has no little trouble with Bryan's personality, and all that he is able to say regarding that agile candidate is in the nature of apology for radicalism. Of Mr. Bryan's ardent championship of the immunity of labor unions from the legal responsibility incurred by other people, Mr. Olney remarks:

> It is not unthinkable that Mr. Bryan's habits, training, and career have not qualified him to wisely estimate the true place and the vital importance of the injunction power as vested in English and American courts.

Of the government ownership fad, we are told that Bryan's declaration of 1906 has "the redeeming feature of demonstrating that Bryan at least has the courage of his convictions"—a statement, by the way, which must have been written before the candidate's recent effort to get away from his earlier position by declaring that he never meant to take it. The gist of the whole argument, as regards the Democratic nominee, is that circumstances will probably so far chain him down, in case of his election, that he can do no harm. This argument, of which one hears much, does not impress us. To elect a dangerous man to the highest office because we will somehow be able to check his activities, is not to apply the rules of common sense. Mr. Olney, a stanch defender of sound money, has no word to say on Bryan's past vagaries on that subject. For ourselves, we regard that part of Bryan's history as fundamentally important. Increased production of gold may well have obliterated free coinage of silver as a practical issue, but it does not obliterate the mental qualities which have led Mr. Bryan into vehement support of this and nearly every other unsound theory of the currency. With what Mr. Olney has to say on the desirability of a check to one-party domination in the United States, we are cordially in agreement. The Opposition party, however, is bound to propose a safe and proper candidate as the alternative to such domination.

Mr. Bryan, in his statement at Philadelphia last week, failed to give that full and frank declaration of the new Bryan's attitude on the old Bryan's economic vagaries which the occasion seems to require. Does Mr. Bryan still hold, for instance, his former belief in free coinage of silver whenever political sentiment seems to favor it? We cannot tell. "The money question," Mr. Bryan says, "has been taken out of politics because of the unexpected discoveries of gold." What seems to rankle particularly, however, is not the charge of silence on his old beliefs, but the charge of shiftiness. Mr. Taft "accuses me," the interview proceeds, "of being changeable and abandoning issues," a phrase which suggests government ownership of railways. On this, we are informed, the new Bryan and the old Bryan are one. Neither wanted it. "I do not desire government ownership"; all that Mr. Bryan ever said was that "government ownership will follow if the railways prevent regulation." Is it so? Who was it, then, that declared in Madison Square Garden, on August 30, 1906, "I have already reached the conclusion that railroads partake so much of the nature of a monopoly that they must ultimately become public property and be managed by public officials"—adding, by way of broader elucidation, "I prefer to see only the trunk lines operated by the Federal government and the local lines by the several State governments"? If this was the language of a statesman shaken with regret at a catastrophe which he felt himself helpless to avert, one must admit that the words were singularly ill chosen.

Mr. Taft's excellent address to the negroes in Cincinnati last week will win him many votes. He is indubitably friendly to the colored people, but he has lately been put in what he regards as a false position toward them. Although his friends have declared that he was not in sympathy with the President's injustice to the three companies of the Twenty-fifth Infantry, accused at Brownsville, and the story has been industriously circulated among the negroes that he would have resigned from the Cabinet in consequence of it but for his duty to the Philippines and Cuba, his lips have, owing to his loyalty to President Roosevelt, been sealed on that point. Mr. Taft has been unfortunate, too, in some of his utterances, as on the twenty-fifth anniversary of Tuskegee,

when he appeared to approve of the nullification of the war-time amendments; and elsewhere when he committed himself so thoroughly to industrial training for the blacks and opposed their higher education—a position hateful to those who rightly refuse to accept any limitations on the intellectual aspirations of the race. On that question Mr. Taft has seen the light, and he manfully admitted his error last week. Furthermore, Mr. Taft pointed out that the best cure for race barbarism, whether North or South, is enforcement of law and the punishment of guilty officials who permit the flouting of justice. As to mob crimes, Judge Taft spoke in the following vigorous fashion:

> I don't know that the race bitterness is any stronger to-day than it ever was. For a length of time it seems to be altogether abated, and then there will be an outbreak, a mob will be formed, developing the most fiendisb cruelty, manifesting itself in the blindest and most unreasonable assaults upon perfectly innocent people simply because of tbeir color. It is only fair to say that such brutish exbibitions are not confined to any one section. It is impossible to read accounts of this sort without baving one's blood boil with indignation that tbere can reside in the human breast such a savage and beastly impulse and motive.

Did any one ever hear anything like this from Mr. Bryan's lips? No; the Southern delegations have made that impossible.

At the same time, we are not without sympathy for the general principles avowed by those colored men, like Prof. W. E. B. DuBois and the Rev. J. M. Waldron, who have announced their intention of voting for Mr. Bryan. They argue with much force that the political solidarity of any race or group of citizens is harmful to them; and that the division of the negro vote would be an advantage to the political parties as well as to the negro. The fact that the negroes have heretofore voted blindly, in a mass, for the Republican ticket has led that organization to look with indifference upon their wrongs. There have even been symptoms of late that the leaders were beholding with calmness the ousting of the negro from portions of the Republican party in the South. Many times, we believe, the negro would have done better for himself in the South had he on local and State issues abandoned precedent and voted for high-minded Democratic nominees. In Ohio and parts of the Middle West negroes hold the balance of power. If they but learn to vote for men who best live up to their ideals and carry out promises, they will have taken a long step forward politically. Yet admitting that a division of the negro vote may be desirable, we cannot see that the national Democratic party offers at present any strong inducements to the negroes.

Alton B. Parker, at the New York State Democratic Convention last week, exposed the weak joint in James S. Sherman's armor. In the days when nobody dreamed that Sherman could ever aspire to any place higher than a seat in the House of Representatives—that is, in 1906—he was chairman of the Congressional Committee. One of his chief duties was to raise funds, and, "as had his predecessors of old," he went down "into Wall Street to get the money with which to 'influence' the doubtful districts." In fine, Mr. Sherman was the chief "fat-fryer" in 1906. But the business of fat-frying has fallen on evil days, and the men who were formerly engaged in it are no longer regarded as disinterested patriots. The revelations as to the extent to which the insurance companies and other large corporations contributed to the support of parties and received their money's worth in the form of legislation have filled voters with a profound disgust at the partnership between finance and politics. Mr. Sherman, of course, is no worse than others of the school to which he belongs; but if the Democrats care to dwell on this aspect of his career, they can turn votes from the Republican ticket, especially in the West, where radicalism is strong, and in those parts of the East where the feeling of hostility to capital runs high.

Lieut.-Gov. Lewis Stuyvesant Chanler's qualifications for the Governorship of New York are largely negative. He is of good family, education, and instincts; he is not unpopular, but he is inclined to be unstable. He has held aloof from the bosses; in his present inconspicuous office he has been free from offensive partisanship. After all, however, he is an untried young man, whose good intentions must be balanced against a record and a personality like those of Gov. Hughes. Mr. Chanler will make a good fight, because even negative virtues will be welcomed by many Democrats who had expected the worst at the hands of Murphy and Conners. Reëstablished harmony in the Democratic party, as opposed to a certain amount of lingering anti-Hughes sentiment among the little Republican bosses, will also help him. Over Mr. Chanler's probable running-mates we can rise to no particular height of enthusiasm or disapproval. An emphatic exception, however, is Comptroller Martin H. Glynn, whose record is one of commendable zeal and effectiveness. No one who votes for Hughes should hesitate to support Glynn against Mr. Barnes's man, Charles H. Gaus.

While Americans are absorbed in the progress and future of the Panama Canal, European newspapers are giving serious thought to Mexico's interoceanic Tehuantepec railway, which, after a year of limited service for American traffic, is thrown open this month to international trade. The success of this line will, it is confidently asserted, measure, in some degree, that which the Panama Canal may attain; and there seem to be good reasons for this belief. The road, which is more than 500 miles north of Colon, connects the new Atlantic port, Puerto Mexico, with Salina Cruz, on the Pacific. It is less than 200 miles long, and the terminals are equipped with the best facilities for docking and loading. English, German, and American steamship lines already touch at the two ports, and the Hamburg-American Line has just begun sending fast passenger steamers to Puerto Mexico. Nobody supposes that the railway will prove a serious rival to the "big ditch" at the Isthmus; for the cost of breaking and making cargo is too great. But any considerable tonnage over its tracks during the next five years will augur well for that day when the first steamer voyages from Colon to Panama.

When British and German workingmen join in a demonstration of international good-will as on Sunday at Berlin, they do more to reassure the friends of peace than Kaiser's or Chancellor's oft-expressed vows of pacific aspiration. For there is never an Imperial statement in favor of international amity without its discouraging qualification. Yes, we want peace, but you must not touch our national honor or our legiti-

mate ambitions; you must not interfere with our high mission of civilizing the world, or with our future upon the seas. But the workingmen of England and of Germany, as of every other country on earth, know that such stirring labels as national honor, legitimate aspiration, and civilizing missions are likely to describe lust of Imperialism and passion for conquest. National dignity too often is synonymous with the dignity and interests of a ruling military caste, and too infrequently with the desires and interests of those who do the work of the world and pay the cost of its wars. We are not sanguine enough to believe that English or German politicians have lost their skill in creating artificial crises, or beclouding the minds of reasonable men with the fumes of a false "patriotism." But every interchange of friendship between the peace-loving masses of England and Germany must make it harder for the politicians to play their game.

It must be irritating to the German Chancellor to see the statistics of German colonization laid bare before the world in the cold type of such a publication as the Statesman's Year-Book. We are told that in the year 1907 the total number of persons who emigrated from Germany to Africa was 37. Germany thus presents the strange spectacle of a great empire reaching out for distant colonies while its teeming population clings with extraordinary tenacity to the fatherland. The influx to the United States sank to small proportions in the early part of the last decade, and even our years of unexampled prosperity failed to swell the tide. In the article "Brasilien," in the last edition of "Meyers Konversations-Lexikon," there is a survey of the flourishing German colonies in Brazil, whose population is put down at nearly half a million. But the emigration from Germany to that republic has come almost to an end, the annual figures having dwindled from over 5,000 in 1890 and 807 in 1902 to 167 in 1907. Nor does Argentina, with its boundless opportunities, lure the Teuton to make his abode under the southern constellations. If the extent of the emigration from a country be taken as a gauge of the contentment prevailing there, then the barometer afforded by German statistics indicates a remarkably equable condition of the public mind in the Empire and a satisfaction with the existing order which would appear to border on stolidity. In the years 1902 to 1907 the average number of emigrants was only 31,000, the greatest deflection from the average not exceeding 5,000. With a population of over 60,000,000 crowded into an area smaller than that of Texas, the German Empire at the present day is actually gaining more by immigration than it loses by emigration.

Maltreatment of soldiers by officers is not a specialty of the German army, but the cases there are numerous and are frequently serious enough to be brought before the military courts. In course of a recent trial in Berlin four officers were indicted for brutal conduct toward privates, leading in several cases to suicide. The soldiers are not only injured bodily by being hit with sticks and butts of rifles, but are made to perform degrading and nauseating acts, some of them too disgusting to be specified. Punishments are inflicted by officers who lack legal authority, and threats of violence are used against those who complain or turn informers. The discipline, at the same time, is so strict that any resistance on the part of the victims can be treated as mutiny. Col. Gädke expresses the opinion that this state of affairs, which is most pronounced in the Prussian army, is a survival among the officers of the feeling prevalent in the eighteenth century, when the mercenaries were the lowest social dregs, and Frederick the Great was right in saying that the soldier should fear his officer more than the enemy. According to a recent issue of the *Frankfurter Zeitung*, there have been thirty trials within the year of officers and warrant officers for grave cases of abuse. Some officers were accused of 229, 280, and 600 instances of brutality. The *Zeitung* complains, too, that in a considerable number of the cases the sentences bestowed were inadequate. Writing in the *Tägliche Rundschau*, Lieut.-Gen. von Litzmann declares emphatically that these tortures must be stopped, even if the sentences of wrong-doers have to be largely increased.

The misfortunes of Russia continue. Four years and three years ago it was war; three years and two years ago it was revolution; last year it was famine; now it is cholera. If you count in the loss of the flower of her eldest born whom she has sent to the scaffold, the mines, and the prison cell, the deliverance of Russia, if it ever comes, will be at an appalling price of blood. It is this loss of her ablest men that the plague-stricken country may soon come to regret. Should the cholera spread from the towns into the open country, it will find a fearful harvest. The Zemstvos, or provincial councils, which in previous epidemics did valiant work among the peasants, are now crippled and in incapable hands. The Zemstvo doctors and nurses constituted an important element in the revolutionary army; large numbers of them are dead, in exile, or in confinement. Inexperienced hands will have to carry on the work under the supervision of stupid and reactionary Zemstvo officials and government agents. In the cities the prisons are fearfully overcrowded; already typhoid epidemics have stirred to anxiety even the conscience of the government. What would happen if the cholera infection should penetrate to the prisons may easily be conjectured.

The distinction between home rule and autonomy which John Redmond would draw is hard to grasp, unless by autonomy the leader of the Irish Nationalist party means a gradual advance towards self-government for Ireland in contradistinction to the sharp governmental revolution we associate with the term Home Rule. Whether or not the process known as "devolution" will bring Home Rule to Ireland as soon as Mr. Redmond thinks—in the present generation—his cheerful testimony to the improvement in Ireland's economic condition shows that the primary sources of Irish discontent are steadily being exhausted. Land legislation is finally coming within sight of its goal—the transfer of the Irish soil to the Irish peasant; and the future of the island must come to be more and more in the hands of her own people. Emigration is still a heavy drain on the supply of labor. The population is still dwindling. But it is not to be supposed that the habit of expatriation, greatly accentuated during the last seventy years and more, shall disappear at once. The New Ireland, as Sydney Brooks calls it, is the problem of its youngest generation.

SENATOR FORAKER AND THE STANDARD OIL.

The letters from John D. Archbold to Senator Foraker which William R. Hearst read at Columbus, Ohio, and at St. Louis are thus far the sensation of the campaign. The final effect of these revelations it is impossible to foretell, but one or two results are apparent.

The first is that Senator Foraker must retire from politics. No explanation which he can offer will dispel the belief that he used his position as Senator to advance the interests of the Standard Oil Company. When the first batch of letters was published, he asserted:

> The employment had no reference whatever to anything pending in Congress or to anything in which the Federal government had the slightest interest.

But this defence is clearly enough destroyed by one of the later letters:

> 26 Broadway, Feb. 25, 1902.
>
> MY DEAR SENATOR: I venture to write you a word regarding the bill introduced by Senator Jones of Arkansas, known as "S. 649," intended to amend the act to protect trade and commerce against unlawful restraints and monopolies, introduced by him Dec. 4. It really seems as though this bill was very unnecessarily severe and even vicious.
>
> Is it not much better to test the application of the Sherman Act before resorting to a measure of this kind? I hope you will feel so about it, and I will be greatly pleased to have a word from you on the subject. The bill is, I believe, still in the committee. With kind regards I am, very truly yours, JOHN D. ARCHBOLD.
>
> Hon. J. B. Foraker, Washington, D. C.

It was only a month earlier—January 27, to be exact—that Mr. Archbold had written:

> MY DEAR SENATOR: Responding to your favor of the 25th, it gives me pleasure to hand you herewith certificate of deposit for $50,000 per our understanding. Your letter states the conditions correctly, and I trust the transaction will be successfully consummated.

This $50,000, Mr. Foraker assures us, was a loan, subsequently returned, to enable Mr. Foraker and his friends to purchase the *Ohio State Journal*. "I applied to a number of friends," says Mr. Foraker, "to see if they would not make up the balance of the amount. Among others I applied to the Standard Oil Company." This statement may satisfy Mr. Foraker and his personal adherents, but, politically, it cannot help him in the least. Whether this $50,000, and the $29,500 which preceded it, were loans, legal retainers, or gifts outright, is all one so far as Mr. Foraker's constituents are concerned. In the interest of the Standard Oil Company he was watching, and apparently influencing, legislation at Columbus and Washington; at any rate, he was rendering services and at the same time was receiving thousands of dollars of pay from the Standard Oil and was borrowing thousands more. It is inconceivable that the electorate of Ohio will condone this, the very essence of political corruption.

The downfall of Foraker, one of the leaders of the Republican party in Ohio, would seem bound to damage the national and State tickets there. The Democrats have nominated a strong man for Governor, Judson Harmon; and if copies of the letters of Mr. Archbold to Foraker are put into the hands of every voter, and if the campaign is in other ways conducted with ability, there will be no difficulty in making it appear that the Foraker-Cox wing of the organization has been subservient to the Standard Oil. The troubles of the Republicans will be much increased if Mr. Foraker adheres to his present intention of trying for reëlection to the Senate. Unless he gives way and a candidate free from all taint comes forward, the Republicans will justly be accused of participating in, or at least pardoning, his iniquities.

The injury to Mr. Taft in Ohio and, indeed, throughout the rest of the country will, of course, be lessened by the fact that he and President Roosevelt have for some time been hostile to Foraker; the policies which they have urged have been those which Mr. Foraker has most bitterly combated; and the nomination of Mr. Taft was obviously a defeat for the Republican "reactionaries"—the faction of which Foraker is one of the chieftains. These points are presented with great force in the statement which the President gave out Monday evening. The Archbold letters are there seized upon and displayed as overwhelming evidence that Foraker's opposition to the President's policies—and therefore Mr. Taft's policies—has been a piece of shameless insincerity, inspired and paid for by Standard Oil malice. Thus it is inevitable that, with considerable masses of voters, East and West, the motives of Mr. Foraker and of those Senators and Representatives who have fought the President at Washington will be pretty thoroughly discredited. However genuine and disinterested the conservatism of these persons, they will be suspected. On the other hand, the President and his followers loom up larger than ever as the only relentless enemies of the Standard Oil and other wicked corporations. And this impression is heightened by the letter from Mr. Taft which the President quotes. Mr. Taft's declaration, so long ago as July, 1907, that he did not care for the Presidency if it had "to come by compromise with Senator Foraker or any one else in a matter of principle," and that Mr. Foraker had "opposed the vital policies" of the Administration—all this is bound to increase the respect for Mr. Taft's wisdom and courage. It will also strengthen him in those very radical States—like Indiana, Kansas, Nebraska, Minnesota, and the Dakotas—where there have been doubts as to the completeness of Mr. Taft's devotion to the Roosevelt programme. In fine, the letters which have undone Foraker will, in many parts of the country, be a certificate of character for Mr. Taft.

The one embarrassment is the rather ostentatious reconciliation a few days ago between Taft and Foraker. That Mr. Taft's handshaking and his promise to speak from the same platform with Mr. Foraker were anything more than an attempt to patch up between the quarrelling Republicans of Ohio a *modus vivendi* till after election is improbable. Nevertheless Mr. Taft must now bitterly regret that he even seemed to meet Mr. Foraker half-way. The maintenance of his former attitude of aloofness would have been far more dignified, and, as the event proves, profitable. For even in politics the man who sticks rigidly for high principles and is not afraid of making and keeping enemies is often the one who wins the fight.

MR. TAFT AND HIS RELIGION.

The Democrats in the Middle West, it is increasingly apparent, are basing some of their high hopes on the quiet effort to stir up orthodox church-members against Mr. Taft because he is a Unitarian. The attack of the Methodists upon Mr. Cannon is an open appeal to their preachers to denounce from their pulpits the course of the Speaker; against Mr. Taft the movement is more insidious. It is a whispering campaign, accompanied by ardent personal appeals

not to let high heaven witness the seating in the White House of a man who denies the divine parentage of Jesus.

Nor is this dissatisfaction with Mr. Taft confined to the Methodists. Adherents of other evangelical denominations are becoming uneasy because — curiously enough—Mr. Taft is believed to be too friendly with Rome. It is remembered that as Governor-General of the Philippines he dealt with many questions in a way highly satisfactory to the Vatican, and that the purchase of the Catholic lands in the archipelago was on terms far more acceptable to the Church than to the Filipinos who had directed their successful revolution quite as much against the friars as against the Spanish authorities. Then, too, by Mr. Roosevelt's direction, Mr. Taft actually went to Rome in violation of all American precedents, to negotiate direct with the Vatican about these very lands. It is further recalled that Mr. Roosevelt was unfortunately involved in the attempt to obtain a cardinal's hat for Archbishop Ireland. For this the President, a spoiled darling, was readily forgiven; but the fear now expressed, honestly or dishonestly, is that Mr. Taft has been so long in training under his political creator as to make it likely that he, too, will appoint a Catholic to his Cabinet and adopt Mr. Roosevelt's methods of capturing Catholic votes. The fact is, however, that the Catholic interest in Mr. Roosevelt was due quite as much to the popular enthusiasm for his personality and the flattery of his attentions to Catholic authorities as to anything done for the Church itself. And the same thing may be said of his success in securing many Hebrew votes. Has he not a Straus as well as a Bonaparte in his Cabinet, and has he not recognized in innumerable ways the important position now occupied by Hebrews in our financial, political, and social life? If Mr. Taft is to be under suspicion because of Mr. Roosevelt's friendliness to Catholics, he should also be watched because the President is hail-fellow with the Jews.

But this argument is obviously too insincere and far-fetched to be worth elaborate refutation, though, unhappily, it is likely to catch the evangelical groundlings and no-popery fanatics of all kinds. The simple truth is that, with the glamour of Mr. Roosevelt's personality removed from the centre of the stage, men of all faiths are going to vote, as before, with less regard to the candidate as an individual and more for the things he stands for. This change we count, in general, a great gain. We look, however, with unmixed regret upon the entrance of the Methodists as a body into politics, whether their objective be a legislative barnacle, like Speaker Cannon, or any one else. Every one knows what an outcry would arise if the Catholic Church gave orders to its priests to read from their pulpits a flaming attack upon the most powerful official of the government next to the President. The best policy for all the sects and for the country itself is to avoid the use of ecclesiastical machinery for political propaganda.

As for Mr. Taft, since this is not the day of the fagot or the rack, we believe that, on the whole, the attempt to attack him because of his religion will react to his advantage. The facts about Mr. Taft's personal life are all known; there is not a shadow on it anywhere, not even the breath of a suspicion that he has ever been other than a clean-minded, clean-living American gentleman. He has put service to the state far above the pursuit of the almighty dollar; he has never attempted to conceal his beliefs, or to shift the responsibility for them, and he has, therefore, even won the unbounded respect of those who differ from him radically on political questions. The example of his upright life is of enormous benefit to the youth of the nation whether he has attended church four times a year or forty. This is no age to proscribe a man because he has played golf on Sunday, or because he believes in the religion of Emerson, of Channing, of Theodore Parker—in fine, because he is a member of a sect which has supplied leaders for all the great humanitarian movements of the last century. The mere effort to appeal to prejudice and bigotry will rally men to his side, if the matter interests them at all.

THE INSATIABLE ARMY.

With Congress nearly three months away and a Presidential campaign absorbing the country, the insatiable army boomers are already planning next winter's raid upon the Treasury. The Secretary of War is to ask for at last ten new regiments of infantry, five of cavalry, and several companies of coast artillery; and it is hinted that President Roosevelt will make the same demand in his annual message. One hundred thousand men is the minimum strength desired, and the President is to prove that we must have this number in order to relieve our infantry, now compelled to spend too much time in Cuba and the Philippines, and in order to man the new coast defences at Manila and Honolulu. Even the present craze for aeronautics is to be a pretext for more soldiers: Congress is to hear that the Signal Corps, which deals with aeroplanes and balloons, must forthwith have more men and money.

Still another reason for more regiments is the already threatening block in promotions. The sudden expansion of the army in 1898 and 1901, and again in 1907, brought into service many young men who have gone ahead rapidly, not only because of the new regiments created, but because of the passing of the entire generation of civil war veterans who at the outbreak of the war with Spain filled the grades from major up. About 68 per cent. of our officers have had less than ten years' service, and with the older men retired, they see approaching the same block in promotion which resulted from filling the regular army with young men in 1866. In the infantry there is only one retirement for age between now and September, 1911; in the field artillery, none until 1913; and in the cavalry but two between now and 1912. Here is at once a plausible reason why more places should be created—to stimulate the flow of promotions. President Roosevelt can become as eloquent on the necessity of young colonels and majors and captains as he can about the crime of having admirals over fifty and battleship commanders above forty-six.

But this is not all. Nearly 600 officers are absent from their regiments or corps as recruiting officers, teachers, or students at West Point and the various graduate schools; instructors of the Cuban troops; officers of the Philippine Scouts and the Porto Rico regiment; members of the General Staff; attachés and students with foreign armies; employees of the Panama Canal Commission, etc. Beyond doubt, the discipline of the army and its efficiency suffer by reason of this absenteeism. Hence Con-

gress will be urged to provide 600 additional officers.

And finally there is the pay-roll. Last winter the army received 10 per cent. more pay for officers and 15 per cent. for the men—the first increase in forty years. But that is declared to be not enough. The two officers who lobbied this bill through Congress complain because the law of last winter did not provide automatic increase of pay for length of service in the case of officers above the rank of captain, and did not satisfy other minor demands.

Ordinarily, in times of business depression, it would seem to be the duty of Congress to curtail its expenses for military and naval purposes, particularly when there is not a cloud upon the horizon. It might be thought, too, when this peace-loving republic is devoting 70 per cent. of its outlay to army, navy, and pensions, that sacrifice would be sufficient. But no; the way to the Treasury has been thrown open to army and navy since 1898, and there is no disposition to let the path remain unused. Where is the thing to end? Mr. Taft seems not to understand the danger of these tendencies. He echoes glibly some of the military clap-trap of Mr. Roosevelt. Bryan has stood at times for the old American principles, only to weaken his position by donning a colonel's uniform in 1898, then by asserting that the army was increased in order to overawe the workingman, and now, by falling in with the mania for a big navy and by declaring through the Democratic platform that we must have an "adequate navy"—without, of course, defining "adequate." Nevertheless, here is an issue which must soon force itself on the public—our national balance-sheet will do that.

THE MODERATE SOCIALISTS.

Because the congress of German Socialists at Nuremberg was sharply divided on a question of parliamentary tactics, we are hardly warranted in looking upon the controversy as a "split" within the Social-Democratic party. Socialist congresses in Germany have quarrelled sharply before this, and gone their way in unity and peace. It will take time to disrupt the marvellous discipline of the German Socialists. The authority of old and tried leaders like Bebel, Singer, and Kautsky can be depended upon to prevail against radical innovations in party principles or practice; but it is no auspicious sign for the future that congress after congress of German Socialists should have to deal with such innovations and heresies. Evidently, the demand, within the party, for a policy that shall go beyond mere protest and criticism is growing. The elements that stand for compromise refuse to be silenced. The Revisionists, among whom Eduard Bernstein was most prominent, wished to modify the Marxian theory so as to make room within the Socialist party for other classes than the urban workingmen. That was a number of years ago, and Revisionism was placed under the official ban. But under another form the idea has again come up for consideration. The question under debate last week was whether Socialist Deputies in the various German legislatures shall continue to vote "No" on all government revenue measures. The Socialists of Baden and Bavaria have recently made a sharp departure by supporting the budgets of their respective governments; and for this Bebel has bitterly arraigned them.

The issue over which battle was joined at Nuremberg confronts the Socialists of every other country in which they have developed strength, including our own. It is natural that the younger generations of Socialism should chafe at the rôle of inactivity to which the orthodox tactics of the older leaders would confine them. The younger element finds it hard that a great party should hold its soul in patient expectation of a decisive victory that may not come for a half-century, when minor triumphs may be gained from day to day. The veterans, on the other hand, are sensitive to the dangers of compromise. Once you start on that facile descent, you will compromise and compromise till you land in the Avernus of middle-class log-rolling politics. Thus the Baden Socialists argued that by voting this year's budget they prevented the Clerical Centre from seizing control of the government. But to Bebel, Centre, Liberal, and Radical bear no different connotation. They are all a bourgeois, "reactionary mass."

Yet even Bebel has been forced at times to recognize the argument from expediency. Three years ago, when the example of Russia had made the hotheads among the German Socialists eager for a general strike which should break the power of conservatism in Prussia, Bebel fought with all his might against a measure which he believed would lead to civil war and repression. More recently, for the sake of expediency, he has declared that in case of war with France he is ready to march with gun and knapsack to the defence of the German frontier. Once you permit expediency to modify the rigor of revealed Socialist doctrine, the moderate faction cannot see why expediency should not be pleaded in behalf of a policy of gradual progress towards the ideal. There can be little doubt, then, that, as the old leaders pass away, in Germany as elsewhere, the tendency towards compromise in tactics, both in and out of the political sphere, must become accentuated. In Great Britain, for example, the veteran Hyndman still holds aloft the banner of uncompromising, revolutionary Socialism. But just one man of Hyndman's way of thinking, Victor Grayson, has succeeded in winning a seat in Parliament. The Independent Labor Party, which counts among its fifty-four members in the House of Commons a considerable number of Socialists, owes its strength to its latitudinarian spirit. Its founders were wise enough to see that if the trade unions were not ready for Socialism, they must be dealt with patiently, and not scolded and alienated.

The Socialist movement in this country is growing conspicuously susceptible to the advantages of compromise. The old revolutionary theory is still upheld by the Socialist Labor Party under the leadership of the veteran Daniel De Leon. To him the ancient law still holds; who is not with him is against him. The trade union that refuses to enlist under the banner of Socialism is as reactionary an institution as the Steel Trust. But the Socialist Labor party is a dwindling faction, and De Leon's would seem to be a lost cause. Aggressive and successful Socialism is represented by the Socialist Party, whose leaders have held an open ear to the counsels of expediency. Their platforms have been framed with a view to the needs of possible converts. At their conventions they have discussed such things as farmers' planks and other planks that might please. Toward the trade unions the Socialist Party has pur-

sued a policy of amiable expectancy, and for their benefit has pronounced, though in somewhat roundabout form, for the restriction of Asiatic immigration—strange action for a party based on the principles of human brotherhood! Above all, students of Socialism have only to consider how impossible such a movement as the Christian Socialist agitation, of which we hear so much now, would have been thought only ten years ago, to see how conciliatory is the attitude of our present-day followers of Karl Marx.

HEROIC COUPLETS REVIVED.

Blackwood's Magazine, which manages to combine bad politics and good literature, gives fourteen pages of its September issue to the first canto of "The Hop Garden," a Modern Georgic by W. J. Courthope, sometime professor of poetry at Oxford, author of a "History of English Poetry," a "Life of Pope," and editor of Pope's works. The titles are not superfluous, for the poem is patently an attempt to eschew modern modes and revive the manner of a past school in which the writer is a recognized authority. The metre is the closed heroic couplet of Pope, and the substance might be described as a compound of Pope's satirical vein, of John Philips's "rustic pipe," and Goldsmith's mellow complaint. Professor Courthope is not afraid to introduce the details of planting the hop and of curing its diseases, and he makes astonishingly good reading of them. But the burden of his song is the decay that has crept over the fields of his native Kent. He recalls the days of his boyhood, when every dale was a busy farm, and when on every side might be seen columns of smoke rising from the oasts, or houses for drying the hops. But now—

Vain dream! their ancient haunts my eyes behold;
I breathe the airs, I tread the paths of old;
But when recording Memory paints anew
Her former scenes—alas! how changed the view!
Why rise no clustered poles, the hamlet's boast?
Why glows no furnace in th' untended oast?
Where are the village bands, whose cheerful din
At sunset babbled round the canvas bin?
All, all are gone! With furrows half effaced,
The garden's soil extends a brambled waste;
To the gay hum of busy life succeeds
A mournful hush, and in the neighboring meads
His scant and wandering flock a single shepherd feeds.

That has not quite the rare Virgilian note of "The Deserted Village"—what living poet can hope to catch that vanished charm?—but when he passes to satire Professor Courthope comes nearer to his model. Free trade, to this rhyming statesman's mind, is the ogre that has devoured the bloom of the fields, and free trade is possible because the "Sovereign Number" are the prey of avaricious money-makers and shifty politicians:

Mark, then, what gifts advance the "statesman's" aim—
A courtier's soul; perhaps a noble name;
A front unused to blush; a brain whose wit
Can shift the shoe the winning side to fit.
Among his peers a bully bold and loud;
Pert to his betters; cringing to the crowd;
With twenty baits he'll catch one huckster's vote,
And turn with equal ease his phrase and coat.
Blamed for his shifts, opinion he outlords,
Or slimes his treachery o'er with canting words:
So eels, pursued, by swimming top the flood,
Or through the bottom crawl in native mud.
Before the expectant audience next he stands,
Crooks the bent knee, and waves obsequious hands;
The platform sweats with promises and tropes,
And lies as numerous as his hearers' hopes;
To win the doubtful seat he'll stake his soul;
If lost—No matter! he must head the poll.

Horrid politics, but good verse. Indeed, the chief interest of the poem is its conscious effort to revert to a rhythmical form which has scarcely been heard seriously in England since the great invasion of the romanticists under Wordsworth and Coleridge. There is something in this closed couplet that has always raised a tempest of revolt in the romantic mind, and the history of English poetry might be epitomized in its varying fortunes. Mediævalism passed away and the Renaissance entered England with its adoption by Chaucer. With the inspiration, and too often the license, of the Elizabethans, it was abandoned for the greater variety of the stanza, or was broken up by making the pauses of the sense fall in different places from the rhythmical pauses. Daniel found the recurring pairs of rhyme "tiresome and unpleasing" because "they run on with a sound of one nature and a kind of certainty which stuffs the delight rather than entertains it." As a reaction the couplet came into favor again after the metaphysical writers had reduced the Elizabethan wit to a kind of drunken preciosity. It suited the eighteenth century poets, who valued restraint and form more than originality, and who dreaded enthusiasm more than dulness. But even Cowper, who used the measure in his "Table Talk" with consummate skill, felt the beginnings of revolt against this

Beating alternately, in measured time,
The clockwork tintinnabulum of rhyme,

The nineteenth century brought in outrageous rebellion in literature as in other things. Keats uses the couplet, but in such a way (in his earlier years, at least; he learnt better with experience), that the rhymes are scarcely felt in the long flow of the paragraph. Leigh Hunt expresses his pleasure in "seeing all the reigning poets, without exception, break up their own heroic couplets into freer modulation." Byron tried in vain to stem the tide of license. For a hundred years the heroic couplet of Pope and Johnson and Goldsmith has sounded to our ears as a clockwork tintinnabulum. Lowell likened it to the two sticks rubbed together by a savage to strike fire.

Well, our own romantic age, like the Elizabethan, has dripped to the lees. We have the language of the gods, but we speak it with an earthly accent. Our enthusiasm sounds thin and shrill; our words seem an echo; we say that poetry is dead—or, more probably, "has slumped." Even in so skilled a writer as Stephen Phillips one rather admires the jugglery of his muse than rises with the beating of her wings. One feels a lack of reality, a note of inveracity, in his work, as in that of all the romantic lingerers into the present. They are not in touch with the forces that are impelling the age. And the question arises—it has been asked in these columns before now—whether the prosperity of verse does not lie for us in a frank acceptance of these facts and in a return to the form and, with the necessary modification of new ideas, to the manner of an age which could offer brave substitutes for the airier inspiration it lacked. There is a rich field open for the satirist who will train him-

self in the school of Dryden and Pope. The homely virtues of life and the pathos of life's regret may still be sung by one who has caught the touch of Goldsmith. There is more promise today for one who will sing the industry of the farms than for one who seeks to prolong Wordsworth's priestly communion with nature. It is because Professor Courthope has produced a measurably successful and deliberately intended revival of this sort that his "Hop Garden" is notable in the poetry of the day.

FRENCH HISTORICAL BOOKS.

PARIS, September 12.

Under the head of history should be ranked "Boccace," by an authority on the Italian Renaissance, E. Rodocanachi. He follows Boccacio as an individual, emotional lover, light—too light—story-teller, winding up religious and mystic; and also as the poet and prose writer of his race, the moralist of his time and a man of politics—all which was not contradictory in that blessed age. A power of evolving contemporary documents beyond all warrant of known reality is the reproach cast up against Anatole France for his "Jeanne d'Arc." Among the countless critics excited by the book, Achille Luchaire may be noted, and P. H. Dunand, who has delivered his attack in three separate pamphlets. M. Luchaire has brought to a close a work of his own, which would have been enough for the lifetime of many historians, with the fifth volume of his "Innocent III." It treats of the kings who made themselves vassals of the Holy See, France remaining the only exception in Western Europe. The subject has not the same popular interest as Joan of Arc, and, evidently, it is not handled with the same mastery of style which Anatole France brings from his romances; but the great Pope marks a turning point in the world's history, and M. Luchaire's volumes represent the latest results of research at first hand Their fulness of material the German Hurter was unable to command seventy years ago. Hurter was so enchanted with his Pope that he turned Catholic; M. Luchaire, who has been a *collaborateur* of Professor Lavisse for mediæval epochs, might well be, from his writing, a liberal Catholic—or perhaps it would be better to say a conservative positivist.

In his episodes of the Thirty Years' War the Vicomte de Noailles publishes a volume, "Bernard de Saxe-Weimar (1604-1639)," which has all but an actual interest for our day. It narrates the "reunion" of Alsace with France. Alfred Rébelliau, librarian of the Institut de France, and lecturer on "religious ideas and literature from the fourteenth to the nineteenth century" in the University of Paris, digs deeper the groove of erudition, which he began some years ago, by a documentary work of prime importance—"La Compagnie secrète du Saint-Sacrement." It contains the letters sent from the group of Paris to that of Marseilles from the year 1639 to 1662. These "companions," who, according to divers sympathies, have been ranked by historians among saints or assassins, turn out to be citizens devoted to their religion in an age when citizens still believed. Their reputation in history is partly responsible for the ill fame of "La Congrégation," which founders of the Third Republic like Henri Brisson have cleverly turned against "les congrégations" or religious communities of monks and nuns—quite another thing. Professor Rébelliau is apparently of Protestant antecedents; but his documents show off their writers to advantage in comparison with what has become official French history. Prince Emmanuel de Broglie's "Tourville" (1642-1701) is a solid historical book on Louis the Fourteenth's great sailor, whose picturesque flights in every European water were not without influence on universal history.

In a volume of miscellanies, "Esquisses et récits," by the new Academician, the Marquis de Ségur, further material is given to judge of that society of the eighteenth century from which Mrs. Humphry Ward transplanted her "Lady Rose's Daughter" into modern England. It explains, finally, the family relations of Madame du Deffand. There is also an interesting description of the education of women in that century of courtiers and philosophers. Mention may also be made here of the official publication by the Ministry of Public Instruction of unpublished documents on the economical history of the French Revolution. The present volume of the immense collection contains 766 pages, embracing two cantons of the district of Alençon (1788—Year IV., or 1796). The decision of Prince Murat to publish letters and documents in his possession has come as an agreeable surprise to historical students, and may well furnish new material of importance. The first volume, "Lettres et documents pour servir à l'histoire de Joachim Murat (1767-1815)," with an introduction and notes by Paul Le Brethon of the National Library, comprises letters of youth and of the early campaigns in Italy and Egypt. "Le Tribunal révolutionnaire," by G. Lenôtre, is, like all the readable and reliable works of this expert, a realistic transcript of the day's doings of the infamous Fouquier-Tinville while sending the victims of the Terror to the guillotine. The unpublished documents, the plans and details of buildings, and the particulars of all these judicial murders in the name of liberty will forever make it difficult to accept the Revolution *en bloc*. The difficulty is heightened by equally authentic work on precisely those opponents of revolution who are commonly supposed to have partly justified its excesses—"Les Emigrés à cocarde noire," by R. Bittard des Portes. This tells the life and sufferings of the honest rank and file that followed princes and nobles to exile and war in England, Belgium, Holland, and back to the French coast at Quiberon, sorely tried by the worn-out aristocracy of officers to whom they were faithful. The unpublished documents of "Fraternité révolutionnaire," by P. Bliard, have pathetic narratives of the death of Louis XVI., of liberty trees, of Lucile Desmoulins, and other victims of *doctrinaires* leading a criminal crowd.

The "Mémoires inédits de Mademoiselle George," the theatrical star, published by P. A. Cheramy from the original manuscript, are of lighter stuff, and throw us literally into the arms of Napoleon—no ideologue he, but with his own will and judgment as the ultimate base of morals. Albert Schuermans's "Itinéraire général de Napoléon Ier" is sufficiently characterized by Henry Houssaye, a competent judge, in the preface: "Of all the books published about Napoleon for twenty years, I hardly know one more useful, more interesting, and, of its kind, better made." Frédéric Masson publishes a third volume of his series, "Jadis et aujourd'hui"—miscellanies mainly occupied with the Revolution of Napoleon, making the twelfth volume of the Napoleonic works which have brought him into the French Academy. Gen. Désiré Chlapowski's "Mémoires sur les guerres de Napoléon (1806-1813)," as published by his son, now appear in French. Their Polish author fought with the conqueror until he found out that nothing was to be hoped for his hapless country, ground between the nether and the upper millstone. "L'Archichancellier Cambacérès (1753-1824)," by Pierre Vialles, gives from unpublished documents the career of one with whom both Revolution and Napoleon had to count, and who outlived both.

"L'Europe et la restauration des Bourbons (1814-1818)," by Pierre Rain, also makes use of much unpublished material concerning the first years of the restored Bourbons, when they showed their own incompetence to deal with the new world in which they found themselves, while their followers were for a great part frankly unworthy. The "Table analytique alphabétique" of the twelve-volumed Socialist History of France from 1789 to 1900, edited by M. Jaurès, is a complete reference book to that Revolutionary "encyclopædia of men and things (Socialist) of the nine-

teenth century." In the name of the Revolution, also, is published the third volume of the complete works of Bakunin, founder of Anarchy. It contains "L'Empire knouto-germanique et la révolution sociale," published by him in 1871, and still earlier "philosophical considerations on the divine phantom, the real world and man," edited with notes by James Guillaume, who was a disciple of the prophet. This is the thirty-ninth volume of the Bibliothèque Sociologique Internationale.

Less theoretical, more actual, is the sixth and final volume of Joseph Reinach's "Histoire de l'Affaire Dreyfus," entirely devoted to the revision of the case by the Court of Cassation. The book is, perhaps, as complete as is possible at present; and, in spite of the inevitably partisan quality of the author, it is laboriously frank, even to disconcerting admissions in regard to the conduct of the Affair, which was built up on the Case. Of absolutely contemporary history, "La Vie politique dans les deux mondes (1906-1907)" is the first volume of an annual series. Its importance may be judged from its appearing under the direction of Achille Viallate, with the help of other professors of the Ecole des Sciences Politiques. Those for whom the dark and mysterious have charms when considering the play of the world may find entertainment, passing instruction even, in "Le Drame maçonnique" by Copin-Albancelli. The author asserts that twenty years of research make him competent to expose Freemasonry—"the occult power against France"—in its origin and aim and in its "veritable organism unsuspected unto this day." The competence is of graduates in the school of Edouard Drumont. "Sur le Pré," by Rouzier-Dorcières, represents the historical affairs of a very limited and fast disappearing set of what used to be known as the Boulevard. It is made up of reminiscences of the duels—more than two hundred—in which the author played some part. The preface is appropriately furnished by the comedy writer, Georges Courteline. S. D.

NEWS FOR BIBLIOPHILES.

George Willis Cooke's "Bibliography of Ralph Waldo Emerson" (Houghton Mifflin Co.), is prepared upon the same general plan as the same author's "Bibliography of James Russell Lowell" (see the *Nation* of December 6, 1906, p. 485). The alphabetical list of single titles giving the place and date of first appearance and subsequent reprints, fills fifty pages. This is followed by the chronological list of separate works, with their various editions; lists of works edited by Emerson; collected works; volumes of selections, or compilations containing poems or essays by him; biographies, notices, poems addressed to Emerson, etc. From the point of view of the collector of first editions it is unfortunate that there is no list of books and pamphlets such as make up a set of first editions—a shortcoming that has been pointed out in notices of the earlier volumes of the series. In the description of the first edition of the First Series of "Essays," 1841, Mr. Cooke says: "The first issue has the words 'First Series' on the back." This is an unfortunate slip. There was no necessity of so designating the volume until a Second Series was under way; and the earliest issue is without the words "First Series." In the list of books containing contributions we fail to find "The Pioneer," a compilation edited by Edward Clapp, jr., Lynn, Mass., 1846. Here first appears in book-form one of Emerson's best known poems, "Each and All." It had come out in the *Western Messenger* (Cincinnati) for February, 1839. In his note to that interesting volume "Over-Songs," four poems by Emerson, Bayard Taylor, George William Curtis, and Lucy Larcom, privately printed for George M. Ide of Taunton, Mass., as a wedding gift to Mrs. Henry Morton Lovering, Mr. Cooke says "Only 5 copies were printed." This may be true, but in a letter laid in the only copy which has ever been offered at public auction, (first in the Roos sale, 1897, and again in the Arnold sale, 1901), Mr. Lovering said:

I think but eight or ten copies were printed, a copy for each of the authors, and one beautifully bound is in my wife's possession. I say I think this was the limit of the edition though I am not positive.

Emerson's obituary notice of Thoreau, as published in the Boston *Daily Advertiser* May 8, 1862, and now reprinted on pages 120-122 of the "Bibliography" will be read with interest by all admirers of Thoreau. The volume is made more useful by having a fuller index than the earlier volumes of the series.

The *Nation* for June 11, described Part i. of an early American edition of Dickens's "Pictures from Italy," issued by Putnam in 1846, under the title "Travelling Letters"; and the surmise was made that no more than that first part was issued in that form. William C. Lane, librarian of Harvard, informs us that his library possesses also a Part ii., paged in continuation of the first part, from 23 to 48, and containing Letters 4 to 7.

On September 30 and October 1, C. F. Libbie & Co. of Boston sell a large collection of books consigned from England, including some notable lots, among them a set of the Delphine Classics, 187 vols., on large and thick paper; *Notes and Queries*, complete to June, 1908, in 123 vols., with six (out of nine) index volumes; and the *Gentleman's Magazine*, from its beginning in 1731 to 1850, 190 vols. Among books likely to interest collectors are some first editions of Coleridge, Wordsworth, Dickens, Thackeray, Browning, Stevenson, and other modern writers, including a set of the Waverley Novels, 74 vols., all first editions excepting the three great rarities "Waverley," "Guy Mannering," and the first series of "Tales of My Landlord"; books from the Elzevir and Foulis presses; several old English Bibles (mostly imperfect); a considerable collection of American maps and some Americana.

Correspondence.

A QUESTION IN THE HISTORY OF THE STAGE.

To the Editor of The Nation:

Sir: I wonder if any of your readers can enlighten me as to the authorship of a pamphlet entitled:

A | Vindication | of the | Stage, | With the Usefulness and Advantages | of | Dramatick Representations, | In Answer to | Mr. Collier's Late Book, Entituled | *A View of the Prophaness and Immorality*, &c. | *In a Letter To a Friend* | [Motto in Latin] | London: | Printed for *Joseph Wild*, at the Sign of the *Elephant* at | *Charing-Cross*. mdcxcviii.

This is one of the many pamphlets provoked by Collier's "Short View," 1698. In R. W. Lowe's "Bibliographical Account of English Theatrical Literature," 1888, this pamphlet is listed without any assignment of authorship. Edmund Gosse's "Life of William Congreve," London, 1888, contains in the third chapter, which deals with the Collier controversy, the following passage (p. 113):

Gildon promised that when he had leisure he would write "A Vindication of the Stage." The very interesting tract, however, which was published under that title on the 17th of May is from a very different and, no doubt, a far more accomplished hand than his. There exists, I believe, not even a tradition which connects this pamphlet with any known name. I have little hesitation, however, in attributing it to Wycherley.

Mr. Gosse then gives his reasons for the attribution, reasons which, the candid reader must admit, are far from cogent. This conjecture by Gosse is mentioned in passing in the article on Wycherley in the "Dictionary of National Biography."

My question is whether Gildon has ever been seriously considered as the author of this pamphlet. In (April, according to Gosse) 1698, he published a play:

Phaeton: | or | The Fatal Divorce. | a | Tragedy. | As it is Acted at the Theatre Royal. | in *Imitation of the* Antients, | *With some Reflections in a Book call'd, a Short View of the Immorality Profaneness of the English Stage.*

The passage in the preface to which Mr. Gosse refers was as follows:

I have no Room in this Place to shew all the Abuses and Absurdities this Author is guilty of, but I reserve most of them for a work I have long design'd, and which I resolve to conclude some time this summer in Vindication of the Stage, *&c.*

At the end of Gildon's preface is another passage which may afford some light:

Which I desire he may do before I publish mine in Vindication of the *Stage* against Mr. *Pryn* and Mr. *Collier;* in which I question not, but I shall make evident that the Wit of Man can invent no way so efficacious, as Drammatick Poetry, to advance *Virtue* and *Wisdom*, and the Supream duty of an *English man* (next the Love of God which is always Supream) the Love of our Country, a Lesson I shall particularly Recommend the *Stage* for to Mr. *Collier.*

The coincidence of title, of course, proves nothing by itself, but "A Vindication" and the preface to "Phaeton" have several points in common: both emphasize Collier's charge as to blasphemy and answer it with some particularity; both point out that when Congreve's lover, Valentine, says he is truth, the fact that there is a similar phrase in the Bible does not make the utterance blasphemy. But it must be con-

fessed that most of the replies to Collier run over a beaten track and touch upon the same or similar matters. "A Vindication," however, does lay much stress on the argument that dramatic poetry advances virtue and wisdom, and the remarks under this head conclude (p. 27) with the sentence:

Thus seeing of what Worth and Value *Drammatick Poetry* is, for forming our Manners and regulating our Lives, besides the great Delight and Pleasure it affords us, I think I need not urge much more for its Recommendation.

But any determination of the authorship of "A Vindication" is impossible without a close study of the writings of Gildon, Wycherley, and perhaps other authors of the period. To most of us Gildon is only a name in the "Dunciad." Have any of your readers that detailed knowledge which will solve my doubts? X.

New York, September 18.

MY FAVORITE BOOKS.

To the Editor of The Nation:

Sir: Your editorial on August 27, "Their Favorite Book," leads me to believe that my own personal experience, which has been, I hope, unusual, may interest your readers. A student and teacher of literature most of my life, I have a first-hand knowledge of a considerable part of the literature of four languages. In English, I am fairly familiar with the principal writings from Beowulf to those of Bernard Shaw. For ten years, however, I have been an invalid—cut off for the most part from ordinary activities. Seldom able to leave my home, and seeing but few people, I pass much of my time in solitude and so am thrown almost wholly upon my own resources. Under these circumstances books are my chief recourse. Perhaps it would be rash to assert that my tastes are not in some degree morbid, yet they are fairly comprehensive. I enjoy the best English and German love-songs, which some of my more sophisticated friends call silly. I have recently found amusement in "The Day of the Dog," and interest in the "House of Mirth"; I can kill time, when it seems to deserve killing, by reading "The House of a Thousand Candles." So I feel that my taste and judgment are still fairly sound.

Under these conditions, which approach quite too near those of the desert island, who are my favorite authors? After doing my best to estimate the facts correctly, I am convinced that Shakespeare and Milton are more to me that any other—yes, than all other authors combined. They satisfy most completely my varying moods. Fortunately, I am so familiar with their works that I do not have to read them, but can recall characters, scenes, and passages almost at will; and the same is true of several other writers. So as I sit alone, Sir Toby and Jaques are my club companions. In my happier moments, Perdita and Florizel, Rosalind and Orlando, and the cheerful pictures from "L'Allegro" serve as a perpetual delight. In my more serious moods, when the harder problems of human conduct perplex me, Shakespeare and Milton give more help toward a solution satisfactory to myself than any other writers I know. Where else is there so wise a criticism of life? Where else such high standards for human action? In Brutus, in Hamlet as I conceive him, in Cordelia, and in the Lady in "Comus." I find incentives toward the highest things of which man is capable. If the burden of life becomes too heavy, I gain courage never to submit or yield from Samson Agonistes and Satan, who to me is a literary—not a theological character. And in the deep despondency of my broken and blasted life. I find nowhere more solace than in the passage of "Lycidas" beginning, "Alas! what boots it." These two authors, therefore, are my chief sources of pleasure, of intellectual interest, of endurance, and of consolation. They respond to my best moods and contribute to my sorest needs. How should they not be my favorites?

I think I notice, too, that in my weaker moments I turn to other writers. When, in rebellious moods, I abandon my best ideals to revel in the worse things of life; when I consciously strive to make the worse appear the better reason; when I feel contempt rather than respect for mankind, I find plenty of food for this bitter fancy in "Vanity Fair," "Faust," "Manfred," "Don Juan," and "Maud," not to mention innumerable others. Perhaps Chaucer's good-natured ridicule will bring me back to my better self; for in Chaucer, as in Shakespeare and Milton, things are generally valued at their real worth.

Asked why I value Milton and Shakespeare more highly than you seem to think most people do, I should say that it is probably because I know them better. The casual reader or playgoer knows little more of the great dramatist than may be learned from Lamb's "Tales." I have studied my favorites until their works are pregnant with what seems to me deep meaning. It matters little whether I have got this meaning from the works, or have read it into them; for me the meaning is there. Moreover, I have reflected on this meaning until it seems of almost world-wide application.

So, persuaded by my own experience, I hold with Matthew Arnold that he who seeks the most and best from literature will find it only in the works of the greatest authors. If he fall to find it, is it not largely his own fault? T. W. Cowgill.

Reno, Nev., September 7.

MORE OKLAHOMA REFORMS.

To the Editor of The Nation:

Sir: The other States of the Union profess to furnish free tuition, collegiate as well as primary and secondary; but it has remained for the aggressive new State of Oklahoma to throw open the doors of her colleges and normal schools without any distinction between residents of the State and visitors from outside, and absolutely without a cent of charge to students in any form—no incidental fee, no guarantee fee, no library fee, no laboratory fee, and most startling of all, no charge for individual instruction in music, vocal or instrumental.

All of these State schools have elaborately constituted departments of music, with faculties decidedly better trained than the average of their colleagues in other departments; and the placing of music on the free list, a plan put into operation for the first time with the beginning of the current school year, is an opportunity which students are taking advantage of with great enthusiasm. At the Southwestern Normal School, for example, with five teachers in the music department, out of a faculty totalling some twenty-five, every music-teacher has every period of his day filled, and the waiting list is appalling in length, while the teachers in the Normal School proper are very indifferently patronized. Time only will show whether it is practicable for an institution to furnish gratuitous individual instruction.

R. T. House.

Weatherford, Okla.

THE MEANING OF "CHAUFFEUR."

To the Editor of The Nation:

Sir: I do not know who originated the title of "chauffeur" as applied to the driver of an automobile. The name is certainly appropriate, and the chauffeurs of the present day possess the qualities which made their prototypes famous. Balzac, in "L'Envers de l'histoire contemporaine," says:

Here you will need a few words of explanation as to an association which made a great noise in its day. I mean that of the raiders known as the chauffeurs. These brigands pervaded all the western provinces. Nocturnal raids were frequent. These bands of destroyers were the terrors of the country. I am not exaggerating when I tell you that in some departments the arm of justice was practically paralyzed.

The modern chauffeurs certainly equal or excel their predecessors, and the arm of justice is still paralyzed.

Geo. A. Torrey.

Boston, September 10.

THE SPRINGFIELD RIOT.

To the Editor of The Nation:

Sir: The action of the grand jury in laying the blame for the riot at Springfield, Ill., so largely on the local police force is about as reasonable as to lay the blame for the loss of a battle on the private soldier. The question of leadership is ignored. While it is true that most policemen, when put to the test, are physically brave, they are not political philosophers or stern moralists. Directly or indirectly, they are instructed what to see and hear and what not to see or hear—the penalty for indiscreet use of eyes and ears, for misplaced inquisitiveness, or reforming zeal, being dismissal or banishment to undesirable posts. In most American cities of the Springfield type, the local police force is dominated by the politician, or, to be more accurate, by the saloon-keeper-politician-gambler.

The so-called "sporting" element is generally disproportionately large in every State capital. Staid, respectable burghers from country towns, as pointed out inimitably by George Ade in his "Fables," are prone to be a bit skittish when away from the trammels of home life. Being lawmakers, they regard themselves as above and beyond the law—it is really too much to expect the same man to make and obey laws. Besides, the king can do no wrong. Consequently, Policeman X., who may be a very decent sort of fellow, with a wife and family to support, naturally hesitates about

raiding a certain back room, in spite of ocular and auricular proof that a "little game" is going on there. Nor would it do to be too "brash" about "pulling" a house; you never know whom you might drag out to light. And it would be gross discourtesy to disturb influential legislators who might be enjoying themselves, however boisterously, in a saloon after legal hours of closing. The pay of legislators is small, but for those who like to play the rôle of Dr. Jekyll and Mr. Hyde there is the lobbyist who is ever ready to replenish depleted pocketbooks. The net result is that an unusually large and rapacious horde of idle, ignorant, and vicious characters, ruled and supported by the sporting bosses, control the police, paralyze their efficiency, and corrupt their sense of duty.

Now, the lower one goes in the social scale the fiercer the spirit of envy and malice against those who are more fortunate. This fact Mr. Hearst appreciates, and he harps on that string. If the successful person, who has raised himself to comparative comfort by his own self-denial and thrift, happens to be of another race—a black or a yellow man—the rage of the unthrifty, lazy, and vicious white knows no bounds. His impulse is to crush his alien rival by physical means—or, in plain language, to murder him at the first opportunity. The negro, on the other hand, it must be confessed, displays little tact in his emancipated position of legal equality with the white man; in too many cases, especially where the blacks are in a numerical majority, he is prone to show that he regards himself as even a little better than the white man, especially in public places; while his beastly proclivities, when under the influence of liquor, alarm and horrify whites of every class Add to all this the fact that, in common opinion at least, our criminal procedure is slow, uncertain, antiquated, and absurdly lenient towards the criminal—and we have all the necessary ingredients for a tremendous social explosion.

The ultimate cause of the Springfield riot is, in my opinion, race antipathy. The immediate cause was bad municipal government. But if we probe a little further, we shall find that the cause of bad government is our practice of reposing too much political power in unfit hands—the vicious, unproductive, incapable rabble.

VERAX.

Chicago, September 17.

MR. BRYAN AS A TARIFF REFORMER.

TO THE EDITOR OF THE NATION:

SIR: I am much surprised to note in the *Nation* of August 27, p. 173, the editorial statement that Mr. Bryan "never cared about tariff reform." As a resident of Nebraska for several years, I was in a position to observe Mr. Bryan's early career at close range, and I should say that during those years he appeared—I do not assume to fathom the secret inclinations of his heart—to be profoundly interested in tariff reform, almost to the exclusion of all other political topics. Perhaps this country has never seen a more signal victory, won through the personal appeal of a single individual, on any political battlefield than that in which he converted an adverse majority of nearly 6,000 into a majority of about that number in his favor, the issue being the tariff question to the almost entire exclusion of every other. And has it been forgotten that he made a speech in Congress upon the tariff question in 1892 which was pronounced by the New York *Times* the ablest which had been delivered for many years—an opinion in which there was quite general concurrence? Is it not possibly a little hypercritical to say that he has not understood the subject, in view of the cant and platitudes that have been heard on the floor of Congress and from candidates for the Presidency and Vice-Presidency in treating of the tariff? One does not need to be versed in the whole field of political economy in order to demonstrate the iniquities of our present system. Whatever Mr. Bryan's qualifications, few men have ever spoken more effectively on the subject to the average voter.

Equally ill-considered, as it seems to me, are your comments upon the inconstancy and inconsistency of Bryan. On the other hand, his self-sufficiency and extraordinary tenacity of purpose seem to many to be serious defects. We would hardly speak of Cleveland's inconstancy because he treated the financial question as of supreme importance when he called the special session in 1893. And in 1896 the financial question seemed to be of supreme importance. Bryan's contention for free silver was largely on the ground that it would add substantially to the volume of the currency; as that volume has increased, through other causes, far beyond his dreams, it would be absurd, from his point of view, to deem it still a leading issue.

You also say that real tariff revision will not come until the people are indignant. Are they to show their indignation by voting the Republican ticket when, with the new and sinister phrase about "a reasonable profit to the American producer" in its platform and in the speech of acceptance of its candidate, it proclaims the obligation of the nation to guarantee success to a privileged class? In connection with the promise of the Republican candidate to call a special session of Congress in the event of his election, you appropriately comment on the slow progress which could be made in enacting tariff laws, but you do not speak of the fact that there is no promise of real revision. We can easily picture to ourselves the smile of derision on the face of Speaker Cannon when that message is received—or any other similar message during the next four years. It will then be said as the American *Economist* says now, that there is not "a word or syllable in this tariff plank that tends to furnish the slightest crumb of comfort" to the advocates of "tariff revision downward."

The bogey of Bryanism may furnish motives for voting for Taft, but there can be nothing more fatuous than to expect tariff reform after we have solemnly decided to waive it for the present.

FRANK W. LEWIS.

Worcester, Mass., September 18.

A STATEMENT FROM PROFESSOR COE.

TO THE EDITOR OF THE NATION:

SIR: The editorial article "An Educational Paradox," in your issue of September 17, is based upon a misapprehension as to facts. I am having no difficulty "with the Methodists at Northwestern University," and I have never had any. During the seventeen years that I have been a member of the Northwestern faculty I have never been conscious of any inclination on the part of its administrative authorities to restrict my freedom of speech. I have uttered my views frankly and fully, and without rebuke. As far as I know, there has been no attempt even to influence by utterances. Nor is there any difficulty of any other kind between myself and any person or persons connected with the university.

I assume that you have relied for your facts upon an article in the Chicago *Record-Herald*, or else upon a condensation of it that was sent out, as I suppose, by the Associated Press. The criticisms there referred to as having been passed upon an article of mine that touches upon the subject of conversion were not made within university circles at all, but by certain clergymen at a camp meeting. Such criticisms do not in any manner affect my relations to Northwestern University or my plans for the future.

At Northwestern there are no such "student leagues" as you describe, nor are such activities as you ascribe to these leagues practised by any other group or organization.

Your article, therefore, does injustice to the university, and, I believe, to American higher education in general. When academic freedom is really denied or endangered, I trust that you will raise your voice. But in this case fair play demands that you do what you can to counteract the injurious impression that your article fosters.

I may add that the report that I have accepted a chair in Union Theological Seminary is unauthorized and untrue. It subjects me, and no doubt the authorities of Union Theological Seminary, to annoyance that seems scarcely deserved.

GEORGE A. COE.

Evanston, Ill., September 19.

[We regret that the widely published report that Professor Coe was to leave Northwestern and come to the Union Theological Seminary should have misled us. We did not, however, say that he had been criticised by the authorities of the institution; our point was that attacks from outside ministers, the fathers of students, and others of the clientèle of a university might make a professor feel freer to speak his mind in a theological seminary.—ED. NATION.]

Notes.

Among the books on the autumn list of the Century Co. are: "Egypt and Its Monuments," by Robert Hichens; "The Red City," a continuation of "Hugh Wynne," by Dr. S. Weir Mitchell; "The Book of the Pearl," by G. F. Kunz and C. H. Stevenson; "Whistler in Venice," by O. H. Bacher; "The Mystery of the Pinckney Draught," by C. C. Nott; "The World I Live In," by Helen Keller; "The Reminiscences of Lady Randolph Churchill"; "The American College," by Abraham Flexner; and "The Age of Mental Virility," by W. A. N. Dorland.

From the Macmillan Company we are to have several books of considerable importance: "Lollardy and the Reformation in England," 2 vols., by Dr. James Gairdner; "The Ancient Greek Historians," by Prof. John Bury; "The County Lieutenancies and the Army, 1803-1814," by J. W. Fortescue; "Social Life at Rome in the Age of Cicero," by W. Warde Fowler; and "William Morris" (English Men of Letters), by Alfred Noyes.

The third, and concluding, part of Molmenti's monumental history of Venice is soon to be brought out by A. C. McClurg & Co. in two volumes. The translation, as of the four earlier volumes, is by Horatio F. Brown.

Harpers announce a volume of critical essays on "Magazine Writing and the New Literature," by Henry Mills Alden, who has been editor of *Harper's Monthly* for forty years. No doubt he has gathered together a number of the papers that have appeared in the "Editor's Study."

Two new volumes, promised by the Oxford University Press, will be a welcome addition to the Library of Prose and Poetry: "Selected Poems of William Barnes," edited and annotated by Thomas Hardy, and "Selected Poems of John Clare," edited by Arthur Symons.

Richard Burton, professor of English literature at the University of Minnesota, has three new books—essays, verse, and fiction—to be published by Little, Brown & Co. The novel, called "Three of a Kind," comes out this week.

Small, Maynard & Co. have taken over the edition de luxe of "The Poems of Madison Cawein," in five volumes with an introduction by Edmund Gosse.

Richmond, Va., is planning again to start the great magazine of the South. A charter has been granted to the *Southern Literary Messenger*, which expects to begin in January.

"Wycliffe and the Lollards," by J. C. Carrick, one of the volumes of The World's Epochmakers (Charles Scribner's Sons), is another series book and a typical specimen. We are reminded of certain other biographies in which the puzzle was to find the name of the person whose life was being described. In this volume of three hundred pages it would be a generous estimate to say that one-third of the space is given to Wycliffe and the Lollards. The rest is filled with grand generalizations, analogies, more or less fanciful, and long historical, literary, topographical, and other digressions, which display the author's encyclopædic knowledge, but do not advance the reader's acquaintance with his nominal subject. A great part of this apparatus is devoted to showing up the scandals, past and present, of the Romish Church, an ungrateful task at best, and one which, after all, does not materially illumine the career of John Wycliffe. Mr. Carrick seems to have read Lechler's "Life of Wicliffe," and to have drawn liberally from it, but otherwise we get hardly an indication as to his sources of information. There is nothing to show that he has read anything of Wycliffe's writing in the original or given any serious thought to following out the tangled thread of his theological argument. To this slipshod method as to material corresponds an equally careless presentation. Apparently no adequate proof-reading was thought of—otherwise we could hardly explain the frequency of repetition of incidents and phrases and the continual employment of school-boy English. A slovenly index forms a worthy conclusion to a book which has no real reason for being.

The Historical Manuscripts Commission of Great Britain has continued its calendar of the manuscripts of the Marquess of Ormonde by the issue of the nfth volume of the New Series, covering the correspondence of the first duke for the years 1679 to 1681. The Ormonde papers at Kilkenny Castle were among the first of the private collections to be taken up by the commission, but no attempt at a systematic calendaring was made until the New Series was inaugurated in 1902, since which time the work has gone steadily forward. Carte in his life of Ormonde made extensive use of the duke's earlier letters, but dealt less liberally with the period of the present volume. The editors have therefore felt themselves justified in including elaborate extracts from the papers of these two years. As readers of Carte's biography are aware the period is not one of special importance in the crowded life of the illustrious cavalier, and it cannot be said that the material here noted is of striking significance, either for English or for Irish history. Details of Irish government, comments on politics and political intrigues in England, gossip of a sporting character from Newmarket and elsewhere, private happenings in the lives of Ormonde and his friends, and references to the careers of his sons, particularly of Thomas, Earl of Ossory, whose premature death in 1680 was generally deplored, make up the bulk of the volume. The principal topic of political interest is the Exclusion Bill, and we get frequent glimpses of two men, intimately associated with that piece of legislation, the Duke of York and the Earl of Shaftesbury, whose careers are of importance in our colonial history. A few details are given also of the early history of Richard Earl of Bellomont, when simply Capt. Richard Coote. The correspondence in general is distinctly entertaining, but does not go deeply into affairs of any great moment.

"Essays in Municipal Administration," by John A. Fairlie (The Macmillan Co.), consists of various essays and addresses which the author has produced since 1898. In general it is a servicable and informing compend, touching various phases of city history, organization, and administration. Departing somewhat from the author's grouping of the various articles, we may classify them under three heads. There is first a series which discusses mainly the organization, actual or ideal, of American cities; second, a descriptive series, devoted chiefly to certain important chapters in municipal experimentation; last, a somewhat impressionistic lot of sketches of municipal conditions abroad. The third lot is least in value. They offer the observations of an intelligent traveller who has made a recent tour of British and Continental cities, and who records his impressions of the general character of urban life, government, and activities, without taking the time to confirm by minute inquiry the views obtained by a necessarily rapid survey. The second group recounts with accuracy and fairness such important pieces of municipal history as the street railway struggle in Chicago and the municipalization of electric lighting in Detroit. Especially useful is the essay "Revenue Systems of American and Foreign Cities"—the joint work of the author and Prof. Charles E. Merriam. The first lot of essays, confined mainly to the problem of the organization of American cities and their relation to the State government, conveys no small amount of carefully collected information. In our judgment, however, it fails in not positing more definitely some tangible and specific goal to be aimed at. If Professor Fairlie would take up the cudgels for or against the programme of the National Municipal League, for instance, or would propound some clear-cut plan for the betterment of our "one conspicuous failure," he would contribute more to the end all lovers of good city government have at heart. H. J. Ford's courageous diagnosis, that the organic defect in our municipal organization lies in the almost total disconnection of the executive and legislative departments, and his remedy—"to give the executive complete legislative initiative, with the right to demand a vote on proposed measures"—are mentioned (p. 23) but passed by without acceptance or rejection. We have seemingly progressed far enough in the matter of city government by trial and error to formulate a working hypothesis, and to test the hypothesis and its legitimate deductions in a more free-handed way than Professor Fairlie seems to approve of.

To the long list of books for which cheapened processes of color printing are chiefly responsible may be added: "The Tower of London," painted by John Fulleylove, R. I., and described by Arthur Poyser (The Macmillan Co.). The text, beautifully printed on thick paper with wide margins, consists of an historical sketch, and then descriptions of walks through the Tower, round the Tower, about Tower Hill, and Allhallows Barking by the Tower. This part of the work is competently done, but without special distinction of style. The pictures are pretty, fortunately in rather subdued colors, but without notable excellence. Any one who has visited the Tower will enjoy refreshing his recollection by looking at them and dipping into the text.

In these days when so many bookish essays are written by thin-blooded ladies and painful male egotists, one feels a distinct relief in perusing the "social and comfortable" discourses of "De Quibus" by William H. Taylor (Richmond: The Bell Book and Stationery Co.). Dr. Taylor writes not out of a library, but out of his own experiences as a quondam pedagogue, on "Old-Time Schooling"; as a Confederate surgeon, on personal reminiscences of the civil war; as a practising physician, on "Our Noble Profession"; as a professor in the Medical College of Virginia, on "Science and the Soul," "The Occult," "Radium," etc.; as coroner of the city of Richmond, on "The Burial of Ophelia"; as an impregnable old bachelor, on "Woman." On this last subject it must be confessed that he is guilty of bad taste in combining a medical and Schopenhauerian form of cynicism with squashiness. In philosophy and religion Dr. Taylor was an unaggressive skeptic till the "insolent attempt of ecclesiasticism to revive its defunct authority over science" put him at odds with the

"mediæval village" of Richmond. His political sympathies are loyally Southern; he hopes that some Milton will write an "Apotheosis of Rebellion." In education he is a devoted champion of the sciences, and he resents the fact that "with the majority of people the ideal man of learning is one who has swamped his brain amid the soggy lumber that has drifted down to us out of the smash-up of antiquity." Yet withal one feels that he is a humane man; he has a good fund of humor and anecdote, considerable power of phrase-making, and an easy, readable style, rising now and then to whimsical pathos and even eloquence.

"The Last of the Plainsmen," by Zane Grey (The Outing Co.), is professedly an attempt to give the reader a realistic impression of "Buffalo Jones," known to readers of Western border literature for his efforts to preserve the American bison from extinction and for his service as warden in the Yellowstone National Park. With little but a book knowledge of the life into which he was plunging, Mr. Grey visited Jones on his buffalo ranch on the northern rim of the Grand Cañon of Arizona, and accompanied him on a hunting trip, the object of which was the capture of living specimens of cougar, or mountain lion. Of course the camera was along, but since the author appears to have been as much of a novice in its use for such purposes as in other experiences of the expedition, his illustrations are but a tame accompaniment to his text. As to the latter, cougar hunting on the confines of the Arizona Grand Cañon is so full of possibilities that one feels cautious about charging exaggeration, though Professor James's "will to believe" needs occasionally to be called into vigorous action. The air of hero worship which marks the author's whole treatment of Jones is so pronounced that one can hardly read without suspecting an unconscious over-coloring. Mr. Grey is never dull in his narrative, but one tires of the undue straining after verbal effect in the descriptive bits with which his story is interlarded.

One of the last of Prof. Friedrich Paulsen's articles is in the *Internationale Wochenschrift* of Berlin, No. 33, entitled "Eine neue deutsche Universität im Osten." It is an earnest plea for the transformation of the present Akademie in Posen into a full university. It is of interest to see that Paulsen deplores the growth of such "monster universities," as he terms Berlin, Munich, and Leipzig, and hopes that such a new institution in Posen will relieve particularly Berlin. He is convinced that such a university would do for German culture in Poland what Strasburg has done in Alsace-Lorraine since 1870. Paulsen declares that it is high time to establish more universities in Germany, as there has been only one new one since the war with France, although the population of the country has increased fully 70 per cent. since that time.

A new quarterly, *Zeitschrift für Politik*, is being published by Carl Heymann of Berlin, and edited by Prof. Richard Schmidt of Freiburg-im-B., and Dr. Adolf Grabowsky of Berlin.

Peter Rosegger's new work, "Volksreden über Fragen und Klagen, Zagen und Wagen der Zeit" (Berlin: W. E. Kantorowicz), is a collection of sixteen addresses on some of the problems and perplexities of the times. He discusses, for example, the Catholic Church of the future, the education of girls, and militarism.

"Geschichte der deutschen Literatur des neunzehnten Jahrhunderts und der Gegenwart," by E. Engel (Leipzig: F. Tempsky & G. Freitag), a substantial volume of 528 pages, with seventy-six illustrations and reproductions of twenty manuscripts, is really a separate edition of the third and concluding volume of the author's larger work, "Geschichte der deutschen Literatur von den Anfängen, bis zur Gegenwart," which, originally published in 1906, has recently reached its third edition.

The Neue Leipziger Klassiker Ausgaben (Leipzig: M. Hesse) contain at a low price leading classics, edited by recognized scholars. Lately there have been issued the Select Works of Matthias Claudius, one large volume edited by Dr. G. Behrmann; Select Works of Dante, 4 volumes, edited by R. Zoozmann; Complete Works of Ferdinand Freiligrath, 10 volumes, edited by L. Schröder; the "Kinder- und Hausmärchen" of the Grimm brothers, edited by H. Wolgast; Select Works of Karl Simrock, 10 volumes, edited by G. Klee.

The publication house of Eugen Diederichs, Jena, has established a special department for the literature of Modernism. German translations of the writings of several French and Italian Modernists have already appeared. A series of brochures by German scholars, advocating reformed Catholicism, is also announced.

"Anticlericus: Eine Laientheologie auf geschichtlicher Grundlage, by Friedrich Andersen (Schleswig: Begas), is a solid volume of more than six hundred pages, in which the author, a pastor in Flensburg, and confessedly a convert of Chamberlain's "Grundlagen des 19. Jahrhunderts," outdoes his master in his radical views of modern religious problems. He finds in the Christianity of history practically only a *pia fraus* of the clergy; and his appeal is for a deliverance of the Church from the Judaistic spirit that has corrupted the original Christianity of the Founder.

The latest volume in the series Religionsgeschichtliche Volksbücher (Tübingen: J. C. B. Mohr) is by Dr. I. Benzinger, now engaged in research in Jerusalem. "Wie wurden die Juden das Volk des Gesetzes?" The purpose is to answer the question as to how the Israelites came into possession of their highly developed legal system. Dr. Benzinger answers this question with constant references to the results of archæological investigation in Babylon.

F. Heman, in his "Geschichte des jüdischen Volkes seit der Zerstörung Jerusalems" (Kalw and Stuttgart: Vereinsbuchhandlung), furnishes in a single volume of 600 pages an ample account of the Jews, with more details than most compendious histories. The work is characterized by an earnest effort at impartiality. In an introductory chapter the author describes the history of Oriental Judaism down to the times of Islam. Then come two chapters on the Judaism of the Occident; one on the Jews and Islam, and another, naturally much longer, on the Jews in Spain under Arabian and Christian supremacy; then separate chapters on the Jews in France, England, Italy, Germany, Poland; a comprehensive chapter on the Jews of the East; and two chapters on the Jews of modern times.

H. Böhmer, in "Die Jesuiten" (Leipzig: Teubner), depicts in outline, but vividly and on the basis of independent sources, the story of the founder and of the organization of the Jesuit order, of its rapid growth in all Europe, its subsequent decay, and its reëstablishment and present influence at the Vatican.

Among recent Lutherana mention should be made of E. Lessing's "Martin Luther als deutscher Klassiker" (Hamburg: Verlag der deutschen Dichter-Gedächtnis-Stiftung), a selection from Luther's poetical compositions and most popular prose writings; R. Neubauer's "Martin Luther: Eine Auswahl aus seinen Schriften in alter Sprachform, nebst Einleitungen und Erläuterungen," in two volumes (Halle: Waisenhaus). This latter work is especially valuable to the student of Luther's language.

The Amtskalender für evangelische Geistliche, by Pastor J. Schneider, of Elberfeld, a standard work containing detailed information regarding the Protestant churches of Germany, has just made its appearance for the year 1909—the thirty-sixth volume of this annual (Gütersloh: C. Bertelsmann).

Stockholms Dagblad for August 23 is a "Swedish-American number," and contains several articles about the Swedes in this country. Among them is a symposium by several Americans of Swedish descent in reply to the question addressed to them by the editor of the paper: "How can Swedish culture best be retained among the Swedes in America, and how can the tie between them and the land of their ancestors be strengthened?" Among those whose replies have been published are Prof. Nathaniel Schmidt of Cornell, ex-Gov. Lind of Minnesota, Dr. E. Norelius, president of the Augustana Synod; Dr. J. A. Enander, editor of *Hemlandet* in Chicago, and J. O. E. Trotz of the American Steel and Wire Company, Worcester, Mass. Nearly all the writers agree that Swedish culture as such cannot have any future among immigrants from Sweden, because most of them do not belong to the cultivated classes, and the culture which they, especially the younger generation, derive here, is American. The object of the emigrant from Sweden is to better his economic condition, and this he will do most successfully if he regards himself simply as an American citizen, and lets his earlier associations take the second place. Among the proposed means of bringing about a closer connection between the Swedes in America and in Sweden we notice warmer encouragement of the Swedish press in America, especially on the cultural side; exchange of professors between Swedish and American universities; a further development of the Swedish singing societies; visits by prominent Swedes to this country, both for the purpose of familiarizing themselves with conditions here and of lecturing among the Swedish settlements, and greater political and religious liberty in Sweden.

H. Aschehoug & Co. of Christania, Norway, have just sent out the first two fascicles of an illustrated history of Norway from the oldest prehistoric times to the year 1905, in a treatise that promises to

be at the same time popular and authoritative. The work, which has been under preparation for several years, has been entrusted to six of the foremost historical scholars of the country: A. Bugge, A. Taranger, G. Nielsen, and J. E. Sars, all professors in the university. E. Hertzberg, chief archivarist of the kingdom, and O. A. Johnson, one of the most promising of the younger historians. The publishers promise that the work, which will comprise six volumes (about 5,000 pages), will be completed in about five years.

The Deichmanske Bibliothek in Christiania has issued the first instalment of a Norwegian "Poole," covering over 4,000 articles on Norwegian topography in seventy-five periodicals, arranged alphabetically under names of localities. It is the intention of the librarian, Haakon Nyhuus, to issue at least one more part, containing articles on biography in the same, and perhaps a few more periodicals. For the preparation of the whole index he looks rightly to coöperation of all the larger Norwegian libraries.

The Imperial Academy of Science in St. Petersburg has decided to issue in parts appearing at irregular intervals an Encyclopædia of Slavic Philology in the Russian language, under the editorship of Prof. V. Jagic. There will be in all five or six large volumes. A beginning has been made with Part xii., containing a sketch of Russian literature from the seventeenth to the nineteenth century, by Prof. E. Budde. Parts i. and ii. are promised for the near future. The Voss Sortiment Buchhandlung of Leipzig is the agent for Western Europe.

F. H. M. Blaydes, the well-known classical scholar, has died at Southsea, England, in his ninetieth year. Dr. Blaydes edited the entire works of Aristophanes, with Latin notes, besides editing plays of the tragedians, and publishing volumes of "Adversaria." He treated his texts with a free hand, after the manner of scholars of his day.

Prof. Charles Wesley Bishell, professor of the history of theology at Boston University School of Theology since 1895, and assistant dean since 1904, died at Salisbury, Mass., September 21. Born in Pennsylvania in 1850, he studied both in America and Europe in preparation for the Methodist ministry. For a number of years he held pastorates. Among his writings are: "The History of Christianity (1891), "The Official Recognition of Women in the Church" (1892), "The Higher Criticism" (1893), "The Foundations of Christian Faith" (1899), and "The Child as God's Child" (1904).

THE PENINSULAR WAR.

A History of the Peninsular War. By Charles Oman. Vol. III. New York: Henry Frowde. $4.75 net.

Professor Oman's ubiquity is amazing. In the brief interval of less than five years which has elapsed since the publication of the second volume of his "Peninsular War," he has given us a portly work of over 500 pages on fifteenth-century England, a special treatise on the Peasants' Revolt of 1381, a brilliantly witty scene (in verse) in the Oxford Historical Pageant, not to speak of countless reviews and minor articles. He has also made considerable progress with his volume on Anglo-Saxon England, the first of the set of six comprised in the collaborate history of that country which has been appearing since 1905 under his own general editorship. And now comes the third instalment of his *magnum opus*, covering the sixteen crucial months of the Peninsular War, from Talavera to Santarem (August, 1809-December, 1810)—a reminder that the author is quite as much at home in the nineteenth century as in the Middle Ages, on the Continent as in England, and, furthermore, that he is preëminently a military rather than a narrative or constitutional historian. In his inaugural lecture at the time of his election to the Chichele professorship in 1906, and elsewhere, Professor Oman has laid down certain fundamental maxims for historians: They should work, perpetually work, cram every spare minute with work; they can find their best recreation in a change of work; though they must never cease to strive for absolute accuracy, they must not shrink from production for fear of inevitable errors of detail. His most hostile critic will scarcely venture to deny that he has practised what he preached, though there are many who feel that his marvellous fecundity has been purchased at great sacrifice of the complementary virtues of scholarly care and deliberation.

However that may be, it is fair to say that evidences of undue haste and superficiality are unusually few in the present volume. They crop out occasionally in careless phraseology. The splendid description of the lines of Torres Vedras, for example, is marred by a most bewildering use of the terms "secondary" and "second" line of defence, to denote the outer or northernmost works from Alhandra to the Zizandre, and the next line, further south from Quintella to the Sao Lourenço, which protected the final semi-circular entrenchment at St. Julians and Oyeras. This confusion in the account of the lines is, moreover, considerably increased by inaccurate and self-contradictory statements in regard to the eight sections into which they were subdivided.

Such instances of careless use of words are, however, comparatively rare; and, what is more to the point, the evidences of painstaking and thorough research and of sane and unbiassed judgment are clear on every page. The author has not only studied the standard authorities, both in manuscript and type, with unwearied diligence; he has also tapped three sources hitherto unknown—the private papers of Sir Benjamin D'Urban, quartermaster-general of the Portuguese army under Marshal Beresford; the correspondence of Nicholas Trant and John Wilson, two enterprising leaders in the Portuguese campaign, to whom was entrusted the important task of cutting off Masséna's communications with Spain and France; and the letters of Gen. John Gaspar Le Marchant, who fell at Salamanca. Furthermore, he has twice visited in person the scenes he describes, and is therefore able to furnish many topographical details of the highest value. His judgments on isolated battles and campaigns have been, and doubtless will continue to be, called in question by military critics, but there can be little doubt that the justice of his verdicts, taken as a whole, will be confirmed. Certainly, their sanity, breadth, and freedom from prejudice will command general respect. To French foe and much traduced Spanish and Portuguese ally he is alike unvaryingly fair. The faults of the Napoleonic strategy, the impossibility of dealing with the Spanish problem *de loin* without a single commander-in-chief on the spot, and the hopeless difficulties which stared the different heads of the six military governments in the face, are vividly portrayed (the story of Foy's two interviews with Napoleon at Paris on November 21 and 24, 1810, pp. 456-61, is a case in point); and many previous hostile verdicts on the generalship (not the character) of Masséna and of some of his colleagues have in consequence been considerably modified. The importance and value of the aid of the Spanish and Portuguese levies are correctly estimated and frankly acknowledged: if indocile and hard to coöperate with, they were certainly heroic, both in bearing the stress of actual battle and in suffering necessary privation and desolation of house and home in the intervals. Even the lines of Torres Vedras would not have saved Portugal and Europe from the domination of Napoleon, had they not been supplemented by systematic ravaging of the country about Masséna's camp, and by surrounding the French army with a light screen of irregular troops, which cut its communications, and prevented its foraging far afield. Of these two indispensable supplementary measures, Portugal endured the one, and undertook the other, and by so doing turned the tide. These facts have never before been fairly recognized by English historians, who almost without exception have blindly followed and shared the prejudices of Napier. In the preface to his first volume Professor Oman observed the striking similarity between the position and value of this great writer's "History of the Peninsular War" and those of Clarendon's "History of the Great Rebellion." It is high time, and only fair to Professor Oman to remark, that, if his book continues as it has begun, it promises to bear to the former work, at least as far as the military side of the subject is concerned, a relation similar

to that which Gardiner's "History of England" occupies to the latter.

The events recorded in the present volume form not only the central crisis of the Peninsular war, but also the turning-point of the entire Napoleonic struggle:

> The high-water mark of French conquest in Europe was reached on the knoll by Sobral (the nearest Masséna got to piercing the Lines of Torres Vedras) on the wet and gusty 14th of October, 1810. (P. 436.)

The retreat which began a month later did not end till French soil was reached in 1814—indeed, in a larger sense, it did not end till Waterloo. On the Portuguese campaign, therefore, Professor Oman has concentrated his best efforts—the other operations in northern, eastern, and southern Spain are properly treated as mere side-issues of the great contest. Even in his account of these the careful reader will discover a deal of new information, as well as considerable revision of older verdicts. The story of the heroic defence of Gerona by Alvarez (whom Professor Oman places in some respects above Palafox) is particularly fresh and valuable. The description of the political situation and of the Cortes of Cadiz leaves something to be desired, and more might have been said concerning the effect of the creation of the six military governments in arousing the Spanish patriots to renewed efforts to expel the invaders; but, as Professor Oman's history is essentially military, one must not complain of omissions of this sort. Certainly the treatment of the central drama—the Wellington-Masséna duel in Portugal—could scarcely be improved, and only in matters of detail. Every page, from Junot's preliminary movements about Astorga, through the great columnar attack at Bussaco and the long wait before the lines, to the retreat and deadlock at Santarem is vivid and thrillingly interesting, and deserves to be ranked with the very best work that military historians have ever produced.

It seems ungracious to close a review of this able and brilliant volume with a complaint about the index, more especially as Professor Oman tells us in his preface that it was done by another as a labor of love. But it is impossible to deny, and really only fair to Professor Oman to add, that it is utterly inadequate, and, like all inadequate indexes, in some respects worse than no index at all, because it naturally leads the unsuspecting reader to the very erroneous conclusion that the omission from it of the name of a place or person indicates that that place or person is not dealt with in the body of the work. Certainly, such an assumption would be exceedingly rash in this particular case. It is to be earnestly hoped that, when Professor Oman's last volume is completed, an index to the entire set may be prepared which will be worthy of the author and his great subject.

CURRENT FICTION.

The Land of the Living. By Maude Radford Warren. New York: Harper & Bros.

Into the oft-told tale of ward politics in Chicago the author has infused some new effects by making it at the same time a study of two phases of the Celtic nature—the idealizing and the domineering. Not only are there a dreamer and a boss, but to a certain extent the boss is a dreamer; and though he recognizes the futility of visions in practical politics, he sets his affections on a boy who is a thoroughgoing idealist. The heroine, too, an impoverished Irish aristocrat, unites an intelligent interest in politics with the standards of a visionary. The reformer, Irish as well, has both dreams and ambitions; but he falls so easily, so abruptly, and before such clumsy temptations, that he can hardly be counted a success as either a reformer or a race-study. Wexford County, more or less remotely, furnishes these four characters; Chicago the remainder. Among the latter stands prominent a stenographer, who, threatening to be like many another slangy girl of fiction, rises to a heroic height before we have done with her.

If the hero and heroine were not steadfast in lofty ideals, the author might be thought to hold a brief for machine politics. Her vulgar millionaire is made to say: "There never was a reformer yet that wasn't an inverted boss." But, on the other hand, the dreamer's dreams come true.

The Four Philanthropists. By Edgar Jepson. New York: Cupples & Leon Co.

A bit of whimsical extravagance in the vein which Stevenson struck with his Suicide Club—if, indeed, it does not lead back to De Quincey and Swift, or farther. Three men about town, about London, that is, and a young girl whom one of them succors in distress and subsequently passes off as his sister, constitute themselve a General Philanthropic Removing Company. The object of the company is to "remove" as many Enemies of Humanity as possible, and incidently to secure subscriptions for a children's hospital in which one of their number, the bland chronicler himself, is interested. The chief means they plan to employ are a sand-bag and a "portable lethal chamber," or noose-bag, to be loaded with chloroform and clapped over the head of the given enemy. The reasoning by which this band of amateur thugs, blackmailers, and kidnappers justify their operations is ingenious and entertaining. Their plans do not altogether succeed; in fact, they fail to remove any one, in the most thoroughgoing sense. But the wages of their activity, such as it is, suffice to endow the hospital, and the enterprise is abandoned to the satisfaction of all concerned. The narrative is well-sustained, and, with its avoidance of mere facetiousness, is a bit of agreeable fooling.

Brunhilda of Orr's Island. By William Jasper Nicolls. Philadelphia: George W. Jacobs & Co.

A small salt aquarelle of Maine, expanded into scenic dimensions by the help of landscape, athletics, and love-making, with a contrasting touch of New York and the world of fashion. The padding has accomplished its work, and the result is an amiable little story which in shunning depth has also escaped sentimentality. Innocuousness having fallen largely into desuetude, a story all tidiness is acceptable. The author's touch is prettily light and swift, bearing down most heavily, perhaps, in his humorous moments. But who would be harsh with the dispenser of an hour's salt and piny joys spent in the society of an ardent yachtsman, an island houri, an old tar, and other amphibians?

The Wayfarers. By Mary Stewart Cutting. New York: The McClure Co.

Mrs. Cutting's short stories, pleasing as they have been, hardly prepare one for the sustained interest of this novel—her first, we believe. It is not by any means a closely constructed work. A hundred details have no bearing on the main plan. These must be taken on their own merits—and they have them—of insight, of humor, of pungency. Where so much is faithful to life one need not ask that all shall be structural. It is a story of human relations; and the minutiæ which Mrs. Cutting's eye and understanding have conveyed to her deft hand lend it variety, if not continuity. It concerns an upright and affectionate man involved in business responsibilities; his adoring wife, seen at first in the critical time of "drifting to a place among the great and terrible company of nerve-centred people"; seen at last resisting self-pity, for "she knew now that madness lay that way." Parallel and equally prominent runs the story of a young girl's growth through a series of well-meant mistakes. Readers will be glad to find all ending well after tribulation and pain, with a margin of charity for the defeated.

Theodosia's false lights are wonderfully well elaborated. First, the poor fellow who falls by the way—no deliberate sinner, but one who had "been brought up in one of those small, dull country towns in which all too many of the cleanly, white, God-fearing houses have no home in them for a boy and his friends." And, second, the good-natured, rich, lumpish vulgarian. The true prince is perhaps rather femininely virile,

rather motivelessly self-denying. The world has perhaps not seen him, but it would be glad to. Throughout, with the difficulties that beset both men and women, the intimacy, the possibility of the fight and the fighters, make it a book of close appeal to those who study life and to those who live.

The Statue. By Eden Phillpotts and Arnold Bennett. New York: Moffat, Yard & Co.

What consideration can have led Mr. Phillpotts to connect his name with a story of this order is a puzzle. As soon expect a Hardy to collaborate with a Haggard, or a James with a Conan Doyle. Mr. Bennett may be recalled as the author of an extravagant tale called "Hugo" (reviewed in these columns January 17, 1907, p. 61), a figment as ingeniously absurd as anything since Stockton. "The Statue" is equally ingenious, but not intentionally absurd. There is no discoverable trace of Mr. Phillpotts in either plot or workmanship. It is the kind of thing the cheap magazines print—a tale of murder and supposed mystery, with suitable embellishment of "love interest." It cannot be said that the mystery is particularly enthralling. The experienced reader of detective fiction will very early discern the rat in the arras. The false scents provided are but faint; and the real question is not Who killed Cock Robin? but Why did Cock Robin build the enormous statue upon whose steps he chanced to be killed? The disclosure produces a thrill hardly adequate to the machinery. The love element is neither more nor less forced than is common in stories of the kind. There is no person in the story who impresses one as anything more than a cog in the rather ineffective machine.

Captain Spink, and Other Sea Comedies. By Morley Roberts. Philadelphia: J. B. Lippincott Co.

High slangmaster of the seas Mr. Roberts may be called. And there is, no doubt, a Mesopotamian blessedness in reading of ship-owners who are balmy on the crumpet; of second-best men in the port watch engaged in putting a new seizing on the foot-rope of the starboard yardarm of the fore-t'gall'n' yard; of yarn spinners that 'ave the undiluted to tell the 'ole man surprising tales. Glorying in such "undiluted," the happy reader feels a good deal like the mate in a cyclone—"as if I were screwed up in a four-hundred-gallon tank, about a quarter full of salt water, and sent over Niagara."

It is not only in marine argot, however, that one may admiringly wallow. There are depths and breadths of device that are alluring, once one is launched. The start is a little reluctant, it may be. The first two of the seven stories catch and clog a little on their own humorousness. But with the Adonis captain who sailed to South America to avoid entangling alliances, off we go, skimming merrily over deep seas of invention. Aged Skipper Brodie's revenge for being treated as aged, Younger Skipper Pasco's desire to add experience to his academic knowledge of cyclones, the yachting German prince's misadventures through disregarding the weather, leave one at last in a mood for more, a clear case of endurance blossoming into embrace.

My Day and Generation. By Clark E. Carr. Chicago: A. C. McClurg & Co. $3 net.

Clark E. Carr of Illinois, whose seventy years of life extend from Andrew Jackson's administration to the present moment, gives in "My Day and Generation" reminiscences of the men and events that have touched him personally during an active career. Though attaining himself no great eminence, his position admitted him to intimacy with many of the great figures of his time and gave him a part in important movements. During the Civil War he was an energetic upholder of the cause of the Union. Soon after he saw under favorable circumstances the inchoate States of the Pacific slope. In the Reconstruction period he was close to the men who were in the foreground. Appointed later envoy to Denmark, his contacts with great European personages were interesting. He rendered a marked service at the Paris Exposition of 1900.

In the frank and graphic series of sketches, presented with no undue self-obtrusion, we have as the earliest a glimpse of Martin Van Buren, whom Mr. Carr encountered while studying law at Albany, N. Y., in 1857. The worn-out statesman is effectively presented in a few telling sentences. Less fortunate is the reference to Millard Fillmore, an amiable and useful man in his day, who has had hard measure from fate. Our author was familiar with Lincoln from the time of his first emergence from obscurity, and some of his reminiscences are well worth recording. As a delegate to the Baltimore Convention in 1864, when Lincoln was renominated, Mr. Carr was cognizant of a shrewd bit of manœuvring on Lincoln's part through which his party became effectively consolidated—a fine illustration of the President's political astuteness. As regards less eminent figures of the war-time, the notices of Ben Wade, and of Robert G. Ingersoll, changing as a young man from a Douglas Democrat into a strong Republican, are interesting. The most thrilling incident of the special session of Congress in 1861 was the denunciation of John C. Breckenridge by Edward D. Baker, in the Senate. This memorable scene Mr. Carr witnessed from the gallery, and now portrays vividly.

Among post-bellum memories may be mentioned in particular the picture of Benjamin F. Butler, whom Mr. Carr beheld in one day address the Supreme Court in an important case, and denounce with all his acrid power, in the House of Representatives, the men involved in the *Crédit Mobilier* scandal. Garfield inquired excitedly if it was intended to include him in the arraignment. "We speak only good of the dead," snarled Butler, and hurried on rough-shod in his diatribe. An hour or two later in the Court of the District of Columbia, Mr. Carr heard him eloquently defend a man accused of murder, and in the evening round out his day's work by entertaining at a reception in his great house on Capitol Hill with all grace and suavity the notabilities of Washington. This book also throws light on a pleasanter figure, hardly yet estimated at his true value, Rutherford B. Hayes, to whom, as it happened, in 1876, Mr. Carr carried the first authentic news of the action in that critical moment of the electoral commission. Our author delineates in a way especially engaging his relations with the King and Queen of Denmark and their royal and imperial children of England, Russia, and Greece, his position as envoy opening a door for him into august circles. It was not a small service that, as promoter of the "Corn Kitchen" at Paris in 1900, he helped Europe to the knowledge of a valuable food, and America to a good market for a great product.

While Mr. Carr's relations are sometimes scrappy, sometimes tell too little and sometimes too much, they are worth reading, and will be resorted to hereafter by historians on the lookout for character and color.

Mr. Gladstone at Oxford, 1890. By C. R. L. F. New York: E. P. Dutton & Co. $1 net.

In the winter of 1890 Mr. Gladstone paid a week's visit to All Souls College, Oxford. Records and memories of the impression he made on the fellows, his hosts, have been collected by one of them (doubtless Charles R. L. Fletcher, the historian) who describes himself as "an intolerant Tory and strong Erastian." Tory and Erastian indeed is the atmosphere of the All Souls common-room, and Mr. Gladstone's presence there is a theme for comedy. Mallock should have described it, in the vein of "The New Republic." Among C. R. L. F.'s collaborators are A. D. G., H. H. H., W. R. A., T. H. W., C. W. O., and A. C. H., who may be identified as Arthur D. Godley, the spiritual successor of Calverley; the Rev. Herbert H. Henson, now the distinguished Canon of St. Margaret's; Sir William R. Anson, warden of All Souls;

T. T. Warren, president of Magdalen; Charles W. Oman; and the Rev. Arthur C. Headlam. On none of these gentlemen was the humor of the situation lost, but for their manner of presentation they chose, perhaps inevitably, a half-hearted Boswellianism which balances between suavity in the text and derision in the notes. If we can imagine Boswell become a self-conscious Oxford don, extremely afraid of his eminent friend and yet privately aware of being better informed than he on all topics, we should have had a document like the present, instead of his masterpiece.

It must be frankly said that, with all its enthusiastic acknowledgment of Mr. Gladstone's charm, of his grand manner, his kindness, and simplicity, the book gives strongly the impression of his failing powers, his tendency to talk about what he did not understand, and the inconsistency of a man fundamentally conservative, but driven by circumstances to a liberal policy. Every one who talked with him felt that in returning to Oxford he had unconsciously reverted to the Toryism of his youth:

> It was the chairman of the "Liberal Three Hundred" to whom he said, "I am sure, Sir William, your memory will bear me out in saying that a valuable element was lost to our social life with the disappearance of our noblemen and gentlemen-commoners." He said in my hearing much the same thing to A. H. H. [Arthur Henry Hardinge], who tells me that, when he afterwards mentioned the fact to the late Lord Palmerston, that statesman drily remarked: "When these privileged persons existed, Mr. Gladstone was always urging their abolition."

It pleased the dons, while it staggered them, to hear Gladstone say that in 1830 the Constitution was incapable of improvement and had been but injured by the Reform Bill of 1832; that he disapproved strongly of schemes for the disestablishment of the Welsh Church; and that the Russian ambition to possess Constantinople was "regrettable cupidity." But they wriggled with embarrassment and throttled the desire to set him right when he declared that doctors' fees were not recoverable by law, that Merivale was the authority of the day on Roman history, and that Liddell and Scott give no meaning for πυλάρτης. And the voice of the maiden lady who lurks in the breast of every true don is heard in this comment:

> There is great mobility and play of face, as well as of gesture with the hands, which he is fond of bringing down plump on the table to emphasize a point (not good for our table, which is a very old, thin bit of the finest mahogany).

It cannot be said that any remarkable utterance of the great man is set down in these pages. Good-humored anecdotes, not very racy, of men he had known, reminiscence of the Oxford of his youth, and the like made up the bulk of his table-talk. When there was the remotest chance of rousing the lion, his interlocutors huddled like sheep before him:

> Of course, nobody dared to draw him on politics. . . . Somebody was rash enough to suggest that recent events were not encouraging to capitalists in that country [Ireland]; for a moment the speaker was conscious of being transfixed by a terrible eye; it was only for a moment, but one had the sense of potential annihilation.

The public has lost great store of entertainment because in all that group of scholars there was not one with the heroic Boswell's indifference to "annihilation."

Enterprise and the Productive Process: A Theory of Economic Productivity Presented from the Point of View of the Entrepreneur, and Based upon Definitions, Secured through Deduction, of the Scope and Fundamental Terms of the Science of Economics. By Frederick Barnard Hawley. New York: G. P. Putnam's Sons. $1.50 net.

It would be hard to mention another work that has appeared within the past three or four years which is freighted with more solid thinking upon economic fundamentals. And this general verdict must be rendered, although dissent be registered upon the proposed transformation of economics advocated by Mr. Hawley. The author has hitherto been known chiefly as the originator and expounder of the Risk Theory of Profits. That theory is evidently the germ from which the present system grew. The validity—at least the qualified validity—of the Risk Theory may be conceded without committing one to making profit the pivot around which the whole economic universe must turn. Economists at one time did not distinguish between the capitalist and the enterpriser. But since Gen. Francis A. Walker's day the function of the capitalist, who owns productive property which he puts at the disposal of the enterpriser, has been sharply contrasted to the specialized work of the enterpriser, who controls the capital which he borrows and with it directs the labor of the operative. But economists are not yet agreed on the distinctive character of the enterpriser's function. That he is a director of men and of processes, and in that capacity receives the equivalent of the wages of superintendence, is admitted. Some contend that in the long run, and apart from a fortuitously favorable market price for his product, the wages of superintendence exhaust his remuneration. Others allow that all but the marginal (or least efficient) enterprisers get something beyond wages of superintendence, in so far as by superior ingenuity in combining labor and materials, and by saving of waste, the more competent enterprisers reduce cost below that of the less efficient competitors who are able to continue producing. Hawley contends that the essential task of the enterpriser, as an *enterpriser*, is distinct from both functions just mentioned; that every undertaking involves a risk wholly distinct from the capitalist's who lends in a risky venture and recoups himself by an interest rate which includes insurance; that this distinct risk is essentially a speculation as to the salability of the product. Profits, therefore, according to Mr. Hawley, are properly the remuneration for the assumption of this peculiar risk. To the extent that his theory posits this particular kind of risk, and insists that there must be a reward for its assumption we give hearty assent. Mr. Hawley is entitled to the credit of disentangling this species of industrial risk from other risks, and of insisting upon its essential import in the theory of profits.

But, unfortunately, as we think, the author of the present volume is not content to set forth with cogency his theory of profits, first expounded by him in the *Quarterly Journal of Economics*. He must reshape the entire *corpus economicum*. And this attempt must be pronounced decidedly infelicitous. Despite his very logical analysis of method and his proper insistence on the superiority of the deductive process where it is available, he defines economics in a way that narrowly confines its range to an analysis of production motived by the expectation of profit. All other methods of seeking a livelihood are relegated summarily to a non-economic limbo. Thus we read:

> The influences which make men powerful, skilful, energetic, lead them to be frugal, enable them to detect unappropriated opportunities, or to become more venturesome, are individualistic, and belong to the study of character, and are useful to economics only as data (p. 284).

Not content with this artificial delimitation of economics, he contrives a terminology absolutely new as regards cardinal terms. Capital is defined as "a fund of unexpended power of purchasing, consisting of a mere claim on wealth in general" (p. 287), and it "cannot be what it is invested in" (p. 183). It is true that capital has been so variously defined that, as Senior said long ago, "it may be doubtful whether it have any generally received meaning." But there is no "inherent absurdity," as Mr. Hawley imagines, in capital's being what it is invested in, except for those who adopt Mr. Hawley's newly contrived definition of capital.

The basic objection to this new schematization of economics, however, is that it proceeds from a profit-seeking type of industry as the tap-root of economic conceptions and analyses. The

true and ultimate source, we believe, must be sought in what is unfortunately termed consumption; that is, in the desires and impulses to enjoy wealth which prompt to every species of economic activity, and which are the ultimate ground of the value-making processes which regulate economic life. To seek the fountain of industrial life in a type, even a dominant type, of production is to begin too far down stream. The true sources lie in the psychological region of individual desire, not in the lower table-lands of associated production.

The Twentieth Century American. By H. Perry Robinson. New York: G. P. Putnam's Sons.

The title of Mr. Robinson's book might lead the intending reader to imagine that he had another volume of observations and impressions, obviously by an Englishman, of contemporary Americans and their ways; and the subtitle—"A Comparative Study of the Peoples of the Two Great Anglo-Saxon Nations"—looks in the same direction. Only remotely, however, does either part of the title describe the book. What Mr. Robinson gives us is an elaborate plea, novel and interesting, if not wholly convincing, for an Anglo-American alliance. Such an alliance, a natural outgrowth of the inherent likeness of the two peoples, would, he believes, insure beyond peradventure the peace of the world. No single Power, nor any combination of Powers, would dare risk a war with the combined forces of Great Britain and the United States, or venture to disregard a clear expression of their joint opinion; while Germany, which Mr. Robinson bluntly declares to be the greatest menace to international peace, particularly in Europe, would be effectually curbed.

The observations on the resemblances and dissimilarities of the English and American characters, offered in defence of this thesis, are often acute and striking. Convinced as he is that an alliance would be welcomed by England if only the United States would cordially suggest it, Mr. Robinson devotes himself, not to a traveller's description of what he has seen or experienced, nor yet to an *a priori* appraisal of American achievements and ideals, but to a discussion of the differences and misunderstandings which alone, in his judgment, prevent the speedy consummation of political union. For one thing, he warns his countrymen that New York city is not the United States, nor even in any degree typical of the country at large; but that, if one is to understand the characteristics of the American people, the West, the Pacific Coast, the South, and the country as well as the city, must be included in the survey. Especially good is his exposition of American energy and aggressiveness as only the inevitable outgrowth of successful struggle with nature on a vast scale—a success which engenders the confident belief, so rasping to Europeans, that Americans are always right, and can do whatever they choose. If the pages devoted to some of the peculiarities of American politics, especially such as arise from the Federal system and the lack of a responsible ministry, seem relatively trite, it is rather because essentially the same thing has so often been said than because what is said is not to the point.

So well does Mr. Robinson balance praise and reproof that one is continually speculating as to which party will, in the end, hold vantage of the other. He certainly does not spare his own countrymen, however graciously he may deal with their insularities and complacencies; yet none the less does he lay his finger on tender spots in the American body. It is not comforting, for example, to be told again in this day of our greatness that it is the United States, and not England, that has been isolated; that England, facing for centuries a hostile Continent and absorbed in the civilization of remote and widely scattered possessions, has failed to understand the United States, not because it was hostile to us, but because we were until lately quite outside the main current of the world's progress, and England did not need to know either what we were like or what we were doing. It is not a compliment to our intelligence as a singularly well-read and much-travelled people to be told that Englishmen are still sincerely and irrevocably attached to monarchy; that the English peerage, into whose ranks American women show such fatal readiness to marry, is not chiefly compounded of bankrupts and *roués;* that the Englishman's attitude towards women is quite as chivalrous as is that of the American; that the climate of England is at least as tolerable as that, say, of Chicago or Pittsburgh, not to mention Buffalo; or that Englishmen really have a sense of humor, notwithstanding their helplessness in the face of American dialect.

On the other hand, certain important affairs of the moment have seemed to Mr. Robinson to exhibit American fibre at its best. The painful revelations of financial crookedness and soullessness which the past few years have brought do not shake his faith in the fundamental soundness of American business life. In more than one place he points out that the great and permanent successes in the business world are not achieved by false practices, but by integrity, and that individual and corporate dishonesty passes out as economic maturity comes in. For President Roosevelt's service in stimulating the sense of private and public justice, as for his courage in attacking the evil rich, there is merited praise; and even American diplomacy, that *bête noire* of European critics, is kindly dealt with.

No summary of leading points can do justice to Mr. Robinson's book, or go further than suggest the scope and variety of the topics on which he touches. The volume must be read to be appreciated, and it ought to be widely read and attentively pondered. As to the desirability of an Anglo-American alliance, the reviewer, pending the reappearance of the question as an issue in American politics, refrains from expressing an opinion, and the more readily because a decision at this point can in no way impair, if indeed it can affect, the worth of Mr. Robinson's general observations. That such an alliance would be vastly more natural than most political partnerships, and that it would be a mighty earnest of the world's peace, may cheerfully be admitted. But as a contribution to good understanding between two peoples whose resemblances are quite as fundamental as their differences, and who ought, therefore, whatever their formal diplomatic relations, to attack harmoniously the problems of world politics, Mr. Robinson's work is cordially welcome. If, as our author repeatedly warns us, war between the United States and Great Britain might easily break out, and with a certainty of popularity in this country wholly irrespective of the merits of the controversy; or if the United States, because of its power and aggressive activity, is itself peculiarly exposed to the fascination of foreign war, any one who, knowing the two English-speaking peoples well, helps to link them more closely in spiritual bonds, renders the execution of a more formal compact the less necessary, if not the less advisable.

Science.

THE TORRICELLI CELEBRATION AT FAENZA.

FLORENCE, September 10.

On October 15 three hundred years will have passed since, in the little town of Faenza, in the Romagna, Evangelista Torricelli was born. At an early age he showed an unusual aptitude for all mathematical and scientific studies. His youth fell in the period when Galileo was at the height of his fame and the scientist's theories on force and motion engaged Torricelli's attention. They led to his writing a treatise on the theme, which, communicated to Galileo, so excited him, blind and broken though he was, that he could not rest until brought into direct relationship with the younger man. It was decided to call Torricelli to Florence; and for three months, that

is, until Galileo's death, the two, master and pupil, lived in the closest intimacy and exchanged their scientific views and theories. In having Torricelli to continue his work, Galileo felt that his labors would not perish with him; and when Galileo died, the Grand Duke, Ferdinand II., with that intuition for genius that distinguished the Medici, nominated Torricelli his philosopher and mathematician extraordinary in Galileo's place. For six years, until his early death at the age of thirty-nine, he filled this place, justifying the anagram of the epoch:

> En virescit Galilæus alter
> Evangelista Torricelli.

It was he who solved two questions that agitated the scientific thought of the seventeenth century—the horror of nature for a vacuum and the weight of the air. He invented the barometer, still sometimes called the Torricellian tube; he effected the quadrature of the cycloid; he discovered fundamental principles of hydromechanics; he greatly improved the telescopes and microscopes Galileo had invented. No wonder a city is proud to have given him birth. Wherefore, Faenza has inaugurated a Torricelli Exhibition to celebrate this third centenary.

This exhibition may be said to consist of two sections: a scientific and an artistic. In the scientific, careful facsimiles of those of Torricelli's instruments that have survived are shown; for Florence, which owns the originals, remembering the sad fate that overtook Volta's originals at the Exhibition of Como, where they were burned, refused to let them leave her Physical Museum. At Faenza are also shown all instruments, ancient and modern, bearing on cognate themes, including daily demonstrations of the flight of birds, and of the applicability of their methods to the flight of man. As is well known, the Italians are pastmasters in the making of instruments of precision. The delicacy of some of these appliances is marvellous to behold. It seems incredible that human hands could have shaped them. A reconstruction based on Torricelli's written instructions has been made of his famous hygrometer. Eight large diagrams lucidly set forth even to the most unlearned the value of Torricelli's chief inventions in the field of mechanics and geometry, as well as those illustrating the novel methods whereby he converted what was a malarious waste into the fertile Val di Chiana. There is, further, a large exhibit of lenses dating from early times to the more perfect present.

Many of his autograph letters and writings are on view also, as well as a most important correspondence exchanged with a French mathematician of the epoch, unearthed by chance not long ago at an antiquary's in Berlin. For years Italy has proposed to issue his collected works, a vast undertaking, which political and financial obstacles have hitherto hindered. Now these writings are about to be published.

In the artistic department Faenza has naturally remembered how she bestowed the generic name of fayence on pottery, how she is the ancient mother *ad esercitium figuli super rotam.* This second section is obviously the more popular. Here Faenza has been able to show that, as in all Italy to-day, new life pulsates in her veins; that she no longer needs to exist only on the memory of her past glories, but tries, and with success, to emulate them in the present by revived artistic energies. For Faenza has never lost the art of throwing the potter's clay; and of late years, thanks first to copying her former output, then to striking out on new lines, her wares are as much sought after and esteemed as of yore. The exhibition is housed in a number of pavilions erected of white staff and effectively decorated with inlet of pottery. One of these is devoted to the exhibit of Fratelli Minardi, the ablest Faentine potters of to-day. Besides showing what they can do in choice as well as common productions, they also show how it is done. Visitors can watch the successive processes of working the rude clay into terracotta, majolica, and porcelain. Especially interesting is the firm's own pottery museum, transplanted here for the nonce, the museum where the workmen learn to reverence and imitate the old. Here are on view authentic specimens of the *grafitti a stecco* of the fifteenth century, attractive in their primitive simplicity; the famous intense blue of Faenza; the light hued, graceful, Raffaelesque arabesques; phosphorescent metallic lustres, and all else that distinguished Faenza's wares.

Some of the exhibitors are not Faentines, though Faenza has inspired them. One of the more notable is Cacciapuoti, the Neapolitan modeller, who has abandoned all the shapes and themes traditional to majolica and created new types, casting aside the conventionalized treatments of flora and fauna, and reproducing man and beast, flower and fruit with accurate realism. More faithful to the old traditions, and to my mind more agreeable, are the labors of the Chini workshop, decorative and sober. Many of these pottery works are run by the workmen themselves on cooperative principles, presided over by some capable artist. This, too, is significant for the new Italy. A particularly interesting exhibit is that of a private gentleman who, on cleaning out a well on his estate recently, found in strata a complete collection of Faenza ware from its earliest attempts until the early nineteenth century, when the workshops were for a period but slightly productive. Many specimens are even not much broken; all serve to reconstruct the history of the industry; many are of quaint shapes and designs of which examples are lacking. Z.

The thanks of the public, and especially of scientific men, are due the Royal Society of London for undertaking the preparation of a "Subject Index" of all scientific papers published in course of the century 1800-1900. The work will comprise seventeen volumes, following the classification adopted in the "International Catalogue of Scientific Literature." The first instalment, "Pure Mathematics" (Cambridge: University Press; G. P. Putnam's Sons, American agents), has just appeared. Some notion of the modern activity in this most ancient and fundamental of the sciences is evident in the fact that this volume of nearly 700 large compactly printed pages contains only abbreviated titles. The number of papers listed is 38,743; the number of journals represented is 700, a large ratio of them being devoted exclusively to mathematics. As for applied mathematics, that will compose a large part of the volumes devoted to mechanics, astronomy, and physics. In so vast an enterprise errors are unavoidable. In this case we look in vain for the *Bulletin* of the American Mathematical Society in the list of serials, though the contents of that journal are listed. The utility of the volume will be great, and will be enhanced when the twelve volumes of the "Catalogue of Authors" (1800-1883) shall be extended to 1900, a work now in course of preparation.

In June, 1907, appeared the first number of a new ornithological publication, *British Birds*, edited by H. F. Witherby and W. P. Pycraft, well-known English ornithologists. Volume I. of this periodical has just been republished in book form, with a special preface and index. The interest is not so limited as the title would indicate; for many of the articles are of general value to workers in this field of science. Among the more noteworthy articles are "Nestling Birds and Some of the Problems They Present," "Wind and Flight," "A Study of the Home Life of the Osprey," "Breeding Habits of the Rednecked Phalarope," "Wood Pigeon Diphtheria," and "Evolution of Birds' Nests." The volume is profusely illustrated with drawings and photographs from living birds.

Dr. H. Albert has just published his "Medizinisches Literatur- und Schriftsteller Vademecum, 1907-8" (Hamburg: Francke & Scheibner). It contains in alphabetical order the names of modern medical writers and their publications; a catalogue of all universities with medical faculties, together with institutes. learned societies, etc.; a list of medical journals, annual reports, etc., and medical publication houses. The author announces that in the near future he will publish a "Medizinisches Literaturlexikon."

F. Kynaston Barnes, formerly assistant constructor of the British navy and surveyor of dockyards, has died in his eighty-first year. He was the author of many papers in the Transactions of the Institution of Naval Architects, one of the authors of "Shipbuilding," and joint editor for a number of years, with Lord Brassey, of

The Naval Annual. He was also the inventor of what is known as "Barnes's method" of calculating the stability of ships, and was the designer of the Nile and the Trafalgar.

Drama.

Faust: Freely adapted from Goethe's Dramatic Poem by Stephen Phillips and J. Comyns Carr. New York: The Macmillan Co. $1.25 net.

In adapting "Faust" to the English stage, our authors have had to face not only the ordinary difficulties of the translator, but also the task of contracting a huge amorphous poem into a single unified play. It is true that the second difficulty has lightened the first. Their necessary and avowed freedom in handling the material has made it easier to avoid the awkward half-translations that commonly leave such work neither quite one language nor the other. In mere style and rhythm and facility Messrs. Phillips and Carr (though in these matters we presume the work to be almost entirely Mr. Phillips's) have thus been able to produce the best version in English of Goethe's work. The very opening of the Prologue with the chorus of the archangels—

> The sun his ancient music makes,
> Rolling amid the rival spheres;
> Still his predestined course he takes
> In thunder speed throughout the years—

compares favorably with Shelley's translation, chiefly because Shelley vitiated the rhythm with the excessive romantic *enjambement* affected by his school. And from these stanzas to the conclusion of the drama we have not observed a single line that does not read as if thought and word had sprung together in the same writer's mind. This is not to say, of course, that the power of Goethe has passed into his imitators. The hardest task of a translator is to preserve the full effect of the original while using the same economy of means. Almost always it seems necessary in transferring an idea or emotion from one tongue to another to elaborate the medium; and Mr. Phillips has not always risen superior to this difficulty. Thus Goethe's famous line,

> Die Thräne quillt, die Erde hat mich wieder!

must take on the sentimental epithet "old" and a needless metaphor:

> The old tear starts! Earth has her child again.

Yet if the simplicity of the original is lost, there is still no specific mark of translation; the idea might very well have been originally so expressed by an English poet. Sometimes, indeed, Mr. Phillips's originality is even too marked. It is a kind of betrayal—*traduttore traditore*—to father upon Goethe such purely Phillipsian modes as

> Man writhes to glory, but through pain of error. . . .

or

> Pure from the world, and pacing lawns of peace. . . .

or

> And fevered Chaos with his blistering stars.

The condensation and adaptation of the poem to a workable drama have been skilfully managed, though not always to our taste. It was to be expected that the writer of "Ulysses" and "Nero" would take full advantage of the spectacular opportunities of "Faust," and, in fact, mechanical changes were required in the theatre in which Beerbohm Tree stages the play, in order to accommodate Mr. Phillips's exuberant vision. Even the Brocken scene has not frightened him; rather, he has developed it so as to exhaust all the resources of stage thunder, calcium lights, and flying scenery. There is a little too much of this sort of hocus-pocus in the original, but description of melodramatic landscape and actual representation are two different things, and the excess of Mr. Phillips's phantasmagoria will almost certainly detract from the seriousness of the play.

The human interest for these spectacular effects is furnished by Faust's philosophical despair and his seduction of Gretchen. The translators have apparently felt the incongruity of these two motives, and have sought to introduce a balance by cutting down the first scenes to a rapid summary of Faust's doubt, his vain call upon the Earth-Spirit, the inspiration of the Easter choruses, the sudden appearance of Mephistopheles after a direct call upon the Spirit of Chaos and Evil (more suggestive of Marlowe than of Goethe), the signing of the compact, and the dialogue with Wagner. The scenes in Auerbach's Keller and without the walls are shrewdly brought together, and the character of Valentine emphasized. Dramatically, the most important addition is the part played by the Witch. In the cave scene, for the goblet that restores Faust to youth she exacts of Mephistopheles a promise of payment to be settled on Walpurgis night. When that night arrives Mephistopheles calls on the Witch to evoke before Faust visions of beauty which will wean him of his remorse for Margaret:

> *Witch.* Master, pay me then!
> 'Twas on the Brocken I should claim my fee;
> So stood our bargain.
> *Mephistopheles.* Would'st thou threaten me?
> I'll pay thee naught till I shall pay thee all.
> *Witch.* [Aside.] Then ere night ends I'll earn my fee in full,
> And trick thee with a vision fair and foul
> That shall affright ye both.
> . . . . . .
> [*The vision of Helen of Troy is gradually revealed.*]
>
> *Chorus.*
> Once more upon the purple main
> That scudding sail doth bear her home,
> Troy's cindered towns are fired again,
> And flare across the crimsoned foam.
>
> *Mephistopheles.* See how they press around her, all her train,
> She for whose lips the world was drenched in blood,
> Yet note that changeless beauty bears no trace
> Of all her countless slain.
> *Faust.* Helen?
> *Mephistopheles.* Ay, Helen,
> My loyal subject Queen who shattered Troy,
> And dyed the Ægean with a Tyrian stain.
> *Faust.* Draw closer, closer, till I touch those lips.
> *Mephistopheles.* Nay! wait awhile! I know an Orient bough
> Whereon there hangs a riper, ruddier fruit
> Embrowned by Egypt's sun. Lead on, sweet hag!
> The feast is not half served.
> *Witch.* [From her cauldron.] Nay, Sire, there is more,
> As thou shalt learn before the cauldron cools.

The vision of Cleopatra follows, and after that Messalina, and then the witch's revenge—"During the Chorus the lonely figure of Margaret is revealed with chains about her wrists, her dead child lying at her feet." And Faust, at that sight, breaks the spell of false beauty and of wit:

> Those eyes are turned upon me! Margaret, stay!
> Across the gulf of Hell I'll fly to thee.
> Go, bear me to that prison where she lies,
> Her anguish is my anguish, all her sin
> Is mine to suffer, aye, or mine to cure.

It is an effective scene, made out of the spoils of Goethe's Walpurgisnacht (with echoes from the second part of "Faust") Marlowe's "Dr. Faustus," and Shakespeare's "Macbeth." It has its justification also in so far as it brings some dramatic unity into the plot. There is a confusion of motives in the new play, as there is in the original; but the Brocken scene gives emphasis to Faust's sin as a betrayal of the emotions, and to his salvation as the result of following the same emotions through to self-abnegation, and thus introduces a kind of completeness into the action of the First Part without the long evolution of the Second Part. It is a curious point, showing how the translators were led to adopt this by dramatic instinct rather than by philosophical grasp of the subject, that, in the famous speech of Faust to Margaret on the nature of God, they should obscure, or practically omit, Goethe's climax: "Gefühl ist Alles—feeling is all." That is the romantic clue which Goethe lost in later parts of the play, and only partly recovered in the final deification of the *Ewig-Weibliche*. The thesis is something more than disputable, but once given, should be maintained. It is regrettable that the present adapters have thought it necessary to conclude the

prison scene with a spectacular exhibition (rather cheaply put together from the conclusion of the Second Part) of Margaret in heaven, with Faust borne upward by angels to her feet. We think the Devil has some right on his side when he exclaims—and his words close the drama—against Goethe and against Messrs. Phillips and Carr:

I will the evil, I achieve the good.

For, after all, Faust's salvation was cheaply won.

Upon the stately mausoleum raised by the followers of Délia Bacon over the remains of the sonneteering Lord Verulam, autbor of the "Novum Organum," "Maxims of the Law," "Romeo and Juliet," and otber trifles, G. G. Greenwood lays a new brick in the form of a bandsome stout volume entitled "The Shakespeare Problem Restated" (John Lane Co.). Himself a lawyer and an M.P., Mr. Greenwood naturally feels great respect for opinions from tbe bench; the authorities wbich be cites most gravely are those eminent English scbolars Judge Webb, Judge Holmes, and Judge Stotsenburg. Witb something of legal astuteness he writes from tbe outset "Shakespeare" when he is speaking of tbe dramatist and "Shakspere" wben be is speaking of the man from Stratford. With the artful iteration of De Foe in establisbing the apparition of Mrs. Veal be constantly refers to "Shakspere" as a tbieving, illiterate rustic, and to "Shakespeare" as a man of profound learning and polite culture. In every contemporary reference to the genius of "Shakespeare" be detects a covert wink—half London seems to bave conspired to keep Bacon's great secret. Ben Jonson was in it; otherwise it is impossible to reconcile his conversations witb Drummond and his lines prefixed to the First Folio. Occasionally Mr. Greenwood is a little too literal-minded; quoting Jonson's lines to the effect that he would not as Cbaucer, Spenser, or Beaumont to move over to make room in their monument for Shakespeare, Mr. Greenwood says this "was very sensible on Jonson's part, seeing that Shakespeare was not buried in Westminster Abbey, as Basse seems to have thought be was, or was to be, for otberwise there is no sense in his allusions." From tbis point of view there was no sense in tbem anyway; for how could tbe poet expect Chaucer, Spenser, or Beaumont to move, being, as they indubitably were, dead? But on the wbole, we do not see why this book sbould be treated with tbe petulance and temper of which Mr. Greenwood complains in tbe "Stratfordians." It must have been good fun to write—no labors are pleasanter than those of the amateur scholar—and approached in suitable mood, it is certainly good fun to read. Furthermore, if tbe Baconians were not lured on by the "Great Mystery" they might know even less about Shakespeare and bis friends than they actually do. Finally, tbis book is more or less valuable as a specimen of a myth in the making.

Not much is to be said in favor of "The Fighting Hope," by William J. Hurlbut, which was presented in the Stuyvesant Tbeatre on Tuesday evening. It is difficult to understand how a manager of David Belasco's experience and professed artistic ambitions could have discerned any solid merit in a piece so crude and violent, both in conception and execution. He was attracted, perhaps, by the theme—the possibility of a man being both rich and honest—whicb doubtless is not devoid of contemporaneous significance or point; but not much is to be gained by an illustration at once so pretentious and feeble. Actually tbe piece is ordinary melodrama, made up of the usual ingredients of sentiment and sensation, but so unskilfully compounded that the thrills and tbe pathos fail equally to produce illusion. Small respect is paid to reason or likelihood, and by neglecting these, two or three isolated situations are secured which indisputably possess a degree of stage effectiveness for unsophisticated spectators; and it is upon tbe support of this somewhat numerous body that the piece must depend. Miss Blancbe Bates plays tbe central character with considerable melodramatic, but not much sympathetic, power.

The most important incident of the week in New York for intelligent playgoers will be the presentation of Percy Mackaye's new comedy, "Mater," in the Savoy Theatre, on Friday afternoon. In the present instance, be bas laid aside—only temporarily, let us hope—all poetic pretension and written a modern play in simple prose. His story deals with tbe political ambitions of a young man and the effect of bis motber's influence upon his efforts to realize them. The mother will be played by Isabel Irving, and other leading characters have been assigned to Cbarles A. Stephenson, John Junior, and Frederick Lewis.

The New German Theatre in this city will be opened in October with Wildenbruch's "Die Rabensteinerin," a play wbicb will be seen later in Englisb under the title "The Executioner." Later Emanuel Reicher, a prominent German interpreter of Ibsen, will be seen at tbis bouse in "Rosmersholm," "The Master Builder," and "John Gabriel Borkman."

The German Tbeatre, in Irving Place, will open under its new director, Otto Weil, on October 1, with "Husarenfieber," a comedy by Kadelburg and Skowronnek, which in the last two seasons has made tbe round of tbe important theatres in Germany and Austria.

It is evident tbat tbe inherent improbabilities in tbe story of W. J. Locke's "Idols" are even more difficult of acceptance when offered upon the stage tban tbey are in the book. The piece, made by the autbor and Roy Horniman, wbich bas just been produced in the London Garrick Tbeatre, appears to be nothing better than lurid sentimental melodrama. That tbe trial scene, very well managed, provides a strong theatrical effect, or rather a series of effects, wbich is likely to attract the crowd, all critics seem agreed.

Wilfred T. Coleby's new play, in which Miss Lena Ashwell makes her reappearance at the London Kingsway, on October 9, bears the somewbat enigmatical title "Tbe Swayboat." The cast includes Miss Kate Rorke, Mrs. Frances Ivor, and Norman McKinnel.

Music.

The Boston Symphony Orchestra will begin its twenty-eighth season in Boston with a public rehearsal on October 9, and a concert on October 10. It will give twenty-four public rehearsals and twenty-four concerts in Boston; ten concerts in New York; eight in Cambridge; five each in Brooklyn, Philadelphia, Baltimore, and Washington; tbree each in Providence and Hartford; and one each in Buffalo, Detroit, Cleveland, Indianapolis, Columbus, and Rochester. The dates of the Thursday evening concerts in New York are November 5, December 3, January 7, February 18, and Marcb 18; the dates of the Saturday matinées, November 7, December 5, January 9, February 20, and March 20.

The Russian Symphony Orcbestra will give only four concerts tbis season at Carnegie Hall, on November 12, December 10, January 14, and February 11. Among tbe soloists engaged are Miscba Elman and Alexander Petschnikoff, tbe Russian violinists, and Josef Lbévinne, the pianist.

Paderewski will arrive in tbis country in January, and will make, all told, about thirty appearances, about half of them witb orchestras. He will play seven or eight times with the Boston Symphony Orchestra, the only orcbestra witb whicb be will play in the East. He will play also with the Chicago, Minneapolis, and St. Paul orchestras, and probably witb others. He will give not more than one recital in eacb of tbe cities he visits, and bis tour will be confined to the larger cities east of the Mississippi. He will bring with bim his symphony, of whicb so mucb is expected. It was promised for two years ago, but was not finisbed. According to an agreement of long standing, it will have its very first production in Boston by tbe Boston Symphony Orcbestra.

Remarkably ambitious are the plans of tbe "Volksoper," wbich competes in Vienna witb tbe Imperial Opera. In addition to Lortzing and Mozart cycles, there are to be three series of performances illustrating the development of German, Italian, and Frencb opera. There will also be performed at tbe Volksoper no fewer than eight operas new to the Viennese: Isidore de Lara's "Messalina," Leo Blech's "Versiegelt," Lafite's "Das kalte Herz," Bela von Ujj's "Der Müller und sein Kind," Giordano's "Andrea Chenier," Miualowich's "Elaine," Smetana's "Zwei Wittwen," and Dvorák's "Russalka."

From Biarritz comes tbe report of tbe deatb on September 20 of Pablo Sarasate, one of the master violinists of bis period. He was born at Pampeluna, Spain, March 10, 1844. At an early age he went to France, and entered tbe Paris Conservatoire, wbere he became the favorite pupil of Delphin Alard, tbe foremost of French players, and under him gained the first prizes for solfeggio and violin. He then entered Reber's barmony class, and secured a *premier accessit* in 1859; but soon after relinquished the study of composition for the more tempting career of concert player. His beautiful tone, named "pure gold" for its unequalled quality, his retentive memory and brilliant execution, added to the singularity of his

appearance, insured his success in Paris, the French provinces, and the Peninsula. The Spaniards naturally honored an artist who was their own countryman, but Sarasate was ambitious for world honors, and after making his way through Europe, from the remotest corner of Portugal to Norway, and from London to Moscow, he visited America, North and South. Everywhere his triumph was complete. His répertoire was varied, and included the works of both classics and moderns. Among the latter his favorites were Max Bruch, Saint-Saëns, and Lalo.

Art.

THE CASE OF ENGLISH PAINTING.

If a picture dealer were asked what was the most important event of the last fifteen years, he would say the revival of the early English school. After a period of relative neglect the canvases of Reynolds, Gainsborough, and Romney have led the market. Even the mezzotints after their portraits bring hundreds of pounds; and the portraits of Raeburn and Lawrence keep commercial pace with those of the leaders of the school. Meanwhile criticism has confirmed the taste of the market-place. We have had such definitive studies as Sir Walter Armstrong's biographies of the famous portraitists and of Turner, and as C. J. Holmes's "Constable," not to mention a host of minor English works or the often suggestive contributions of French and German critics. And if one needed additional testimony to the popularity of the school it might be found in the abundance of forgeries in the salesrooms.

In view of this popularity, the critic might ask first; What is there in us that craves the English school of painting? Next: Are these pictures worthy of this admiration? But before attempting an answer we must get rid of the fiction of a unitary English school. Sweeping aside the abortive beginnings of mediæval miniaturists, the imported face painters from Holbein to Kneller, and the Tudor and Jacobean offshoots from Dutch portraiture, the English school as a subject of general significance begins with Hogarth and presents at least three widely different aspects: First we have Hogarth himself, whether in genre or portraiture, a Briton of the Britons. Nothing connects him with the group whom he disdainfully called the "portrait manufacturers." For strangely unlike reasons, he is as isolated as Blake. The time was too finical to accept his raciness except as humble folk found it made for edification. The second group consists of the elegant portraitists under the leadership, acknowledged or unacknowledged, of Sir Joshua Reynolds. It is they that have so completely imposed themselves upon modern taste that when one cites the English school without qualification, they are meant. The third group would include the landscapists from Gainsborough and Richard Wilson to Constable and Turner. Here, evidently, would be need of reclassification into fantastic and realistic painters, with Turner and Constable as the contrasting types. Within this classification we have only two really contentious points, Sir Joshua and Turner. No one, I think, will deny the importance of Hogarth and Constable, though naturally their rating on an European scale is still tentative. But on what we think of Sir Joshua, the most conservative of portrait painters, and of Turner, the most anarchical of landscapists, depends our whole attitude towards the English school. In fact, pretty much everything pivots on Sir Joshua. If he was not a great painter, great as measured with the greatest, then the English school of painting sinks into relative insignificance, and the task of criticism is to detect the few isolated geniuses that flourished in spite of unfavorable surroundings. A thoughtful German critic, Julius Meier-Graefe,* brings at least clear convictions on this matter. He asserts, and gives ingenious reasons for his opinion, that no English painters deserve the name of great except Hogarth and Constable.

Whistler, it will be recalled, limited that distinction to the older painter. It is one of the curiosities of criticism that it has taken more than a century to discover that Hogarth was not merely a most diverting caricaturist and illustrator, but one of the finest technicians that ever held brush. For lightness and brilliancy of execution The Shrimp Girl is a marvel worthy to hang by The Gypsy of Frans Hals. And the English portrait is far more significant, being a vivid generalization of the London lass—an epitome of an entire level of a civilization. The more sober portraits, such as that of himself with a bulldog and of his sister, need fear no company. One may pass from them in the National Gallery, to Moroni, Champaigne, Bellini, or even Jan van Eyck, without taking back a whit of the first enthusiasm. Again, the little narrative series, particularly Marriage à la Mode, are models of the painter's craft. Before one begins to be interested in the anecdote, one is captured by the beauty of the scene as such—the proportions and airiness of the interiors, the harmonious disposition of the numerous figures, the pervading charm of a color gay, rich, and masterfully applied with a full and accurate brush. And yet these pictures are, to boot, among the world's best illustrations, considered merely as graphic narratives. The originality and the extent of his accomplishment can hardly be overestimated. The history of art finds few parallels for it. In a single lifetime he compassed pretty much everything that Dutch art, excluding Rembrandt, effected in the three generations from Old Brueghel to Terburg. He is as racy of London as Albrecht Dürer of Nuremburg.

It is a temptation to follow Meier-Graefe in using Hogarth as a club for Sir Joshua, but a president of the Royal Academy, an admirable, great gentleman, a most resourceful and influential painter, deserves to be freed from painful comparisons. On the plus side there is much to be said for Sir Joshua. Technically, he had talent enough for three or four great painters, as such repute went in his time. We may not complain that he drank a little from many cups: from Rembrandt and Correggio, even more from Van Dyck and Van Dyck's greater model, Titian. But, when all is said, his brush has a sparkle and felicity all its own. His workmanship is extraordinarily varied. He understands the heavy falls of satins, and the buoyancy of filmy scarves. He commands a peculiarly vibrating crimson, and invents a delicious silvery blue in flesh tones. Only the very greatest executants have excelled him in freshness and variety of his method. Why, then, isn't he a great painter?

"Sir Joshua had everything but humanity," writes Meier-Graefe, and, properly interpreted, this seems to strike the cardinal defect of his art. Why does a likeness of a great lady by Sir Joshua fetch ten times the price of that of her spouse, painted at the same time, and presumably with equal ability? Because it is prettier, of course. A good reason and a bad one. Even trade makes no such childish distinction between the "fine and superfine" of Titian, Rubens, or Velasquez. The prettiness of Sir Joshua represents, unhappily, no discerning study of the individual woman. He has not had the patience or the capacity to catch the gesture and expression that are hers and hers alone. Instead he sees an obvious picturesque (not pictorial, mind you) opportunity in the graceful creature, poses her, and begins to paint. Then his ingenuity

**William Hogarth.* Von Julius Meier-Graefe. [Klassische Illustratoren, No. 2.] Munich and Leipzig: R. Piper & Co.

Die Grossen Engländer. Von Julius Meier-Graefe. Munich and Leipzig: R. Piper & Co.

These well printed and illustrated volumes abound in critical ideas agreeably and trenchantly expressed. Many critics will disagree with Herr Meier-Graefe in his particular judgments. We find, for example, his attitude towards Turner on the whole grudging, and his strictures upon Whistler's portrait of his mother curiously sophistical. But he always gives his reasons and conducts his arguments with persuasive dignity. The two books constitute a survey of the main figures in British painting from Hogarth to Constable, with Whistler—is he really of the English, or of any school?—thrown in for good measure. Many readers will regret the omissions, but this collection of essays should not be judged as a manual. Constable occupies the lion's share of the space, and we have read nothing better about him.

comes to the rescue of the theme. Its colors gleam in shadow, its golden whites fairly glow. Vague trees repeat the swing of the slender figure, vaguer park contours reinforce her crooked finger—like slow music emphasizing the pathos of a melodrama. The result is infinitely seductive. It requires a severe resolution to withstand so appealing a falsity. Yet it remains a concocted thing, a thing never conceived pictorially. Sir Joshua *quâ* artist is a great showman, and little more. Like a clever theatrical manager, he knows the points of his figurantes—not their real points, but those that will strike the crowd when glimpsed beyond a gilded frame. If you would know the difference between a dazzling confection and a real portrait, pass from a Sir Joshua to a Bronzino. Even a Nattier will do, for, with a far smaller gift, he took his frivolous world seriously, and his work has documentary value. Sir Joshua's is deceptive at nearly every point. Yes, he lacked humanity. There is more real femininity in the little canvas by Gainsborough of his two daughters, in a mere sketch of a girl's head by Constable which hangs near at South Kensington, than in Sir Joshua's entire *œuvre*. "His gowns are so fine," says Meier-Graefe, "that one would gladly own them without the woman."

Unless we have done Sir Joshua grave injustice, how little there is to say for the Opies, Beecheys, Coteses, Hoppners; for the sentimentalist Romney, with his slender gift as a painter; for the specious superficialities of Sir Thomas Lawrence, which, had it not been for the abysses of high Victorian portraiture, would seem the very negation of sound and fine painting! The syrupy current of the age was almost irresistible. Yet there is Raeburn, a fine, austere workman, a conscientious observer. With no pretensions whatever to greatness, his modest excellence need not fear the best company. He is real. So, of course, is Gainsborough, and criticism of his work remains one of the most delicate of problems. He is charming enough to make the inspired homilist John Ruskin forget both himself and his principles. He is prettier than Sir Joshua, but with a prettiness long meditated and transformed into beauty. With the amiable shortcomings of the amateur, which he always remained at heart, he had the amateur's refined audacities. He painted what seems beyond paint. These are not pictures, one is tempted to say, but the fragrance of so many English women and Suffolk landscapes. To ask whether he be great or not may seem a superfluous and injurious question. Instead of trying to answer it, then, let me ask one or two others that should be clarifying. In the great gallery at Hertford House, where hang, also, Rembrandt, Velasquez, and Hals, do his admittedly greatest portraits seem a little thin? Do we unconsciously associate him, not with our admirations, but with our affections for such painters as Lorenzo Lotto or Moretto of Brescia? Finally, is not his peculiar aroma conveyed by certain pictures still more thoughtfully conceived and exquisitely painted by one Watteau? Possibly these are unfair questions. Let us admit, instead, how poor the courtly school of England would seem without the gracious presence of this poet-painter. Again, in landscape Gainsborough has a place all his own. Admit the obvious conventionality of his arrangements—always the bright central space shading out into surrounding shadow—concede the small range of his palette, his formulas for trees and rocks, and he remains one of the most interesting figures of the century. Only Canaletto and Guardi, whom we may fairly reckon with the landscapists, seem plainly his superiors. His mood is unique. There breathes a poetry through his best landscapes that relates him with Corot. The confrontation is instructive and a little damaging for Gainsborough. We note once more the difference between the inspired amateur and the trained artist.

How say anything just about Turner? He provokes not admirations, but passions. He worked in an atmosphere of mystification. Then came Ruskin to cloud the whole issue by lauding as a humble realist the greatest fantastic of his time, and one of the most impressive of all times. There were several Turners, and none of them is negligible: Turner the faithful, rather timid portraitist of English landscape; Turner the stupendous delineator of the "Liber Studiorum"; Turner the magical creator of the panoramic vignettes in watercolor; Turner the too conscious emulator of the classicalities of Claude; finally, the reallest of all, Turner the sun-worshipper. Though this imposing and varied metempsychosis, he was always progressing. His brush learned new audacities, his palette rejected all colors less transparent than those of the sky and clouds. No landscape painter before him, and few since, have amassed such extravagance of technical means, such knowledge of the possibilities of glazed, broken, or juxtaposed colors. His painting is still, in spite of the damage most of his canvases have suffered, a sort of repertory of impossibilities fairly compassed. Yet as time goes by and his discoveries become part of the common stock, it is possible that Turner may come to seem, as he did to his contemporaries, more bizarre and portentous than great. The material and the energy of greatness were unquestionably in him, but he never attained the culture and self-restraint that usually accompany great craftsmanship. His sense of ends was ever deficient. One perceives his lack of centrality in the casualness of his compositions, in his tendency to spoil fine pictures by introducing too many objects. He seldom knew when to let a painting alone. Such masterpieces as the Fighting Temeraire and Rain, Steam, and Speed are exceptional. In his remote dusty house he seems to have encouraged a sort of youthful auto-intoxication at an age when the great masters have learned the wisdom of renunciation. Claude, with the paucity of his technical resources and his anæmic workmanship is unquestionably both the greater soul and the greater artist. Yet Turner needs no regrets, even if there is a certain pathos in the dispersion and frequent stultification of his great abilities. It should be glory enough for him, when most of his painting has perished, and the remnant looks as odd as most Victorian sublimities are surely doomed to look—it will be glory enough for Turner to have it said that he was a mighty conqueror and subjected to the art of painting the recalcitrant kingdoms of the air.

The most central figure in the art of the last century was a miller's son, who rarely left his native Suffolk, finding material for a busy lifework in a few square miles of meadow, coppice, and river. He marked even more curiously the sun-shot and water-soaked clouds—the constant element of novelty in this apparent monotony. Concerning himself little with the work or opinion of others, he produced with joyous patience an infinity of oil sketches which constitute a prophecy of all the possibilities of landscape painting, and numerous large pictures which are a sort of standard for the normal practice of this art. No one could be more single-minded than John Constable, more sturdily English. No air of a genius or citizen of the world was his. His accomplishment was so unobtrusively fine that an age keyed up to Lawrence and Turner barely heeded it. But across the water certain striving young Frenchmen saw that it was the earnest of a new art. Constable's position and peculiar excellences are so thoroughly understood at last, even in his England, that a comprehensive criticism would be superfluous. Let us say that he is a painter's painter, as Spenser is a poet's poet. In both there are *longueurs* and occasional monotonies that repel one who approaches these artists with romantic expectancies. With Spenser you must give yourself willingly to the verse, and with Constable, too, unless you perceive the extraordinary beauty of his handling, you will come off ill. Except Hogarth, he is about the only English painter who felt in paint strongly and habitually. Others mastered it for purposes of display, but he, so pale was his life otherwise, found in the manipulation of the brush his chief emotional outlet. He depended upon no exceptional or hallucinatory moods. Na-

ture found him always ready to pay her homage with a beautiful arrangement of lines, masses, and textures, and the instinct to color a canvas richly at once drove him back to her, the great collaborator. His paint has an Ariel-like gleam and iridescence, but it flows at the bidding of a master intelligence that has formulated true symbols, and simple ones for complicated and baffling appearances. We have to use a term that has become cant—he effected a true synthesis. When he sketches a thicket, his method is not that of a nurseryman, but of a god. You see no bushes planted, but from the first stroke of the brush a mass of paint that is beginning to mean thicket to the eye. Constable is the Masaccio of landscape painting, an epitome of sound practice, as Turner is of alluring and rather dubious *tours-de-force*. It will be years yet before the value of his painting as a school can be fully absorbed and exhausted. Even the impressionists have gone much less far beyond him than it seems. His ultimate position as an artist it seems foolish to predict. It is possible that, like many pioneers, his fame may remain while his work dwindles a little. We are now in the flush of rediscovery. Perhaps the future may hold that he painted no landscapes quite so fine and satisfying as a half-dozen by Rousseau. If so, the defect will be rather national than personal. No English painter of the time, and especially no painter of landscape, could conceivably command the architectonic sense that presupposes a long artistic tradition. If posterity judges Rousseau at his rare best, possibly the smaller historic figure, but the greater artist, it will be Poussin that makes the difference. In composition Constable seems merely adequate, and sooner or later his painting will have to compete with landscapes that in this cardinal point are superlative.

About Blake, I should rather say nothing. No moderate statement of his merits can possibly content either the worshippers or the mockers. For England he seems to me a profoundly significant and valuable figure. His life is an eloquent protest against a kind of half-commercial snobbism that has been the bane of British art. As a decorative book illustrator, his achievement is prodigious. "Songs of Innocence" and the Prophetic Books go far to redeem artistically the entire Georgian age. Yet imagine a representative group of Blake's finest designs transferred to the Louvre or the Uffizi, and I fear that, as their eccentricity increased, their impressiveness would diminish. In fact, to be a convinced visionary and to invent a new grammar of expression are rôles quite incompatible. One cannot make a Michelangelo in a single lifetime. Such an apparition implies a previous Giotto, Masaccio, and Signorelli. Blake's rupture with his age, then, if personally commendable, became as much his weakness as his strength. He has the untutored sublimities and tendernesses of some preacher in the wilderness. There is something divine in his imperfection. But to deny imperfection would be absurd.

It is evidently too early to estimate the worth of the Pre-Raphaelites and of Watts. They still mean so much to us, that we cannot hope to set them advisedly in a just historic perspective. Unless I have gravely misunderstood the painters briefly considered in this essay, we should be very cautious, if we would use the measured language of criticism, in speaking of great painters in England. Hogarth, and more doubtfully Constable, alone seem to deserve this distinction. But happily we find many delightful talents, and an occasional genius so great that we are little inclined to dwell upon its blemishes.

One might ask why a nation that has been prolific in every other kind of genius should have produced so little in the graphic and plastic arts? Why should England, with on the whole greater enlightenment and prosperity, and an evidently greater stock of talent, fall behind Holland and Spain in this regard? Of course, any real answer to such a question would involve another essay. Here I may say that the causes seem complex. Undoubtedly, the break with the Middle Ages through the Reformation counts for much. Yet it may be doubted if the English Middle Ages gave any great promise of a developed art. Art after Tudor times never corresponded to the taste or needs of England generally. From the first the English painter of parts had hard work to be his own master. Unsustained by the popular enthusiasm that made Italian painting, he was forced to minister to the fixed and narrow tastes of lordly patrons. From the houses of Stuart and Hanover little salutary was to be expected. Furthermore, the English artist was dazzled by the success of the imported court painters from Van Dyck down, and tempted not to live as an artist, but as a great merchant whose staple happened to be his own pictures. There was too rarely any steadying effect from public commissions for mural painting. In the absence of such opportunities the inducement was great to stick to paying portraiture, or to venture only in the field of obvious anecdote, or facile patriotism. English art in short was corrupted at its sources, being ever an object of luxury, a perfunctory appurtenance of wealth and social state. To-day the attitude of the English patron towards art has not been one of humility but of pride, and this complacency has been so tyrannical that many great talents have given the pathetic spectacle of gladly condescending to delight the casual curiosity of the least artistic people in the world. While these conditions, which show some signs of generalizing themselves in our new plutocratic civilization, hold in England, sporadic manifestations of genius in painting may fairly be expected, but nothing like a great and consecutive art.

M.

Lord Ronald Sutherland Gower (Hammerfield, Penshurst, Kent) requests the loan of letters referring to John Flaxman, whose life he is writing.

Museums have not yet solved their problem as the libraries have, within a generation, solved theirs. They commonly come to contain so many things that they are visited mainly as collections, as shows *en masse*, and but little for the sake of the separate object. The trees are not seen for the forest; yet the trees are the things worth seeing. Every aid in breaking up this habit of gallery visiting and in forming the habit of object visiting is to be welcomed. Such has always been the avowed purpose of the Handbook of the Museum of Fine Arts in Boston, of which a third edition has just been issued. This purpose explains the novel form of the book, which is not a running account of galleries or collections or arts with occasional illustrations—but a series of notes, from a sentence to a page long, generally bearing upon an individual object illustrated on the same page or opposite. That this method responds to a latent wish among those who make most use of such literature has been indicated by the praise the book has received. Hitherto it has had no imitators, but they are surely to be expected and invited. In the present edition the book preserves its attractive and compact form—about the size of a Baedeker and equally easy to consult.

In the restoration of Santa Croce, Florence, triforium windows, one with the original glass, have been discovered and will be reopened. The roof has been redecorated after the old design, and tests here and there on the side walls have shown that they were once entirely covered with fresco paintings. A more important change is the taking down of Donatello's statue of St. Louis from the niche which it has occupied for fifty years. Originally it stood high on the façade, and was little thought of. Vasari writes that Donatello, being reproached with its blockishness, answered: "It was done on purpose, for he being a king was a blockhead to become a friar." The anecdote may be true. If so, it was the artist's little joke, for the St. Louis turns out to be one of Donatello's most serene creations—a thing quite worthy to stand beside the beautiful Annunciation in this church. The St. Louis will be set up in a good light in the sacristy.

A well preserved fresco by Tiepolo, on an allegorical subject, has been discovered under the ceiling of the Palazzo Grassi in Venice.

Excavations in the island of Cephalonia have resulted in the discovery of no less than thirty-two tombs of the "Mycenæan" period, containing terra-cotta vases, bronze nails, weapons, and some gold ornaments.

Further excavations are contemplated in other parts of the island.

Paris is to have another art society, the Société internationale de la Gravure originale en Noir, whose first Salon will be given November 25, at 43 Boulevard Malesherbes.

A fire on September 17 in McCoy Hall of Johns Hopkins University destroyed, among other things, a valuable collection of papyri and archæological specimens from Thebes and Memphis, and seriously damaged a Roman and Hellenic collection, which included Roman jewels from Herculaneum.

Giovanni Fattori, the animal and battle painter, has died at Florence, in his eighty-fourth year.

Finance.

THE "ELECTION SCARE" ON THE STOCK EXCHANGE.

That the often-predicted and long-delayed "election scare" has arrived on the Stock Exchange, has been unanimously admitted since last week Tuesday. In the intervening period, declines of 5 points or more in prices have been numerous. Taking the five stocks on which activity has converged throughout the season, the decline of the week ran to 14 points in St. Paul, 12 in Great Northern, 16½ in Reading, 13¾ in Southern Pacific, and 18 in Union Pacific. For the heavy selling which accompanied this break, no other reason was assigned in Wall Street than an "election scare."

Now, it is true that so abrupt a discovery of its own state of mind by the Stock Exchange has in it something of the artificial. The performance is not in all respects convincing when, during three weeks or more, a market with its hand on its own pulse asks mildly, "Am I frightened?" answers with some perplexity, "Apparently I am not," and then, of a sudden, cries out to the surrounding observers, "Aha! At last I am alarmed." One must admit that this is not exactly the way in which acute misgiving usually manifests itself. But, on the other hand, it has been a matter of constant comment, since the nominations in early summer, that the absence, not only of actual political misgivings, but of any spirit of financial caution looking to a possible turn of events in Mr. Bryan's favor, was something unusual in the markets of a Presidential year. There were no "political scares" in 1904 or 1892, because every well-informed man knew what was bound to happen; there was none in 1888, because the financial community was equally willing to see either candidate elected. But 1900 saw the September stock market upset by repeated "scares" regarding the possible success of Mr. Bryan, and in the prevalent doubt on the very eve of the November vote, money went up to 25 per cent. because lenders did not wish to take chances. The 1896 campaign was marked by a prolonged and excessively violent "election scare" on the Stock Exchange, with an overwhelming drop in prices up to the middle of August, and with an unbroken succession of reports, from the Middle West particularly, that Bryan was "making unexpected inroads" on the Republican preserves, and that the East was "indulging in foolish overconfidence." The visitor from Iowa, Illinois, or Ohio, who had found every man that he met in those localities about to vote for Bryan, was a daily factor in the affairs of Wall Street. On the day before election, call money rose in the Stock Exchange to 96 per cent., and a long line formed before the Sub-Treasury's redemption window to get gold for legal tender notes. These were no doubt occasions when an issue of the greatest magnitude was at stake in the campaign; nobody knew into what condition our finances would be plunged if Bryan were elected. But "election scares" were not confined to years of the currency dispute. Even the really prosperous year 1880 was marked by a sweeping break of 10 to 25 per cent. in prices, which did not end until the "October elections" in the doubtful States—an institution since abolished—removed all doubt regarding the national election.

Precedent, in other words, favored a season of election scares this year. Yet not only did no scare occur until last week, but in the main prices were pushed higher and higher, quite as if no sign of political uncertainty existed. It was the vote of Maine, in its State election of last Monday, which apparently woke the market up. That Maine should have performed this office was not in all respects surprising. It is true, as any political expert will inform inquirers, that Maine's "September vote" in a Presidential year is no such faithful forecast as Vermont's; that Maine went against the Republican State ticket two months before the sweeping Republican victory of 1880, and gave a "record" Republican plurality in the year of Mr. Cleveland's first election. All this was true, and was announced before last Monday's vote. But the news that the Maine Republican plurality had fallen to 7,700, as against 27,000 in September, 1904, and 12,500 even in the vote before Mr. Cleveland's second election, was startling. Explanations that the "local option" plank of the Maine Democratic platform did the job, and reminders that Vermont's plurality of 29,000 was well above the line which favored Democratic chances, failed to silence the popular inference. The "election scare" began. If the Maine plurality had not so unexpectedly provoked it, something else would certainly have done so—the "Foraker letters," for example, which did, in fact, have much to do with the severity of the break in prices.

Now that politics has been fairly injected as a disturbing influence into the autumn markets, it is in order to inquire, first, how much if any further the depression incident to the scare should go; next, what would happen in the conceivable event of Mr. Bryan's election. Neither question admits of a ready answer. The stock market, taken by itself, has so confirmed a habit of "discounting" once and for all its expectations, that one might expect the process of readjustment to the new doubts and misgivings to be soon accomplished. Precisely as evidence that "Bryan's strength is underestimated" was pressed upon the market at its recent high figures, so a severe decline is rather likely to be followed by testimony that we have been overestimating this strength. If this were not to happen—if testimony to a "growing Bryan movement" were to increase rather than diminish—then there will be considerable anxious scanning of the financial horizon between now and November.

"All those people, and they are doubtless much more numerous than most of us believe, who have a certain instinctive feeling for the transcendental in literature, religion, and other phases of human experience hidden away in secret corners of their practical minds, will find themselves justified of their belief by *Oscar Kuhn's* interesting account of *'The Sense of the Infinite,'* 'A Study of the Transcendental Element in Literature, Life and Religion.' It is written with unusual simplicity in every-day language, with ease and dignity of style. The book is a discussion of how this sense has manifested itself in religion, literature, and love, and of its effect upon man's life."—*N. Y. Times Review.*

Composition and Rhetoric

By CHARLES SWAIN THOMAS, A.M., Head of the English Department in the Newton (Mass.) High School; formerly of Shortridge High School, Indianapolis; and WILL DAVID HOWE, Ph.D., Head of the English Department in Indiana University. With 10 Illustrations. Crown 8vo. pp. viii-509.

LONGMANS, GREEN, & CO., New York

Reading Case for the Nation.

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Holland House Circle

By LLOYD SANDERS

8vo. With 24 Illustrations. $3.50 net.

From 1799 to 1840 there was hardly in England a distinguished man in politics, science, or literature who had not been a guest at Holland House. It is to that period, when the mansion formed a temple of merit where men of all parties and professions could meet on common ground, that this volume is chiefly devoted.

The Nation.

NEW YORK, THURSDAY, OCTOBER 1, 1908.

The Week.

Webster began his reply to Hayne with a demand that the real question before the Senate be read. Similarly, it is high time that the attention of the American people were recalled to the true issues before them. For the past two weeks the air has been shaken with explosions and outcries, but their relevance would be hard to make out. Whether Roosevelt or Bryan be the greater master of abuse and insinuation, may be a very important matter, as between them, but the voters are not to pass upon that question. They are not even going into the booths to declare that they think Haskell a villain, and Du Pont a man tainted with wealth. If this Presidential election is to be a thing for grown men and not children, better arguments than sound and fury must be used. Gov. Hughes, in his Youngstown speech, and again Monday at Indianapolis, went to the heart of the business in his keen analysis of Mr. Bryan's character and political record. Mr. Taft, too, has of late been devoting more energy to this topic. It is the vital one. The question is if we have any way of judging a man's future, except by his past, and whether flightiness and demagoguery can develop overnight into steadiness and sagacious statesmanship.

Gov. Haskell, bowing perforce to the present demand for immaculate virtue in everybody who has to do with politics, has resigned as treasurer of the Democratic Committee. It is not for such a man to handle campaign subscriptions from the pure in heart. To match this act of compelled abnegation, the Republican Committee sacrifices the chairman of its speakers' bureau. Gen. Du Pont has discovered, with the aid of broad hints from Washington, that one connected with a Trust which the government is at the moment suing, is not fit to supply the demand for orators in the rural districts. In the midst of such an explosion of morality in politics it is grand to live, but where is this process of purification to stop? Already it is intimated that Mr. Bryan will call for the resignation of the Republican treasurer also, since Mr. Sheldon is supposed to have looked upon more than one Trust when it was red. President Roosevelt would doubtless sacrifice him without the flicker of an eye-lid. But if this thing goes on, who will be left to manage the campaign? Certainly not Mr. Roosevelt, for a man shown to have been in secret cahoots with Harriman four years ago should have nothing to do with a political canvass in which only saints are to be allowed to engage. For our part, we know of nobody really good enough to conduct this campaign, since we do not live in the days of St. Francis or St. Elizabeth.

The last batch of Archbold letters which Mr. Hearst has produced is somewhat less sensational than those involving Senator Foraker, but only because Senator John L. McLaurin of South Carolina has been somewhat less prominent than Foraker. It is plain enough that he, too, was seeking the favor of the wicked corporation; he could "beat Tillman if properly and generously supported." But the hero of this whole correspondence thus far has been Representative Joseph C. Sibley of Pennsylvania. He appeared in the letters first published, and he now comes up again—always the assiduous tout of the Standard Oil. He boasted to Mr. Archbold that he had told the President "some plain, if unpalatable, truths" about the political effects of an appeal to the "rabble." He wrote to Mr. Archbold that Senator B[ailey] of Texas was "wholly and unalterably opposed to the President's and Garfield's policy vs. corporations," and was "prepared to make a great fight" against these "vicious principles." Sibley therefore tried to arrange a meeting between Mr. Archbold and Senator Bailey—a "great man," who "at the proper time" would be a "tower of strength." And, finally, Sibley wished to borrow $1,000 of the accommodating Mr. Archbold for a Republican Senator who "would do anything in the world that is right for his friends if ever needed." "Do you want to make the investment?" said Mr. Sibley. We do not know whether Mr. Archbold wanted to do so or not; but it is evident, as Mr. Rockefeller says in the *World's Work* for October, that the Standard Oil finds it "well-nigh impossible to restrain this occasional man who is over-zealous for his own or his company's advancement." Both Mr. Archbold and Representative Sibley seem to have been quite unrestrained. It is pleasant, too, to note that the Standard Oil is strictly non-partisan. As the late Jay Gould once said of the Erie, it is Democratic in Democratic districts and Republican in Republican.

Senator Foraker's long statement helps him but little. No one has supposed that he vulgarly took bribes—$14,500 for this vote and $15,000 for that. But he is an old enough hand in politics, State and national, to know exactly what the Standard Oil Company is and what he has been doing in the galley with it. He cannot plead ignorance as to the kind of favors which the Standard Oil has been asking of politicians of both parties, in Legislature and Congress. He must have understood its desire to enlist the interest of influential men like himself. He cannot pretend to any superhuman virtue that would enable him to separate Foraker the Senator from Foraker the attorney. His mind is not provided with watertight compartments. Moreover, the letters of Mr. Archbold show that the Standard Oil was desirous of securing Mr. Foraker's backing or opposition, as the case might be, for certain measures and policies. It was therefore grossly improper for him to accept retainers from the Standard Oil and to borrow $50,000 from it. The newspaper for which that money was to be paid was bound to be an organ of both Foraker and the Standard Oil. The long and short of the matter is that Mr. Foraker made himself a political agent of the Standard Oil.

What did the President mean in his denunciation of Foraker, by speaking of the "great and sinister moneyed interests, which have shown such hostility to the Administration," as being now opposed to Taft? We have not heard that any of the Trusts or large corporations have come out for Bryan. If the President has information that they are se-

cretly striving to defeat Taft, let us have it by all means; the fact would be of incalculable benefit to Mr. Taft. Or is the President's only proof of this opposition of the Trusts the extraordinary leanness of the Republican treasury? It has been printed and not denied that the fund is now only $300,000, in striking contrast to the $3,000,000 in hand at this period in 1904. If the President is worried by this ingratitude, and by the refusal of the corporation officers he has attacked to bombard Mr. Sheldon with checks, the country may well rejoice that this poverty gives the best prospect of an honest election that we have had in a life-time. There will be no buying of voters in blocks of five in Indiana, no purchase of lukewarm Republican voters in this State. The result should throw an interesting light on past history and afford some better data than are now available for estimating the extent to which Republican corruption funds have helped to buy recent elections.

Both the great parties are in flux; they are visibly breaking up. In 1884, with the first great bolt from the Republican ranks, independent voting was denounced as little short of treason to the flag. Even those who conceded the unfitness of Blaine for the Presidency felt that only a national emergency should excuse the repudiation of partisan ties. But the change in twenty-four years has been very great. Among intelligent men it is now hard to find one who will vote for a party merely because he or his father has always voted for it. And whereas in 1884 and 1888 and 1892 it was a single issue which led men to change their politics, there is to-day a complexity of motives. No better proof of this truth could be obtained than the explanations commonly given for the preference for this candidate or the other. One man approves Mr. Taft's stand toward labor. That is the paramount issue; and Mr. Taft's frank opposition to class legislation for workingmen must be supported. The next man has chosen Taft because of fear lest there may be a business cataclysm if Mr. Bryan is elected. A third voter will plump for Taft because of the vacancies on the Supreme Bench to be filled by the next President. The dyed-in-the-wool protectionists care for nothing but their own hobby, and are for Taft and tariff revision by its friends. Others have decided to work for Taft because he is such a refreshing contrast to Roosevelt; and, on the contrary, hundreds of thousands are cheering for Taft because he is so like Roosevelt in his beliefs and his opposition to the "predatory rich." Some men have gone over to Taft merely because of his experience as an administrator. Part of Wall Street will vote for Taft because it believes him at heart a "reactionary," or, at least, the less of two evils.

On the other hand, an astonishing number of intelligent citizens are backing Bryan "because he ought to have a chance after trying three times," or because they think he is a good fellow who has been kept down long enough. Violent radicals and some free traders are, of course, on his side. Extreme anti-imperialists are attracted by Bryan's professions of anti-imperialism. Many farmers actually believe that Bryan is Roosevelt's heir; while the thousands who think that the Pope at Rome is aiming to control the Presidency and subvert our liberties are, if we may believe the *Appeal to Reason* (of Girard, Kansas), working for Bryan. The men who regard safeguarding of bank deposits as the chief reform to be accomplished are enthusiastic for the Democracy, as are those benighted beings who always vote against the party in whose administration hard times have occurred. In short, there is no overshadowing issue to compel any one to lay aside his pet "greatest-evil-before-the-country."

Gov. Hughes's speech of acceptance is a clear and impressive summary of the policies and achievements of his Administration. He riddles the silly Democratic complaint of "governing the State by commission," and shows that some of the most important commissions were recommended by Democratic Governors and created by Democratic Administrations. Most of what he says covers ground that is familiar to all who have watched the course of recent legislation at Albany. His most significant remarks come at the end of his speech, where he goes distinctly beyond his party platform in advocating reform of the primaries and an improved ballot. The convention at Saratoga intended a slap at the Governor in declaring against any change which should make it more difficult for the voter to exercise his right on election day—that is, more difficult to vote, at the boss's wish, the straight ticket. But Gov. Hughes replies that the Massachusetts ballot, as it is sometimes called, will not make it more difficult for the voter to designate "the candidate whom he wishes to support," which is, after all, the essential thing. The passage is worth quoting in full:

> I have recommended the adoption of a simplified form of ballot, without the party column, in which the names of candidates for the respective offices shall appear but once grouped under the names of the offices. I do not regard such a form of ballot as rendering it more difficult for the voter to exercise his constitutional privilege of designating upon the ballot the candidate whom he wishes to support. On the contrary, such a ballot would have the advantage, not only of giving him this opportunity, but of encouraging the nomination of candidates who would not suffer by reason of separate consideration.

Still more notable is Mr. Hughes's argument for a direct mandatory primary. This reform promises to do more than any other one thing to curb the power of the bosses—especially when popular feeling is roused. It is for this very reason that the New York bosses oppose the direct primary and its leading champion.

The Savings Bank Section of the American Bankers' Convention at Denver has adopted a resolution strongly condemning the plan of guaranteeing bank deposits as "economically unsound in principle, confiscatory in form, and inimical to the best interests of depositors, stockholders, and borrowers," and "a specious form of paternalism and Socialism" which "would discourage individual initiative" and "tend to encourage speculation and undue expansion of credit." Every one of these allegations we believe to be strictly true. They do not dispose at once of the popular favor in which the expedient is held in certain parts of the country, only because it presents a plausible and insidiously contrived form of Socialism. No one can blame the ignorant depositor, who has lost money by a bank failure or who feared the loss of it last November, for looking with favor on a scheme to tax all banking institutions, sound and unsound, in order to insure him against future loss. Yet this guarantee plan involves insurance pure and simple, undertaken without the slightest

reference to the well-known and fundamental principle of insurance, that the premium should be fixed and allotted according to the risk. In operation a year ago, the compulsory guarantee would have insured depositors in Charles W. Morse's chain of banks equally with depositors in the Chemical National, and at exactly the same ratio of assessment on the banks concerned. It would thus, necessarily, remove one of the chief grounds of doubt and suspicion which prevent the depositor from yielding to the seductive offers of an unsound and mismanaged institution.

The Liberal defeat at Newcastle may or may not have been the outcome of Catholic resentment at Mr. Asquith's action with regard to the recent Eucharistic Congress. But if the Newcastle seat had to be lost, the Ministry may not be averse to having people find the reason in Catholic animosity. Such a belief would be sure to rally militant Protestant opinion to the government, and more than make up the possible damage from Irish defection in doubtful English constituencies. Regrettable though the fact may be, the storm aroused by the proposed procession of the Sacrament has shown that the sectarian spirit must still be reckoned with in England. Even before the Newcastle election, Mr. Asquith was accused of having made a bid for heartier Nonconformist support. This entire stirring up of religious passions is particularly unfortunate, because it comes at an era of denominational good feeling. The Catholics in Ireland have just received the university they have so long been demanding, and the different churches have been coming into agreement on the education question in England. But the old evil notoriously dies hard.

In its latest pronouncement on Morocco, German diplomacy has lived up to its reputation for spasmodic action. Having startled France with what seemed a direct challenge to a dispute, Germany has now startled her again with the effusive tone of its reply to the joint Franco-Spanish note concerning Mulai-Hafid. Of course, there is no reason why Germany should not be effusively amicable, since that would be no bar to an imperial declaration to-morrow that "Germany's rights must not be infringed upon"—with a rattle of the sabre and a dark look across the Rhine. But since acts count for more than words, after all, we must take it that Germany will not bite and will content itself with a warning growl now and then. Against a special position for France in Morocco, the Emperor still protests. But such ambitions France has, officially, disavowed. So the case stands where it stood in Morocco before the tribesmen raided Casablanca a year ago; only the Sultan is changed. The international police are to be organized, the international bank will lend the Sultan money; and France, because of her claims for reimbursement in connection with Casablanca and the fighting that followed, has, if anything, a stronger grip than ever on the Sultan's affairs.

Cable companies have forwarded a summary of Count Okuma's recent newspaper article. This Japanese Hobson's high-flown talk about his country's urgent need of a larger and better navy does not represent the aspirations of either the government or any considerable fraction of the people; and, coming at the very moment when Japan is being driven to economize in deadly earnest, even to the point of deferring an international exposition, this demand for the mastery of the Pacific sounds worse than farcical. We should not, however, criticise Okuma too harshly; for he has been stirred by President Roosevelt's prophecy that the United States will be the future owner of the Pacific. The mote in the Asiatic imperialist's eye is but a splinter of the Big Stick in our own.

The International Moral Education Congress met in London last week, to discuss not merely the whole problem of moral education, but to bring about, if possible, the establishment of an international moral education journal and an international bureau or clearing-house for the arousing of interest in the ethical aspect of education. The movement is wholly free from sectarian bias and influence, but its promoters, have not, of course, excluded the religious or philosophical points of view. Its organizers are simply grappling with the problem of supplementing the teachings of home and church in such a way as to make the ordinary school course produce greater moral results. We Americans, at least, cannot neglect the efforts of those who are trying to graduate girls and boys not only as masters of the three Rs, but of themselves. We have not only to train our native stock, but to make the children of aliens into useful citizens. The common theory as to this moral instruction is summed up by Rabbi Hirschberg of Milwaukee:

> There is a large fund of ethical judgments which we all hold in common, a whole host of things upon which we have all come to agree, as the right, the true, the good, the benevolent things for us to do in certain circumstances and relationships, as moral beings. And these things, I hold, teachers in our public schools can teach, wholly apart from any belief and any theory they may have as to whence mankind has come into the knowledge of them, and whence it has derived the authority for doing them.

It is plain that personal morality is the first requisite for imparting moral instruction, and that in matters of this kind the effect of example is a thousand times more potent than the reiteration of precepts. Indeed, it is probable that the most useful instruction in morals—the real basis of all true education—may be given indirectly in the way of casual comment and explanation rather than by formal lesson. *Abeunt studia in mores.*

Mr. Carnegie's latest benefaction, the pension fund for Scotch heroes, widens somewhat the circle of life-savers privileged to receive a reward. But, if the ironmaster aspires to touch with his bounty every brave soul who delivers others from peril at great personal risk, we fear that he will have to part with all his worldly goods and live in a tub. There are the physicians, for instance; we believe the trustees of the fund have not attempted to honor every man who, for the sake of his fellows, has invited death in bacteriological laboratory and lazar-house. And yet the medical profession harbors the majority of our habitual heroes. Russia's cholera epidemic ought not to be needed to keep this fact alive in our thoughts. Fully conscious of the risks he is incurring, and yet accepting them day in, day out, the physician exhibits courage of a finer type than that of the boy who plunges, without a moment's thought, into the surf to rescue a drowning man. We may admire the boy's act, praise it, and even reward it. But we ought to call it instinct rather than heroism.

MR. TAFT ON THE ISSUES.

Mr. Taft has at length taken the stump in person, and his two extended speeches at Chicago and Cincinnati, last week, with his briefer speeches on the way, mark the real beginning of his campaign. These utterances will be received with mingled feelings. What Mr. Taft said at Chicago on the boycott, the injunction, and government ownership of railways is worthy of his record and his high repute as a judge, and is a fit reply to the demagogism of Mr. Bryan and his platform. The note of sincerity and courage is what the voters want, and it sounds clearly in the language with which Mr. Taft confronts the demands of the labor agitators and of Mr. Bryan for immunity from the responsibilities of the ordinary citizen:

> The owner of a business, whether railroad business or any other, is entitled to be protected in his pursuit of it and to immunity from unlawful injury to it. To take away from him the remedy by injunction which has always been his, merely because it sometimes leads to the punishment without a trial by jury of those who violate the injunction, is to introduce into the law class legislation in favor of employees and laboring men, and it is to take them out of the ordinary operation of civil remedies because they are laborers. I say that that kind of class legislation is pernicious.

These are statesmanlike words; not less so, because Mr. Taft was well aware that members of labor unions were in his audience. Of the boycotting of all firms which should do business with a concern involved in a labor dispute, Mr. Taft spoke at Chicago, in no uncertain language: "No more cruel instrument of tyranny was ever adopted than this 'secondary boycott.'" He reiterated his own previous opinion from the bench: "A secondary boycott is an unlawful injury, whether it is perpetrated by laboring men or otherwise; . . . that is the law to-day, and it ought to be the law." As to government ownership, Mr. Taft is equally explicit:

> I am unalterably opposed to it. It would place too vast a power in the control of the President. It would lead to a management of railroads not nearly so effective as that which we have under private ownership, and it would involve the government in an enormous debt. It would make railroad employees government servants, and would subject them to the dangers of political supervision in a way that certainly would be most inimical to their interests.

Endorsing as we do these courageous declarations on two important issues of the campaign, we have the deeper regret at the tactless and foolish manner in which Mr. Taft, in his principal Indiana speech on the way to Chicago, dealt with the tariff. Time was when intelligent men of a strong protectionist bias found it possible to contend that the Wilson tariff caused the panic of 1893, and to threaten the people with "another panic" in the event of another bill for reducing the tariff. That time is now long past, not only because the foolish assertion has been met and exploded scores of times since it was first developed by the sophistry of John Sherman, but because, within twelve months, reasoning men of all classes have had the opportunity of discovering what causes financial panics and what does not. Mr. Taft asserted in his Indiana speech:

> The certainty that the bill was going to pass, after Democratic success in November, precipitated a panic out of a clear sky, and the subsequent passage of the bill prostrated all industries and brought about four years memorable in the history of this country as the worst financial disaster it has ever seen.

Now, Mr. Taft must know, or if he does not, he ought to know, that the panic of 1893 was not "out of the clear sky," but was so distinctly foreshadowed, by causes having not the remotest relation to the tariff, that no financial disaster in our history was so little a matter of surprise. Mr. Taft should be aware that the collapse of the government gold reserve and of the public revenue—two main causes of the subsequent apprehension—had begun, in formidable shape, before Mr. Cleveland's election in 1892. Mr. Taft ought to remember, if he read the newspapers of that period, that nobody, even among the Republicans, assigned the tariff controversy as a cause for the wreck of public credit which began in the last months of the Harrison administration. The overwhelming issue was the maintenance of the standard of value. If Mr. Taft is so forgetful as to imagine that the "subsequent passage of the bill prostrated all industries," some better-informed man ought to explain to him that the depth of industrial depression, after the credit panic of 1893, was reached in the first six months of 1894, and that the Wilson tariff did not even pass the Senate until July. Mr. Taft goes so far, in fact, as to quote with seeming approval Mr. Cleveland's denunciation of the Wilson bill amendments as a "perfidy and a dishonor." Does he by any chance recall that the celebrated letter of July 19, 1894, to which he is referring, was written specifically to denounce the failure of the amended bill to provide for free raw materials, and the Senate's questionable dealing with the sugar duties?

We should not grant even this much of serious consideration to the subject, and should dismiss it as mere foolish perversion of history, but for the grave results for which Mr. Taft must look in his own campaign, if he indulges in this kind of talk. Surely, no public man can expect to win the support of the old-time Cleveland Democrats—on whose votes the election may possibly depend—by resorting to the hackneyed and worn-out arguments of the dyed-in-the-wool protectionists of a dozen years ago. Mr. Roosevelt long since abandoned childishness of that sort; Mr. McKinley himself repudiated it outright in his second term, and called for tariff reduction. Does Mr. Taft imagine that its recrudescence now will be tolerated? Or, if he does, what sort of light does he suppose such speeches will cast on his own pledges regarding "tariff revision by its friends"? It is not too late to inject some intelligent management into this campaign, to save it from a place in political tradition as a campaign of blunders.

THE PRESIDENT STUMPING.

Mr. Bryan stated the exact truth on Saturday, when he said that it was "a violation of the obligation that the President owes to the whole people to use an office that belongs to the whole people as a party asset for the advancement of a personal friend and political protégé." This fact was dimly recognized by Mr. Roosevelt himself when he caused it be known that he would not take the stump for Taft, as such a course would be improper. But now he has taken the stump in front of the White House and daily excoriates Mr. Bryan and exalts himself, with incidentally a kind word for Mr. Taft.

Whatever the merits of the controversy raging between the President and Mr. Bryan, whatever the political effect of Mr. Roosevelt's rushing into the fray, the spectacle of the Chief Magistrate engaging in a verbal brawl is one which the people ought not to be compelled to witness. Mr. Roosevelt, of course, was born to defy precedents. He breaks conventions as Samson his green withes.

But sober citizens cannot help asking if some way may not be found to stay his hand. They do not wish the head of the state to go about hitting at other heads with a club. They feel that he is impairing both his official and his personal prestige by adopting the rough-and-ready methods of a partisan campaigner, snatching eagerly at newspaper clippings as if they were evidence, stooping to any sophistry to score a point on his adversary, and involving not only himself but the Presidency in a violent altercation, with the lie passed back and forth freely. We can but hope, therefore, that when Mr. Bryan rejoins, as he infallibly will, the President can be persuaded to keep silent. Some one ought to read to him Tennyson's lines:

> Surely, after all,
> The noblest answer unto such
> Is perfect stillness when they brawl.

If one could pardon Mr. Roosevelt for dragging the Presidency into vulgar squabbles, it would still be hard to admit the relevancy or force of much in his latest outbreak. In continuing to attack Governor Haskell at such length, he but slays the slain. Haskell is out of it; but we suppose that the President had accumulated so much good ammunition that he could not refrain from firing it off, even though he was shooting at a dead man.

The really critical part of Mr. Roosevelt's latest letter is where he attempts to answer Bryan's searching questions about the secret visits from Harriman in 1904, with the large money contributions made by that gentleman to debauch the vote of New York in Roosevelt's interest, and about the President's giving his assent to the Steel Corporation's swallowing a competitor. Now, in effect, the only reply the President makes is to say: "I am a good man and a lofty patriot. Therefore, whatever I do is right in itself and for the best interests of the country. It is true that I promised not to prosecute the Steel Trust for making a combination in restraint of trade, but by no other means could the financial panic have been stayed. It is true that I accepted money from Harriman, and from insurance companies and Trusts, but in no other way could the country have been given the blessing of an all-wise and impeccable President." One has but to imagine the boot on the other foot—to suppose it was Bryan whom Gary and Frick had visited to secure immunity for the Steel Trust, that it was Bryan who had requested Harriman to come and see him as a fellow "practical man," and who had accepted $260,000 from Harriman to aid in his election—to realize how Mr. Roosevelt's trenchant weapon would have cut through all the sophistries which he now weaves in his own defence. He was asked what the effect would have been of publishing his letters to Harriman in 1904. His reply is that he is against making public campaign contributions in advance of the election, because to do so would be to "create a false impression" that the candidate would be loyal to those who had aided him; and that if Harriman's contribution to the Roosevelt campaign of 1904 had been known, it would have been made the basis of "an insincere and untruthful argument." This from the blunt and forthright Roosevelt! It is too painfully like the elastic politician who wrote to Harriman in 1904: "If you think there is any danger of your visit to me causing trouble, why, of course, give up the visit for the time being." Fancy such a letter from Bryan to Harriman, and the great play that Roosevelt would make of it!

Judge Taft was asked in Minneapolis if he approved of President Roosevelt's course in going out day after day to smite Bryan. The Republican candidate declined to answer. We suppose it is one of those things in his relations with Roosevelt which he admits to his friends are "exceedingly embarrassing" but which he has "got to stand." He must see that the President's dash for the front of the stage has shoved Taft himself far over to the wings. If this keeps on, people will be in danger of forgetting exactly who is the Republican candidate for the Presidency. Judge Taft's dignity, as well as that of the Presidential office, requires that Mr. Roosevelt should leave off these recurrent shoutings, and let the nominee of the party speak for himself.

ENGLAND AND GERMANY.

Lord Tweedmouth's final retirement from the English Cabinet, primarily for being too friendly a correspondent of Kaiser Wilhelm, is one proof more of the persistent bad feeling between England and Germany. This, unhappily, has to be accepted as a fixed fact. It colors the press of each country; it embarrasses every form of intercourse between Germans and English; it affects their diplomacy; it shapes their policy. The more statesmen and rulers endeavor to remove or minimize this hostile sentiment, the more plainly is its existence put in evidence. King Edward may embrace the Kaiser, but the people behind them are as far as possible from falling on each other's necks. At the very moment when the English Chancellor of the Exchequer was making his good-natured and friendly speech in Hamburg, the book-shops of that city were displaying an alarmist brochure, "Die Engländer kommen: Ueberfall von Hamburg." This was, no doubt, a mischievous publication, but its account of the destruction of the German fleet by the English, and the landing of 150,000 men to capture Hamburg, shows the preoccupation of animosity which prevails. The English are equally irritable and obsessed on the subject of the designs of Germany. Nothing but a kind of brooding over possibilities that runs into hysteria could account for the absurd outcry at the time the German torpedo-boat put into an English port near the fleet manœuvres. Excitable Frenchmen, with their readiness to cry out "Traitor" or "Spy," could hardly have equalled the sedate English, on that occasion. Such incidents could occur only when there is settled distrust between two nations.

The causes of such a state of international prejudice and antagonism are not of a day, nor are they simple. The difficulty is one partly of manners. Englishment have, traditionally, an enormous talent for making themselves hated, and during the past twenty years they have given Germany the full benefit of it. That "moral censorship" which Lord Rosebery has said that England is so ready to exercise over the Continent, has been extended over Germany with peculiar rigor and offensiveness. And the Germans, on their side, have not been blameless. German official manners are not exactly ingratiating. Bismarck set the fashion of diplomacy booted and spurred, and the trouble has been that his smaller successors have too often attempted to stamp about in his rough Prussian fashion, but without his vigor or effectiveness. There is an evident feeling in Germany that she has not of recent years been so successful

or respected in diplomacy as she should like to be; and this sentiment is like a goad to a man of Von Bülow's stamp, pricking him forward to rashnesses like his Morocco note of last August. An accumulation of these annoyances on both sides tends to irritate and inflame, though no real provocation be intended.

A deeper reason for Anglo-German misunderstandings and jealousies lies in commercial rivalry, and in the supposed necessity of promoting or at least protecting trade by armaments. Germany has made great and rapid strides along the industrial path. Almost without harbors though she is, she has built up large merchant fleets and developed a vast sea-borne commerce. Along with this mercantile strength on the ocean, she is entitled, according to the accepted canons, to a navy commensurate with her growing trade and her closer and more important relations with distant parts of the world. But this application of the established doctrine of England, some Englishmen are not willing to allow Germany to make. "We cannot see," said one English member of Parliament, in all gravity, "what Germany wants with battleships except to threaten us." This is the sore spot. At the very point where German ambitions are at present the highest, England's opposition is felt to be the most intense. A common expression among Germans is that England is not content to see Germany reap the legitimate fruits of skill and energy. It was probably a settled resentment of this, more than any desire for war, which led the German government to reject in advance of the Hague Congress the proposals of the English Ministry for a limitation on the building of warships.

The fact that both nations are strong, yet are unable to match strength with strength, seems to add exasperation to the ill-feeling. Germany believes that she has a splendid and unrivalled instrument of war in her army. Yet she cannot use it against England. The English fleet is with reason believed to be the strongest in the world, yet it would not enable England to grapple with Germany on land. The whale cannot fight the bear, nor the bear the whale. This is lucky for the peace of the world. Bismarck said that cold water was the most peace-preserving of the elements; and the strip of cold water between England and Germany is a confirmation of the saying.

Yet the mutual suspicion and dislike remain. The efforts of enlightened men in either nation to bring about more friendly relations have really had but slight effect upon the masses. In the minds of the generalty, the smouldering animosity seems to close observers to strengthen with every year. Germany as such, hates England, and England as such hates Germany. Much as we must deplore the fact, we cannot blink it. Anglo-German relations are almost continuously tense. We do not say that a war is thought of, or is at all conceivable, on any ground of difference that now exists; but such an inflamed and embittered feeling between two nations is always dangerous. If there is any way of subduing or removing it, the statesmen responsible to the two peoples ought not to lose a day in setting about it.

The public attitude of the monarchs of the two lands has been all that the most ardent lover of peace could expect. The Kaiser's long visit to England, last year, was a marked token of friendliness; and King Edward is to make a stay in Germany the coming winter which will be fully as significant. But it is, after all, policy, and not the friendship of kings and emperors, that makes for secure peace. As Dr. Theodor Barth pointed out at the Free Trade Congress in London this summer, English fiscal policy is a strong bond of good relations with Germany. So long as a Liberal Ministry is in power, Germans will know that whatever measures may be taken to keep the English navy far stronger than their own, nothing will be done to deprive German trade of equal opportunities in all parts of the English possessions. Should a protectionist government take office in England, and add discriminating tariff laws to the other causes of German irritation, one could but tremble for the result. Meanwhile, the golden hour should be seized to establish an Anglo-German *entente* covering equitable trade relations, and, if possible, an agreement respecting the size of war fleets. The German government might be ready now to listen more tolerantly to offers along this line than when Prince Bülow declared so categorically last year that Germany could find no "formula" in accordance with which armaments might be limited. He may find a financial formula now. The Imperial Government is so heavily in debt, and is so embarrassed in looking about for new taxes, that it might welcome a plan that would at once assure peace and permit the naval budget to be cut down. The *Kreuz-Zeitung* has lately intimated that this might be done. In that case, the very exacerbation of opinion which now divides Germany from England, might lead up to a friendly settlement embodying once more Cobden's ideal of retrenchment, free trade, and peace.

MEDICINE'S LOSSES AND GAINS.

Last week an international conference on tuberculosis was opened at Philadelphia. This week the Congress on Tuberculosis for which delegates have come from every corner of the globe, is meeting at Washington. Apparently, the doctors are not quite convinced by Christian Science argument that their trade is a swindle, or at best a delusion of which practitioner and patient are alike the victims. We say this with no desire to be ironical. But it is hard to do away with the general impression that the various schools of mind cure have been carrying on a winning fight against the orthodox medical creed. It is an impression founded on the growing number of "spiritual healers," on the prominence given to their views by the press, on the notable converts they make from time to time, and last, but not least, on the fact that the established religious denominations are finding it necessary to meet the competition of the new propaganda by establishing spiritual clinics and sanitaria of their own. The medical reformers have cited eminent scientific opinion in their own behalf. Prof. William Osler, for instance, has been quoted as maintaining that practically our entire pharmacopœia might be discarded without appreciable loss to the world's health. And we of the laity, who are generally the slaves of experts in every field, and especially in the field of the sensational, have fallen into the habit of looking upon doctors rather superciliously.

For the new scientists—if we grant them the use of that term—have this enormous advantage: When they assail the doctors, they appeal to an instinct that probably goes back to the time when the first broken bone was set and the first epileptic was cured by medi-

cine men who beat kettle-drums, blew horns, and made horrible faces. The human mind has always felt the anomaly of giving the mastery over life and death into the hands of men who are apparently no better than ourselves, and often, as the Irishman believed, worse. Add to this the fact that the medicine-men were the first scientists, that scientists are historically regarded as pretending to greater knowledge than they possess, and that the world avenges its chronic subjection to scientific authority by occasional saturnalia of distrust and abuse, and we find it natural enough that Molière's skeptic, who needed all his strength to bear up under his ailment without loading himself with drugs, is as real now as he was two hundred and fifty years ago. It does not matter that Molière's Doctor Diafoirus refused to believe in the circulation of the blood, and that we have attained a knowledge of nerve tissue and germ-plasms. The case still stands that life is our fundamental possession and that doctors often try to save life and fail. Hence the movement away from medical science *cum* medicine, as the English would say.

What has made the revolt against the doctors all the more impressive is that sedition has been strongest among those whom we are beginning to call our upper classes. The Christian Scientists are a prosperous denomination, and they draw their recruits largely from the old native stock. As to why this should be so opinions would differ. The Christian Scientists might assert that with a higher degree of intelligence comes quicker insight into the futilities and pretensions of the doctors. The doctors might retort that only the well-to-do can afford to suffer from neurosis, with which the new religion most successfully deals. But in any event, the class-distinction we have pointed out would hold; and about it the doctor, if he be not too much out of temper, might build up a powerful argument against the general belief concerning the decline of the old medicines. He might show that for every follower the orthodox medical science loses, it makes a dozen converts among the immigrant millions who come to us bearing the ailments of the Old World. Our hospitals, clinics, and social settlements report no particular apathy in our tenement districts. The Sicilian peasant in New York prays less to his images and goes more often to the free dispensary. The Slavs and Levantines give up amulets and simples for expert medical advice. The Jews of the East Side have called in the doctors whom in poverty-stricken Russia they could not afford to consult. Our physician might, therefore, formulate this striking anomaly: While medical science is winning over millions of our foreign-born from superstitious practices to the methods of scientific healing, the native-born are drifting away from real science into what the doctors describe as superstition.

But the case may be made much stronger still. In view of such successful effort as medical science is making against tuberculosis and other diseases, it would be absurd to maintain that medicine is being discredited as a science or an art. The campaigns against yellow fever, cholera, malaria, the sleeping sickness, and plague, are campaigns in which hundreds of thousands of lives and great portions of the world's area have been and are being won. That the fight is largely one of prevention, sanitation, housing, and feeding, and not of drugs, makes it no less a fight of strictly medical science against disease. Only the fanatic would now assert that medicine is synonymous with Molière's clysters, leeches, emetics, potions, and Latin rigmarole.

THE READING OF CHILDREN.

Considering the number of children who have been in the world at one time or another, it is surprising that so little organized attention has been given to their reading. A collection of bulletins from public libraries reveals the fact that juvenile readers first gained official recognition less than two decades ago. Previous to that time boys and girls under twelve or fourteen were frequently barred from the people's books as irresponsible nuisances. Of course, they always had access to the dull and pious slush of the Sunday School library; but excepting that treacle diet their intellectual fare was much neglected. In this field the *laissez-faire* doctrine has always been popular. "Give a young girl," said one who knew much of books but little of girls, "the run of a good old-fashioned English library and she will find her proper food." To say nothing of the fact that good old-fashioned libraries are not to be found in every five-room flat, this easy counsel is fraudulent. Some girls, like Elizabeth Barrett—later the pedantic Mrs. Browning—are doubtless born in dark blue stockings. But put a fresh-hearted, right-minded ten-year-old child among the frowning tomes of Hooker, Spenser, Milton, Dryden, Swift, Pope, Fielding, and the rest, and it is as much at a loss for nourishment as if settled among the megalithic relics of Stonehenge. Furthermore, if that child demands of the regular denizen of the good old-fashioned library "something to read," the chances are that this literary authority will be unable to mention among his two or three thousand volumes one book that is suitable.

The fact is that most parents, educated or uneducated, are hopelessly incompetent to minister to the intellectual recreation of their children. In the first place, they do not give the subject serious thought, and they fail to keep in touch with the "movement" in the world of juvenile letters. With all the talk among elders of the Augustan, Romantic, and Realistic Ages, no one has appeared to recognize any corresponding development of taste in boys and girls. Otherwise why should Johnnie have to read "Pilgrim's Progress," when his father is absorbed in "The Jungle"; or Mary, "Little Susy's Six Birthdays," when her mother is gusting "The Fruit of the Tree"? Partly because Mary's mother and John's father would be put to it to name half a dozen good children's books written within the last ten years. Partly also, because the average parents, especially fathers, are, in relation to their offspring, prigs. Possibly, the father still chuckles over "Tom Sawyer" and "The Story of a Bad Boy," but for his own son, he feels that mischief needs no artificial prompting, and besides he is probably conniving at the aspiring mother's plan for a Fauntleroy-Chesterfield. Embarrassed by this hypocritic virtue, it is no wonder that, generally speaking, parents flee in terror from the intimacies of their children. Though childless, Samuel Johnson was in some ways a typical parent. Every one will remember his dismay when Boswell, whimsically inspired, asked him what he would do if shut up in a castle with a new-born infant. "Why, sir," was his first reply, "I should not much like my company." Then when relentlessly pursued by his

biographer, "I should feed it, and wash it much, and with warm water to please it, not with cold water to give it pain." From the thought of intellectual association with the young child he withdrew abashed.

In a field where a universal doctor like Johnson, who rose in the morning prepared to set people right all day, could get no farther than a warm-water bath, there must still be room for original research. That we are now a little lower than the angels instead of being a little higher than the apes is due, as John Fiske pointed out, to the prolongation, in our branch of the simian family, of the period of childhood. Yet the possibilities of that rich tract of time between the cradle and the high-school are only beginning to be realized. The public libraries have already done a noble work with inadequate means in setting apart rooms, selecting books, and studying and guiding the juvenile taste. That these children's books often constitute 40 to 50 per cent. of the entire circulation justifies the endeavor; and no one can say how many idle hands have been prevented from hiring out to Satan by the occupation of the heads. But unless we wish with Plato to surrender our young to the rearing of the state, we should not rest there. So much could be done by the independent effort of every child-rearing family! Every nursery could easily be turned into an experimental laboratory. Every household should possess, in addition to Hesiod, the Koran and the ninety-eight other "best books," a hundred irresistibly bound volumes, copiously illustrated, chosen after diligent investigation for the use of the youngest generation. The children should have free access to the shelves, and should be scientifically observed. With a little patience, statistics could be gathered which would enable the future historian of "Juvenile English Literature" to rank authors in the temple of fame, determine classics, and speak intelligently of literary taste previous to the twelfth year. At present the whole field is a mediæval morass.

It is comparatively easy to say what works should not be in the child's bookcase. They may be divided into three classes: First, all those books read by show-boys and infant wonders and mentioned in their biographies—those, for example, read by that dry little pundit, John Stuart Mill, who began Greek at three and by the time he was eight knew more of the classics than most college presidents. Youths in short trousers who read Gibbon, Hume, and Herbert Spencer are not to be trusted nor imitated. Such boys dolorously leap-frog their youth and stale their maturity before its time. Equally pernicious in a different way are the works of the prolific and mechanical authors who show their unfitness for producing juvenile literature by the absolute ease with which they turn out fifty or one hundred volumes of it. Nearly all of this work is unscrupulous shoddy, as harmful to boy as to man. A good book for children cannot be made like a roll of dry goods; it calls for a mature, grave, and resourceful head that writes with the simplicity of Solomon. The third class is the most damnable of all—that engendered in the mind of snobs whose sub-titles always run "For the Little Ones," an almost certain sign that the book should be burnt by the common hangman. An excellent illustration is afforded by the "Child's Keepsake: A Book of Original Poems for the Young," published in Boston, 1854. The intolerable condescension of the author, representative of the period, is clearly brought out in the first lines of the first poem:

> My dear little readers, the moment you look
> At the pictures and poems contained in this book,
> You'll see 'tis a volume intended for you,
> To guide your young hearts to the good and the true.

What are the hundred best books it is impossible in the present state of our knowledge even to suggest. One fundamental principle, however, may be enunciated: The best children's books may be read with equal, if modified, pleasure by adults. In spite of new-fangled faddists, there has never been published a more wholesome and stimulating book for old and young, a book containing a more suggestive and splendidly diversified picture of life than "Mother Goose." From the gnomic terseness of

> He that would thrive
> Must rise at five

to the wild note of Byronic revolt in

> A frog he would a-wooing go
> *Whether his mother would let him or no*

there is not a line which does not conduce to virtue, wisdom, or delight—or to the three in one. If the *quod semper, quod ubique* test is of any value, "Mother Goose" must be reckoned with the immortals. By such touchstones we must proceed in our task of selection. Next to "Mother Goose" are to be esteemed the various beast fables and epics, and, in short, all the work of the nature-fakers from Pliny to Long—on such stuff, the infant Shakespeare fattened. Of much merit also are the chromatic fairy tales, and, for those who are equal to the terrors of the Queen of Hearts, "Alice in Wonderland" and "Through the Looking Glass." For serious works we may include "Evangeline" and the "Birds' Christmas Carol"—but one should not sadden children often. On the workshop shelf—every boy should have a workshop—there should be a half-dozen books telling how to make things such as boats, sleds, and traps. For girls Louisa May Alcott's works seem perdurable classics. Finally, a boy had better never have been born than not to have fingered the fowling pieces and powder horns of Crusoe—than not to have known the imaginative deliciousness of dried goat's flesh and tortoise eggs.

THE INTERNATIONAL CONGRESS FOR THE HISTORY OF RELIGIONS.

Oxford, September 19.

Perhaps the most significant features of the Third International Congress for the History of Religions were: First that it was held in Oxford; and second, the list of members—about six hundred—comprised representatives of all phases of religious thought. The spirit of the Congress was one of the broadest tolerance in combination with a remarkably earnest disposition to discuss frankly problems of historic or archæological interest, as well as those which have a distinct bearing on present religious conditions. These Congresses are an outgrowth of the Parliament of Religions held in Chicago at the time of the World's Fair in 1893. Instead of attempting a repetition of that experiment, which would have been of doubtful value, it was resolved in connection with the French Exposition of 1900 to hold a Congress of students interested in the history of religions. The undertaking proved sufficiently successful to warrant the holding of a second one in Basel in 1904.

The choice of Oxford for the third Congress was particularly happy. Whether judged from the point of view of membership, which was almost twice as large as at Basel, or from the character of the 140 papers presented, or from the arrangements for the com-

fort and pleasure of those in attendance, the congress was a perfect success. Two new features were added: The one an addition of a section for Method and Scope of the History of Religion; the other a series of addresses by the presidents of the nine sections, intended to furnish a survey of work done within the respective divisions or a discussion of problems of a more general character. The nine sections of which the congress was thus composed were: (1) Religions of the Lower Culture; (2) China and Japan; (3) Egyptian Religion; (4) The Semitic Religions; (5) India and Iran; (6) Greeks and Romans; (7) Germans, Celts, and Slavs; (8) Christian Religion; (9) Method and Scope of the History of Religion. The presiding officers were: E. S. Hartland, H. A. Giles (Cambridge), Flinders Petrie (London), Morris Jastrow, jr. (Philadelphia), T. W. Rhys Davids (Manchester), Salomon Reinach (Paris), Sir John Rhys (Oxford), the Rev. William Sanday (Oxford), and Count Goblet d'Alviella (Brussels). The sessions were held September 15 to 18.

The address of the president of the congress, Sir Alfred C. Lyall, was an able presentation of the contrast between the Christian and Islamic attitude towards the problem of Church and State, on the one side, and that of Buddhism and Hinduism on the other. Classing the two former as the religions of the West, he traced the development in both, of the doctrine that the state was bound to enforce orthodoxy, unity of creed being regarded as essential to national unity; whereas in the religions of the East, religious despotism in the sense of the legal establishment of one faith or worship to the exclusion of others, is unknown to history; and this despite the fact that in the region covered by Buddhism and Brahmanism political despotism has prevailed immemorially. While the governments have been absolute and personal, the religions have been popular and democratic. Even in China, where the ritual code is incorporated into the statute-books and promulgated with imperial sanction, the government formally recognizes three denominations. Religious wars, *i. e.*, wars caused by the conflict of militant faiths, were unknown in eastern Asia until Islam invaded India. Coming to modern times, Sir Alfred dwelt on the significance of the fact that the theory that a state was bound to propagate the religion it professes is gradually being abandoned in countries where Christianity holds sway, whereas in Mohammedan kingdoms, as in Turkey, the notion still survives. The movement towards constitutional reforms in Mohammedan Asia may lead to tolerance resembling that of European states. The speaker closed by pointing out that the reconciliation of civil with religious liberty is one of the most arduous of the many problems that confront European dominion in Asia.

One of the most notable of the presidential addresses was that of Prof. Flinders Petrie, whose survey of the various aspects of the Egyptian religion was a masterpiece. Taking up in succession the theologic, funerary, magical, popular, tribal, psychological, and personal phases of the religion, he pointed out how, in accord with the temple architecture, which was copied from the structure of the house, the temple ritual was a transfer to the statue of the god of the daily service rendered to a great *seigneur* in Egypt. The fire was lighted, a lamp carried to the god, incense burnt, food offered, the god was washed, perfumed, anointed, and decorated—in short, the daily routine of a servant towards his master was carried out. The most suggestive part of the address was the closing division in which he traced the development of the "Logos" doctrine in Egypt from the sixth century, B. C., in which the first definite traces appear, down to Philo Judæus, about 40 A. D. In Hermetic documents of the fourth century, B. C., we already find the thought of the "Logos" as the creative word of God strikingly developed and hailed as "Son of God."

The addresses of Professor Jastrow of the University of Pennsylvania and of Prof. Rhys Davids of Manchester University, as presidents of the fourth and fifth sections, respectively, represented an endeavor to cover in a rapid survey the more important results of recent researches within their respective fields—the Semitic Religions and the Religions of India and Iran. Professor Jastrow took a definite stand against the extremes to which theories and theses, in themselves valuable and containing much truth, were being pushed by their advocates. To this category belongs the astral-mythological key with which Messrs. Winckler and Jeremias propose to unlock the intricacies of ancient civilizations. The theory, however, rests on a substantial basis, which should not be lost sight of by those who are unable to follow its advocates to the full length. Prof. Rhys Davids made special reference to the valuable series of publications being issued through the cooperation of various scholars under the able editorship of Prof. Charles R. Lanman of Harvard University. The briefest of the presidential addresses was that of Salomon Reinach, which, however, enjoyed the distinction also of being the most incisive. Instead of attempting a report on the progress of scientific study of the Greek and Roman religions since 1904, M. Reinach contented himself with pointing out certain tendencies in this field of research. While admitting that the so-called anthropological school has steadily gained ground, different systems based on euhemerism, on ancestor-worship, on solar and astrological myths, in order to account for the phenomena of religion, can by no means be considered as discarded. Setting forth recent contributions to the history and scope of astrology in ancient religions, M. Reinach suggested that we have perhaps dwelt too exclusively on the earthly and psychological elements of cult and myth, and that it may be well for us to turn our eyes once more to the starry heavens, though warning against hasty and immature conclusions is here also in order.

Perhaps the most interesting portion of Sir John Rhys's address as president of the section on the Religions of the Celts, Germans, and Slavs, was that which dealt with the old Celtic hero-god Lug, traces of whose wanderings in Great Britain and on the Continent Professor Rhys found in such place names as Leyden (=Lugdunum Batavorum), Lyons, Ludgate, and even London. Count Goblet d'Alviella gave an admirable summary of the part played in the study of religion by ethnography, folklore, prehistoric archæology, philology, and psychology, and sociology. As he is a veteran in the study of the phenomena of religion, his warning against the attempt to explain everything in religion through the study of primitive culture was, perhaps, the most striking feature of the address. As a proof of the growing interest in the historical study of religions, he instanced the fact that there are now about twenty-five chairs especially devoted to the subject at universities in Europe and America Even in so "orthodox" a centre as Bavaria, the government has recently transformed into a course for the history of religion, a "theological" chair whose occupant was accused of Modernism.

In addition to the presidential addresses, most of which were delivered in general sessions, a selection of the papers was made for presentation at sessions of the combined sections. The address of Arthur J. Evans, the explorer of Crete, on "New Lights on the Creed and Sanctuaries of Minoan Crete," was one of the most notable. Among the important results of Mr. Evans's most recent researches was the increasing evidence of the aniconic character of the main objects in the Cretan cult, which consisted either of natural objects as stones, peaks, and trees; or of artificial symbols, as pillars, cones, obelisks, the double axe, and also the cross, which in its simple form—and probably at its origin a four-rayed star—had been found in the oldest stratum of the Cretan excavations. By the side of these objects, however, occur representations of deities, painted designs, or engravings on signets, as well as images of clay

faience or metal. The main divinity appears to have been a goddess, as in general goddesses in Crete take precedence of the gods. Most remarkable among images of deities was a goddess with snakes entwined about her arms as a symbol of her chthonic associations, while the dove, which also occurs as one of her symbols, points, on the other hand, to her celestial attributes. On a signet ring, the goddess was represented as coming in a barque from across the sea, an important indication of the importation of the cult. The dog was one of her symbols and this, as well as other facts, suggested parallels, if not a direct connection, with various Semitic goddesses.

Prof. Percy Gardner's significant paper on Greek influences in the religious art of Northern India suggested new avenues of archæological research. It was supplemented by a series of lantern slides to illustrate the main characteristics of Buddhistic religious art, which were explained by Professor A. A. Macdonell of Oxford. The religious architecture of India was divided by Professor Macdonell into three periods, relic mounds, churches, and monasteries. From being at first low and dome-shaped, the relic mounds gradually grew to be more like towers, and finally into the shape of the Chinese pagodas. On the other hand, the cave churches with their naves and side aisles bore a striking resemblance to the Christian churches, even to the relic mound, which took the position of the altar. In connection with these two papers, Prof. Flinders Petrie showed pictures of images and other objects which were found in the course of last year's excavations at Memphis, and which, dating from c. 200 B. C., pointed decidedly to India as their origin. The proof thus furnished of an early connection between Egypt and India would account for the ascetic tendencies, including the establishment of monasteries, in the later periods of Egyptian history.

Two of the general papers—those of Prof. C. von. Orelli of Basel and of Prof. R. C. H. Charles of Oxford—bore on Old Testament and New Testament problems. The former, choosing as his topic "Religious Wisdom as Cultivated in Ancient Israel in Common with Neighboring Peoples," showed that the books of Proverbs, Job, and Ecclesiastes illustrated the form of thought that the Hebrews shared with their neighbors. It is on this basis that we must explain the references to the "Wisdom of Edom." found in the prophets Jeremiah and Obadiah; nor is it necessary to assume Greek influence in accounting for the philosophy and general spirit pervading the "Wisdom" literature of the Old Testament. The practical character of this literature and the gnomic form point to a Semitic origin; and although there are striking similarities between the Old Testament proverbs and specimens in the literary remains of ancient Egypt, Professor von Orelli was not inclined to recognize any direct Egyptian influence, but rather to find the missing link uniting the two in the much earlier and much more unsophisticated "Wisdom of Edom" and the "Sons of the East," *i. e.*, the nomadic tribes of Arabia and Syria. Quite different is the later "Wisdom" literature, as illustrated in Ecclesiasticus or the Sayings of Ben-Sira, which is distinctively an outcome of Jewish thought. Professor Charles took up the doctrine of man's forgiveness of wrongs as set forth in the Old Testament, in the Apocrypha, and the New Testament. Contrary to the opinion currently held in wide circles, Dr. Charles showed that the New Testament view of forgiveness was not a new departure, but represented merely the further development of thoughts clearly expressed in the Psalms, though by the side of survivals of the earlier view, which favored a *quid pro quo* for wrongs and injuries. The manner in which the New Testament view was approached in the Jewish Apocrypha furnished a further proof that the later Judaism was proceeding in the direction which found a more definite expression in certain sayings in the New Testament.

Of the sectional meetings, two were held daily during the four days of the congress; and it is, of course, impossible to convey more than a general impression of the papers read. A paper of more than ordinary interest in the Egyptian section was read by Miss M. A. Murray of London on "The Position of Women in Early Egyptian Ritual." She showed that from the time of the fourth dynasty down to Ptolemaic times women held priestly offices. In the Pyramid period women held office in the cult of the dead king, but this custom did not continue. Under the Ptolemies the chief sanctuary of every province had its high-priestess, as well as its high-priest. An early goddess of war, known as Neith, and identified by the Greeks with Athene, was served entirely by women in the old kingdom, while, curiously enough, another goddess, Hegt, worshipped as a frog and symbolizing the goddess of birth, had only male priests in attendance on her.

In the Semitic section mention should be made of Dr. J. G. Frazer's "Notes on Hebrew Folk-Lore." One of these notes furnished an explanation of the Hebrew word for widow, which means "the silent one." Dr. Frazer instanced numerous examples from various parts of the world of the custom prevailing among primitive peoples, obliging a widow to refrain from all speaking for a period after her husband's death, varying from a few months to several years. The reason for the strange custom was the fear lest by speaking the widow might invoke the spirit of her dead husband to the injury of the tribe. Professor Jastrow's paper on "Hepatoscopy and Astrology Among the Babylonians and Assyrians," was an endeavor to show that, while hepatoscopy, or divination of the future through the liver of the sacrificial animal, represented an outcome of popular beliefs, astrology was the outcome of early "scientific" speculation on the relationship between the phenomena of the heavens and occurrences on earth. A young scholar, Dr. Robert Eisler, from Austria, read two most suggestive papers, one on the "Origin of Eucharist," the other on the "Orpheus Cult." He offered a new explanation for the term "Orpheus," which he took to be an ancient Lycian word meaning "fisher," or, in a more general sense, "hunter." The Orpheus cult was originally a "fish" cult, and the music of Orpheus was intended as a means of attracting the "fish," and subsequently of animals in general. The "fish," which plays such a prominent rôle as a symbol of Jesus, Dr. Eisler would connect with the same cycle of ideas and beliefs. Jesus and his followers, as "fishers of men," represent an adaptation of an ancient rite connected with a fish cult. Connecting the three stories in the gospels associated with the institution of the Eucharist, (a) the Lord's supper with the paschal lamb, bread, and wine, (b) the feeding of the multitudes with loaves and fishes, and (c) the miracle at the shore of Lake Tiberias, and mentioning the roast fish and the bread, Dr. Eisler strongly maintained that the "bread"—in Hebrew, *lehem*—was identical with "fish," just as the Phœnician god Dagon was both a "fish" and a "corn-god." Since *lehem* besides meaning "fish" and "bread," also equals "spirit" or "breath," the further conclusion was drawn that all three symbols—fish, loaves, and lamb—were ultimately identical, and that the final source of the Eucharist was an ancient widespread rite connected with a water cult of some kind. In the Indian section Professor Lanman of Harvard gave an account of Buddhaghosa, whom he called the "St. Augustine of the Orient," and whose work, the "Way of Purity," was an elaborate and systematic treatise in Pali upon Buddhism, written in Ceylon about 410 A. D.

A suggestive paper was that of Dr. Nathan Soderblom of Upsala University, on "Holy Triads." Distinguishing between polytheistic and non-polytheistic triads, he placed in the first group cosmical triads of synchronous or successive divine rulers; the mythological triads, father, mother, and son; the hierarchic and intercessional triads, and the like. Dr. Soderblom maintained that the Christian triad, Father, Son, and Spirit, does not belong to any of these types, but has its illustrative analogy in the Buddhist conception of

Buddha, Dhamma, Sanga. Such a triad is characteristic of historical and revealed or "founded" religions, and is the outcome of the historical fact of (1) "the revealer" (Buddha, Christ), (2) of his revelation (the doctrine of salvation, the heavenly Father), and (3) of its result, "the new life." This triad, it was argued, is inherent in all founded religions, although it has been expressed in a tripartite formula in Buddhism and Christianity only. While in both these religions, the three-headed formula has given rise to metaphysical speculation, in its origin it is not due to speculation or to the holiness of the number three, but to the essential character of a founded religion.

Prof. Arthur Titius of Göttingen advocated the appointment of an international commission to gather the material for the study of rites and beliefs among primitive people. Another suggestion was the need of a school for training men in the principles of comparative religion, which was brought forward by Dr. Louis H. Jordan from Canada. It is, perhaps, too early for these congresses to take up definite projects, but it is to be hoped that as a result of the stimulus given to the study of religions, practical steps may at a future congress be taken to promote the investigation of important problems, which can be solved only through the coöperation of scholars, working in various fields.

At the closing session, an International Committee was appointed to make arrangements for the next congress, the place to be left to this committee. The American members are Profs. George F. Moore of Harvard and Morris Jastrow, jr., of the University of Pennsylvania. It is likely that either Hamburg or Brussels will be chosen for 1912. Owing to the unexpectedly large membership, the Oxford Committee will have enough funds to publish many of the papers in full and others in copious abstract.

M. J., JR.

NEWS FOR BIBLIOPHILES.

Forty years ago Henry G. Bohn, in his revision of Lowndes's "Manual," described eight different title-pages for the first edition of "Paradise Lost," and other writers have followed him. Marshall C. Lefferts, who gave special attention to the bibliography of Milton, and the result of whose studies is embodied in the Collations of the Grolier Club, came to the conclusion that Bohn's fourth and fifth title-pages never existed; and more recently W. E. Baxter, an English author, in an article on "Paradise Lost," published the same conclusion. It is somewhat of a surprise, therefore, to see that Dr. G. C. Williamson, in the Catalogue of the Milton Exhibition, held at Christ's College, Cambridge, in July, describes eight title-pages, though, as he reproduces only six, he is apparently unable to discover copies of the two missing forms. Of the six varieties known to collectors, two are dated 1667, two 1668, and two 1669. The form generally described as the first has the name "John Milton" in large italic capitals, measuring more than three-sixteenths of an inch in height. Dr. Williamson's facsimile, which is full size, and is supposed to be photographic, does not contain the large period or full stop at the end of the first line. If this is a faithful reproduction, it shows an earlier form not hitherto identified. It is more likely, however, that this period was accidentally cut away in "routing out" the plate. This is a not infrequent fault of zinc etchings, which, though photographic, cannot always be trusted. In the second title-page, also dated 1667, the author's name is in much smaller italic capitals, measuring scarcely one-eighth of an inch. In both titles line 6 is "By John Milton." In the third title, this line is changed to "The Author J. M.," and the date is 1668. Dr. Williamson describes the fourth title as identical with the third, "but with some slight variations in the size of the type and a full stop after the word 'books.'" This variation was not mentioned by Bohn, but was described by Prof. David Masson. Mr. Lefferts, however, calls this merely a variation of the third title. Masson and Williamson's fifth title (the fourth of Bohn and most other writers) has in place of the license a fleur-de-lis ornament of four lines under the author's name, and a different imprint. Instead of "Printed and are to be sold by Peter Parker," this, and all later forms read, "Printed by S. Simmons." Bohn's fifth title has three asterisks before and three after the author's name. As this form has not been seen in recent years, it probably never existed. The asterisks may have been put in with a pen in the copy which he saw. His sixth is the "same as the fifth, excepting that there are no stars on the title-page." This makes it identical with his fourth. His seventh and eighth titles (actually, probably, the fifth and sixth) bear the date 1669; one has a period after "Books," and the word "Angel" in the imprint in Roman letters; while the other has no point after "Books" and "Angel" is in italics.

The Grolier Club of this city is preparing an exhibition for December, in honor of the three hundredth anniversary of Milton's birth, December 9, 1608. There will be first editions of all of the printed books, and several books from Milton's library. There will not be the interesting paintings, drawings, and miniatures which were included in the Cambridge exhibition, but the committee has already secured a greater number of engraved portraits.

The Harvard Library has received as a gift from Alfred Mitchell of New London an interesting volume of early New England sermons. The book is thus described in the *Harvard University Gazette:*

Of the seventeen pamphlets contained in the volume, six were printed in Cambridge, between 1667 and 1682, and eight in Boston, between 1678 and 1686. Among the authors were three presidents of Harvard College—Leonard Hoar, Urian Oakes, and Increase Mather, as well as Samuel Willard, who bore the title of vice-president from 1700 to 1707. Five of them were, at one time or another, Boston ministers—John Cotton, Samuel Mather, Increase Mather, Thomas Thacher, and Samuel Willard—while Thomas Shepard and Urian Oakes were settled in Cambridge, Hugh Peters in Salem, Richard Mather in Dorchester, and William Adams in Dedham. Seven of the authors were graduates of Harvard College; namely, Samuel Mather, 1643; Urian Oakes, 1649; Leonard Hoar, 1650; Increase Mather and Eleazar Mather, 1656; Samuel Willard, 1659; and William Adams, 1671. Six of them were also fellows of the college at different times.

Several of the pamphlets bear the autograph of William Adams, who graduated from the college in 1671, and was afterwards settled at Dedham, where he died in 1685. An inscription on the pamphlet, "God's Terrible Voice in the City of London, wherein you have the Narration of the Two late dreadful Judgements of Plague and Fire inflicted by the Lord upon that City," shows that it was bought of the printer, Samuel Green, February 29, 1667, at which time Adams was a freshman in college. The volume was bound in its present form by William Adams's son, Elipbalet Adams (Harvard College, 1694), who was ordained pastor of the First Church of New London about 1708. At his death his library was bought by Nathaniel Shaw, a wealthy parishioner, from whom it passed through his granddaughter, Polly Shaw, to her husband, Ephraim Woodbridge, the seventh pastor of the same church. Mr. Mitchell, who gives the book to the Harvard Library, is a great-grandson of Ephraim Woodridge. It would probably be difficult to find in the College Library another volume containing so many early New England publications of extreme rarity.

Correspondence.

CORRALLING THE GERMANS.

To the Editor of The Nation:

Sir: One of the rather amusing questions which certain German papers have been discussing of late is the imaginary Isolation of Germany, but this particular topic is now giving way to a more serious, not to say more pathetic one, namely, the so-called *Einkreisung Deutschlands*, or the Corralling of Germany. For, after all, complaints of isolation and loneliness, whether real or feigned, sound pusillanimous, especially when indulged in by jingoes, who are proud of carrying a chip on their shoulder. Hence the Fatherland is no longer represented as left out in the cold and starving for lack of friends, but as surrounded and threatened by all sorts of foes and bogeys from whom some of the most excited alarmists see no escape, except by taking to a "Zeppelin" and dropping bombs from above. Meanwhile temperate Germans, as well as sober foreigners, stand by once more, wondering how all this loud talk about being corralled can have arisen and what it will end in. When thoroughly sifted, the complaints of German chauvinists and jingoes amount simply to the well-known cry of the pouting schoolboy: "I won't play, because the others don't like me!" And as a matter of fact, the playmates in the neighboring yards are not over-fond of the poor, disgruntled chap; but why they are not, he is neither told, nor does he care to inquire; all he insists on is that they are "down on him."

What, then, is there about Germany and the Germans as we bave known them, say, since the eighties of the last century, that has turned the respect and admiration of so many foreigners into indifference and even dislike? It would be strange, indeed, if this change of feeling were solely due to envy or jealousy; neither is proof lacking that such is not the case. Thus, the German

army that won the battles of the Franco-Prussian war is still admitted to be a model of its kind. In the sciences, pure and applied; in manufactures and inventions; in most industries and trades, Germany is still teaching the world what thorough training can accomplish with natural resources much smaller than those of many another country. Her great municipalities are visited and studied by numerous Americans who come to blush at the shame of their own city governments, and depart to apply newly-learned lessons of reform. In short, there is scarcely a field of human activity cultivated in Germany of which the fruits are not shared and also gratefully acknowledged by foreigners.

But—and this is probably one of the less obvious causes of the growing dissatisfaction with German civilization as we see it developing—in the reconstruction of the present empire, with Prussia for its chief architect, much more of the rotten mediæval timber was retained than the strain of modern equipments will allow. Not that this wrong-headed conservatism was the fault of Prussia alone, for the reconstruction, we must remember, took place in an age when all Germany became wildly enthusiastic over the past and finally went into a violent historical fever, which other nations either did not succumb to or soon threw off again. Any man with but a modicum of intelligence was at that time, and in the opinion of many he is still, nothing if not historical, or, as the misnomer ran, evolutionary. Specialists in history and philology had set the pace; others quickly followed—economists, naturalists, teachers in high schools and grammar schools, politicians, reformers, and journalists—all were told, on pain of being ousted from their guild, that they must look upon life, not *sub specie æternitatis*, but through the dim glasses of the past. Only what had been (so it was said) could ever furnish the clue to that which was to be; everything else was forthwith condemned as "historically unjustified" and as of no value for future progress. In fact, Germany's idealism, which in the darkest period of her political degradation under the first Napoleon did hitch her wagon to a star, has so long been digging among the ruins of bygone ages that it is itself fast becoming a matter of mere historic interest. An exaggerated worship of the past has enthralled the idealist and made him forget that ideals are neither of Time nor of Place, and may even require an occasional, resolute break with the past. How, then, can any unprejudiced observer of German life blame Americans or other foreigners for doubting that those shackles of Time will ever be loosened by a power like Prussia, whose very name has come to stand for reaction of the worst sort?

Far more patent, though hardly less baleful, than the effects of the *furor historicus* on the natural growth of German idealism have been those of an excessive militarism on German life in general. Here, too, a fair-minded critic will not forget what Germany owes to the Prussians. It was only through their inborn love of order and system, their keen sense of duty towards the state, and their devotion to national ideals that all the different tribes could be united in the hour of need. Nevertheless, it is one thing to inculcate elementary lessons of order, duty, and loyalty to one's clan; but it is a very different thing to prepare a people for self-government and for the broader patriotism that takes due account of the stirrings of international brotherhood. And in the teaching of these higher lessons, Prussian militarism has thus far miserably failed, as all militarism is doomed to fail. Its main structure is that of a mechanism, which can never perform the work of a living organism. Its ultimate tendencies are towards the establishment of rank, caste, grades, petty distinctions, millinery shows, superciliousness of conduct on the part of superiors, and servility on the part of inferiors—in short, towards foibles and vices which soon counteract its undoubted virtues and which, in spite of all the denials of military enthusiasts, are becoming painfully evident in the civic and social life of Germany.

If corroboration or proof were needed for the correctness of such harsh criticism as this, when advanced by foreigners, it could be adduced from writings and utterances of Germans whose patriotism has never been questioned, save by those who drown all criticism whatsoever with cries of "My country, right or wrong!" It is therefore both superfluous and useless to refer or even allude to men like Barth and Naumann, for they, too, have long been classed with the *Nörgler*, or chronic grumblers, and charged with the heinous crime of balking the final and complete Borussification of Germany. As for the masses and their numerous factions—away they march to drum and fife, now singing the praises of their imperial captain and leader, who is leading them the Lord knows whither, and then again chuckling and going into hysterics over Capt. Voigt of Köpenick fame, but failing withal to profit from the striking resemblance of counterfeit and original. It is a spectacle as sad as it is amusing.

And now, without further considering the effects of a decadent idealism and a rampant militarism on school and church, on elections and freedom of speech, and on the attitude of Germany in questions of international import, such as the peace movement and kindred reforms, let us ask why the Germans think themselves corralled, and who it is that is coralling them. The answer is not far to seek: Prussia, martial and aristocratic old Prussia, has done for Germany all that she could do. Her mission is ended, and to look for a modern Prussia seems hopeless. There are none so badly corralled as those who for years have been ensconcing themselves behind fences and pickets of their own erection. Nor are the Germans the only people guilty of such foolish doings and imaginings. We Americans, too, have our tariff barriers, and we have heard our Hobsons crying aloud from the Pacific to the Atlantic for more forts and bigger battleships to keep us from being corralled by the Japanese. Let us admit all this frankly, lest we seem partial or patronizing in our reflections on the affairs of others. But none the less is the pity that the Germans lack the saving sense of humor which would easily make them see that the corralled and the corraller are one. With respect to this insight, it would seem, we have the advantage of them, and there can be no doubt that we owe it mainly to our habit of now and then taking counsel of democracy. X.

En route in Germany, September 7.

"BRITISH" AND "ENGLISH."

To the Editor of The Nation:

Sir: In the interesting letter on the date of Shakespeare's "Lear," in the *Nation* for September 3, your correspondent, Prof. Roland G. Usher, remarks, "The word 'British-man' for 'Englishman,' on which Malone relied, cannot be earlier than March, 1603."

Too much importance has been given to this word "British" as an evidence of date. It is true that Edgar's words, "I smell the blood of a British man," occur in Harvey, Nash, and elsewhere, with "English," instead of "British." But the choice of "British" in "King Lear" has nothing to do with King James or his accession. It is the result of Shakespeare's oft-denied historical sense. In "King Lear" and "Cymbeline"—the two Shakespearean plays based on legendary British history—the dramatist consistently employs the terms "Britain," "Britons," and "British." These words (except "Britain") occur in no other plays; "English" and "England," on the other hand, are absent from these two plays, except for a single "English" (Lear iv., 6, 275) in the folio, supplanting "British" in the quartos, probably by a printer's blunder. All the major sources of "King Lear"—Holinshed. "The Faerie Queene," and "The True Chronicle Historie of King Leir and His Three Daughters"—are consistent in the use of "British." Shakespeare, in spite of the anachronisms with which the play swarms, is true to history in this regard, and, in the scrap put into Edgar's mouth, altered (if he did alter) "Englishman" to "British man" for the sake of consistency, not in deference to King James. The passage is accordingly without significance as an evidence of date. Frank H. Chase.

Beloit College, September 17.

THE REPUBLICANS AND THE TARIFF.

To the Editor of The Nation:

Sir: You said recently, "The Standard Oil is the most hated of all the Trusts." The majority of us are Republicans, and we vote for the tariff that makes Trusts possible. Such a tariff our national platform demands, and our candidate for the Presidency approves. Mr. Taft even intimates that some schedules must be "revised upwards," and that, over and above this, a "reasonable profit" must be provided for. Profit on the tariff the consumer must pay, as a matter of course; but the new doctrine that the government must make provision for such payment shows how considerate Mr. Taft is of the interests of the Trusts. You are supporting Mr. Taft; yet when he is President, the Standard Oil will continue to charge us from 30 to 50 per cent. for light more than it will charge foreigners. We shall pay for sugar about twice the price paid in England. Our steel producers will charge our railways $28 a ton for rails which they will sell to Mexican and Canadian roads, that ours must compete with, for $17. They will charge the American shipbuilder $55 a ton for steel plates which they sell to the English or any other builder for $35. This policy Mr. Taft advocates; yet he has the support of the *Nation*, and will probably be elected. How,

then, can we maintain that the Trusts are hated? JOHN GAMBLE.

Haywards, Cal., September 12.

A SUGGESTED AMENDMENT TO GERMAN GRAMMARS.

TO THE EDITOR OF THE NATION:

SIR: Let me use your columns for calling attention to a serious defect in all German grammars—all at least within my reach. One of the stock rules for gender is that mouns ending in -ei, -heit, -in. -keit, -schaft, -ung are feminine. To save the beginner trouble it would be well to note:

(1.) That Ei "egg" is neuter.

(2.) That "Schaft," in the sense of an upright piece, a column, the "shaft" of a spear or arrow, is masculine. (The phrase "Der Säulenschaft . . . klingt" occurs in "Faust" II., 1835). Also that "Petschaft," seal, (of Slavic origin) is neuter.

(3.) That the termination -in is twofold. In such doublets as König, Königin; Graf, Gräfin; Koch, Köchin, it denotes of course a feminine noun. But why overlook the fact that there is another (accented) -in used in hundreds and thousands of scientific terms, all of which are neuter? I will mention only five, any one of which may be a stumbling block to the ordinary reader: "Alizarin," "Anilin," "Morphin," "Quinin," "Strychnin."

J. M. HART.

Cornell University, September 18.

Notes.

The autumn list of the American Unitarian Association contains the following titles: "Captain Thomas A. Scott," by F. Hopkinson Smith; "The Higher Sacrifice," by David Starr Jordan; "The Sea of Faith," by Milton Reed; "Paul," by W. Wrede; "Sons of the Puritans," by various authors; "The Church of To-day," by J. H. Crooker; Theodore Parker's Works, Vols. IV., V., and VI.; "A Book of Prayers," by C. G. Ames; "Where the Light Dwelleth," and "Some Memories," by Robert Collyer.

The autumn announcements of B. W. Huebsch include: "The Spy," by Maxim Gorky, authorized translation by Thomas Seltzer; "Art and the Human Spirit," by E. H. Griggs; "Self-Measurement," by William De Witt Hyde; "With the Battle Fleet," by Franklin Matthews; "Product and Climax," by Prof. S. N. Patten; "The Development of Christianity," by Otto Pfleiderer, authorized translation by D. A. Huebsch; "The Commonwealth of Man," by Nathaniel Schmidt; and "The Spiritual Significance of Modern Socialism," by John Spargo.

Ouida's posthumous novel, "Helianthus," is to be published by the Macmillan Company this month. Most of the story had been put in type and read in proof by the author before her death.

The Revell Company will soon have ready the life and addresses of "John Jasper," the colored preacher of Richmond, famous for his saying: "The sun do move."

Robert R. Risk is soon to publish, through John Smith & Son of Glasgow, "America at College, as Seen by a Scots Graduate."

After the two recent lives of the Pretender, James III., we are to have "The Early History of the Tories, from the Accession of Charles II. to the Death of William III.," by C. B. Roylance Kent (published by Smith & Elder). There is manifestly a curious and widespread revival of interest in the Tory tragedy.

"The Campaign Text Book of the Democratic Party" for 1908 comes to us from the National Committee—a pamphlet of some 300 pages. It needs no criticism in these columns.

Two more volumes, containing "Sense and Sensibility," have been issued in the pretty set of Jane Austen, being published by Duffield & Co., in St. Martin's Illustrated Library of Standard Authors (see the *Nation* of September 10, p. 232). R. Brimley Johnson contributes a brief bibliographical note. The colored pictures by A. Wallis Mills are spirited and amusing, but they only tend to convince us that no one but a genius can illustrate Jane Austen.

Edward Carpenter's "Sketches from Life in Town and Country" (The Macmillan Co.) makes one wish that its author had settled down years ago to steady, artistic production, instead of scattering his energies in preaching, lecturing, market-gardening, and sandal-making, in socialistic meetings, street-corner speeches, and calls on Walt Whitman. For when he reflects on "civilization, its cause and cure," he is a petulant child with the temper of the older Ruskin, and his mouth echoing Rousellian fallacies. What undoes the social philosopher makes the artist: when he sets quietly to work depicting the lives of the humble which have appealed to his imagination—the Derbyshire peasant, the village lover, the slum family, the guests at a country public house, a "Saxon" household—he reveals a certain talent of his own, albeit slightly reminiscent of Thomas Hardy; and his Arcadian dream of the past and the future casts a pleasing glamour over the sordid present. Representative of the spirit of this whole book is the tale of Indian life, "Narayan." Two Indian lads grow weary of the peaceful monotony of village life on the mountainside under the tamarind trees among the white jessamines, and go down into Bombay to explore the civilization made by the English. In the big cotton mill where they find work, one of them, while cleaning the bearings of the driving shaft, is caught in the machinery, spun round and round, and dropped to the floor horribly mangled—such is the civilization of the English. Interesting also is an account of the international social congress at Paris, 1889, with pen portraits of Bebel, Cipriani, William Morris, and other distinguished leaders. The volume closes with a handful of poems, including a sonnet of farewell to the "Muse of Measured Verse."

The forthcoming edition of Anatole France's works in English, of which "The Garden of Epicurus," translated by Alfred Allinson (John Lane Co.), has just appeared, is to be deprecated only on the ground that it partly removes one of the great incentives to study French. For in the life and writings of this seductive man of letters, the subtlest flower of French culture since Renan, converge the intellectual currents of this century. It is therefore to English readers an advantage to meet him in a book which opens at once a central point of view over his forty years of literary activity. The "'Garden of Epicurus," published in 1895 in its author's fifty-first year, is neither a system of philosophy nor a praise of earthly pleasures; it is a collection of *causeries* and *pensées* on love, death, science, poetry, etc., by a man of erudition who writes like an exquisite amateur for a circle of friends. In this volume are included also a discourse "On Nunneries," "How I Discoursed One Night, with an Apparition on the First Origins of the Alphabet," "Careers for Women," "Miracle," "Card Houses," "In the Elysian Fields," "Aristos and Polyphilos on the Language of Metaphysics," and "The Priory." The book is not what Arnold would have called "tonic"—indeed Paul Desjardins calls its author a barren figtree. M. France's note is that of cheerful melancholy and ironic resignation. He has lost faith in scientific progress and represents almost the ultimate limit of skepticism. There is a bound set to evolution: at last the sun will blacken like an ember in the grate; the earth will freeze from rind to core and the last man, returned to the barbarism of the cave-dwellers, will freeze wretchedly at the bottom of a mine. What purpose then is served by the miserable race of men—*qui sait?* Yet there are compensations, of which the chief is intellectual curiosity quietly inquiring its way amid the eternal flux of phenomena; and there are duties of which the chief is pity for all the manifold suffering of men. All Philistines who abuse the name of Epicurus should be forced to read Lucretius and—Anatole France. The format of this limited edition of 500 copies is eminently satisfactory; the typography, paper, and binding are of excellent quality. The translation of France's Attic prose should not be difficult, but here and there the easy grace of the original becomes a shade awkward in the English, or even false to the spirit of the French. For example "But by that time our planet will be very old and coming near the *goal of its fortunes*" has by no means the connotation of "Mais alors notre planète sera bien vieille et touchera aux termes de ses destins." Such slips are perhaps venial in an otherwise fairly adequate rendering. A note on the original date and place of publication would contribute to the value of these volumes.

"In the Track of R. L. Stevenson," by J. A. Hammerton (E. P. Dutton & Co.), is, as title suggests, a parasitic growth, and a fairly heavy one, upon the "Travels with a Donkey" and "An Inland Voyage." Mr. Hammerton also tracks Daudet and S. R. Crockett through some interesting and comparatively little explored parts of France. He informs us, furthermore, that this fat volume is "but a very little sheaf from the occasional writings of its author on his wayfarings in old France"—so that if we want more of the same, we know where to send. The book is copiously illustrated from small and generally indistinct photographs of places and persons mentioned by Stevenson, together with many others not so mentioned. The only portions of the text of much interest are the extensive quotations from "R. L. S."; the summaries of "R. L. S." are not so entertaining. Mr. Hammerton made numerous inquiries for recollections of his illustrious predecessor, but in most cases with

no success. On one occasion he noted a canal-boat plastered with foreign advertisements, only one being of local origin—"a circumstance that would, we may be sure," he says, "have drawn from Stevenson some pages of gay philosophy." That fairly lets the cat out of Mr. Hammerton's bag; alas, neither Scotch whiskey nor English soap nor heaven above nor earth beneath elicits any "gay philosophy" from him. He eats his supper and goes to bed mounts his bicycle and dismounts again, describes in pedestrian fashion this thing and that; but when all is said and done it is perhaps wiser for a writer who has no ideas not to follow too hard on the heels of one who has.

Roger Boutet de Monvel has written an entertaining brief account of "Beau Brummel and His Times" (Lippincott), to which Mary Craven has contributed a chapter on "Dress and the Dandies." Whether the work was originally written in French we do not know. There are no signs of the translator's hand, but the point of view is French—which adds another touch of interest, if that is possible after Chateaubriand's "Mémoires" and Barbey d'Aurevilly's "Dandysme"—and the last years of Brummel's life at Calais and Caen seem to be nearer to the author than the years of prosperity in England. It is a strange mingling of comedy and tragedy, this story of the Regent's friend, the bully of society, the *arbiter elegantiarum*, and then the broken-down exile, brave against all his enemies save disease and death, who have their way with him in the end as with all the princes and beauties sung by Villon and the other poets. The story is too well known to need expatiation here. It is only necessary to say that the portrait is lightly etched by M. Boutet de Monvel, and that the familiar anecdotes are always interesting.

The "Builders of United Italy" (Henry Holt & Co.) whom Rupert S. Holland has chosen to describe are Alfieri, Manzoni, Gioberti, Manin, Mazzini, Cavour, Garibaldi, and Victor Emmanuel. His purpose is to give a popular, but not flimsy, biography of these men, and to make their lives serve as an outline of the history of the Risorgimento. In both purposes he merits commendation. The general reader, who will find his profit here, can hardly fail to be so stimulated that he will go on to seek a wider acquaintance with this fascinating period. For Mr. Holland has caught the enthusiasm without which no historian can either sympathize with or describe the spirit that upheld the Italians in their struggles for freedom and independence. He has a pleasant talent for narration, and as a specimen of his ability to summarize without allowing essentials to evaporate we may mention his account of the preliminaries of the war of 1859. He skilfully avoids repetition. Each sketch has a portrait of its subject.

The John Lane Co. has brought out another of Edward Frazer's interesting historical sketches of the British navy. In "The Londons of the British Fleet" he makes a fresh appeal to the enthusiasm of his countrymen through well-written accounts of the six naval vessels which have borne the name London, from the time of Oliver Cromwell to Edward VII. Incidentally, there are woven into the thread of his story many bits of fact and gossip which throw light on naval life and manners. The book is popular in style and purpose, a fact which possibly explains its lack of references to the authorities upon which its statements are based. Nevertheless, the volume is eminently readable and instructive.

In these days of the wholesome "nearer-to-nature" movement there is room for such a manual as Oliver Kemp's "Wilderness Homes; A Book of the Log Cabin" (The Outing Publishing Co.). Mr. Kemp wisely confines his instructions to the building of log cabins of the simpler kind, leaving to the architect the ornate and elaborate structures known in the Adirondacks as "camps." His book may be recommended to those who contemplate the building of forest homes, as it is practical in character and sound in its advice. The actual use of the axe cannot be taught by books, but the author might have devoted more space to the art of axemanship, if only to encourage the jaded city man to take up this delightful and wholesome exercise. The most serious defect of the manual is its omission of all mention of skylight windows, which are easy to put into the roof and often transform a badly lighted and worse ventilated cabin into an abode of cheeriness and out-of-door freshness. No one-story cabin that is permanently occupied should be without one. Mr. Kemp's book contains no index.

"In the Woods and on the Shore," by Richard D. Ware (L. C. Page & Co.), is a collection of eleven tales of shooting at large and small game, written in a pleasing style by a hunter of experience. The photographic illustrations are more satisfactory than the rather careless drawings of Mr. Bull. One of Mr. Ware's chapters, called "The Hunt," is written in blank verse, and suggests that prose is his more natural medium.

One is disposed to open a volume on "Paul the Mystic," with the expectation of finding a religious treatise quite out of the ordinary. To a writer who is himself a mystic the subject offers superb possibilities. The mighty spirit of Paul, confined so long in the narrow dogmatism of Pharisaism, found in the warmth and freedom of the faith of the Nazarene encouragements to sublime flights. In the immediate realization of divine things few have surpassed him, and one who had insight to pierce through the eager controversialist and busy man of affairs to the religious poet and seer revealed in the loftier passages of his letters would produce a religious classic of the first order. Unfortunately the author of the present volume, James M. Campbell (G. P. Putnam's Sons), is not a mystic. He is an evangelical of the informed and tolerant type, and he anaylzes Paul, first as a mystic, then a religious mystic, then as an evangelical mystic, but cabined as closely in a system of doctrine as Moody or Spurgeon. Dr. Campbell is anxious to convince his readers that Paul nourished his piety by regular exercises and steadfast adherence to the articles of a well-established creed. The free and mighty spirit emboldened to frequent perception of truths not lawful to analyze is quite beyond the author's reach. Such a writer may convey much information on Paul the missionary, or even Paul the maker of dogma, but he cannot deal successfully with Paul the mystic. Dr. Campbell, however, has called attention to an attractive theme, and a side of the character of Paul which has been too much neglected.

A new English edition of the "Realencyklopädie für protestantische Theologie und Kirche" is in preparation, and the first volume indicates that it will be a useful work. The title is "The New Schaff-Herzog Encyclopædia of Religious Knowledge, Embracing Biblical, Historical, Doctrinal, and Practical Theology, and Biblical, Theological, and Ecclesiastical Biography from the Earliest Times to the Present Day" (Funk & Wagnalls Co. Vol. I. Aachen-Basilians). Dr. Samuel Macauley Jackson is editor-in-chief, and he has the assistance of Charles Colebrook Sherman and George William Gilmore, and a large number of department editors and collaborators. The recent third edition of Hauck's "Realencyklopädie" forms the basis of the work, but the German articles have been rewritten, revised, and considerably condensed. A large number of contributions on subjects of importance to English readers have been added. In completeness and thoroughness this work far excels the earlier editions of Schaff-Herzog; especially in historical and biographical subjects the treatment is more adequate. The articles vary greatly in merit, and it is sometimes difficult to account for the proportionate space assigned to different subjects, as, for example, twenty careful pages devoted to Africa, a topic in which the religious interest is remote, but only a column to Aristotle and his far-reaching influence on Christian theology and the life of the Church. The treatment of the principal characters in early and mediæval ecclesiastical history is excellent. The same can hardly be said of the Biblical titles, to which insufficient space has been accorded. The point of view of the editors is tolerant, fair, and modern, but no ray of modern light is discernible in Prof. B. B. Warfield's essays on Agnosticism, Apologetics, Atonement, etc. Dogmatic theology seems to be the field in which all recent encyclopædias are weak and unsatisfactory. On the other hand, high praise must be given to the bibliographies prepared by Mr. Gilmore. These are thorough, judicious, and carefully arranged, and in themselves render this encyclopædia valuable to any library.

A second volume has been published of the collection of biographies of prominent characters in the history of the church, edited by Prof. B. Bess of Halle, under the title "Unsere religiösen Erzieher" (Leipzig: Quelle & Meyer). It contains a study of Luther, by Prof. Th. Kolde of Erlangen; of Zwingli, by A. Baur, Weinsberg; Calvin, by the editor; Spener, by P. Grünberg, Strasburg; Goethe and Schiller, by K. Sell, Bonn; Schleiermacher, by O. Kirn, Leipzig; and Bismarck, by O. Baumgarten, Kiel. There is added a *Schlusswort* by Prof. W. Herrmann, Marburg, entitled "Die Religion der Erzieher."

A good specimen of modern Catholic scholarship is the extensive discussion of the authenticity and age of the Epistle of Jude, published by Friederich Maier, in the

Biblische Studien (edited by Prof. O. Bardenhewer of Munich), Vol. XI., Heft1 and 2, In this painstaking work of nearly two hundred pages the conservative view is maintained, with a constant reference to the position of modern critics. An equally characteristic expression of Catholic scholarship is the recent apologetical volume of Prof. A. Seitz of the University of Munich, "Das Evangelium vom Gottessohn" (Freiburg-im-B.: Heder). The author devotes some five hundred pages to defending the divinity of Christ.

Prof. R. Seeberg, one of the leading conservative members of the Berlin theological faculty, has just published (Leipzig: A. Deichert) a collection of Abhandlungen und Vorträge, under the title "Zur systematische Theologie," to constitute the second volume of the series Aus Religion und Geschichte. These discussions are all on burning religious questions.

The Gesellschaft zur Förderung der Wissenschaft des Judentums has, through its commission, consisting of W. Bacher, M. Braun, and D. Simonsen, with the coöperation of J. Guttmann, published the first volume of what promises to be the standard biography of the great Jewish scholar of the Middle Ages—theologian, philosopher, and physician—Maimonides. The work entitled "Moses ben Maimon: Sein Leben, seine Werke und sein Einfluss" (Leipzig: Fock) is thus far a collection of twelve papers by eleven writers, among them Ph. Bloch, H. Cohen, J. Pagels, B. Zeimlich (since deceased), A. Schwarz, J. Friedländer, and F. Rosenthal. The chief fault of this volume is that it lacks unity, as there is little connection between the various papers.

M. A. Schmitz du Moulin, originally a Roman Catholic, but for some time now an adherent of Mohammedanism, is, with the customary zeal of a convert, publishing through the Teutonia Verlag, Leipzig, a series of books intended to make Islam palatable to Western folk. His "Geist des Orients," "Das Wesen des Islam," and "Modernes Heidentum" have lately been followed by "Die Wahrheit über orientalisches Frauenleben" and "Die Urheimat unserer Väter," all volumes of two or three hundred pages or more. The books are not without merit, for the author is evidently a scholar, but in the nature of the case his panegyrics of the Turks and the Moslem Orient are in the nature of an apologia.

"Die Friedensfahrt deutscher Kirchenmänner nach England" (Giessen: Alfred Töpelmann), by Prof. W. Bornemann of Frankfurt-a-M., is an interesting account of the journey to England made by prominent churchmen of Germany last spring in the interest of international peace.

Arthur Bonus has published the third part of his "Isländerbuch" (Munich: G. D. W. Callwey). He discusses among other things the importance of old Icelandic prose literature and its effect upon Ibsen. Some translations are added, the work of Andrew Heusler. Literary notes on the three volumes conclude this book.

H. Schroeder's "Aufnahme und Studium an den Universitäten Deutschlands" (Halle: Waisenhaus) is a valuable compilation of the regulations that prevail at the different German universities with reference to admission of students, courses of studies, and the like. The data are taken from official sources, and are particularly full in their information as to rights of women at these institutions.

An excellent permanent record of the recent celebration of the three hundred and fiftieth anniversary of the University of Jena, has been prepared by Ernst Borkowsky, a volume of 287 pages, "Das alte Jena und seine Universität" (Jena: Eugen Diederichs). The 107 illustrations are chiefly portraits of famous professors.

The University of Leipzig will celebrate its five-hundredth anniversary, July 28 to 31, 1909. The principal exercises will be on July 29, when a public service will be held, followed by an address by the King of Saxony as the Rector Magnificentissimus of the University. For the great *Kommers* on July 30 the city will supply a monster tent on the Messplatz, capable of accommodating ten thousand participants. The King himself will act as presiding officer of the *Kommers*.

With the publication of Vol. XII., 1908, No. 3, Dr. J. M. Paton retires from the editorial board of the *American Journal of Archæology*. The business management will hereafter be in charge of Prof. Mitchell Carroll of the George Washington University; the departments of news and bibliography will be conducted by Prof. William N. Bates of No. 220 St. Mark's Square, Philadelphia, Pa.

News comes by cable that Prof. Ernest Francisco Fenollosa has died just as he was to sail for this country. Professor Fenollosa was born at Salem, Mass., in 1853, and was educated at Harvard. From 1878 to 1880 he occupied the chair of political economy and philosophy in the Tokio University, and from 1880 to 1886 the chair of philosophy and logic. Other positions kept him in Japan until 1890, making him an authority on Japanese art and literature. From 1890 to 1896 he used this knowledge as curator of the department of Oriental art in the Boston Museum of Fine Arts. His publications include "East and West" and "The Discovery of America, and Other Poems" (1893), and "An Outline History of Ukiyo-Ye" (1902).

Frank Parsons, lecturer on law at Boston University since 1892, died at Boston September 26. He was born at Mount Holly, N. J., in 1854, and in 1873 graduated in the mathematical and engineering course at Cornell. Later he studied law and became a text writer for Little, Brown & Co. He also lectured publicly on economics and sociology, and taught history and political science in the Kansas Agricultural College, as well as in Ruskin University, Missouri. Among his writings are "The World's Best Books" (1892), "Our Country's Need" (1894), "The Drift of Our Time" (1898), "Rational Money" (1899), "The New Political Economy" (1899), "The Power of the Ideal" (1899), "The City for the People" (1900), "Direct Legislation" (1900), "The Bondage of Cities" (1900), "The Story of New Zealand" (1904), "The Heart of the Railroad Problem" (1906), and "The Railways, the Trusts, and the People" (1906).

The death is announced of Mrs. Adeline Kingscote, better known as the novelist "Lucas Cleeve." Her stories, beginning in 1895, came out with astonishing rapidity, and for their plots she drew upon her knowledge as a linguist and her large experience as a traveller.

Alex. Freytag von Loringhoven has died at Weimar in his sixtieth year. Among his many novels and dramas may be mentioned "Am Strande," "Erlebnisse aus dem deutsch-französischen Kriege," "Skizzen und Humoresken," "Aus der Hexenzeit," "Nerven."

Jadwiga Luszczewska, the Polish poetess whose death was reported last week, was born in Warsaw in 1830. As a child she displayed remarkable powers of improvisation. Later, under the pseudonym "Deotyma," she wrote successful poetic narratives and epic verse. Some of her poems appeared in various collections, of which the more prominent are: "Improwizacye i poezye" (Warsaw, 1854 and 1858. 2 vols.), and "Polska w piesni" (Poland in Song, 1859-87). A drama entitled "Mieczislaw," and an epic, "Sobieski vor Wien," came from her pen. Her novels and stories are strongly marked by their poetic language; they are "Na rozdrozu" (At the Parting of the Ways, 1876), "Kryz and otchlania" (The Cross above the Chasm, 1878), and "Branki w Jasyrze" (The Prisoners in Jassyr, 1890). The last named is her most noteworthy prose, a work in three volumes.

IN GOOD OLD COLONY TIMES.

Calendar of State Papers: Colonial Series, America and West Indies, 1699. Preserved by His Majesty's Public Record Office; edited by Cecil Headlam. London: Printed for His Majesty's Stationery Office by Eyre & Spottiswoode.

The issue of a Calendar for the Colonial State Papers of 1699 will be welcomed by all persons who take an interest in the history of the colonial period of the United States. By the bounty of the British government, similar Calendars have been issued at intervals since 1860. The earlier volumes were edited by Noel Sainsbury, long identified with the Public Record Office; on his death, the work was carried on by J. W. Fortescue; on his appointment as King's Librarian at Windsor Castle, the task has been taken up by Cecil Headlam of Magdalen College, Oxford, whose wide reading, extensive travels, and literary culture are observable in the composition of his preface to the volume just issued. Besides documents of the year 1699, the present volume includes addenda embracing the period from 1621 to 1698; the papers in question were, from various causes, overlooked when previous Calendars were being prepared.

Those who are interested in the family history of America will find in this Calendar names very familiar in their respective States. Thus, there is a list of the principal officers of militia for the several counties of Virginia, appointed by the Governor on June 3:

Henrico County—William Byrd, colonel and commander-in-chief; William Randolph, lieutenant-colonel.

Surrey County—Benjamin Harrison, colonel and commander-in-chief.

Norfolk—Lenwell Mason, colonel and commander-in-chief.

Warwick—Miles Cary, lieutenant-colonel and commander-in-chief; William Cary, major.

Lancaster—Robert Carter, colonel and commander-in-chief; Joseph Ball, lieutenant-colonel.

Westmoreland—Richard Lea, colonel and commander-in-chief.

Stafford—George Mason, colonel and commander-in-chief.

In Massachusetts, among justices appointed on July 17, are Wait Winthrop and Samuel Sewall, to the Superior Court; and, to Inferior Courts, Elisha Hutchinson, James Russell, John Hathorne, Daniel Peirce, William Peperel, Joseph Hawley, Joseph Parsons, William Bradford, Nathaniel Thomas, John Wadsworth, Barnabas Lothrop, James Allen, John Coffin, James Coffin, and John Gardner. In the General Assembly of New York appear the names of J. de Peyster, Abraham Gouverneur, K. Van Renselaer, Gabriel Ludlow (clerk of the Assembly), and Thomas Morgan.

But the outstanding character disclosed by the Calendar is Richard Coote, Earl of Bellomont in the Peerage of Ireland, who was Governor of New York and New England (excepting Rhode Island and Connecticut). He justified by his conduct the character of an "honest and intrepid man," as William III. had described him. Being "perpetually in business from five in the morning till ten at night," he might be regarded as rivalling in hard work the celebrated Marquess of Dalhousie, who, when Governor-General of India, was said to write sixty minutes to the hour. With the high ideas of a real statesman, he would recognize no "English party" in New York, saying: "I discourage all I can these distinctions of Dutch and English." Bellomont deserves to rank with Wellesley, Dufferin, Macartney, Sir Hercules Robinson, Sir George Bowen, and other Irishmen who have proved among the most successful of proconsuls within the British Empire. His correspondence with the home authorities would justify publication in book form; for his pungent, forcible dispatches make racy reading.

Bellomont was commissioner with the special object of suppressing piracy and illegal trading—a Herculean task, in view of the attitude of the colonists. With rare exceptions, the officials whose duty required them to assist in enforcing the laws, were in league with the smugglers. Mr. Headlam describes the difficulties of the Governor, as thus surrounded by disloyal and incapable officers. He had to rely upon indifferent collectors; an ignorant and incompetent, if not dishonest Attorney-General; and a Clerk of Assembly who had been convicted of coining. "The very soul of government went upon crutches," for those who practised at the bar, from the Chief Justice downwards, had been soldiers or dancing masters. The colonists joined in evading the restrictions of the laws of trade and navigation. Writing from New York Bellomont characterized piracy and unlawful trade as "the beloved twins of the marchands of his place." In 1699, John Townsend, the customs officer at Oyster Bay, "where great quantities of goods are run," resigned within a month, under threat of being knocked on the head. Although a lieutenant of one of the companies was offered the post, with a salary of £100 a year, New York money, with a couple of horses and a man to attend him; yet he, "though accounted a brisk man and ready to starve for want of his pay and subsistences," told Bellomont in plain terms he "thought it too hazardous an undertaking." Bellomont reported that the inhabitants of Long Island (then Nassau Island) were unruly; "and to mend the matter there are several pirates settled among 'em, who, to be sure, will eg 'em on to do mischief." In Philadelphia, as Mr. Headlam observes, the principle of brotherly love seems to have been extended principally towards pirates. Even those who had been arrested were allowed out on bail, and walked "the street with their pockets full of gold." They were constant companions of those high in the government; they freely marketed prohibited goods; and they threatened the lives of the King's collectors, who, in a population of "non-jurors, quakers, and ill-affected Scotchmen," despaired of bringing any offenders to justice. In pursuance of a strong representation from the Council of Trade and Plantations, the Lieutenant-Governor, Col. William Markham, was removed from office, for conniving at illegal trade, and for receiving presents from pirates, and for protecting them.

It would require a separate article to deal thoroughly with the details of piracy (which, as we have just seen, was almost inextricably bound up with smuggling), and with the case of Capt. Kidd, in particular, as set forth in the Calendar for 1699. On the conclusion of peace, by the Treaty of Ryswick in 1697, many privateersmen were thrown out of employment. Some of these took to piracy for a time, as a modern insurance director is said to have reformed by turning burglar. Frequent instances occurred of seamen seizing their ships and turning pirates. Towns on the coast were not safe from raids. As for the officials, Gov. Fletcher, Bellomont's predecessor in New York, explained his intimacy with the pirate Tew as proceeding from the pleasantness of Tew's conversation, and a desire to reclaim him from an ill habit he had got of swearing. Regarding Capt. Kidd, whose name has long been synonymous with piracy, Bellomont found himself in a strange position. Before his appointment as Governor, Bellomont had been mainly instrumental in getting Kidd a commission for the suppression of piracy. This he had done on the recommendation of Robert Livingstone, who believed in Kidd's special fitness for the service. A syndicate was formed to fit out the Adventure, with a stock of £6,000. Of this sum, one-fifth was subscribed by Livingstone and Kidd, and four-fifths by Bellomont and others, among them Somers, the Lord Chancellor; Orford, First Lord of the Admiralty; Romney, Secretary of State, and the Duke of Shrewsbury, one of the Lords Justices. It was after Bellomont had assumed his office as Governor that he received the exasperating intelligence that Kidd had turned pirate. Kidd, alleging his innocence, endeavored to extract a promise of pardon before landing at Boston; and at the same time he tried to bribe Bellomont by presents of jewels and ingots to Lady Bellomont. The Governor promised Kidd pardon if he should prove "as innocent as he pretended to be." In July, 1699, Bellomont had the satisfaction of clapping the adventurous sea-rover into the Boston jail, but the arrest was made only when Kidd "looked as if he was upon the wing." Kidd maintained that his wrongdoing had been forced upon him by his crew, and that other things, wherein his conduct had been impugned, had been done by virtue of his commission. He was sent to England in 1700, and on May 23 he was hanged at Execution Dock, after a trial that was not fair.

Among other matters that occupied the attention of the colonists in 1699 was the case of Harvard College. Bellomont refused to assent to a bill, already twice rejected, which contained a clause excluding members of the Church of England from the government of Harvard. What he called the "sour part of the Council" would not hear of his proposal to apply to the King for a charter to incorporate the college, which was left without a constitution by the abrogation of the charter of the colony. As a makeshift, it was decided that the government of the college should be carried on by the members of the late corporation. During a week's stay at Rhode Island, a community of "Quakers and demi-Quakers," Bellomont collected "matter enough to prove that government the most irregular and illegal in their administration that ever any English government was." On their side, the Rhode Islanders, who notoriously connived at piracy and illegal trade, held the English government to be "little better than slavery." There is also a considerable amount of material relating to the affairs of New Hampshire, New Jersey, Virginia, North Carolina, and South Carolina; and in his preface, to which this notice is much indebted for details of the contents of the Calendar, Mr. Headlam has treated of papers relating to Newfoundland, Ber-

muda, and the West Indian colonies. This Calendar also contains a number of facts regarding the feckless attempt of the Scottish nation to found their colony of Caledonia at Darien.

Among the Addenda is an account of Barbados in 1669. The Assemblies of Nevis and Antigua objected to billet soldiers quartered amongst them; and they anticipated the Declaration of Independence in this regard, by urging that "free quarters were an abomination to the King, and contrary to the fundamental liberties of the people." In Montserrat, a negro convicted of theft to the value of twelve pence was condemned to be hanged and his quarters set up on poles in public places; while another negro, convicted of having absented himself from his master's service for over three months, was condemned to be broken to pieces, and afterwards his limbs and body to be burnt. After noting these atrocities, Mr. Headlam finds a slight tendency towards humanity in the decision of the delegates of Maryland to omit a clause in a bill for cutting off the noses or ears of negroes.

CURRENT FICTION.

Lewis Rand. By Mary Johnston. Boston: Houghton Mifflin Co.

Miss Johnston has a wide circle of admirers, among whom a new book from her pen is warmly welcomed; but of all her novels "Lewis Rand" has the best right to be regarded as a literary event. It is by no means light reading; not a book to be skimmed. And yet, even if one boggles at philosophy and political economy in a novel, one is not likely to lay this volume down unfinished. The story is notable for a deepening of thought and maturity of analysis that are almost startling in comparison with its predecessors. In some ways the hand is easy to trace—notably in the descriptions of the forest, and also, be it confessed, in a certain cumbrousness of mechanical elaboration—a labored suspense that clogs the movement. At first the heroine, Jacqueline, seems only another example of Miss Johnston's favorite type, the Stooping Lady—a new edition of Jocelyn and Patricia; but Jacqueline develops a dignity and a power of her own as the action progresses to the final—shall we say tragedy or apotheosis?

The bare outline of the story suggests "Quisanté." Lewis Rand is a lad of plain birth and turbulent blood; by inheritance and by training, or the lack of it, his ethical sense is awry. His wife, outcast from her family and its traditions for his sake, trusts him to be loyal to the high ideals he enunciates, and her trust is betrayed. In a fit of blind rage he commits murder, and goes out from the place of his crime to construct an effective alibi. What is to accomplish the redemption of such a man? His love for a woman? He confesses his crime to Jacqueline, who urges submission to punishment as the only expiation. His whole being rebels, but to prove his love for her he consents to give himself up. This is the point where it would have been easy to fall short; but, with fine insight, Jacqueline is swept up to spiritual heights. She will not accept the sacrifice, made for her; she stands beside her husband, conceals her knowledge of his guilt, and watches in agony as he fights the great battle of his soul. The struggle is long, but ends in high victory. Lewis Rand gives himself up to justice, not for the sake of any human creature, but to satisfy the imperious demands of his own awakened consciousness of right—"he said he must have sleep."

This is the mere sketch of the story; the background is well wrought, and the host of minor characters play their parts well. The portraits of Jefferson and old Major Edward are drawn with an especially convincing touch. Above all the sub-motives, however, rises the vital theme—the triumph of character over temperament. The keynote of the book is sounded in one sentence: "It is strange what pain we grow to call Victory."

A Commentary. By John Galsworthy. New York: G. P. Putnam's Sons.

Mr. Galsworthy's animating motive, a desire to puncture the thoughtless complacency of the comfortable classes, has produced in this volume of organically related sketches a work of original distinction. In his novel, "The Island Pharisees," the same motive tended rather to provoke irritation at the author and his unsatisfactory hero than at the conditions in society which displeased them. Here Mr. Galsworthy's method is different and decidedly more effective: instead of forcing the reader to look at the world through the eyes of an unconvincing crank, he breaks a number of stained-glass windows and bids the smug, contented citizen look for himself. The result is a series of little pictures, or idylls, strangely disquieting, of misery and comfort, satiric, ironic, tragic. The chapters bear such captions as "Old Age," "Fear," "Fashion," "Sport," "Justice"; but these abstractions are the shadows cast by characters of flesh and blood. As "The Man with a Hoe" becomes "Man with a Hoe," so the carefully particularized individuals of these sketches expand gigantically into types. James White and his wife, upward of seventy, dying of cold and starvation in their attic, willing to work but preferring death to the workhouse, become symbolic of helpless and abandoned senility. It is a common theme, but uncommonly executed with an imaginative and poetical quality reminding one of Maeterlinck's "The Blind" and "The Intruder," and with a repetition and parallelism in style suggesting the direct influence of the Belgian dramatist. For the ignorant, the infirm, the vicious Mr. Galsworthy has no maudlin sympathy—only a bitter compassion. But against the comfortably respectable man who settles into his family, business, and social circle as into the land the Lord his God has given him, the shafts of Mr. Galsworthy's satire are keen. His social sense is, like Tolstoy's, painfully acute; it is outraged by the thought that there is any happiness in a society where there is so much misery. He is sure that there can be no honest happiness for those who have eyes to see; and his endeavor to remove scales from blind eyes bears every mark of sincerity. It is unusual for a book of such intense social purpose to have such genuine artistic merit.

By Right of Purchase. By Harold Bindloss. New York: Frederick A. Stokes Co.

The title of this melodramatic work alludes to an arrangement by which Carrie Denham, an English girl of good blood but of disreputably extravagant and indigent family, becomes the wife of Charley Leland, a young Canadian wheat-grower on a vast scale. At first sight the hero and heroine are strongly attracted to each other; but just as soon as the able young man marries her, thus saving her from the clutches of Aylmer, a "coarsely fleshy man of the cities," and carries her to his prairie home, she becomes an unaccountable prig, spends the evening in full dress, and for several months keeps her husband at more than arm's length. During this long period of probation Charley exercises a splendid self-restraint, frequently mentioned with admiration by the author, and habitually addresses her, after the manner of kings and Christopher Sly, as "Madam." After Leland has suffered much from the malice of whiskey-runners, prairie fires, and a falling wheat market, his wife, of course, begins to appreciate him; the whiskey-runners are driven out, the fires are extinguished, and wheat goes up at a bound. The return of Mrs. Leland to a decent frame of mind and the triumphant moment of her career is presented in the flaming frontispiece, where she is seen driving up to the edge of the prairie fire with a team of plunging horses to bring the thirsty fire-fighters a barrel of water. The characterization is of the crudest simplicity. Every time that Charley appears we are asked to note his "bronzed face," his "spare form," and his "quiet, simmering temper." Carrie is identified again and again by her "pride of station," which is manifested "languidly" and "coldly." All this is gruel of

the sort proverbially relished in the boarding-school.

Heartbreak Hill: A Comedy Romance. By Herman Knickerbocker Vielé. New York: Duffield & Co.

A writer of such stories as Mr. Vielé's earlier "Inn of the Silver Moon" and the present book is a public benefactor. On wholly different lines from its cherished predecessor, "Heartbreak Hill" shows much of the same quality. The merry twinkle, the iridescent coloring, are here, and withal so is the ingenuity in inventing a tangle. The actual, the fanciful, the fantastic, the human, and the elf-like join hands in song and dance. The pivot of the story is a hill jointly owned by two cousins. The revolving circles whirl as far away as Wall Street, financial conspiracies, motor cars—even painless dental parlors. And yet, we say it boldly, the quality of the book is that of the *fabliau*. The incredulous of this seemingly absurd statement have only to apply the simple test of reading. They will find a something mediævally Gallic in the touch, turning America into No Man's Land, reality into soap-bubbles; a something not quite comedy, romance, tale, or fable, but tincture of all.

The City of Genoa. By Robert W. Carden; with 12 illustrations in color by William Parkinson, and 20 other illustrations. London: Methuen & Co.

The past decade has witnessed the publication of a vast number of books on Italian subjects, the majority of which are useless to the serious student; but it has also produced a few works of sterling merit, and among these latter Mr. Carden's "City of Genoa" should find an honored place. If it cannot take rank with such masterpieces as G. G. Coulton's "From St. Francis to Dante" or E. G. Gardner's "St. Catherine of Siena," it is easily in the same class with Miss C. M. Ady's admirable monograph on the Sforza, and, in many respects, compares not unfavorably with even so excellent a piece of work as Prof. Langton Douglas's "History of Siena."

Mr. Carden possesses in no small measure those indispensable requisites of the historian, impartiality and accuracy. His style is generally direct and vigorous. He is master of the difficult art of adequate condensation, and it is clear that he has spared neither time nor labor. We have, therefore, no sort of quarrel with his facts, which, as far as we have been able to verify them, appear to be thoroughly trustworthy. Such fault as we have to find is with his manner of stating them. Thus we read (pp. 3 and 4) that in the eleventh century, "S. Remo and Ceriana had already become feuds of the Church." What will the ordinary reader make of this? The context may possibly put him upon inquiry, but we are afraid that he will be more than likely to imagine that the reference is to the Church of Rome, the Papacy, and he must read on for well-nigh eighty pages before it dawns upon him that the Bishops of Genoa possessed temporal as well as spiritual authority, and that "the church" in question is, in fact, the Church of Genoa. So, too, we are told (p. 7) that, in 1147, "sixty thousand *marabottini* were sent from Almeria." The context affords us no assistance, and the unfortunate reader who is ignorant of the nomenclature of mediæval Italian coins will be compelled to wait for an explanation till he reaches page 105. If the word *marabottino* appeared in the index with a reference to both passages, this annoyance might be obviated. But such is not the case.

Perhaps, however, the weakest point in the book is to be found in the fact that Mr. Carden studies his Genoa, as it were, in a vacuum, and rarely draws an analogy from the history of other communes. The supersession of the episcopal rule by that of the consuls, and the subsequent removal of the consuls to make way for the Potestà, were steps in an evolution which was common to nearly all the city-states of Italy; and this should have been noted. The main interest of Genoese history is to be found in the fact that it forms part of the history of Italy as a whole. Moreover, we should have welcomed a chapter on the daily life of the old Genoese. There is, proportionately, too much political and too little social history for our taste.

But the blemishes to which we have referred are but as spots on the sun, and we heartily recommend the work to all lovers of things Italian. The narrative, which begins with the legendary origin of the city, in the days of the patriarch Abraham, is carried down to our own day, when the ancient Queen of the Ligurian Seas is renewing her age-long struggle for commercial supremacy in the Mediterranean. Nor are her peaceful triumphs overlooked. Neither the architecture nor the painting of Genoa is neglected. The "historical survey" occupies only 74 pages out of a total of 263, the rest of the book being devoted to a study of the principal civic monuments—the Church of S. Siro, the Cathedral, the Harbor, the Palazzo di S. Giorgio, the Palazzo Ducale, etc., etc.—and, in each and every instance, the dull details of topography are illuminated by the associations of the sites described. The volume is one which no visitor to Genoa can possibly afford to do without, and our author is to be congratulated upon the production of what is at once a learned and a readable book, serviceable alike to the student and the tourist.

Ansichten und Aussichten. Von Ernst von Wolzogen, Berlin: F. Fontane & Co.

Augurenbriefe. Von Ernst von Wolzogen. Berlin: F. Fontane & Co.

To those who know Ernst von Wolzogen only as the author of delightful comedies like "Die Kinder der Excellenz," "Lumpengesindel," and "Ein unbeschriebenes Blatt," and of a score of excellent novels, among them "Der Kraftmayr," his recent works will come as a surprise. The poet, dramatist, and novelist now presents himself as a sane critic of literature, music, and art. Although a contemporary of young Germany of the century's end, Wolzogen has never been a partisan either of the naturalistic or of the neo-romantic school. For one who stood in the midst of that revolution which brought to Berlin a host of youths, from the whole empire, whose discontent with existing conditions and established standards and whose undigested scientific learning were their chief assets, the author manifests a rare impartiality towards his colleagues. The essay "Humor und Naturalismus" is an important contribution to the psychology of that generation of literary Germany. Wolzogen does not hesitate to speak of the ignorance of life which characterized those immature writers and to argue that, so far as knowledge of human nature was concerned, the phases of metropolitan life which they studied tended to narrow rather than widen their horizon. But if Wolzogen makes French literature responsible for certain idiosyncrasies in their writings, especially for the emphasis upon erotic problems, he himself indulges in hasty generalization; for the leaning towards eroticism seems to have been common to the younger authors of almost all European countries towards the end of the century.

There is an appreciation of Italian acting in a paper on Shakespeare in Venice and an interesting study of "Troilus and Cressida," which Wolzogen, with Georg Brandes, regards as a parody upon the grandiloquence of Chapman's Homer. Sympathetic insight is the characteristic of the essay on Richard Wagner's love affairs. In his papers on music, he acknowledges having outgrown some of his opinions and yet he has refrained from changing the text of the essays, the oldest of which dates back to 1888, when the modern movement reached its high-water mark in German literature and music. In the introduction to these papers he admits that he has later learned to appreciate Hugo Wolf and even Max Reger, whose chromatic impressionism still offers much that is bewildering. These papers "Musik und Musik" (1888) and "Das Epigonentum in der Musik" (1899) are both enlightening and suggestive. But the most important essays in that volume

are those that treat of comedy. The author is of the opinion that our nervous, over-hurried and over-harrassed world needs mirth more than anything else. Wolzogen would like to have the stage become a school of the art of living. He admits that, at present, conditions in Germany are not favorable to the production of comedy pure and simple. That blend of tragedy and comedy, however, which is a reflection of life he would represent on the stage with all its contrasts, but with humor as its keynote.

"Augurenbriefe" is another collection of miscellaneous prose, in which the personal note is more evident. The author is a severe critic of his country and his people, and mercilessly lashes certain types and phases of modern Germany. He mentions among the "benefactors" of humanity, the shoemaker Voigt, who as "Hauptmann von Köpenick" staged a satire on militarism far more effective and far-reaching than Shaw's "Arms and the Man." In a paper entitled "Fromme Kurpfuscher," Wolzogen treats with a charming humor and with an undertone of seriousness the attempts to reconcile science and religion. The book closes with an interesting study of the civilization of the Germans before their enforced Christianization. It is based upon the writings of a Viennese scholar, Guido von List, who has made a close study of the intellectual life of ancient pagan Germany. The clear and liquid prose of Wolzogen makes both these books delightful reading.

Science.

The Popes and Science. By James J. Walsh. New York: Fordham University Press. $2.

In the proposition, "Resolved: That the Roman Church has always been the foe of science," you have a topic for controversy as inexhaustible as the old debating club favorite: "Resolved, That Lincoln was a greater man than Washington." The affirmative has been copiously argued by Dr. Andrew D. White in his volumes, "On the History of the Warfare of Science with Theology in Christendom." The negative finds no better statement than in Professor Walsh's several books, of which the one before us is the latest and most convincing. The learned Fordham physician has at command an enormous mass of facts, and he orders them with logical force and literary ease. However strong the reader's prejudice against the view that Roman pontiffs have always been the scientists' most watchful guardian angels, he cannot lay down Professor Walsh's volume without at least conceding that the author has driven his pen hard and deep into the "academic superstition" about Papal opposition to science.

Professor Walsh is now concerned with the Church's attitude toward medicine, its theories and its practices. The supposed Papal prohibition of dissection is disproved by quoting in full the very bull ("De Sepulturis" of Boniface VIII.) which Dr. White has cited as evidence that the Church hampered the progress of anatomy. In adducing many facts from first-hand authorities to show that Popes repeatedly overruled civil officers in permitting dissection; that the nearer to Rome medical schools were, the more dissection was done in them; and that dissection was most common in the Eternal City itself during the "golden age of anatomy," Professor Walsh convicts his opponents of hasty generalizing, if not anti-clerical zeal. Nor is he less successful in the debate over the supposed Papal prohibition of chemistry, surgery, and the experimental method. Probably his strongest points are made in the chapters on Papal physicians and the Papal medical school, where, it is shown, great investigators like Vesalius and Realdo Colombo enjoyed scientific freedom almost indistinguishable from that tolerated to-day. There is sound historical judgment, too, in Dr. Walsh's view of the mediæval treatment of insanity. He rightly declares absurd the present-day custom of heaping opprobrium upon the Church for her ancient belief in evil spirits, for the exorcising of demons, and for the burning of witches. In all this, Popes and priests were but children of their time, accepting a spiritism older than history. Furthermore, the much ridiculed mediæval method of dragging insane patients off to special shrines, there to be cured by appeal to Heaven, is not strikingly different from the twentieth century's resort to religious suggestion and encouragement in the treatment of certain mild psychical disorders.

Let us grant that Professor Walsh has established the liberality of some pontiffs, the prosperity of some mediæval medical schools, and the freedom of some mediæval scientists. Shall we therefore regard as accomplished his main purpose, which is to prove "that the Church, the Popes, and ecclesiastics generally during the Middle Ages . . . were constantly in the position of encouraging and fostering science"? Emphatically, no. Professor Walsh has simply demonstrated what every student of history should expect to find in any institution which draws its members from every race and social class. The Roman Church has always had its Modernists, its Nicholas Cusanus, its Pope Nicholas V.; so, too, its less progressive but practical adherents who, seeing the immense advantages of hospitals and physicians, have gladly encouraged investigation, so long as no open conflict with dogma threatened. But did it not also have its reactionaries? And were not these in the saddle more often than not? And was not Papal influence outside of Rome a nullity when matched against the College of Cardinals, the Congregation of the Inquisition, or even a distant parish priest? Professor Walsh will convince few readers of his central thesis until he shall have shown that these backward driving powers seldom thwarted a Galileo, or that their attitude and the very atmosphere in which they lived and moved and had their being seldom discouraged the spirit of scientific investigation. The writer's unbroken silence on the workings of inquisitors and the censorship is fatal to his arguments. He has vindicated some churchmen, but not the Church.

"My Pets," by Miss Marshall Saunders (Philadelphia: Griffith & Rowland), is a series of twenty-eight stories of pet owls, rabbits, gallinules, robins, pigeons, canaries, and other small pets of fur and feathers, written for young people. There is much sentimentalism mixed with some good hints as to food and general care, but the book, as a whole, is merely a readable account of trivial happenings in aviary and cage. We criticise strongly the way in which birds are reared and cared for, only later to be given their freedom. When a bird is confined under such unnatural conditions as those of the average aviary, it is seldom capable of looking out for itself—finding food and avoiding enemies. It were far kinder to keep it a captive, or mercifully to chloroform it, than to give it freedom, with the probability of slow death from starvation.

The Third International Congress for the Care of the Demented (Kongress für Irrenpflege) will be held in Vienna, October 7 to 11. One of the subjects to be taken up is the proposed establishment of an International Institute to Study and Combat the Causes of Mental Disease.

Drama.

THEATRICAL BELL-WETHERS.

All art is imitation. The average American play, for instance, is art because it imitates some other play that has made a hit. Foreigners say that we are prejudiced against what is traditional and what is old. But however true this may be of our political methods, our social standards, and certain phases of our business morality, the charge will not hold against our native drama. Effete, immobile, drowsy Europe sends us our theatrical sensations from season to season. Pushing, adventurous, novelty-loving America goes on weaving plots after the manner of our grandfathers. Everybody assures the young author, poet, painter, or musician that the world wants something new. Your

fortune is made if you "strike a fresh note" in fiction, or politics, or linen collars, or mining machinery—in any field except on the stage, where they tell you that the public is not quite up to anything that it hasn't already been up to for some years. The safest thing for a manager to produce is something like what the manager across the street produced last year. The other fellow's play dealt with love and business. Write me a play about business and love. And if the young dramatist should protest that he could not follow directions without turning out a play identical with the other fellow's, the manager would fall upon his neck and bless him.

We have no quarrel with imitation on the stage, or in any other branch of art, when the imitation is either frank or intelligent. We are now, for example, in a welter of Satanism. Salome and the Devil divide theatrical America between them. There are imitations of the imitations of the original dance of the daughter of Herodias; Satan, instead of walking up and down the earth seeking whom he may devour, merely waits at home till the "Standing Room Only" sign is put up. When the success of the advertising trick which gave New York its two popular infernal plays was assured, it was inevitable that in a short time the enterprising companies should be playing "Faust," singing "Faust" and "Mefistofele," and reviving every other play and opera that could be in any way connected with the Evil One, his views, or his permanent abode. Drama, opera, burlesque, vaudeville sketch, and moving-picture show unite to do Lucifer honor. For aught we know the villain in the tank-melodrama may now be represented as living on an exclusive diet of devilled crabs. But, after all, such managerial imitation makes no pretences to be anything else.

Moreover we have no quarrel with the kind of imitation that is less frank but is at least intelligent. If theatre managers are now in full hue and cry after plays that mingle business with love, they do the cause of good drama no harm. It is legitimate for the stage to seize on the dominant question of the day and turn it to use. And, in fact, if the playwright were in all sincerity to attack this subject of capital and labor combined with duty versus love, he might give us, in the course of time, something as near to real life as we have perhaps had on the stage. But because Charles Klein won fame and money with a play that showed a leader in finance in conflict with a young girl who works as his secretary but is in reality the daughter of his bitterest enemy, it is now the rule that all plays of American business life must show a struggle between a money king and his secretary who is the disguised daughter, sister, or wife of his bitterest enemy. This stupid mimicry goes much further. Because a play of domestic life showing only a half-dozen characters has achieved signal success, it follows that what the public wants is a play with as few characters as possible. Straight overboard go the "walking" ladies and gentlemen, the comic lover, the soubrette, the innocent, prattling children, the eccentric old man, and four adults, three adults—who knows but that the two-adult standard may be close upon us—walk through three long acts. Another play that takes the popular fancy happens to show the same setting throughout. Away go the much-advertised libraries with real books, gardens with real flowers, streets with real snow.

We are not concerned here with the question of an uplifted theatre as against a degraded and commercialized theatre. We only wonder why theatrical managers should be so wofully lacking in that appreciation of the original, which in every other calling is so necessary. After all, it is only the first and second imitations of a play like "The Lion and the Mouse" that pay. The third, fourth, fifth, and twelfth fail more and more ignominiously. But the sheeplike intelligence of the manager clings to the old path, until by the law of accident a new play that is really new secures a hearing. Immediately the flock goes off helter-skelter in the direction of the new bell.

A new writer of poetic drama is announced by Henry Holt & Co. in Prof. Martin Schutze of the University of Chicago. He has built up a play on the story of "Hero and Leander."

Carl Robert has published in his "Szenen aus Menanders Komödien" (Berlin: Weidmann'scher Verlag) a German rendering of the newly found fragments of this Greek dramatist.

"The Worth of a Woman," by David Graham Phillips (D. Appleton & Co.), was performed some time ago in the Madison Square Theatre, and attracted a certain amount of attention by the frankness with which it treated certain relations of the sexes. It is written with honest intent and is sound enough in some of its general reflections, but, as is generally the case with plays designed to prove some special thesis, pays so little attention to the actualities of life that it has not much force as a demonstration. Some of the characterization is vivid, but the tale as a whole is quite incredible.

In spite of its indisputable cleverness and originality the new comedy by Percy Mackaye, just produced in the Savoy Theatre, is, in some respects, disappointing, because, although it is plainly written with a definite and apparently serious intent, it reaches no absolute conclusion, but rather leaves the spectator in doubt concerning the moral. On its face it seems to argue that what is right is not always expedient, and that, in practical affairs, a good end may justify doubtful means. The piece is described as "a study in American comedy," and it is true that the greater part of it is composed in a light and humorous vein, but the climax, arising out of a question of principle, is distinctly tragic in tone; and the fact that in the final solution, the main issue, the very essence of the dramatic conflict, is shirked or avoided, suggests either infirmity of purpose or failure of logical perception. Briefly the plot is this: Michael Dean and his twin sister Mary are zealots for political reform on lines of the loftiest idealism. They are also a pair of precious young prigs. Their mother, a charming widow of forty-four, a merry-hearted, womanly creature, with a contempt for theories which she does not understand, and a firm belief in the power of tact and common sense, loves, tolerates, and laughs at both of them. Michael is running for office, but holds it disgraceful to subscribe to a campaign fund, and is especially bitter against the "boss," Arthur Cullen, who frankly intimates that if Dean does not pay up he will be counted out. Mrs. Dean declares herself the best politician of all, and bids her son leave his cause in her hands. Having discovered that Cullen has mistaken her for her own daughter, whom he wishes to marry, she flirts with him desperately, and practically pledges her hand to him, on condition that he will not interfere with her son's election. When Michael discovers her supposed alliance with Cullen he solemnly curses and discards her—a queer situation for light comedy—and is still further outraged when, after his victory at the polls, she informs him that she is "the people" and that if it had not been for her he would have been beaten. He vows again that he will never forgive her, but, conquered by her ridicule, throws himself into her arms and owns that she is right after all. Whether he realizes that he has been a fool, or that his mother's way is more effective than his, or that his theories are not practical, or that he has certain filial responsibilities, or comforts himself with the reflection that the trickery was not his, are points left open for debate. If the piece was meant to be amusing only, it was unwise to put any tragic emotion into it, and thus expose it to serious analysis. Regarded simply as light satire upon the extravagance of juvenile idealists, and the euphemisms with which professional grafters try to disguise their rascalities, it has many merits. It is fresh, humorous, fanciful, and, in spots, poetic. The part of the mother is delightfully drawn. Throughout the literary merits are conspicuous, but cannot distract attention from the dramatic weakness.

"A Gentleman from Mississippi," by Harrison Rhodes and Thomas A. Wise, which was produced in the Bijou Theatre on Tuesday evening, is, in its general nature and aim, a genuine contribution to American drama, although not remarkable for literary, inventive, or constructive quality. Considered as a satire upon political corruption at the national capital, it is not a very lucid, instructive, or credible work, the conception and development of the plot being neither ingenious nor plausible, but it is right in spirit, interesting in many of its details, and effective in its climax, which shows the triumph of simple and courageous honesty over organized fraud. Although much of the matter employed is

rather cheap and imitative and many of the characters conventional, the piece undoubtedly has a realistic atmosphere and creates illusion when not subjected to deliberate analysis. Having a swift succession of incident, and being well supplied with quips, which, if they are often familiar, are at least amusing, and with political and topical allusions, it constitutes agreeable entertainment The central figure of the simple Mississippi Senator, with his old-fashioned notions of private and public honor, is impersonated with genial and natural humor by Thomas A. Wise, who won a decided success. He was well supported, on the whole, and there can be little doubt that the piece will prove very popular, as, indeed, it deserves to be.

Miss Maxine Elliott's annual engagement in New York will begin at Daly's Theatre on October 5, when she will present a new play entitled "Myself—Bettina," by Miss Rachel Crothers, author of "The Three of Us." It was in this play that Miss Elliott made an extended tour last season following the closing of her engagement at the Garrick Theatre. Miss Elliott has practically the same company that appeared with her in this play originally. The leading members are Julian L'Estrange, Eric Maturin, Grant Mitchell, Suzanne Perry, Lois Frances Clark, and Viola Fortesque.

Miss Maude Adams will open her new season about the middle of October. Her plays will be "Twelfth Night," "Quality Street," "L'Aiglon," and "What Every Woman Knows."

In consequence of the success of Jerome K. Jerome's "The Passing of the Third Floor Back," which promises to run for a long term at St. James's Theatre, London, Forbes Robertson has determined to produce Henry James's comedy, "The High Bid," at a series of matinées, with the same cast with which the piece was originally performed in Edinburgh last March.

About the middle of October Arthur Bourchier will produce, in Manchester, England, "The Outsider," the new comedy written by Mrs. B. M. Clarke and Capt. Robert Marshall. The hero, the son of a rich tailor, is an officer in a fashionable British regiment, and finds his pedigree a great obstacle in the way of his social success. In the end, however, he triumphs over all difficulties. Mr. Bourchier also has a play which Mrs. de la Pasture has made out of her own novel, "Deborah of Tod's."

Joseph Wheelock, an aged actor, died suddenly at the Highlands of Navesink, N. J., Monday morning. Although he never attained to particular distinction, he was an honored veteran of the American stage. He acquired his early training under the old stock company system, and was a thoroughly trustworthy and competent performer. He did some remarkably good work in "May Blossom" and other sensational dramas, in the Madison Square Theatre, under the management of A. M. Palmer. Of late years he had filled only secondary parts, but whatever he had to do was well done. He was a man of high personal character, and was much beloved in the profession.

The death of William Farren, which is announced from London, deprives the English stage of one of its brightest comedians. The grandson of the first and the son of the second William Farren, he inherited a large share of the histrionic ability for which the whole family was distinguished. In scenes of pure comedy he was admirable, but there was apt to be a touch of affectation in his pathos and of effort in his passion. In his youth, with other famous actors of his period, he passed through a varied experience, playing all manner of parts, developing his abilities, and acquiring ease and certainty of execution. Among his principal successes may be noted, Orlando, Charles Surface, Sir Thomas Clifford, Sir Peter Teazle, Sir Anthony Absolute, Young Wilding, Adam (in "As You Like It"), Lord Ogleby, and Sir Harcourt Courtley. He was in the eighty-third year of his age, and had been in retirement for many years.

Music.

The Rise of Music. By Joseph Goddard. New York: Imported by Charles Scribner's Sons. $2.25 net.

The Standard Concert Guide. By George P. Upton. Chicago: A. C. McClurg Co. $1.75.

The complete title of Mr. Goddard's book, "The Rise of Music: Being a Careful Inquiry into the Art from its Primitive Puttings Forth in Egypt and Assyria to its Triumphant Consummation in Modern Effect," has a quaintly archaic look which arouses the suspicion that the volume is a reprint of a work issued decades ago. That such is not the case is indicated by references to Elgar's oratorios and other modern products. At the same time, the author is singularly reticent regarding that "triumphant consummation in modern effect" of which he speaks in his title. Beethoven, Weber, Schubert, and Wagner are referred to briefly, but of Chopin, in whom pianoforte music was consummated; of Liszt, in whom the symphonic poem and programme music found their perfect development; of Verdi, in whom Italian opera reached its climax, no mention is made. It is with the rise of music and its mediæval aspects that the author chiefly concerns himself, and on this phase of history he has many interesting things to say, although we have not noted any evidence of original research. He dwells on the remarkable fact that so many vital departures should have been made accidentally or for some immediate purpose, and in total blindness of their great consequences. For instance: "who would have anticipated that the gambols of descant would have led to the threshold of harmony?" Four points which are particularly emphasized in these pages are the influence of the Church upon the joint development of harmony and notation; the importance of the great central development—the enweavement of the scales; the creative consequences of the clavier type of instrument; and the explanation of a new and perfect order of beauty resting upon our tempered system. Illustrations help to elucidate the text.

Mr. Upton begins where Mr. Goddard leaves off, being concerned entirely with modern music. As the title indicates, the book is not a history, but a guide to the true inwardness of such pieces as a concert-goer is likely to hear—standard symphonies, oratorios, cantatas, and symphonic poems. Though not a history, it is like a history in being largely a graveyard of works once in vogue. An appendix of six pages gives a list of the vocal and instrumental organizations "whose repertories are likely to contain the works described in this volume." We doubt, however, whether any of these organizations or their patrons are interested in forty or more of the compositions included—by Benedict, Bennett, Corder, Costa, Cowen, Gade, Macfarren, Leslie, Smart, and others. The present volume is a condensation and combination of the same author's "Standard Oratorios," "Standard Symphonies," and "Standard Cantatas." The condensation might have been safely carried farther, making a volume of 400 pages instead of 500. Time is inexorable; concert pieces and choral works fall like leaves in the forest, and lucky the composer who can see them for a time at least in autumn colors. That Mr. Upton's work is well done, readers of the *Nation* have been told more than once. There is no foolish "parsing" here, but only such information—sometimes supplemented by illustrations in musical type—as will aid the reader in appreciating the piece in question. He will be puzzled only by one strange thing. In the index reference is made to "Bürckner." In the table of contents and the body of the book this same gentleman is referred to as Brückner. His real name is Bruckner—Anton Bruckner. Not to close with a discord, let us finally call attention to a feature which doubles the value of this volume for reference purposes—an extra twenty-eight-page index of the principal arias and other numbers in the various works therein described.

The Leipzig publisher, Robert Torberg, has brought out under the title of "Aus den Klavierabenden von Eugen d'Albert" a collection of pieces as edited and played by that pianist. Attention has been called to the fact that, although the most authoritative Mozart player of the time, the veteran Carl Reinecke, expressly sanctions to a certain extent the modernizing of Mozart for the concert hall, d'Albert, a pupil of Liszt and ultra-modern in his tendencies, is surprisingly conservative in that matter.

An association for collecting popular songs and melodies in all of the provinces of the Austrian Empire has been organized in Innsbruck, and has secured some four thousand songs and melodies in the

Tyrol and the Austrian Alps. The collection is to be published by a committee of which several university professors, notably Drs. Josef Eduard Wockernell and Michael Mayr, are leading members.

The Philadelphia Orchestra, under the direction of Carl Pohlig, will give twenty-two evening and twenty-two afternoon performances this season in that city. On the evening of Wednesday, February 3, the one hundredth anniversary of Mendelssohn's birth, and on Friday afternoon, February 5, the orchestra, in conjunction with the Ben Greet Players, will present "A Midsummer Night's Dream," with Mendelssohn's musical setting.

The Kneisel Quartette announces that its regular chamber music concerts will be given at Mendelssohn Hall on the following Tuesday evenings: November 17, December 15, January 12, February 9, March 9, and March 22. The list of assisting artists includes: Miss Katharine Goodson, Ernest Consolo, Ossip Gabrilowitsch, Courtlandt Palmer, and Ernest Schelling.

The Dresden, Germany, Philharmonic Orchestra of sixty-five musicians, under the leadership of Willy Olsen, will make a tour in America next year from April 12 to May 9. Among the soloists at the concerts will be Mme. Nordica, Charles Dalmores, and Albert Spalding.

Adele Verne, the English pianist, who will make her first general American tour the coming season, will be heard in New York at Carnegie Hall on October 17, in recital. About a week later she will play there with orchestra.

The veteran musical critic, Adolphe Jullien, has made his usual count of the number of representations of operas in the Paris repertory up to the end of August. Gounod's "Faust" and Meyerbeer's "Huguenots" are the only works which have reached their 1,000th representation. The former is not only ahead of all others, but continues advancing more rapidly—1,102 on August 31, 1908, with thirty-eight representations for the twelvemonth, to 1,054 with only eight new representations for the "Huguenots." Meyerbeer's "Prophète" was given four times, reaching a total of 574; and Gounod's "Roméo et Juliette" six times, with 258 as a total. Rossini is next in order, with five representations of his "Guillaume Tell"—a total of 863. To compare these figures with the Paris demand for Wagner's operas, it must be noticed that Rossini had a start of more than sixty years, as did also in varying measure Meyerbeer and then Gounod. "Lohengrin," with which Wagner broke into the Paris Opéra in 1891, under police protection against a popular demonstration, has had fourteen representations during the year, which brings the total up to 261. "Tristan et Iseult" was given eight times (total 45); "Valkyrie" nine times (total 177); "Tannhaeuser" eleven times (total 190). This gives Gounod forty-four for the year all told, and forty-two to Wagner. "Samson et Dalila" of Saint-Saëns was given twenty-seven times (total 265); but M. Jullien attributes this preference to the fact that it allows of an independent ballet. Massenet's latest opera, "Ariane," which started off with forty-nine representations for its first two years, had only ten last year; his much older "Thaïs" had still six representations, thanks to Miss Mary Garden. "Rigoletto" was given six times (total 166); "Aïda" five times (total 248)—which keeps Verdi on a level with Meyerbeer and Rossini. Of French composition again, Reyer's "Salammbô" was given eight times (total 149); his "Sigurd" three times (total 206); Paladilhe's "Patrie" four times (total seventy-six); and the new "Catalane" once (total nine). Rameau's "Hippolyte et Aricie," which had been given 120 times up to 1767—and never since—had a patriotic resurrection seven times during the year.

Art.

THE EXCAVATIONS AT ALESIA.

PARIS, September 12.

Three years ago archæologists were invited to an excursion to Mont Auxois, where a military explorer had identified the site of Cæsar's Alesia. Many were not convinced by the arable green fields which he pointed out as covering the ruins of the Roman colony. They saw nothing in the resemblance between "Alise," the immemorial place name of present-day France, and "Alesia" of Roman Gaul. The few trenches which had been dug showed at first sight little more than the remains of antiquity common to so many localities of this old land. This year an invitation was again sent out. Those who responded have seen a Gallo-Roman city revealed in its streets and houses and monuments. The excavations have illustrated the contemporary writings of Cæsar and the elder Pliny and thrown much light on the history of ancient pottery; and they promise rich materials for the study of the social life of Roman Gaul.

The ruins of the great theatre which have been uncovered show a façade 270 feet long, with outer and inner hemicycles. Behind the theatre is the substructure of a temple. Further to the east is one of those mysterious ruins which open a field to archæological investigation—three apses of different epochs. To the north are the best preserved and most striking monuments yet found—a vast quadrangle, with a façade having a double row of columns at different levels, and a building of many halls with a large full-centred arch for its portal. At the place of the forum, there still exist the bases of the columns which made up the colonnades of its northern and southern sides. On the sites of the private houses many separate rooms are found, apparently cellars. There are Gallo-Roman waterpipes; a bronze foundry; a bath hypocaust, with its subterranean furnace; and the remnants of huts of the native Gauls. In these ruins the varying value of the materials used, the diversity in art and workmanship, indicate three successive epochs in the Gallo-Roman city, from its chief splendor in the first century of our era to the decadence of the fourth.

In art objects and furniture of daily life the yield of these excavations is rich. There are remains in bronze and iron, and in pottery; and bas-reliefs and statues which must have been wrought on the spot, perhaps by native artists, since they are made of stone from the neighborhood. Notably among the bronze statuettes a bust of Silenus and a reclining Gaul have real artistic merit. The most curious find is unique in archæology. It is a wooden Pan-pipe found buried at the bottom of a well. This classic instrument of music was hitherto known only from descriptions and carvings. Alesia, in 1906, revealed this first real example.

Such results alone would suffice to show the importance of these excavations. They are carried on by the Société des Sciences historiques of Semur-en-Auxois, the modern town, with the help of the French government and several learned societies. The latest historian of Rome, Guglielmo Ferrero, draws from his visit the conclusion that modern archæology should occupy itself with researches in Europe, as well as in Asia and Africa; and he points out the immense importance to history of Gallo-Roman remains, quite apart from any artistic value. According to him, it was the development of Gaul which secured the solidity and unity of the Roman Empire during the first two centuries of its existence; and the decomposition of the social system which had been formed in Gaul under Roman domination was the beginning of the crisis, in the third century, which was to end in the destruction of ancient civilization throughout the empire's European provinces. He has an instance ready to hand in a recent discovery made among these remains of Gallo-Roman pottery. J. Déchelette, the author of the authoritative manual of archæology, has found after long examination something which Ferrero regards as one of the most important discoveries in archæology for fifty years. He has proved that many apparently Greek vases found in the Imperial provinces, and even in Italy, were really manufactured in Gaul. There is Gallic pottery in the ashes of Pompeii. This agrees with the constant assertion of Pliny the elder that the products of various industries of Gaul were exported to other parts of the Empire. Pliny alone had not persuaded modern historians that Gaul, one century after the Roman conquest, had become an industrial country, so far as the expression can be applied to ancient times. Alesia bears witness beyond cavil.

S. D.

Grant Allen's "Evolution of Italian Art" will be issued soon by A. Wessels Company in an octavo volume with sixty-five illustrations.

Dent & Co. have arranged to publish a new edition of Crowe and Cavalcaselle's

"History of Italian Painting." with notes by Edward Hutton. It will be in three volumes, with some 300 illustrations. The first volume appears this autumn.

A replica of Rodin's monument to Whistler to be erected in Chelsea, London, may be had for New York on the payment of $12,000. Already $9,000 has been secured, and an effort is making to complete the sum.

Signor Corrado Ricci, the director of the fine arts department in the ministry of education, has decided to begin the publication of a catalogue of the ancient and mediæval monuments in the different townships of Italy. The catalogue will be illustrated, and will furnish a complete list of the various monuments composing the artistic heritage of the country.

Albert-Pierre-René Maignan, historical painter, died in Paris, Tuesday, at the ago of sixty-three. He had been a pupil of Noël and Luminais, received a medal of the first class at the Salon in 1876, and the cross of the Legion of Honor in 1883. Among his principal works are Barberousse aux pieds du pape, Attentat d'Anagni (in the Metropolitan Museum, New York), Dante rencontre Matelda, Naissance de la perle, and Hommage à Carpeaux.

The death is announced of the Parisian artist, Jacques Wagrez, at the age of sixty-two. His best-known works are Venetian scenes and Italian historical pictures. He also did much work as an illustrator.

Jules Joseph Dauban, for many years director of the École des Beaux-Arts and the Museum of Angers, has died at the age of eighty-five. His first great success as an artist was a series of pictures portraying the life of the Trappists. His chief historical painting is Madame Roland se rendant au Tribunal Révolutionnaire.

Finance.

FINANCIAL UPS AND DOWNS OF 1908.

When the recent violent collapse in the market was fairly under way, one began to hear on the Stock Exchange that "Amalgamated, Union Pacific, and Smelting are back at the July level"; that "St. Paul, Northern Pacific, and Great Northern are at the lowest since May," and so on. Such comparisons roused the rather interesting question what has been the actual swing of values on the Stock Exchange this year? The general impression has certainly been, not only that each successive advance has touched new heights, but that, in the market as a whole, there has been a great enhancement of values—even at the low level of last week Tuesday. This idea is quite erroneous. The fact is that, with a few exceptions, the prices last week were only slightly higher than the level reached in the January recovery. Some active stocks were 20 points or more above it; other standard shares were actually below; and a surprisingly large number showed no change of consequence. These are the figures for a dozen stocks which are fairly typical:

	Jan. High.	Feb. Low.	Summer. High.	Sept. Low.
Union Pacific	128⅝	110½	168⅞	149⅝
St. Paul	117⅞	105¼	147⅜	127¼
Reading	111	92⅛	137⅜	120¾
Great Northern	125¾	113¾	140	125¼
United States Steel.	31¼	26½	48⅛	41⅛
Amalgamat. Copper.	53¾	45⅛	83⅝	68⅞
Missouri Pacific	47	28½	64½	50
New York Central..	103	92⅝	110¼	100¼
Amer. Smelting	79¼	55½	107	79
Pennsylvania	117⅞	109¼	126¾	119½
Del. & Hudson.....	168	141½	174⅞	160¼
Erie	17⅛	12½	31¼	27⅜

The break in prices after the Maine election of September 14 was so sharp as to cancel a very substantial gain between the middle of January and that date. The declines of 12 to 18 points in the most active stocks compare with such maximum declines, during the whole half-year of financial agony which marked the political contest of 1896, as 11 points in New York Central, 20 in Chicago, Milwaukee and St. Paul, 25 in Rock Island, and 29½ in Chicago, Burlington and Quincy. Those were all sound, dividend-paying stocks in 1896, and they led the market as Union Pacific, Southern Pacific, and Reading have led it this year; and the comparison shows that the six days' decline of last month was more than half as severe as the entire six months' decline in 1896. Nevertheless, it is not unfair to take those prices as a basis of inquiry as to the whole year's movement on the Stock Exchange.

The most obvious fact is that the rise, though substantial, has been considerably less than people have imagined. There have been several violent "booms" since January, but they have been temporary and in large part imaginary; the September readjustment separated the real from the unreal. This leads naturally to the question, whether or not the stock market has reflected industrial conditions. In most respects, it has. The "January rise" was the normal response to restored facilities of credit, which affected merchants and investors alike. Up to that month, neither investors nor merchants could obtain funds for their customary operations. Both had therefore virtually ceased doing business: but when, at the opening of January, money rates fell to normal, hoarded currency poured back into the market, and surplus bank reserves, within a few weeks, rose to the highest figure reported at that date in fourteen years, both the stock markets and the commercial markets were bound to be affected.

This January advance, then, had a sound and permanent basis. But the later movements have been of a different character. There was the excited "March advance," which was Wall Street's translation of the assurances, of which the newspapers were full, that conditions of 1906 were almost restored again, and that the expansion of trade would be continuous. Presently it turned out, however, that the buying on which those assurances were based was a purely temporary movement, induced by the long postponement even of necessary purchases, and discontinued as soon as those immediate needs were filled. Discovery of this fact led to a moderate relapse on the Stock Exchange in April, May, and June. Following that came the Prosperity League with its creed that business would boom again if we only believed it to be booming, the Wall Street midsummer testimony that the industrial "boom" had already arrived, and the market's testimony that politics need worry nobody. This was all pure illusion, and the extravagant rise in prices, built up on the basis of it, was misleading. Ordinary common sense soon taught that business will "boom" when consumers buy more goods, not when producers think more goods ought to be purchased. Assertions that the "boom" was actually "on" had to give way before official statements of production, trade and earnings, showing a business, at the summer's end, smaller by 25 to 50 per cent. than in 1907. As for politics, the stock market had forgotten, what trade circles did not forget, that the real misgiving and agitation of a Presidential canvass commonly begin a month or two before election.

To the September markets, in short, was reserved the function of testing the correctness of the Stock Exchange's assertions, predictions, and "discountings" of the eight months' period following January. Perhaps the above comparison of the September stock market prices with the high level of January will measure the actual movement of industrial recovery. Five weeks from now, we shall have a clearer notion of the part which politics has played, and of what is to be expected, in both finance and trade, with the electoral problem settled.

Ready This Week.

Hero and Leander

By MARTIN SCHUTZE, of the University of Chicago. $1.25 net.

A poetic drama of unusual merit. While several authors have tried this theme, probably no one before has brought these ill-starred lovers so close to our sympathies. Professor Schütze has imagined new and striking episodes, and minor characters who lend added life and body to the original slender legend.

The Pleasant Thought Year Book

For each day of the year. Selected by MARY R. J. DUBOIS. 18mo. 122 pp. Full gilt. $1.00 net.

Donald G. Mitchell (Ik Marvel): "It is a charming little book. The selections most adroit and wise. It is certainly one of the choicest collections of pleasant thoughts for the year that we have ever seen, embracing, as it does, the finest sentiments of more than one hundred of our best authors."

A Holiday Touch

And other tales of dauntless Americans. By CHARLES BATTELL LOOMIS, author of "Cheerful Americans," "Poe's Raven in an Elevator," etc. Illustrated. $1.25.

This volume consists chiefly of anecdotes of Americans who won out smiling; among them are *A Study in Optimism, Buffum and the Cannibals, Uncle Eli's Induced Ambegris, A Dinner to Paul, With a Money King to Back Mc,* and several delightful burlesques, including *The Only Vice of Awful Adkins* and *A Coat of Alpaca,* while a brace of Christmas stories in highly contrasted veins open and close the book.

The Nation.

NEW YORK, THURSDAY, OCTOBER 8, 1908.

The Week.

President Roosevelt's order removing the collector of customs and the special Treasury agent at Port Huron, Mich., for pernicious activity in politics, is highly commendable. Commendable also is the President's desire that his "action shall be given as wide publicity as possible, . . . so that all other collectors and heads of bureaus or offices may be warned in the matter." The particular offence with which the collector at Port Huron was charged is demanding political assessments from the classified employees at the custom house. This breach of propriety is, as the President says, "very gross." Nevertheless, the collector at Port Huron may quite possibly be astonished to find himself brought up with a round turn. Preceding the Chicago Convention, the Federal officeholders throughout the country were exceedingly active. The Federal machine as a whole was being vigorously operated in behalf of Mr. Taft, and collectors and postmasters zealously rounded up delegates without suffering a word of rebuke from the President or the heads of the departments. Since the Convention there has also been some political activity which Mr. Bryan, at least, would describe as pernicious. No less a personage than the President himself has descended into the arena and has taken advantage of his position to secure a wide hearing for his arguments for Mr. Taft and against Mr. Bryan and Mr. Haskell. It is not to be wondered at that subordinates have supposed that the rule against activity was suspended *pro tem.*

Hesitating voters must be turned from Mr. Taft every time he expounds his peculiar doctrine about the Wilson tariff and the panic of 1893. We do not recall any selection of an issue by a candidate in any previous campaign, so thoroughly calculated to do a minimum of good and a maximum of harm to his political fortunes. The South Dakota audience, to whom Mr. Taft described the Wilson bill, last week, as "that great tariff measure," "under the influence of which wheat went down below fifty cents," may possibly have included two or three farmers so densely ignorant as to suppose that the two things had some relation to one another. But the South Dakota speech was duly telegraphed and printed and Mr. Taft may be sure that for every muddle-headed listener who might have been deluded, a hundred intelligent readers of his words, among his natural supporters in other localities, were stirred to indignation. Republican stump speakers used to pretend that the Dingley tariff caused prosperity—a prosperity which would turn into panic and hard times again the instant any one but a Republican was elected President. But the panic of 1907, at the height of Republican ascendency and with its tariff in full vigor, has disposed of the "workingmen's full dinner-pail" as a campaign cry, and therefore Mr. Taft seems to think that nothing is left except to tell the farmer, who is fortunately still prosperous, that the Republican party makes the wheat grow and the foreign markets bid for it, whereas the Democrats, with their Wilson Bill in 1894, blighted the corn crop and prevented the buying of wheat. This talk about "the tariff bill which sent wheat below fifty cents a bushel" is a great shock to people whose support of Mr. Taft had been based on belief in his wisdom and good sense. The reiteration of such statements will do more than anything else possibly could to drive from his side the independent Democrats, whose scorn of economic fallacies prevented their support of Bryan, who believe in a lower tariff, whose votes won the elections of both 1892 and 1896, and may be the decisive factor in 1908.

Mr. Taft's argument for the publication of campaign contributions after election, rather than before, is not without plausibility. The chief purpose of the various laws on the subject is, of course, that the people shall ultimately know who gave the money and how it was spent; and that corruption of the electorate shall be prevented. There is also a possibility that the publication of the names will afford a pretext for cheap partisan clamor against this man or that. But the McCall bill, which Mr. Taft approved, provided for publication before election. And as to clap-trap and possible misconstruction of motives—what is fair for one side is fair for the other. The Republicans have no monopoly of virtue. If the Democrats come out with their report, the worst construction can and will be placed on Republican silence. Mr. Bryan will be entitled to say that the Republicans are afraid to show their accounts and trust the general intelligence of the people to interpret the facts correctly. And to this charge there can be no effective answer.

Mr. Taft is highly indignant because he is accused of having said that a dollar a day is wages enough for any man. But is he so little read in the history of Presidential campaigns as not to know that this particular accusation has been levelled at every candidate for many years past? Last time Judge Parker had to meet the identical attack, backed up, of course, by an affidavit of a man who had heard him say so; and it is only a variant of it which makes Mr. Bryan this year responsible for having called laboring men "beggars." Consequently, far from provoking wrath, this special form of campaign calumny should serve to reassure a Presidential nominee. It shows that he is truly in the line of the great vilified of other days. Many occurrences in the past few weeks might well have led Judge Taft to doubt whether he, or another, were the Republican candidate, but with the arrival of the dollar-a-day story, all uncertainty is at an end. The thing takes its place beside the *Cogito, ergo sum* of Descartes. "I am alleged to have said that a dollar a day is good enough for any laboring man, therefore I am a Presidential candidate."

Equally stereotyped is Mr. Taft's innocent assertion that he is now certain that he is going to be elected. The sure evidence is the crowds that have poured out to hear him. But it is in this way that all candidates are always elected—in advance of the voting. Bryan carried the country several times over in 1896, and again in 1900, on the strength of his enormous audiences. It is the pathetic but the invariable fallacy of all

who run for the Presidency. Poor Greeley had it in 1872. Blaine fell into it in 1884. It is, indeed, the most natural thing in the world. A candidate faces a vast assemblage, all eager to hear him speak, and he cannot easily resist the conclusion that the country is rising to him. There is no one to tell him that as great a crowd would gather to see a two-headed monster, a still greater one to see him hanged, and that his rival had the same hall similarly stuffed with the same people the week before. So the old delusion persists. "Until I saw the crowds, I was in doubt. Now I know that I am going to be elected." Both Bryan and Taft say it. It is a conventionality of the campaign which could not be omitted. If people more easily smile at such solemn futilities this year, it is because everybody knows how confused the electoral battle really is, and how impossible is a prediction of the outcome. With party lines wavering and broken as never before; with conflicts in a dozen States cutting directly across national issues and confounding the wisdom of the politicians; with guerrilla fighters turning up in every patch of bushes; with business still depressed and a great army out of work; with campaign funds meagre; with the evidence of popular excitement small—it is absurd for any one to pretend to know what the result will be. Yet politics would not be politics if those in the business did not affect the owl-like gravity of Roman augurs, and pose as wiser than seven men that can render a reason.

Is it good Republican politics for Mr. Sherman to hug Speaker Cannon so closely to his bosom? Even the West, where the ordinary rules of consistency go into hiding when infallibility at Washington speaks, must wake to the incongruity of the situation. While salvos of artillery ring out every Monday and Thursday against Trusts, predatory interests, and reactionary legislators, the vice-heir to the Roosevelt policies goes about announcing that Cannon, the arch-fiend, has been "a tower of strength to the Administration," a slayer of vicious bills, a very Cerberus of economy whose capitalized value to his country cannot be less than "ten million dollars." Mr. Bryan in his regular Wednesday and Saturday letter to the President is sure to seize upon the incident. If Cannon, after all these years in Congress, needs for reëlection the aid of the Republican candidate for Vice-President, his district is showing a moral sensitiveness which bodes no good to any apologist of Cannon. If he does not need Mr. Sherman's assistance, why does Mr. Sherman gratuitously take the risk?

Of the eight Republican Senators who opposed Gov. Hughes on the gambling issue, five have been denied a renomination. The last case is that of Benjamin M. Wilcox of Auburn. Senator Wilcox was a conspicuous offender, as his prominence in a Methodist church lent a fine touch of hypocrisy to his alliance with the gamblers. He was so strong politically in his district, however, that he was able to keep the Senatorial convention deadlocked for weeks. But on Monday, the last day under the law when a party nomination could be made, another man was finally chosen, though Chairman Woodruff went in person to beg for the selection of Wilcox, saying that he himself would shoulder "the responsibility for the nomination." The delegates, though, would not, and Wilcox has gone to swell the mortality-list of those who defied their constituents as well as the Governor, on a plain issue of public morality. It is an impressive and wholesome demonstration.

Lieut.-Gov. Chanler makes an agreeable impression in his speech accepting the nomination for Governor. His open rebuke of Chairman Conners for betraying his confidence, is a pleasing indication of personal vigor. In general, he endorses the Democratic platform, which does not, we are bound to say, afford a very substantial footing. Like Gov. Hughes, he pledges himself to carry on the work of deepening the Erie Canal. He could not do otherwise. The project was long agitated and was finally approved in a popular referendum. To-day the undertaking could not properly be abandoned without resubmission; and on a new vote we believe the result would be substantially the same as before. Mr. Chanler, we regret to note, accepts the clap-trap in the Democratic platform condemning "government by commission." This is not a subject in regard to which wise men indulge in sweeping generalities. No sound formula for or against commissions can be framed. The question in each particular instance is whether a certain function of government can be better discharged by a single officer, elected, say, or appointed by the Governor, or chosen by the Legislature—or by a commission created in one of these three ways. The circumstances of the case and the nature of the duties should determine the character of the executive. Mr. Chanler declares for honest and efficient government. All candidates do that; but Mr. Chanler is, we believe, entirely sincere; and were he elected, he would doubtless endeavor, within his lights and his capacity, to fulfil his pledge. But all that he promises Gov. Hughes has already performed.

In summing up the work of the American Bankers' Association at Denver, most emphasis is laid upon the opposition to the Bryan plan for guaranteeing deposits. This was condemned in addresses and by formal resolution. Yet it should not be overlooked that the Association also expressed disapproval of the scheme for postal savings banks. This was in the Republican platform, and has been especially endorsed by Mr. Taft. Clearly, then, the bankers have vindicated their non-partisanship. The report on the Aldrich-Vreeland currency bill appears to be a kind of damning with faint praise. The measure was described as one that could not be altogether approved, yet which was "in the direction of progress." A pretty plain implication is that the greatest progress will be made by not bringing the new law into use at all.

The meeting at Grand Rapids last week to promote the building of a canal to connect Lakes Michigan and Huron is but one proof more of the quickened interest in deep waterways. This latest project follows one for a canal from South Chicago to Toledo, O., by which 500 miles would be cut off from the present lake route between the two cities. That the scheme has such backing as that of the Chicago Association of Commerce is probably due to Canadian competition in water-borne freight, but the fact that the proposed canal would do much to swing traffic southward to find its way to the sea via Buffalo and the Erie Canal is sufficient to enlist the attention of New York. The canal would

be 244 miles long, with a depth of twenty feet. The chief difficulty is that a greater enterprise seems to have the right of way, namely, the Lakes-to-Gulf Canal. Meanwhile, Canada, more than ever alert to her opportunities, is pushing the Trent Canal system to completion. One look at the map of the Dominion shows the advantage that would be gained by a canal connecting the Georgian Bay with Lake Ontario and the St. Lawrence. The Trent Canal was begun as long ago as 1837. But other and more pressing subjects then demanded attention, and the work progressed slowly, for many years stopping altogether. To date, something like $5,000,000 has been spent on the enterprise; and the Hon. George P. Graham, Minister of Railways and Canals, in a recent speech at Peterboro, made the statement that this year the Government is devoting a million dollars to the canal, and that to complete it will require two millions or more. He was positive, however, that work would not cease until this link in Canada's waterways is finished. In all, Canada has spent since confederation more than ninety millions of dollars on her canal systems; adding the sums laid out previous to that event, she has expended a total of more than one hundred and twenty millions on canals.

A two-cent stamp now carries a letter from Los Angeles to Liverpool. The new treaty making this possible is hailed on both sides of the ocean as a good business stroke and also a tightening of the bonds of international friendship. Probably time will justify the opinion, but in the meanwhile ignorant men wonder why the American authorities did not accept, along with Imperial penny-post, the parcels-post system. To be sure, the former benefits a larger number of persons and benefits them more constantly; but the lack of the parcels-post works far more serious inconveniences. To make the present situation thoroughly anomalous, our Post Office Department receives and delivers packages forwarded from Europe at parcels-post rates, but accepts none for abroad save at prohibitive rates. But the wise know that the anomaly must endure at least as long as Senator Platt; for to send bundles to Europe would be to compete with the express companies.

TURKEY AND BULGARIA.

To all of the little Balkan states the revolution in Turkey must have come as an unwelcome surprise. They have all been waiting impatiently for Turkish misrule and anarchy to hasten the break-up of the Empire. That was to be their opportunity. To none can the prospect of a rejuvenated Turkey have brought greater disappointment than to Bulgaria. For while her rivals, Greece and Servia, could trust only to accident and the good will of the Powers for a share of the Ottoman heritage, Bulgaria has been for a long time in a position to take what she wanted by force of arms. Greece tried war with Turkey in 1897 and made only a ridiculous showing. Servia, of course, would stand no chance. But Bulgaria's fighting efficiency is regarded by experts as fully equal to that of Turkey, though based on a population only one-sixth as large. She can place 210,000 men in the field within ten days, and can reinforce them with 230,000 men of the first and second reserve. Turkey's army, while on paper numerically superior, is in a far lower state of efficiency. She would need six weeks to mobilize even partially. Bulgaria, in consequence, could afford to regard the growth of Macedonian anarchy with equanimity. She was prepared.

Bulgaria, however, was not prepared for an Ottoman revolution that had for its main objects the reorganization of the Empire on the basis of liberal institutions and a policy of conciliation towards the warring nationalities in Macedonia. With Macedonia quieted and appeased, the Turkish break-up would be long postponed, the sympathies of Europe would be gained for the new régime, and the splendid Bulgarian army would either grow rusty with disuse, or, with the heavy cost of its maintenance, ruin the four millions who make up Bulgaria. Hence it became essential for Bulgaria to strike before the new order in Turkey had taken firm root. A declaration of war without sufficient cause would not, of course, be tolerated by the Powers. But to proclaim the independence of Bulgaria would be a step which a proud and vigorous young nation might take without arousing general condemnation, inasmuch as such a declaration would be only the official recognition of what has been an accomplished fact for the last thirty years.

If war comes, it must be by the action of Turkey. Will the reform party which is now in power at Constantinople go to that extreme? The situation of the Young Turks is indeed difficult. It is not only the chances of war they must now take into account, but the possible effects of war on conditions at home. The temper of the Young Turkish leaders in external policy has been militant. The Gueshoff incident (virtually a refusal to recognize the representative of Bulgaria at Constantinople) is the direct cause of the present crisis; and this trouble was brought on by the rather foolish desire to vindicate Turkey's theoretical but long dormant rights over Bulgaria. In other parts of the Empire the Young Turkish leaders have evinced a similar determination to reassert Turkey's obsolescent claims. But it is one thing to proclaim a policy of aggressive patriotism in the first flush of victory over a decadent régime; it is another to face such arduous conditions as those now presented by Bulgaria. Against war, in the first place, is the unpreparedness of the Turkish army. Against war, too, is the danger of reaction within Turkey. Should the war begin with even a minor setback for the Turkish army, there is little doubt that Abdul Hamid would attempt to seize control of affairs. The Young Turkish party would be accused of having brought disaster upon the country, and the Constitution would be abrogated just as the Constitution of 1876 was done to death under similar circumstances. The restoration of the old despotism would readily lead to revolt in Macedonia, if indeed the majority in that country would not certainly rise in event of strife between Turkey and Bulgaria. But perhaps the weightiest reason against war is that, even in case of victory, the Turks have nothing to gain. Europe, which has been watching Turkish decline for centuries, will not allow a Turkish advance. Turkey's decisive victory over Greece in 1897 brought her no gain outside of a small indemnity, and a rectification of her southern boundary.

Peaceful acquiescence in Bulgaria's action has also its difficulties. The reactionary elements can bring forward the same charge against the Young Turks that would be forthcoming in the case

of war and defeat. Instead of saving the Empire from dismemberment, the new Turkish Ministry will have begun with the sacrifice of province after province. Bulgaria is gone, and Bosnia and Herzegovina are on the point of being annexed by Austria-Hungary. Should Turkey quietly submit, what will be the effect on the other nationalities? Will Greece refrain from taking chances by the annexation of Crete? Will Servia keep her hands off Novi-Bazar or Uskub? What will happen to the weak remnants of Turkish authority in Arabia? If Austria has been behind Bulgaria, then, of course, Italy will insist on compensation on the Adriatic coast, and Russia may make a bid for the freedom of the Dardanelles. Even the case of Bulgaria is complicated. Herself long virtually independent, Bulgaria has held since 1885 Eastern Rumelia, which has continued to pay tribute to Turkey. To abandon Turkish suzerainty over Bulgaria proper would perhaps work no immediate harm. But surrendering Eastern Rumelia would actually be giving up Turkish territory.

Such are the elements of a highly disquieting situation. As yet the chances seem to be in favor of peace. Europe is not quite prepared to go to war over the Balkans, and the diplomats will probably patch up the business. It may be, too, that the Young Turks, who have made such a good record for efficiency and self-control at home, will show a still greater self-control in foreign affairs. They may allow the lost provinces and dependencies to go in name, as well as in fact, while they set themselves to strengthen and cement the provinces Turkey still rules. Whether they are strong enough to force such a policy of abnegation on the Turkish people and defend themselves against reactionary intrigue is the question. That the influence of Great Britain and France will be behind them in such a policy would appear to be certain.

REFORM AND HYPOCRISY.

The pot-and-kettle exchange of letters between Mr. Bryan and President Roosevelt has, let us hope, been brought to a close, for the time being, at least. A wearied and disgusted people are ready to exclaim with Christopher Sly: "'Tis a very excellent piece of work: would 'twere done!" Yet the state of facts and of morals in party management, which the correspondence has emphasized, calls for comment and, above all, for discrimination. How much of the change which has confessedly come about represents a true political reform, and how much mere pretence and hypocrisy? What part of it all is to remain with us as a fixed advance in party methods, and what to be dropped as temporary aberration and insincerity?

One able to recall Presidential campaigns for twenty-five years past might be tempted to think that our parties had suddenly become not merely virtuous but saintly. In 1884, for example, the Republicans openly put a protected manufacturer and corporation magnate at the head of their National Committee, and made no concealment of their wish and intent to get money from any selfish or corrupt quarter. Jay Gould's gift of $50,000 at the end of the campaign was particularly welcome. Four years later, the party of moral ideas was led to victory by Quay, under whom Theodore Roosevelt worked for Harrrison's election, possibly at that time acquiring that admiration for the great political bandit which led him, at Quay's death, to send a telegram bewailing the loss of a personal friend. The frankly commercial spirit in which Mark Hanna managed the two campaigns in which he was chairman is notorious. A prominent and honored Ohio Republican has said of Mr. Hanna that his only notion of political activity was "to go out and buy somebody." It is not necessary to enlarge the list of names or of infamies. Any political Rip Van Winkle of the age of "blocks-of-five" Dudley and President Arthur's "soap" and Platt's open purchase of up-State cattle, who should wake up to-day to see the two parties vying with each other in scorn of vote-buying and in flogging the money-changers from the temple with a whip of small cords, might well think that the millennium had dawned since he fell asleep.

If, however, he rubbed his eyes hard enough, and looked about him with sufficient sharpness, he would discover that Satan was not yet bound, or the saints inheriting all of the earth. He would see certain undoubted gains. The secret and interested campaign contribution is in a fair way to be abolished. Such vast sums from suspect sources as were paid over in the dark to elect Roosevelt four years ago, are already a thing of the past. The vows of poverty which the two parties have taken this year are not, it is true, wholly voluntary. They have renounced corruption funds partly because they can no longer collect them. But though the motives may not be entirely pure, the result is good. The cries of distress which are going up from party treasurers to-day need disturb no patriotic citizen. It is well that campaign committees should be compelled, like the rest of us, to economize. They have too long had too much money, and set up a scale of expenditure both lavish and demoralizing. If they are now forced by poverty to cut off an army of parasites and frauds who have in previous years fastened themselves like leeches upon the party treasury; to give up subsidizing useless orators at $1,000 a week; to leave off paying the honest farmer "for his time"; to make their headquarters less glittering and their private cars and special trains less numerous, the effect will be salutary for them and for the country, too.

Such limitation, together with the publicity of campaign expenditures, means a genuine reform. So does the increased sensitiveness about the alliance between business and politics for mutual but dishonest profit. The sudden zeal of Republicans against Standard Oil associations may yet lead to a dislike openly to be dictated to by interests that are equally corrupt and equally tyrannous, though they call themselves simply the protected classes. All this is well; but no one with his eyes open can fail to see that the movement has been accompanied by a tremendous amount of hysteria and outright hypocrisy. The process of proscription is not unlike that which raged in the French Revolution. Now, as then, it is enough to point out a man as "an aristocrat" in order to raise a cry that he be hurried to the political guillotine. Thus the President's rash citation of one Standard Oil attorney as a supporter of Bryan, has already led to the discovery that the lawyer in charge of the Republican headquarters at Chicago has also taken a retainer from the Standard Oil. Of course, that proves him a scoundrel. Against even Senator Crane, a prominent Republican leader in Ohio has lifted up his voice, wanting to know how the labor vote

can possibly be secured for Taft if a mas as rich as Mr. Crane is allowed to have anything to do with the campaign.

This is neither reform nor common sense. It is an excess of madness. The passions of the have-nots have been stirred by Mr. Roosevelt, Mr. Bryan, and Mr. Hearst, and if these passions now direct themselves furiously against the chosen assistants of Mr. Taft—men like Mr. Sheldon, William Nelson Cromwell, and Senator Crane—that is only to be expected. We hear much of the unscrupulous corruptionist, but the unscrupulous reformer is almost as terrible a being. By his loud condemnation of others for what he does freely himself, by his indiscriminate attacks upon opponents and his unwinking defence of supporters, he necessarily gives reform an aspect of hypocrisy. That leads to such follies as we now see, when men of upright life are in danger of being ostracised merely because they have money, and the theory is soberly advanced that the rulers in a government touching property at a thousand points must take no advice from any man having property!

REVISING THE TARIFF UP.

Mr. Taft's remark that on some articles "the tariff should be raised" was received with derision even in quarters not unfriendly to the Republican party and the policy of protection. But those words, absurd as they seem, were evidenly a sop to the stalwart band of protectionists who intend that when the tariff is revised, the general result shall be to increase rather than to lower the duties. This is the inference we draw from several articles in the September issue of the *Annals of the American Academy of Political and Social Science*—and particularly from a contribution by Col. Albert Clarke, secretary of the Home Market Club. Substantially all of this number is devoted to tariff revision. D. M. Parry, former president of the National Association of Manufacturers, discusses "Tariff Revision a Public Necessity"; A. B. Farquhar of York, Pa., answers the question, "What Ought the Tariff Rates to be on Iron and Steel Manufactures?" and A. August Healy, vice-president of the United States Leather Company, treats "Hides, Leather, Boots and Shoes, and the Tariff." There are twenty papers in all, presenting as many different phases of the subject.

Mr. Parry, for example, wants "an honest protective policy," and he argues that "many of the duties in the present tariff" can be "pruned without doing violence to the protective principle." He thinks, for example, that to tax raw materials is "a senseless policy." Mr. Farquhar is more specific; he analyzes the cost of producing pig-iron and certain steel products here and in England. He would, in the first place, bring in the ores free. He also adds:

> Supposing pig iron admitted free of duty, without another change in the tariff, the evidence that it would continue to be produced in the country at a price from $2 to $4 lower than at present, to an amount never equalled here until 1901 (that is, more than half the present production), and without serious inconvenience to the laborers of the country, amounts to complete demonstration. . . . Since for twenty years the cost of manufacture has been less in Pittsburgh than anywhere on the globe, there would be no harm in putting steel rails on the free list.

Mr. Healy begins:

> As at present conducted, tanning hides into leather and manufacturing leather into boots and shoes are separate industries, but for the purposes of this article they may be considered as one. Together they form a very great industry. There is none in the United States which is naturally more capable of successful development. There is none which has been more impeded by the tariff. This great industry now calls loudly for a reduction of the tariff. Especially does it call for the abolition of the duty of 15 per cent. imposed on hides by the Dingley tariff of 1897.

The most striking thing in the volume is, however, the collection of arguments against lowering the tariff. Charles W. Asbury, president of the American Hardware Manufacturers' Association, asserts that "the existing rates are not materially higher than they should be if fair, reasonable, and equitable protection is to be given to the [hardware] industries and their employees." Chester W. Lyman, assistant to the president of the International Paper Company, hopes that Congress will "deal with the revision of the paper schedules in a liberal and reassuring manner." He is opposed to taking the tax off wood-pulp, and he argues that it is not a serious burden on the newspapers. For the sake of maintaining such a benevolent institution as the International Paper Company the newspapers, he apparently thinks, should be willing to stand part of the loss, and then pass the rest along to the subscriber and advertiser: "Less than 7 per cent. increase in rates [for advertising] . . . would compensate for the extra bills for paper." He closes with this eloquent and logical peroration:

> But, even if we could not have newspapers of the present size, style, and price without driving out our paper industry; which alternative would be best for the country—a larger wage-fund, or smaller papers? As Kipling says: "We must help the people to live before we help them to learn."

But Mr. Asbury and Mr. Lyman are only half-hearted "stand-patters." They speak as if trade with foreign countries might under conceivable circumstances be of value to us. What we admire is the gusto with which John P. Young of the San Francisco *Chronicle* and Col. Albert Clarke "go the whole hog." Mr. Young discourses of "Waste in External Trade in General and with the Orient in Particular." He tells us roundly that "external trade is a source of tremendous waste" of our natural resources; and a lowering of the tariff with a view to increasing our markets abroad is therefore highly undesirable. The same idea seems to be implicit in the view of Col. Clarke. Asked what tariff schedules should be changed, he fills three pages with a tabular list showing the "competing imports which have increased" between 1900 and 1907. These figures, Col. Clarke naïvely tells us, show on the face of it that "the duties are far from prohibitory, and that in some cases they are not adequately protective." Moreover, he has "asked one thousand manufacturers and merchants what tariff changes the experience of their own business suggests." "A few" have "in general terms recommended reduction all along the line"; but "many particularize and in most cases show the present duties should be increased," or that the classification should be changed, or "that customs regulations should be modified so as to effectuate and not defeat the law." He concludes, then, that "if the facts do not justify reduction, but call for increase, the party must have 'the courage of its convictions.'"

That every effort will be made to impart such "courage" when the moment comes is already plain. The "many" merchants and manufacturers of whom Col. Clarke has been inquiring are busy. Mr. Taft's utterances on the tariff are growing more and more guarded as the campaign proceeds. Two years ago he

spoke out unequivocally for reduction, but lately he has been engaged in telling us into what dreadful woe the Wilson tariff plunged the country; and the drift of his talk is that tariff revision is a subject to be handled very gingerly. The bourbons seem to have got his ear. Under these circumstances, Bryan, had he a record as a consistent and determined opponent of high duties would capture many votes of tariff reformers. But he is busy cursing the corporations, replying to President Roosevelt, and talking nonsense about the guarantee of bank deposits. No wonder that the "standpatters" are cheerful and aggressive.

LIBRARIES FOR USE.

Not long ago a distinguished scholar from Berlin, while being shown the wonders of New York, was taken up to the Columbia University Library, and there invited to draw any book he chose. Even unto this day, it is said, the worthy man suspects that he was the victim of a clever Yankee trick; for was not the volume he selected placed in his hands less than a minute after he had found its shelf-number in the card catalogue? The professor was not morbidly incredulous; he was simply a German. To comprehend his amazement and doubts, one needs only a few days' experience with Old-World libraries and stack-rooms. More awe-inspiring than the Pyramids and the Sphinx is the system of any large German library, excepting perhaps the reorganized part of the Royal Library at Berlin. Nothing is lacking to produce the effect: the Pyramids are there in books, and the Sphinx in the guise of speechless, millennial-old bureaucrats, who shuffle about the place in felt slippers, staring resentfully at intruders who would disturb the book-worms in dusty manuscripts. All the mystery of Gizeh and all the supreme indifference to lapsing hours are there. Let the American scholar who writes on German university libraries in the *Frankfurter Zeitung* furnish some details.

As for mystery, the buildings themselves are constructed like labyrinths and locked up like prisons:

> There is an outer door, an inner door, a vestibule door, a door to the loan room, a door to the vestibule of the reading-room, a door to the reading-room itself, a door to the catalogue room, and so on; and all are closed. Every uninitiated mortal must ask himself: "May I go in there at all?" "Is the place a fortress?"

As if this were not enough to make the visitor in search of a book feel like Theseus after the Minotaur and shiver apprehensively at every dark turn in the passageway, access to the library catalogue is forbidden! Sometimes, to be sure, the topical catalogue is open to the public; but the main alphabetical one remains under lock and key. "And why?" asks the American. "Because," retorts a *Herr Bibliothekar* in Bavaria, "otherwise the catalogue would be worn out by use!" Up in Prussia the mystery is made refined by the following diabolical craft:

> I wish to look up an important tax reform in which Germany leads the world. . . . I was allowed—probably by courteous waiving of rules—to consult the systematic catalogue. There the whole classification was in Latin. . . . After a vain search, I applied to the librarian, who could not say at the moment under which head my topic was entered. Probably it was not there at all. The old Romans knew nothing of the tax, hence had no name for it!

The typical Continental library blinks at the centuries. Time means nothing to him who dispenses and him who awaits books there. Slips must be handed in the day before volumes are wished, or sometimes early in the morning of the same day. Books are sought on the shelves, not by a staff of spry, bright boys or girls, but by two or three tottering old periwigs. Frequently a line of twenty would-be readers stands a full hour waiting for some message from the disarranged stacks. Germany is not the only land where chaos mocks the foolish man who seeks any little-used volume. What the Bodleian and what some dark territories in the National Library at Paris are, more than one heart-sick American has narrated.

A correspondent depicts, in the *Westminster Gazette*, the situation at Trinity College, Dublin, and the Irish National Library, in words which apply, with scarcely an erasure, to a hundred other places:

> The current of intellectual life in Dublin is big enough to create a cyclone in T. C. D. Library, if it could find its way in. But, of course, it cannot. The staff and the reading-room accommodation are both severely tried by the needs of the university alone, and there is practically no room for outsiders. . . . In the National Library of Ireland . . . the available space is sometimes so crowded that one may see readers perched on ladders around the reading room, or two sharing a single chair.

We cannot accept the stock excuse that Europeans are too poor to install American improvements. This has force only in answer to complaints about the wretched catalogues, which cannot be replaced save at considerable expense, and about the ramshackle firetraps in which priceless manuscripts and records are stored. To facilitate the distribution and local use of books, only a little thought and a few dollars are necessary; segregation of commonly used works, a staff of stack-room boys, a public catalogue, and a few more desks and chairs for visitors will multiply the usefulness of the institution tenfold. That this has not been accomplished, after so many years of American example, suggests that the mediæval conception of a book, as a treasure to be guarded like a rare papyrus from the earliest dynasty, is still prevalent. Doubtless there is some reason in this superstition. Guardians of hidden wealth may well resist the modern idea that an ordinary book, like a locomotive, is to be used, and used until worn out, and then consigned to the junk heap. But this is simply a good reason, either for retiring these good old gentlemen, or else for placing the shelves of day-to-day books under separate management. It is plain, however, that Europeans are not quite ready to construe the fact thus, even though many of them bewail the absurdities of their libraries. Bibliolatry still prevails. The library is something between a temple and a museum. Small wonder that the learned in Europe are an aristocracy and close corporation! They are the veterans of the Grand Army of the Republic of Letters who have fought their way to books.

HIGH SCHOOL FRATERNITIES.

Though the American high school may have failed to equip its pupils for voyaging in unknown seas, it can at least boast of having taught them the beaten ways of men. To this fact high-school athletics, high-school dances, high-school social clubs, bear witness; but most strikingly the high-school fraternity. Its practices reproduce adult life so faithfully that school authorities find conventional rules of pedagogy inapplicable to its members. The young gentlemen have their club-rooms, their smokers, their theatre parties, and, when

threatened, their press agents and attorneys. Judges must interrupt the calendar to listen; and once the United States Supreme Court was called upon to define the Inalienable and Alienable Rights of Boy. The decade-old war is renewed every September. This autumn the Chicago Board of Education opened the campaign with an order that "frats" must go. In reply the persecuted, from Alpha to Omega, held high jinks in their clubhouses, while fond parents paid the lawyers. Were it not for the perversity among children, the blundering of educators, and the parental incompetence here brought to light, the affair would be flawless comedy.

With a few exceptions, high-school teachers and their superiors have wofully mismanaged their case. Their conviction that the secret society is inherently evil has a sound basis in fact. For the college man, living away from home, a fraternity has a certain usefulness wholly lacking in the case of his younger brother at the preparatory school. If the imitation of college manners went no farther than the founding of a club with mysterious title and rites, the high-school child might be humored in this performance; but, so long as he is left to his own devices, his immaturity leads him straight into apish extravagances injurious to himself, his parents, and the school. Strange oaths, Druidic ceremonies, and gold pins suffice not; a house, or at worst an apartment, must be leased, furnished, and made cozy with pictures, banners, and piano. Then, of course, the "frat" must demonstrate its power and general superiority before the world; its members must secure school offices, break athletic records, set a new high-water mark for lavish entertainment and worldly wisdom. The results have often been described at educational gatherings—"early sophistication," snobbishness, factional bitterness, dissipation, neglect of studies, and breakdown of school discipline. There is no mere pedagogical austerity in the complaint teachers raise against all these monkey-shines. But it is foolish to attempt to end the nuisance by declaring violent war upon the "frat," with solemn manifesto, board meetings, and elaborate police measures. The whole procedure only goes to show that the miles and miles of theses and text-books on child psychology and pedagogy have set no sign-posts for the teacher who would handle live boys and girls.

After all, be his trousers ever so well creased, the high school boy is brother to the hoodlum whom a pursuing policeman makes heroic and a ride in the patrol wagon a demi-god. To forestall this dangerous notoriety of the street boy, we have established children's courts. Is not equal diplomacy called for in the high school? Principals bewail their inability to crush the fraternities even by wholesale expulsions and rigid standards of scholarship. As well complain that a man cannot be starved, even by giving him food and drink. Boy life is all the sweeter when at war with the state; one's ingenuity is tickled by midnight councils, where ways and means of baffling the authorities are devised, and the envious glances of the classroom pay fat dividends on lost sleep. Deplore the crudity of American youth as you may; you must still reckon with it, while it lasts. If publicity and "persecution" merely strengthen juvenile resistance, plainly different tactics are in order. Assistance from home should be more generally sought; for the responsibility of fathers and mothers for the excesses of their children is obvious. Without funds, the "frat" dwindles to an ordinary boys' clique; without permission to stay out late of nights, and to waste study hours, the high school youth must console himself with more innocent pleasures. To bring about such results, shrewd principals are trying to instruct parents in the wisdom of controlling their children with some regard for the welfare of these children and their schoolmates. Where this has been accomplished, the "frat" has become not only harmless, but even a welcome substitute for the "gang." In a few schools, it has been converted into a sort of Phi Beta Kappa, with membership based upon character and scholarship.

That this happy outcome is still so rare is not the fault of teachers alone. Americans are prejudiced in favor of the let-alone method of home training. False ideas about manliness and social distinction teem in many a mother's brain. The disposition is still strong among adults to regard teachers as the natural enemies of youth. Children must not be thwarted, and, anyhow, it takes too much time to regulate their lives. Let them do anything they choose, so long as they do not interfere with father's business and the afternoon teas. This muddle of loose, selfish philosophy in the family lies between more than one teacher and the regenerated high school of his dreams. More than any other one thing, it makes the fraternity and the "early sophistication" of high school pupils generally so serious a problem.

THOMAS BAILEY ALDRICH AND VERS DE SOCIÉTÉ.

I.

Anybody to-day into whose hands a few documents have fallen can write biography, forgetful in his haste that "easy writing's curst hard reading." Indeed, you cannot follow the tide of Lives turned out by the press without feeling that now in earnest the Philistines be upon us, and, with the memory fresh in mind of what has happened to Lafcadio Hearn, one shudders to think of the result if Aldrich had been surrendered to a Mrs. Bisland or a Dr. Gould. Here, above all, delicacy and reticence (not concealment, for there is little or nothing to conceal) were necessary, and, fortunately, it is just these qualities that Mr. Greenslet has brought to his work*, together with a skill in words that reproduces something of the charm of one who made refinement the end of all his labor. Mr. Greenslet knows when to stop. He tells just enough of the child's surroundings at Portsmouth; he finds the right note of emphasis for the half-hearted association of the clerk and youthful editor in New York with that sad Bohemian band before the war, out of which Poe escaped by wine and opium, and from which Whitman was saved only by his phlegmatic egotism; he follows the man sympathetically through his Boston years of prosperous toil and golden ease, to the honored close. It is a happy life gracefully told.

If Mr. Greenslet fails to satisfy us anywhere, it is in the last chapter, in which he sums up his criticism of Aldrich's writings. What he says is good and sound, but somehow it is not quite sufficient; it lacks the last transmuting touch; he quotes, but does not take to heart his author's lines:

> To the sea-shell's spiral round
> 'Tis your heart that brings the sound;
> The soft sea-murmurs that you hear
> Within, are captured from your ear.
>
> You do poets and their song
> A grievous wrong,
> If your own soul does not bring
> To their high imagining
> As much beauty as they sing.

That is more than should be asked of any reader, no doubt; but at least one

**The Life of Thomas Bailey Aldrich.* By Ferris Greenslet. Boston: Houghton, Mifflin Co. $3 net.

may demand of the critic a fuller use of his own high imaginative right by which he lifts the melody of the poet out of its isolation and gives it a place in the music of time.

How much more might be said, which Mr. Greenslet could say so delightfully, about that little volume of "Songs and Sonnets"* selected by Mr. Aldrich himself from the body of his work and published in honor of his seventieth birthday. These catches of "short-breathed music, dying on the tongue," we call *vers de société*, perhaps, having no better name for them. There is, in fact, something in that phrase that reminds one rather of the glittering, tableau verses of Austin Dobson than of Mr. Aldrich's reticent grace, and I could almost wish we had adopted the phrase "Gentle Verse" suggested by Miss Carolyn Wells in her "Vers de Société Anthology," using the word gentle as Coleridge and Lionel Johnson have applied it to Charles Lamb, or as signifying that which is "innately fine, polished by the experience and sophistication of truly good society."

II.

But by whatever name we call them, we should not suppose that these fragile verses of Mr. Aldrich's were mated carelessly or without thought of the greater destinies of a beautiful accomplishment:

Enamored architect of airy rhyme,
Build as thou wilt, heed not what each man says;
Good souls, but innocent of dreamers' ways,
Will come, and marvel why thou wastest time;
Others beholding how thy turrets climb
'Twixt theirs and heaven, will hate thee all thy days;
But most beware of those who come to praise.
O Wondersmith, O worker in sublime
And heaven-sent dreams, let art be all in all;
Build as thou wilt, unspoiled by praise or blame,
Build as thou wilt, and as thy light is given;
Then, if at last the airy structure fall,
Dissolve, and vanish—take thyself no shame.
They fail, and they alone, who have not striven.

This art in miniature, of which Mr. Aldrich's "Songs and Sonnets" are the final flower, is not, in fact, a new thing to be thrown off by any untaught hand; beside the tradition of the larger art it has its own long and sacred history. From the time when some monk, it may be, in the decline of Greek letters, gave to his swallow-like trochaics of love and wine the magic name of Anacreon this new muse of wanton wisdom has had a place with the graver sisters of the nine. Perhaps there is too much of wantonness and too little of wisdom in the "Anacreontica" to afford the model we are seeking; they lack the background of seriousness that is always felt in the finest *vers de société*. Yet the picture of this old man, crowned with flowers and crying the pains and pleasures of youth, took a strange hold of the fancy of later poets, and his mischievous boy Eros has had a sly knack of slipping into the minds of passionate singers who should have invoked only the sterner god, known and worshipped by the ancient true Anacreon.

There is seriousness and to spare in the Greek "Anthology," if we open its heart, and here, if anywhere, has been the inexhaustible source from which our rhymers have drawn their hippocrene. But still the tone is not tempered to just the mood for our present purpose. Almost too insistently the might and tragic glory of Greece weigh on the mind as we read these deliberate efforts to hide its grave with flowers; whether by a trick of fancy or not, too poignantly almost we feel that the end of that world is terribly near at hand. These brief epigrams, as they are called, were written to pass from mouth to mouth during the banquet hour, or, at least, took their mode from that norm. Into the heart that began to doubt of wine and love they were designed to bring the epicurean zest that follows the intruding thought of universal transience. Some trace of that shadow may always, no doubt, be detected in the eyes of our *Musa philommeides*, even when she visits our New England clime:

Ho, eglantine and cresses
For her tresses!—
Let Care, the beggar, wait
Outside the gate.

Tears if you will—but after
Mirth and laughter;
Then, folded hands on breast
And endless rest.

That is also in the "Anthology," that and something more. It is not only the Egyptian death-masque among the feasters to crowd their pleasure, but, sitting with them, one seems to hear, amid the pauses of their singing, from afar off, muffled by the windings of many streets, the engines of the enemy beating at the city gates. The banquet hall is in a beleaguered town, the barbarians are beneath the walls, and the guests cling to one another in friendship, and to "the fair things of Hellas," their inheritance now about to be scattered and trodden under foot. It is the consummation of Greece one sings in the epigram best known to us in its Latin version, *Spes et Fortuna valete:*

To Hope farewell, and Fortune; having found the port
I leave you; others now shall be your sport.

III.

The Romans also had their votaries of this Muse, greater names in this kind than Greece could count. Catullus, the lover of Lesbia, has, indeed, accomplished all that is possible in bestowing upon passion a graceful ease. No one has surpassed his song of the kisses, the *basia mille, deinde centum, dein mille altera*, with its solemn reminder:

So may we live and love, till life be out,
And let the graybeards wag and flout.
Yon failing sun shall rise another morn,
And the thin moon round out her horn;
But we, when once we lose our waning light,—
Ah, Love, the long unbroken night!

Or, if this seem too directly pathetic for our class, there is the inimitable song to Lesbia's sparrow, which so many poets have tried so bravely to imitate. And yet withal Catullus was too swift and too energetic to belong wholly, or even primarily, within the circle we are trying to draw. He who walked in the terrible company of Cæsar and Mamurra, of Clodius and his sister the *quadrantaria*, may have dallied with the day; but under his fine linen might be felt the surface of steel, and in his hand he carried a dagger, and not a lily.

Despite his inferiority as a poet, perhaps in part because of his lesser force, Martial is really nearer at times to our model than Catullus. Here is the note of tenderness for little, broken things, for young children whom neither their loveliness nor their prattling eloquence could save from death—*mollia non rigidus cæspes tegat ossa:*

Soft lie the sod above her; lightly rest,
O earth, on one who lightly touched thy breast.

But here, again, we are deterred from accepting this later singer as our type, if only for the filth and sordidness that choke his pages. His rarer notes of beauty are like iridescent bubbles floating on a turbid and foul stream; we fear to touch them lest they burst and soil our hands.

IV.

Nevertheless, in these poets are the sources of the kind we are trying to distinguish. Their influence extends to England with the Renaissance, and is never forgotten. The Caroline poets, Suckling and Carew, and the others, knew it; Herrick felt it, and wrote his "Hesperides" under the spell. But somehow they failed to put the shadows in their pictures as well as the lights, or, rather, they left out the moral element too completely; they belong too much to the school of the "Anacreontica" and too little to that of the "Anthology." The real *vers de société*—they can scarcely here be called Gentle Verse—came in with the wits of Queen Anne; and for the better part of a century Prior's lines

*A Book of Songs and Sonnets. Selected from the Poems of Thomas Bailey Aldrich. Boston: The Riverside Press. 1906. $5 net. Only 430 copies of this book, exquisite in form and contents, were printed. It will be a prize for future collectors.

to Chloe and Clorinda and the other nymphs of London, and Pope's "Rape of the Lock," were admired as the very mirror of a society in which good taste was finally codified. Well, it may be unjust, but I, for one, cannot read the lightest and prettiest of those verses without remembering the satyrlike advice of Rochester to his Cælias and Corinnas, or the brutal coarseness of Swift's Strephon and Chloe. The background of that graceful diversion is not the kindly illusion we are seeking, but a cruel cynicism; the drop of bitter is hatred and not regret.

If any one in that age caught the tone of Gentle Verse, it was the learned, awkward, absent-minded, pious usher of Westminster school, Vincent Bourne, whose Latin poems Cowper placed above those of Tibullus, Propertius, and Ausonius, and not below those of Ovid. Perhaps, it is his very use of Latin that makes him so perfect a master in the kind. There is in that cunning union of ancient words with modern ideas, in that wedding of the speech of the schools with the politeness of the man of the world, a something that tantalizes the reader like a half-seen, half-vanishing face. One feels this here and there in the lines which Bourne has turned into Latin from Prior and the other singers of Chloe; One feels it still more strongly in the translations of his own poems into English. Cowper, if any one, was fitted to catch the charm of his fables, but "The Jackdaw" and "The Cricket" miss just the piquant meeting of gravity and levity that mark the "Cornicula" and "Ad Grillum." Lamb, too, has tried his hand and almost succeeded. In the "Epitaph on a Dog" especially he was able to match Vincent with his own experience of the humors and pathos of the London streets, but his verses still lack the Virgilian echo that sighs through the "Epitaphium." Read the close of the two poems together:

These were my manners, this my way of life,
Till age and slow disease me overtook,
And sever'd from my sightless master's side.
But lest the grace of so good deeds should die,
Through tract of years in mute oblivion lost,
This slender tomb of turf hath Irus rear'd . . .

Hi mores, hæc vita fuit, dum fata sinebant,
Dum neque languebam morbis, nec inerte senecta,
Quæ tandem obrepsit, veterique satellite cæcum
Orbavit dominum: prisci sed gratia facti
Ne tota intereat, longos deleta per annos,
Exiguum hunc Irus tumulum de cespite fecit. . . .

The very essence of Gentle Verse is in that Virgilian *dum fata sinebant* applied to a blind beggar and his dog; and Lamb has omitted it.

V.

But it is time to hasten on. There is not room even for the names of the poets of the later nineteenth century, Austin Dobson, Andrew Lang, Frederick Locker-Lampson, and a host of other Englishmen and Americans, who have written in this vein. As a rule, their work has just missed the mark, because their intention was too evident. One seems to hear them say: Come, now, we will sit down and compose *vers de société*. And almost always they use the modes of the past as a kind of masquerade, so that their scenes may fall into neat artificial tableaux. From these, however, and from the earlier poets one begins to see the limitations and possibilities of the kind. Its essence lies in irony—not the grim sort we know from the tragedians and satirists, but a self-deprecating irony that half deliberately hides its strength in gentleness. Reticence, suggestion, and accepted littleness are its indispensable qualities. The regret of an imaginative past will linger in it, but its themes are of the immediate present. It must have its root in deep emotion, but its manner is rather of one who sees passion in another than feels himself. It is touched by the brevity and insufficiency of life, but has no grief more clamorous than a sigh. It knows the deception of the world, but harbors pity and not cynicism. It employs the most elaborate polish of art, but affects a careless spontaneity.

And these are the marks that distinguish the little book of "Songs and Sonnets" as, in its own field, one of the most precious things in English. Aldrich wrote a good deal in the course of his life—novels, which have the thin-blooded amateurishness of the older New England fiction; other prose, like the "Ponkapog Papers," too finely woven to endure harsh handling; long poems and plays, beautifully devised but lacking in human nature. His chief title to genius is the inerrant taste with which he has after many trials beaten out a few lyrics into perfect form, and set them apart from the rest of his work. Their veil of reticence is their beauty. To read them is as if one sat alone in a city park, when the mist of twilight was falling, and beheld a company of fair women pass homeward—magically fair in the glimmering dusk. So, in his verse, the atmosphere is that which divides the day and the night, and the two worlds, meeting togetber, create an illusion of impalpable loveliness:

Forever am I conscious, moving here,
That should I step a little space aside
I pass the boundary of some glorified
Invisible domain—it lies so near.

He deals with the old themes in the old way, but with his own delicacy of touch—grave antiquity coloring a whimsical sentiment of the present, as in the "Intaglio Head of Minerva"; death hovering between terror and idle fancy, as in "Identity"; the mockery of human fates turned into pity and wonder, as in "Destiny"; love caught between dream and passion, as in "Latakia"; and nature—

These winter nights, against my window-pane
Nature with busy pencil draws designs
Of ferns and blossoms and fine spray of pines,
Oak-leaf and acorn and fantastic vines,
Which she will shape when summer comes again—
Quaint arabesques in argent, flat and cold,
Like curious Chinese etchings . . . By and by
(I in my leafy garden as of old)
These frosty fantasies shall charm my eye
In azure, damask, emerald, and gold.

Even beauty itself, which poets are fond of magnifying as a great and awful power pervading the world, he will reduce by the delicate wand of irony to the least and most ephemeral form:

My mind lets go a thousand things,
Like dates of wars and deaths of kings,
And yet recalls the very hour—
'Twas noon by yonder village tower,
And on the last blue noon in May—
The wind came briskly up this way,
Crisping the brook beside the road;
Then, pausing here, set down its load
Of pine-scents, and shook listlessly
Two petals from that wild-rose tree.

In that exquisite and pathetic deminution, I take it, lies the secret of what is called *vers de société* or Gentle Verse. And many a lover of this lesser muse will hold in memory the falling petals of these "Songs and Sonnets" long after he has forgotten more ambitious things.

P. E. M.

NEWS FOR BIBLIOPHILES.

Volume XXII. of J. H. Slater's annual record of English sales at auction, "Book-Prices Current," has just been published (London: Elliot Stock). The period covered is from October, 1907, to July, 1908; and the number of lots reported is 9,500, whereas recent issues have averaged about 6,500 lots. This increase does not indicate that the season has been of exceptional importance, but only that a larger selection has been reported. Heretofore no lot selling below one pound has been noticed, but Mr. Slater says: "The old hard and fast rule of noticing only those which realize 20s. or over has been finally broken down, and is not likely to be resorted to again." And he adds: "Every book sold is now considered on its merits, and inserted or not according to its importance or the infrequency of its occurrence." Four lots only during the season brought more than £1,000: "The Golden Legende," printed by Caxton, 1483, £1,300; a block book, the "Biblia Pauperum," printed probably by Roger of Bruges, £1,290; Earl Howe's copy of the First Folio Shakespeare, £2,025; and Mrs. Piozzi's manuscript "Thraliana." £2,050. Forty-nine lots brought £100 or over. Of these eighteen were Shakespeareana, and twenty-three were manuscripts. The index

to Vols. XI. to XX. of "Book-Prices Current" is announced for publication soon.

The fourth and concluding part of Vol. V. of Frank Karslake's "Book-Auction Records," from June 29 to July 31, is just issued. The entire volume includes records on 15,019 items. The editor promises in future to give the lot number in the auctioneer's catalogue—the plan always followed by Mr. Slater.

The record of American sales, "American Book-Prices Current," Vol. XIV., is expected in October, a month, at least, earlier than last year.

A fine copy of that very rare book the Boston edition of W. Hubbard's "A Narrative of the Troubles with the Indians in New England," 1677, is the gem of the library of the late Joseph Willard, which is to be sold by C. F. Libbie & Co., Boston, October 13-16. This copy contains the original "map of New England, being the first that ever was here cut," known as the "White Hills" map. This map was reengraved for the English edition published in London later in the same year. That later copy, from the altered designation of the White Mountains, is known as the "Wine Hills" map. The Willard copy seems to be without the election sermon by Hubbard, "The Happiness of a People in the Wisdom of their Rulers," 1676, which is usually bound in at the end. The manuscript journal and orderly book of Capt. Abijah Willard, of the Second Battalion of Governor Shirley's Provincial Regiment in Nova Scotia in 1755, 289 pages, small quarto, is another important item in the same sale. It extends from April 9, 1755, to January 5, 1756, and is of especial interest as it contains a contemporaneous account of the carrying off of the Acadians, which forms the theme of Longfellow's "Evangeline." The following is a portion of the entry for August 16, 1755:

Aboute 3 o'clock this afternoon I ordered the whole to be Drewd up in a Body and bid the french men march off and sott fire to their Buildings and Left the women and children to Tack Care of themselves with great Lamentations which I must confess itt seemed to be something shoking. I march on aboute 3 miles to an old frenchmans house where had Lived Ever since anopilis was Taken and Lodged their this Night, and he Treated me very hansom but his wife Took on much att their Dificulty.

Another orderly book in the same sale is that of Captain Scott's company of the British Legion under the Rt. Hon. Lord Cathcart, dated at "Greenwich, near N. York, 1778," and extending from October 26 to November 24. It is a narrow octavo pocket note-book, with brass clasp. Several Revolutionary manuscript maps (some used by Gen. Henry Knox); an imperfect copy of Gorges's "America Painted to the Life," 1658; Ramusio's "Voyages," 1606-13, 3 vols.; and Torquemada's "Monarchia Indiana," 1723, 3 vols., are other valuable items.

Correspondence.

ANOTHER CLASSICAL PARALLEL.

To the Editor of The Nation:

Sir: The rather more acrimonious than edifying correspondence between President Roosevelt and Mr. Bryan recalls Aristophanes and "The Knights." Here is the passage:

Cleon (in a thundering tone)—Dogs and villains, you shall die.

Sausage Seller (in a louder, shriller tone)—Ay! I can scream ten times as high.

Cleon—I'll overbear ye, and out-bawl ye.

Sausage Seller—But's I'll out-scream ye, and out-squall ye. (Frere's translation, vv. 369-372.)

ALFALES YOUNG.

Salt Lake City, September 28.

THE PRESIDENT'S INTERFERENCE.

To the Editor of The Nation:

Sir: Can nothing be done to bring home to the President a realization of the harm that his persistent "butting into" the campaign may do Mr. Taft? In every circle of independent voters with which I am acquainted, the most of whom have intended either to vote for Taft or to refrain from voting for Bryan, the mutterings of discontent at the President's course have become outspoken voices of protest.

This discontent started with the feeling that no President should meddle with the nomination of his possible successor, much less should he take part in the campaign for the election of that successor; and it has spread in all directions since the beginning of the Hearst-Foraker-Haskell-Bryan-*et al.* affair—an affair in which Mr. Bryan comes out a long way from a discreditable position. The feeling engendered by the President's course is not only one of resentment that he should assume to influence, almost to dictate, where the people are the sole arbiters, and he but the executive officer of their will; but it is also one of disgust at the dragging of the person and the office of the President into a verbal fracas little better than is to be found in the commonest ward politics. I know personally of one vote that the President's course has turned from Taft to Bryan; and my friends, whose opportunity of observation is better than mine, say that this course is helping Bryan "right along." Taft may well pray, "From our foolish friends, good Lord deliver is." G. S. W.

Baltimore, October 1.

SELF-GOVERNMENT IN THE ORIENT.

To the Editor of The Nation:

Sir: In your issue of September 17 you remarked:

We have denied them the essential qualifications for democracy because they are Orientals. . . . But concerning the immobility of the Orient we have been of late vastly enlightened. The East, after all, is human, and when elemental human needs come into conflict with absolute power, the latter will yield in the Orient as it does elsewhere.

If the Asiatic policies of European nations were based upon this understanding of Oriental people, civilization would have advanced farther than it has. Much of the so-called conflict between Eastern and Western civilizations has its origin in the fact that the European in the Orient never forgets to assume that Orientals are by nature inferior to the people of Europe. Before constitutional government was introduced into Japan, all Asiatic people were regarded as unfit for such a government. But when the Japanese demonstrated their ability to conduct a constitutional system, political theorists and imperial politicians of Europe recognized the Japanese capacity, but asserted that the case of Japan must be looked upon as exceptional. Even five years ago constitutionalism was thought impossible in Persia or Turkey. Now, however, when the people of Persia have shown their determination to protect their newly won Constitution, even at the cost of blood, a section, at least, of the West has begun to form rather favorable opinions about the Persians. There are persons who see in the present crisis in Persia nothing but Persian unfitness for popular government; but these gentlemen may simply be referred to French history. Then comes the startling news of the "peaceful revolution" of Turkey. The Young Turks by their masterly management of the revolution have won sincere admiration from the Western world, and constitutional government is now believed possible in the Turkish empire. Not long ago Islam was considered to be the most conservative, nay, reactionary, force in Asia. Now, however, when the venerable judge of the Sacred Law, from his august seat in Constantinople, has declared that reformation of social and governmental evils is not contrary to the teachings of the Prophet, and when the Moslem, the Christian, and the Jew are embracing each other in the land of Osman, newspapers of the West have begun to write about "Modernism in Islam." So far so good.

But in some quarters of the Orient the West is asked to be logical. The joint scheme of Great Britain and Russia for introducing reforms in Macedonia has been abandoned in view of the new régime in Turkey. His Majesty King Edward sent personal congratulations to his Majesty the Sultan of Turkey for granting a Constitution to the Turkish people. The President of the United States sent a congratulatory message to a recent meeting of the Young Turks in New York and another to his Majesty the Sultan. The press dispatches report that the British and Russian governments have presented a joint note to the Shah, urging him to carry out his promise to convene another national Assembly. These facts, rightly interpreted, mean that both King Edward and President Roosevelt believe that popular government is suitable for Turkey, and that King Edward believes that such government is suitable for Persia also. In other words, the traditional belief of the West that popular government is fundamentally incompatible with Oriental conditions is not shared in by the two most advanced governments of the world, Great Britain and the United States. Now the question is: Are these governments always consistent in their convictions and policies? By inaugurating a popular government in the Philippines the United States has proved such consistency. But what about Great Britain? If the British government believes that the Ottoman Empire, with all its racial, religious, and social problems, is fitted for a popular government, why is it refusing such a boon to India? The racial, religious, and social problems of India are not more complex than those of Turkey. Why, then, are Indians who advocate a popular government in India proscribed as "agitators," "visionaries," and "disturbers of peace"? The Indian subjects of King Edward are not inferior to the subjects of the Sultan in educational or moral elevation. Why, then, did Viscount Morley, the British Sec-

retary for India, proclaim the other day that democracy is as unsuited to Indian temperament as a Canadian fur coat to Indian climate? The noble lord cannot yet conceive a time when some sort of autocracy will not be needed in India. Is this consistency? Yes, here it will be said that India has the caste system. But did caste system ever influence governmental policy in India more than feudalism did in Europe? And has caste system any influence in the constitution and organization of the Indian National Congress, which to-day represents the political aspirations of the Indian people?

Let us, however, pass over India. What about Egypt? Has Egypt any caste system? Has Egypt any such racial and religious problems as the Ottoman Empire? (We consider Egypt as virtually separated from Turkey.) Or are the Egyptians less enlightened than the Turks? If the Ottoman Empire is fitted for a popular government, why not Egypt? Will the British government be logical and consistent? We wait. We shall see. SATIS CH. BASU.

Lincoln, Neb., September 26.

"LE NOUVEAU CYNÉE."

TO THE EDITOR OF THE NATION:

SIR: Last June I found that the Harvard University Library possessed a copy of "Le Nouveau Cynée" of Émeric Crucé, Paris, 1623. This copy, which belonged to Charles Sumner, went after his death to Harvard with the rest of his library. The book is of particular interest, for in it the author proposed the establishment of a permanent international court of arbitration such as the present Hague Court is. He was also in favor of religious toleration and other good things. There is a copy in the Paris Library which was deposited there, probably at the time the volume was printed. Sumner never knew the author's real name, for it was not discovered until 1890 by Judge Nys. Doubtless there are some other copies of this rare book in some of the libraries of the Old World.

THOMAS WILLING BALCH.

Philadelphia, October 1.

AN ARABIC MANUSCRIPT OF "ALI BABA AND THE FORTY THIEVES."

TO THE EDITOR OF THE NATION:

SIR: It may, perhaps, interest some of your readers that Galland's story of "Ali Baba and the Forty Thieves," has at last been found in an Arabic form. The strange thing is that it should not have turned up long ago, as it forms part of a manuscript which has been in the Bodleian since 1860, when it was bought from the Paris bookseller, A. Franck, for eight shillings. There it seems to have lain unnoticed until I came upon it by accident, a couple of weeks ago. The manuscript is a small octavo written in quite a modern hand, and containing two stories only. The first is the "Story of Harun ar-Rashid and the Daughter of the Kisrâ." Then, on folio 45, "Ali Baba" begins in the same hand, but on a slightly different paper. Only the first story has a non-Arabic title—in Latin—which may, perhaps, explain how "Ali Baba" was not recognized sooner.

Of course, the questions of the origin of this text and of its relation to Galland's version still remain, and can only be settled after publication of the whole. That I hope to do soon from a photograph which is now being taken for me. The stories are not divided into nights, nor is there any indication that they are regarded as part of the "Nights."

Another point as to the "Nights" may also be of interest. In the summer of last year I had an opportunity of examining the Arabic manuscripts on which Habicht's edition of the "Nights" was founded. From that examination it was perfectly plain that there was no such thing *in rerum natura* as a Tunisian recension of the "Nights," nor even a Tunisian manuscript; that Habicht had no continuous manuscript of the "Nights" at all; and that he only built up a recension out of fragments, arranging and dividing to suit himself. He was thus the creator of a new recension, and not the editor of one already existing. This I hope to prove elsewhere with a full description of Habicht's sources.

DUNCAN B. MACDONALD.

POE AND HAZLITT.

TO THE EDITOR OF THE NATION:

SIR: Prof James Albert Harrison, in his "Life of Poe" (p. 86), quotes from an article by T. H. Gibson, in *Harper's Magazine*, November, 1867, the following:

> The first conversation I had with Poe after we became installed as room-mates [at West Point, 1830], was characteristic of the man. A volume of Campbell's Poems was lying upon our table, and he tossed it contemptuously aside, with the curt remark: "Campbell is a plagiarist"; then, without waiting for a reply, he picked up the book, and turned the leaves over rapidly until he found the passage he was looking for.
>
> "There," said he, "is a line more often quoted than any other passage of his: 'Like angel visits, few and far between,' and he stole it bodily from Blair's 'Grave.' Not satisfied with the theft, he has spoiled it in the effort to disguise it. Blair wrote: 'Like angel visits *short* and far between.' Campbell's 'Few and far between' is mere tautology."

This may have been "characteristic of the man," but the criticism was not original with Poe. In Hazlitt's "English Poets" (1818) occurs the following (Bohn Library Edition, p. 199): "His [Campbell's] fine things are,

> Like angels' visits, few, and far between."

A footnote by Hazlitt adds:

> There is the same idea in Blair's "Grave":
>
> Its visits,
> Like those of angels, short, and far between.

Mr. Campbell, in altering the expression, has spoiled it. "Few" and "far between" are the same thing.

And the editor comments: "Campbell never forgave the author this exposure of his plagiarism."

Perhaps Poe had not read Hazlitt's essay, but the chances are against this supposition, for Hazlitt's temperament would have been especially congenial to the author of "The Raven": both were brilliant and misanthropic, both possessed extraordinary insight, but lacked system, and were impatient of restraint. Add the fact that Hazlitt's volume had been in print twelve years, and it becomes extremely probable that the American was himself guilty of plagiarism in this instance—the more so since the charge has been proved against him in other instances. Hazlitt's light has illumined many a thankless follower, though it is good to remember that at least one appreciator, Robert Louis Stevenson, generously expressed his indebtedness in the words: "We are mighty fine fellows, but we can't write like William Hazlitt."

HARRY T. BAKER.

Beloit College, Beloit, Wis., September 22.

Notes.

From the monthly list of Longmans, Green, & Co. we mark the following books as almost ready to appear: "Old and Odd Memories," by the Hon. Lionel Tollemache; "Madame Elizabeth de France," by the Hon. Mrs. Maxwell Scott; "The Book of Winter Sports," by Edgar Syers; "On Safari," by Abel Chapman; "Woodsmen of the West," by M. Allerdale Grainger; "Chronicles of Service Life in Malta," by Mrs. Arthur Stuart; "In Old Ceylon," by Reginald Farrer; "Scottish Gardens," by Sir Herbert Maxwell; "The Book of Princes and Princesses." by Mrs. Andrew Lang; "Known to the Police," by Thomas Holmes; and "Design in Nature," by J. Bell Pettigrew.

The next group of books to come from G. P. Putnam's Sons will be "First and Last Things: A Confession of Faith and a Rule of Life," by H. G. Wells; "A Canyon Voyage," by Frederick S. Dellenbaugh; and "The Lincoln Centennial Medal."

John Lane Company has about ready a new book by G. K. Chesterton, entitled "Orthodoxy." That acrobatic writer has already had his say on "Heretics." It will be interesting to know who are his orthodox.

As a timely work the Frank Allaben Genealogical Company of this city brings out the "Ancestry of William Howard Taft," being the first volume to appear in a series of Genealogical Miniatures edited by Mabel T. P. Washburn.

This month the Empire Publishing Company will bring out "The Trial of Jesus from a Lawyer's Standpoint," by Walter M. Chandler. It will be in two volumes, the first dealing with the Hebrew trial before the Sanhedrin, the second with the Roman trials before Pontius Pilate and Herod.

The Oxford University Press will publish an index to the names and subjects in the forty-nine volumes of "The Sacred Books of the East." The work will be compiled by Prof. M. Winternitz.

The current number (Vol. VII. No. 2) of the *Journal of English and Germanic Philology* is largely a memorial to the founder, the late Gustaf E. Karsten. A memorial note by Prof. Otto E. Lessing is followed by eight of Dr. Karsten's addresses and unpublished papers, showing his breadth of interest and zeal in scholarship. From one of these we quote a single significant sentence. "Like the Greek φιλολογία, Philology refers not only to the form, but also to the content of the λόγος; it virtually means the whole history of the human mind, as it manifests itself in language documents of the past and present"—an interpretation that "is gaining ground in America." Surely a hopeful sign.

The volumes of the New Mediæval Library (Duffield & Co.) vary widely in value. Of the two before us, one is wholly unworthy of the good paper and press work expended upon it. "The Legend of the Holy Fina, Virgin of Santo Gimignano," now first translated, with introduction and notes, by M. Mansfield, is a most ordinary specimen of fourteenth-century hagiography. One may find the like, or better, in every Catholic community and in every European language. If we are to read the lives of the saints—and they well deserve study—let us take such as have at least the ethical charm of the church militant, in the days when to be a saint really meant something. Without burying ourselves in the catacombs of the "Acta Sanctorum," we may pass many profitable hours over the "Dialogues" of Gregory, or still better—over Bede's "Historia," Books iv. and v. By the side of Hild, abbess of Whitby, Fina of Gimignano is merely puerile.

The other volume, "The Babees' Book," done into modern English by Edith Rickert, is of very different calibre. It is a collection of treatises upon mediæval manners for the young, modernized from Dr. F. J. Furnivall's well known volumes in the Early English Text Society publications. The introduction, p. xii., tells us that the present modernization has been undertaken at the instance of Dr. Furnivall, who wished that the substance of his collections might be imparted to readers who have not time or inclination "to worry through antiquated English." The wishes of the doughty doctor are, of course, not to be lightly gainsaid. Yet we suspect that the reader who may have the patience to worry through antiquated manners might also have the patience to worry through an antiquated speech which is after all not so formidable. At all events Miss Rickert has done her work with tact and scholarship. One can learn much from the little volume. Thus, when Ascham, p. xx. note, complains of the wise men who have more care "to find out rather a cunning man for their horse than a cunning man for their children," we see the "Four Hundred" of England and America shaking hands across the centuries. In a few places we venture to correct or at least to supplement the editor's remarks. The assertion, for example, p. xxviii., that Greek was not taught in England before 1500, is too sweeping. It is true only of Greek in the Renaissance sense; for there are evidences that Greek was studied in England from the days of Augustine of Canterbury on. The note, p. 181, on "Edyllys be" is wide of the mark. The phrase means "a nobleman's ring;" "be" is the Old English "beag." The attribution of the origin of courtesy to the salutations of the angel Gabriel and Elizabeth to the Virgin, see pp. xiii., 16, and 182, is more evident from the Apocryphal gospels. Page 182, note upon p. 20, the phrase "in same" is likened to the German "zusammen;" rather say, German "insgesammt." The account, p. 188, of the editions of "How the Wise Man Taught His Son," overlooks the (exhaustive) edition by Fischer, 1889 (Erlanger Beiträge, No. 2). The line "Thereof thou must bethink thee *soon*," p. 79, is not a fair rendering of the original "Ther-to the nedys to take the tome." "Tome," Scandinavian "*tóm*," means "leisure," and the sense is: Take leisure for considering the situation. Our few strictures will not, we hope, create the impression of careless editing. On the contrary, the editor is well equipped and thoroughly conscientious, and her book is a dainty little treasure.

It is to be feared that Theron Wilber Haight will not succeed in his rather naïve hope of restoring Sylvester's "Divine Weeks" to common favor. The popularity of that translation of Du Bartas in Shakespeare's and Milton's days is easily explained. The lines possess a certain fluency and lucidity far from common among Sylvester's contemporaries, never sinking very low, never rising above a comfortable commonplace. And in substance the poem flattered at once the militant Puritanism of the age, without falling into the brambles of theology, and the quasi-scientific curiosity about the natural world, without indulging in the eccentric difficulties of Euphuism. Now and then, especially when he interpolates passages of his own, our Englishman rises to an interest of a more general sort. Perhaps the most memorable passage in the poem is that in which, like Donne and Vaughan, at a later date, he repudiates the muse of "Ovid's heirs" (having in mind probably Shakespeare's "Venus") and "our new Naso" (Drayton):

O furnish me with an unvulgar style,
That I by this may wean our wanton isle
From Ovid's heirs and their unhallowed spell,
Here charming senses, chaining souls in hell.
Let this provoke our modern wits to sacre
Their wondrous gifts to honor Thee, their Maker,
That our mysterious elfin oracle,
Deep, moral, grave, invention's miracle—
My dear, sweet Daniel, sharp, conceited, brief,
Civil, sententious, for pure accents chief—
And our new Naso that so passionates
Th' heroic sighs of love-sick potentates,
May change their subjects, and advance their wings
Up to these higher and more holy things.

That is almost poetry, and at least "our mysterious elfin oracle" for Spenser could not be bettered. But it takes more than one swallow to make a summer, and Mr. Haight's manner of editing his favorite (published by H. M. Youmans, Waukesha, Wis.), is not likely to conciliate the skeptical. That he uses modern spelling is quite to the advantage of his author; his omissions, too, certainly do no harm. But he should not have tampered with the text for the sake of smoothing it over, without at least noting all his changes in the margin. Scholars will rightly demur, and the general reader will not be attracted any the more. Mr. Haight is concerned to show the influence of Sylvester on Milton and on later poets. His parallels tend rather to minimize such a relationship. A fair specimen of these is his comparison of Sylvester's "night's horned queen," with Milton's "the horned moon," which scarcely seems proper evidence of borrowing. In fact the association of the two poets is easily overemphasized; the roots of "Paradise Lost" cling more to "The Apollyonists" of Phineas Fletcher than to "The Divine Weeks" of Du Bartas and Sylvester. Mr. Haight is more successful in pointing out the many colloquialisms of New England, such, for example, as "his folks," that occur in Sylvester, though the reading of "The Divine Weeks" by the colonists probably had little to do with their retention of these idioms. Other faults of editing we pass over. Mr. Haight was well advised in reprinting a work which was once so famous, but which has not been issued in any generally accessible edition since the Restoration; we could wish he had chosen a different method of fulfilling his mission.

Ruskin's "Poems" make a comfortable little volume in the Muses' Library of E. P. Dutton & Co., and perhaps in this form will find readers. They all date from his sixteenth to his twenty-seventh year, the bulk of them being written when he was nineteen and twenty, and while not exactly *péchés de jeunesse*, they show no particular power or promise. G. K. Chesterton, who furnishes the introduction, has nothing to say about the poems, but applies his usual effrontery of epigrams to Ruskin the man. "In so far as Ruskin," he declares, "was dogmatic he was divine. In so far as he was saying that he was right and that all the other people were wrong, he was doing what every healthy man ought to do, nay, he was more than healthy; he was humble." Mr. Chesterton supports his paradox with another, "that a man who talks like a torrent for hours on end is a humble man." For our part we seem to remember some endlessly loquacious politicians who were not humble at all; but it is scarcely fair to test Mr. Chesterton's amusing boutades with facts.

A new edition of the "Letters of Edward Lear" (Duffield & Co.) gives Lady Strachey the opportunity to make a few unimportant corrections in her introduction. The letters themselves are of that breathless sort which the humorists of the day—Shirley Brooks's recently published correspondence is another example—much affected, and which loses its fun and sounds pretty flat when set out in cold slow type. Lear, however, was a man of winsome character, and there are many who will be glad to make his acquaintance in any form.

In his "Holland House Circle" (Putnams) Lloyd Sanders does not follow in the steps of Princess Liechtenstein's well-known account of that mansion. There is little, too little, description of the house itself; but, passing rapidly through the fortunes of the Fox family, from its founder, the Sir Stephen who entered life as a valet of the Earl of Northumberland in the seventeenth century, and the history of the residence which as Cope Castle began its career about the same time, he passes to the life of the third Lord Holland and his Lady, and then to brief chapters on the circle of statesmen, wits, men of letters and science, foreign diplomats and exiles, who gave to Holland House a unique place in English history. The story suffers from diffusion. The house itself is never made visible to us; the characters of the host and hostess are never brought out with sufficient sharpness to form a centre to the society about them; for a popular book Mr. Sanders assumes in his reader too much knowledge of those political shifts during the early decades of the last century which are perhaps harder to keep disentangled than in any other period of English history since Elizabeth. The chapters in fact resolve themselves into a series of brief character-sketches of men and women whose only connection is that they

were more or less familiar guests at the same home. But as such, and despite its lack of artistic unity, the book affords good reading. Of a good many of the politicians who surrounded Charles James Fox and the Regent one is inclined to say, as Talleyrand said of his friend Montrond, Who would not love them, they are so vicious? But the sketches become more interesting as we pass from the politicians to the wits, for the reason that we no longer feel the want of historical background. Mr. Sanders, as his bibliography and his quotations show, has read thoroughly the anecdotal literature of the age, and if his stories are necessarily old, they are none the less entertaining. As for his heroine, Lady Holland herself, she still awaits her historian, though Greville and Macaulay have recorded her eccentricities, and Mr. Sanders has scattered the material for such a history through his pages. She was above all mistress of that union of tact and insolence which is not so rare as one would suppose. The impertinence might seem to have been too strongly predominant when she guided the conversation with a "Now, Macaulay, we have had enough of this; give us something else." But how otherwise was that endless talker to be controlled? Again, Lady Holland had a cat which used to mawl poor Rogers, and which Brougham could only keep at bay with pinches of snuff; but a much lesser than either of them, Henry Luttrell, got rid of the pest by simply avoiding the house until it was banished. Lady Holland, with her whims and tenderness, was the last heiress in England, one may say, of that tradition of the fantastic, imperious, fascinating great-lady which began with Queen Elizabeth. Macaulay noted the family likeness when he described her in 1831 as "a large, bold-looking woman, with the remains of a fine person and the air of Queen Elizabeth." The chief difference is the lack of amorous flirtations in Holland House, although the early escapade of the mistress might have led one to expect such a trait in her character.

Three pleasingly illustrated books of travel and description are: "Montreux," painted by J. Hardwicke Lewis and May Hardwicke Lewis, and described by Francis Gribble. (The Macmillan Co.); "Lisbon and Cintra, with Some Account of Other Cities and Historical Sites in Portugal," written by A. C. Inchbold, and illustrated by Stanley Inchbold (Duffield & Co.); "Tyrol," painted by E. Harrison Compton, and described by W. A. Baillie-Grohman, with twenty-four full-pages in color. (The Macmillan Co.). The only novelty in Mr. Gribble's volume is the illustrations, for the text consists almost entirely of literal transcriptions from the same author's "Lake Geneva and Its Literary Landmarks," welded together after the manner of a musical potpourri. The chapters on the Pietists, the Regicides, Madame de Warens, Bonivard, and the Castle of Chillon are taken bodily from the edition of 1901. Readers who from the title are expecting a description of the Swiss Riviera, must therefore be content with a short chapter of seven pages, while those interested in the literary associations of the region will certainly prefer the author's earlier work. For the volume in question the illustrations seem to be the only *raison d'être*. "Lisbon and Cintra" belongs to that class of pleasantly written books which travellers buy before visiting the countries of which they treat, and which afford a great deal of information, historical and descriptive, in a form less wearisome than that of the guidebook which they supplement, but do not supplant. Portugal deserves more attention from the seekers after pastures new. It is the least frequented of all countries within easy reach, chiefly because it is on the road to nowhere, a *cul de sac* lying off the beaten track. Yet its hill towns may well be compared with those of Italy in natural beauty and historic interest, though not, of course, in their art treasures. Mr. Baillie-Grohman's "Tyrol" possesses more of human interest, for it is from the pen of an old resident, thoroughly familiar with the character and habits of the Tyrolese peasant, as well as with the remoter districts of Tyrol. The point of view of the insider, whose familiarity with the land and its people is vital, is often fresher than that of the traveller or the student. The Lago di Garda, the Dolomites, and the Gross Glockner are included in the author's survey.

Though other popular works have come to rival H. W. Elson's "History of the United States," since it was first issued in one volume in 1904, and in five volumes the next year, we may welcome its new publication by the Macmillan Company in five volumes at the low price of $7.50. As the work was reviewed at length in the *Nation* (July 7, 1904, p. 17), on its original appearance, our judgment of its excellences and defects need not be repeated. The present edition contains some two hundred illustrations selected and edited by Charles Henry Hart.

W. T. Bixby of St. Louis has printed for private distribution a series of letters of Zachary Taylor, 1846-1848, the originals of which are in his possession. The letters, all written to Dr. R. C. Wood, contain much on family matters. The military events, however, are not neglected, and the belief of Taylor that the authorities in Washington were seeking to pull him down is developed in occasional references—notably in a letter printed as an appendix, written to Buchanan, and intended to be a full exposition of his Mexican campaign and the intrigues it occasioned. Naturally, Taylor did not look with favor upon his fellow officers; Scott was, in his opinion, heartless and insincere; Pillow, a very small man in every respect; and Worth, of little account. But the most interesting feature of the letters is the account of Taylor's becoming a Presidential candidate. Rarely has such a political innocent been taken up and "boomed" for the high office. Taylor was not anxious for the honor, but he said: "I will not say I would not serve if the good people were to be imprudent enough as to elect me." He would not accept the nomination from any party, but wished it to come by the spontaneous will of a majority of the people. At that time he was seriously embarrassed by the growing demands to know his "views" on political questions. He was a slaveholder, but doubted if a slaveholder could be elected President, and hoped to see some compromise on the slavery question which should preserve the Union. He did not know whether he was a Whig or a Democrat; but had concluded that the Whigs were closer to Jeffersonian principles than the Democrats and therefore would have voted for Clay in 1844! He had never cast a vote for a President, and so could hardly have seriously considered the issues on which the elections had turned. Thus he expressed his views in September, 1847:

> All who are writing me about a U. States Bank, which is dead and will not be revived in my time; the tariff, which will be increased only for revenue; internal improvement, which will go on in spite of presidential vetoes; and the Wilmot proviso, which was brought into Congress to array the South against the [North] must, or ought to be left to Congress. The president has nothing to do with making laws, he must approve or veto them; when approved or passed by a majority of two thirds, his business is to see them properly executed.

He promised to act within the Constitution and to go back to the methods of the first Presidents, but he refused to make any party pledges, and thought he would be supported by Whigs, Democrats, and Native votes. After the Whig nomination had come to him he accepted it, but wrote that he would have accepted in just the same spirit a nomination from the Democrats. Once nominated, he was dazed by the course of his political opponents; and once elected he was pained by the rush of officeseekers, among whom were many of his relatives. Altogether it is an interesting story and told frankly and in full confidence to his correspondent. William H. Samson prepared the letters for printing, and the very erratic spelling leads one to suspect that the copyist was at fault.

The late Senator John Sherman made provision in his will for the preparation of a biography, not, as he modestly said, "to secure a eulogy, for I am conscious of many faults, but I claim that in my duty to the public I have been honest, faithful, and true." The two substantial volumes of Winfield S. Kerr's "John Sherman: His Life and Public Services" (Boston: Sherman, French & Co.) are the fulfilment of this direction. The task of the biographer has been at once easy and difficult: easy, because the essential material, in the form of reminiscences, letters, speeches, and official reports, has long been available and to an unusual degree familiar; difficult, because Sherman's long career was so engrossed with affairs, and of so little interest on its purely personal side, that the temptation is strong to make the biography a general history of the time. As a careful and intelligent compilation, Mr. Kerr's work will hardly need to be done over again, but the student of American history will not find in it anything new; while the general sketch of events, though making fully a third of the bulk, is quite without distinction. The pervading tone, moreover, is persistently eulogistic, though not offensively so; and one looks in vain for any critical appraisal of Sherman's notable public services. On the whole, the book does not displace the briefer and more discriminating volume by Theodore E. Burton in the "American Statesmen" Series.

"Uncle Sam's Business," by Crittenden Marriott (Harper & Bros.), modestly an-

nounces itself as a book for young Americans, but children of a larger growth may also find it illuminating. It is a clear exposition of the functions and responsibilities of our government, personified as Uncle Sam. An idea of the author's method may be gained from the chapter "Uncle Sam, Society Man," in which our blue-coated representative is portrayed making himself agreeable in the ballroom of the world. The book is to be praised for its attempt to vivify the dry bones of political science, and for the pleasant human bits of the writer's own philosophy, shyly insinuated here and there. It should meet the present demand for instruction without drudgery.

Anything approaching a real "solution" of either the Trust, the labor, or the negro problem would seem to be a task quite sufficient for the average man, but Harry Earl Montgomery, in his "Vital American Problems" (G. P. Putnam's Sons), essays to settle them all. The evils of Trusts are to be met by Federal incorporation, control through a Federal bureau, publicity, local taxation of tangible property, and a graduated Federal tax on profits. For the labor problem, pending the general adoption of the Golden Rule, Mr. Montgomery prescribes, first, collective bargaining; to be followed, if this fails, by compulsory arbitration through the agency of industrial courts similar to those in New Zealand and elsewhere. As to the salvation of the negro, that is to be looked for through education, especially industrial education, in furtherance of which there should be Federal aid; and, second, through the united action of Southern white women for the elevation and safeguarding of negro womanhood. As a sort of side issue, Mr. Montgomery frames a brief argument against government ownership. We cannot go into the details of any of the various plans submitted, but the reader will find the proposed remedies set forth with more reasonableness than the rather assertive confidence of the author's language might suggest; while the array of statistical and other data gives the book a value for popular reference.

A long-forgotten predecessor of Lessing, the epigrammatist Christian Wernicke, whom Prof. Erich Schmidt was the first to set before his countrymen in the proper light, is now introduced to American readers by William Guild Howard, in a reprint from the Publications of the Modern Language Association. Wernicke's place in literature is assured by his literary portraits, of which fully half of his epigrams consist, and while his critical estimate of his contemporaries is not borne out by posterity, his opinions on the theory of art are of lasting value. In his independence of judgment Wernicke was a true forerunner of Lessing. He differed from Opitz and Boileau, though indebted to both, and was the first German writer on æsthetics who dwelt authoritatively on the proper respective limits of the arts of painting and poetry. His mind was preëminently philosophical, and as a diplomat by profession (he died in 1725 as Danish State Councillor at Paris), he perhaps turned naturally to the epigram as the safest vehicle of expression.

On the basis of the large "Mittelländisches Wörterbuch" of Verwijs and Verdam, which has been in course of publication since 1882, and has now reached the letter S, Prof. J. Verdam of Leyden has begun to issue in parts a smaller work, "Mittelniederländisches Handwörterbuch," for those who desire only the definitions and not the history of the words. The whole will be completed in about twenty-five parts, four to appear annually (The Hague: M. Nijhoff).

A forty-first edition of William James's "Dictionary of the English and German Languages," printed by Bernhard Tauchnitz of Leipzig, has been brought out in this country by the Macmillan Company. The revision for the present issue has been complete, and some use of its pages justifies us in commending the work as convenient and comprehensive.

Frank Eulenburg, in "Der akademische Nachwuchs" (Leipzig: Teubner), discusses the old and ever new problem of the career of extraordinary professors and private docents at German universities. He shows how the attractions and opportunities of business are drawing away from the academic career not a few of the most promising docents. The problem as to the future supply of really first-class men in the university faculties may thus become serious.

Hermann Weimar's "Der Weg zum Herzen des Schülers" (Munich: Beck) is a discussion of the influence of the personality of the teacher on the pupil. What the author says is perhaps not new, but much of it is often forgotten. Throughout the discussion the influence of Pestalozzi's ideas are felt.

Adolf Weber in "Die Grossstadt, und ihre sozialen Probleme" (Leipzig: Quelle & Meyer), a contribution to the series Wissenschaft und Bildung, edited by P. Herre, is an outgrowth of a course of lectures delivered on the problems and perplexities of modern city government and life. The work is rather popular in character.

In all biographies of Goethe peculiar importance is attached to his genealogy and the influence it exerted on the formation of his character and the direction of his intellectual development. His earlier ancestry is involved in profound obscurity and of his paternal and maternal lineage even as far back as five generations we know nothing. The Goethes were of North German stock, and his mother's family, the Textors, of South German. To those who are interested in this subject we recommend "Goethes Ahnen," by Dr. Karl Knetsch (Leipzig: Klinkhardt & Biermann). It is a richly illustrated volume based upon thorough study. Dr. Knetsch shows that the paternal progenitors were mostly laborers, mechanics, butchers, bakers, and tradesmen of various kinds, whereas his mother's side included artists, officials, scholars, and members of the learned professions. The author also proves a remote consanguinity of Goethe with the elder Lucas Cranach of the fifteenth century.

Another fact forming a prominent feature of Goethe's life, but almost wholly ignored by his biographers, is his connection with the Freemasons. In 1780 he joined the Weimar Lodge, of which he was an active and fairly enthusiastic member for more than half a century. This biographical deficiency has now been supplied by Gotthold Deili's "Goethe als Freimaurer," just published (Berlin: Mittler).

"Die Eigenart der amerikanischen Predigt," by Hans Haupt (Giessen: Töpelmann), constituting one of the Studien zur praktischen Theologie, edited by Prof. Carl Clemen (who has just come to this country to lecture at the University of Chicago), is an interesting study of American pulpit oratory by an observant German. He finds American preaching to be chiefly distinguished by its disregard of the church year and its fixed texts, by the character of the American people, and by the individuality of the denomination and the preacher.

Ulrico Hoepli of Milan publishes a "Crestomazia Neoellenica," compiled by Prof. E. Brighenti, which contains a useful collection of pieces, verse and prose, in both the *lingua pura* and the *lingua volgare*. There is no vocabulary or grammatical synopsis.

The Rev. Frank Field Ellinwood, for twenty years professor of comparative religion at New York University, died at Cornwall, Conn., September 30. Born in 1826 at Clinton, N. Y., he was graduated from Hamilton College and studied at Auburn Theological Seminary and Princeton. After some years in the pastorate, he became secretary of the Presbyterian Board of Church Erection and later corresponding secretary of the Board of Foreign Missions. He was author of "The Great Conquest" (1876), "Oriental Religions and Christianity" (1892), and "Questions and Phases of Modern Missions" (1899).

The Rev. Walter Chalmers Smith, senior minister of the United Free High Church, Edinburgh, died September 19, in his eighty-fourth year. He was a graduate of Edinburgh University. His writings have been chiefly in verse; among his books are: "The Bishop's Walk" (1861), "Olrig Grange" (1872), "Hilda" (1878), "Raban" (1881), "Kildrostan" (1884), "North Country Folk" (1887), "Thoughts and Fancies for Sunday Evenings" (1887), and "A Heretic" (1890).

THE ENGLISH CONSTITUTION.

The Dawn of the Constitution: or the Reigns of Henry III. and Edward I. (A. D. 1216-1307). By Sir James H. Ramsay; with Maps and Illustrations. New York: The Macmillan Co. $2.75 net.

Sir James Ramsay is gradually approaching the end of his self-appointed task of writing a history of England in the Middle Ages. Unlike the majority of historians, he began with the end of his period and produced as his first instalment a history of the Houses of Lancaster and York. With insight quickened by the experience gained in this effort, he then turned to the beginnings of English history, and in a series of volumes, each bearing an individual title, has brought his subject to the close of the reign of Edward I. Another volume, at least, is required to fill in the gap to the close of the fourteenth century. Whether Sir James will attempt to recast the Lancaster and York volumes, which as they stand to-day are inferior to those which have followed.

is doubtful, for he is already advanced in years.

The history is confessedly one of facts, dates, and statistics, and boasts no ornaments, either rhetorical, speculative, or philosophical. It is designed to provide the cardinal facts in a consecutive and verified narrative, based on the original authorities and elaborated with the help of modern views and interpretations. The style is good, possessing "precision, veracity, truth to the thing to be presented," qualities which the author deems sufficient for his purpose. Such a definition will hardly appeal to the lovers of Macaulay and Froude, and to them Sir James is bound to be uninteresting, not because he fails to deal with the subjects that arouse enthusiasm, for he has much to say of men, manners, and the heavy battalions, but because he puts no life into the men, no reality into the manners, no action into the battles. The story is told year by year and almost day by day; no great movement can be followed in its entirety; causes, relations, and progressive changes are rarely considered. A work constructed on this plan can hardly be otherwise than dry.

A second feature of the work provokes deeper criticism, or rather deeper regret. The narrative deals almost exclusively with the life of the feudal lords, spiritual and temporal, with their wars, marriages, ecclesiastical relations, quarrels, intrigues, and the scores of other matters that centred in the royal court and the baronial estates. One grows weary of the author's painstaking chronicle of movements and interests of but one class, his neglect of other aspects of the life and thought of the nation. Two sections of twenty pages each sum up his comment on burgesses and villeins, law, literature, education, architecture, and finance. What is said on these subjects, however, is often well said, and no inconsiderable part of it, particularly relating to finance, is new.

Yet despite limitations, the merits of the history are many and lasting. To the student of the thirteenth century the work is indispensable. In its marshalling of facts, its accurate chronological statements, its attention to the geography of campaigns, its statistics of troops, royal revenues, and expenditures, it is a mine of information. The author has seized every opportunity of exhibiting and refuting the absurd exaggerations of the chroniclers in their estimates of numbers, and has utilized with great skill the material which the public accounts furnish, printing in text and appendices tables drawn from the Exchequer Accounts and Pipe Rolls. The task of making up these tables must have been a most tedious one, and it seems almost like ingratitude to suggest that the compiler might have made an additional effort to ascertain, at least in a general way, where the money came from, that is, in what way the financial burden of the King's heavy expenditures was distributed among the people at large. In all that relates to such confusing events as the Barons' War and the relations of Edward I. with Scotland, the author is clear, full, and impartial. His footnotes enable the scholar to verify every step and to test every statement, and the pains which he has taken with his chronology make it possible to assign every event to its proper place. When it becomes clear that the history is designed chiefly for scholars or for exceptionally well-equipped readers, and when we agree with the author that the whole life of the times lies in detail, and without the detail cannot be understood, we shall be ready to affirm that few works on English history have contributed more solid information, scientifically obtained and impartially presented, than has this valuable volume.

The Constitutional History of England: A Course of Lectures by the late F. W. Maitland. New York: G. P. Putnam's Sons. $3.50 net.

But few historians are of such popular repute that their early unprinted work would have commercial value. In fact, no historian worthy of the name would wish his immature efforts given permanent form; and a heavy responsibility rests upon a literary executor who publishes lecture notes—generally mere guides to thought, and not the finished thought itself. The publication at the present time of a course of lectures delivered twenty years ago at the University of Cambridge demands, therefore, a justification. The lectures were not intended for publication: that Professor Maitland told the Cambridge Law Club. They might in time have been worked up into suitable form, but the manuscript remained literally untouched from the day, April 7, 1888, when the last word of the last lecture was written, until the summer of 1907, when, after consultation with competent advisers, H. A. L. Fisher, Professor Maitland's brother-in-law, decided to give the manuscript to the public. Of the results of the past twenty years' activity the manuscript, of course, contains not a word. In ordinary cases, such a fact would seriously discount the usefulness of a history. That it does not in this instance is due to certain characteristics that may be succinctly presented.

In the first place, though one of Maitland's earlier writings, this constitutional history is neither immature nor unfinished. Maitland had been reader in English law for four years; he was elected professor of the laws of England the following summer. These lectures represent one stage in the development of his remarkable powers, and must have formed a convincing testimonial of his fitness for the higher position. He left the manuscript in an almost perfect condition, for though written in six months and never copied, it bears no marks of correction, save an occasional marginal note. Such a manuscript reveals a mind already equipped with a vast amount of knowledge and competent to present that knowledge with accuracy and insight, zeal for the idea underlying the facts, and comprehensive grasp of detail combined with high speculative power.

The greater portion, 375 of the 539 pages, deals with the years after 1307, a period that Maitland was never able to cover again. It is, moreover, a period that has received comparatively little attention in the last two decades. No such upheaval has taken place in our knowledge of the Constitution in the Tudor, Stuart, and Hanoverian eras since Hallam, Anson, Dicey, and others wrote, as has been effected (in the period before 1300) by Round, Vinogradoff, Maitland himself, and his co-workers in the Selden Society. Even for this earlier phase, these lectures are far from antiquated, for they contain many of the seminal ideas which were subsequently developed in the "History of English Law," and show that as early as 1887 Maitland had already shaped in his own mind conclusions that the world was to know only from his later publications. This fact lends peculiar interest to the earlier portions of this history, which is no mere recapitulation of Stubbs, but contains scores of suggestions, expressions of faith, doubt, and uncertainty, and positive contributions to knowledge, which disclose Maitland already at work recasting traditional views and exploring new fields, particularly of local history. Much of the research which underlay the later writings was already in progress.

Moreover, the form of presentation gave to Maitland's lectures a permanent value. He chose an analytical rather than an historical mode of treatment. Constitutional history he regarded as a history not of parties, but of institutions, not of struggles, but of results. The struggles he believed to be evanescent, the results alone a permanent heritage. What is the Constitution? not, How did it come about? is the question he proposed, and he answered it by minute topical analyses of the Constitution at certain selected dates. He chose the years 1307, 1509, 1625, 1702, 1887, and he preferred periods of calm to periods of commotion, because they were generally avoided by other writers. He was already teaching his students, as he afterwards taught older scholars, to break with tradition, even though that tradition were reasonable, and to refrain from repeating what the standard books said, even though their sayings were true. He wished to see familiar facts in a new light. In thus

neglecting problems of development and change he was saved the consideration of many difficult points that would have led him into the field of doubt and conjecture. What he has written is in the main indisputable, and needs no revision. By contenting himself with established facts he has rendered his work of almost as much value to-day as it was twenty years ago.

In carrying out his task Maitland depended to a considerable extent upon the classical text-books of Anson, Dicey, and others, but his greatest dependence was upon the statute-book. The skill with which he utilized the voluminous and unwieldy mass of English statute law is little short of marvellous, and reminds us of the genius which he displayed afterward in his analysis of the Year Books, Domesday Book, and the Saxon writs and charters. The statute is his final authority and his unfailing test of legality. He traces, of course, the growth of practices and arrangements that are not statutory, such as those defined by the terms "Cabinet," "Prime Minister," etc.; and of principles that are not principles of law, as of the decay of the King's personal will and pleasure; but it is to the statute-book that he turns again and again when he wishes to know what is meant, for example, by "the crown," or by "royal prerogative," terms which he deems but convenient covers for ignorance. He taught a wholesome lesson when he argued that the traditional lawyer's view of the Constitution had become untrue to fact and to law. No part of his lectures is more absolutely modern and permanent than that which urges the importance of the statute-book:

> If you are told that the crown has this power or that power, do not be content until you know who legally has the power—is it the King, is it one of his secretaries; is it the outcome of a prerogative power, or is it the outcome of statute?

He finds no satisfaction in legal definitions or formulæ, whether given by Austin or by Holland, and he prefers to show what constitutional law is by means of concrete examples.

To these sound and sufficient reasons for publication we may add that the lectures are filled with profound suggestions and original interpretations that the world could not afford to lose. They are in the main written with much of the author's well-known charm and lucidity. We may regret occasionally that he could not have revised and polished these lectures in the days of his greater maturity and have recast some of the pages of detail. Yet the regret is tempered by thankfulness that we have the work at all. It in no way precludes the writing of that history of the English Constitution which has been and is still so sorely needed, but it fully bears out the contention of the editor that it provides better than any book now in existence an introduction to the study of English constitutional history. As such it will be highly valued by practical teachers in our colleges and universities.

CURRENT FICTION.

A Spirit in Prison. By Robert Hichens. New York: Harper and Bros.

Admirers of Mr. Hichens's "The Call of the Blood" will find a satisfactory sequel in the present story. If the former tale was found too harrowing, this will afford a compensatory thrill. The earlier situation will be recalled: A young Frenchman with Sicilian blood in him goes to Sicily with his English bride. The honeymoon is hardly over when she feels herself impelled to the bedside of a sick man in Africa, a friend of hers. It is a part of her generous or fantastic emprise to go alone; and the young husband is left to kick his heels in Sicily and make love to a peasant girl. The affair reaches its culmination on the eve of the wife's return, and the death of the culprit follows at the hands of an outraged father. Let both marriage and amour bear their fruit, bring together a half-brother and sister, and the two mothers with their divers memories, and you have the material of the sequel. It is, perhaps, a disappointment that nothing more spectacular comes of it. Mr. Hichens, with his accustomed slow and voluptuous pressure, wrings whatever emotional excitement he can out of the mental sufferings of his heroine (the widow). But she seems rather a dull and weak creature, a mere victim of nerves and self-indulgence, and it is hard to be glad for Emile (the hero of the African episode) when she eventually comes to her senses sufficiently to marry him. That habit of portentous moralizing over the moods of insignificant egoism which we have noted as characteristic of Mr. Hichens in the past is still his darling vice.

Further Experience of an Irish R. M. By E. Œ. Somerville and Martin Ross. New York: Longmans, Green, & Co.

In these days, when fiction in general is either purposeful or futile to the verge of tears, one welcomes a book whose aim, avowed and accomplished, is a hearty and wholesome laugh. In these short stories, there is neither the tragedy of overwhelming fate nor of the writer's incompetence, but the same comedy, pungent as a turf fire, that insured to Flurry Knox and his genial biographer upon their first appearance a true Irish constancy and warmth of welcome for the future. The richness and diversity of Hibernian idiom is worthy of attention, independent of the threads of amusing misadventure on which it is strung; the combination may be ephemeral, but nobody can feel that the moments spent upon it are wasted.

The Riverman. By Stewart Edward White. New York: The McClure Co.

About this story hang the aromatic fragrance of Michigan pine, the poetry of the river, the prose of logging camp and lumber city. The idyllic, the humorous, the rough, the tough, and the grim are all here. The hero is a fine fellow, with much muscle and no nonsense about him. A believer in himself and in most others, he is a born leader, an organizer of many a victory over rival man and hostile nature herself. He can be tender to parents, wife, and child, loyal to friends, just to foes. He can knock out a professional athlete and confound a card-sharper; he can curb his temper for the most part, and let it go mightily when occasion prompts.

The story is good, and we think would be better for a little abridging of the mass of technicalities relating to logging and to the financing of lumber companies. They serve to give reality to the hardships and brutalities that go into that great fight with nature and man called the lumber industry; but he who reads feels at moments a little like running. Only a lumber expert and a compiler of stock market columns—and it is to be feared they are not as a rule novel readers—could competently pass judgment on these parts of the book. This is, however, less a fault than the overdoing of a merit. The story is a good, definite, ringing story, both in itself and in the episodes—elaborated with no little originality—which float it. The way in which justice is administered at the last makes an ending which leaves the reader tingling with a primitive and complete satisfaction.

The Wooing of Calvin Parks. By Laura E. Richards. Boston: Dana Estes & Co.

Here is a book that, like others from the same pen, is to be gratefully greeted as "reading without tears." And this is much to say in a day when, for all the seas of light reading, there is a dearth of books which shall interest without harrowing and cheer without sickening. To read it is to think at once of the hospital patient or the aged lingerers in armchairs who enjoy only such pathos as may attend happy endings and who shrink from more suffering than may lawfully beset the confounding of the unjust; who, in a word, like to be amused, but are not fools.

Mrs. Richards serves a feast of Maine humor, seasoning it with her own sympathy. She makes a very engaging central figure of Calvin Parks, once "master of the Mary Sands, Bath and Floridy—with lumber," now owner of a "candy route, hoss and waggin." Sam and Sim, the old twin brothers, in their

temporary reaction from too long and too heavily enforced love-each-otherness, make a good field for missionary effort and Christmas reconciling. It is caricature, of course, but not stupid caricature. And the benevolences of the story are amiable, but not cloying. Pervading the whole are Maine-isms of choicest quality.

Amédée's Son. By Harry James Smith. Boston: Houghton Mifflin Co.

Nowadays, when the novel or tale of local color connotes so frequently the tragic, the squalid, or the grotesque, it is a pleasant surprise to come upon such a gentle and gracious idyll as "Amédée's Son." That Evangeline's land should be so very much what it was—if it ever was—in Evangeline's day seems almost too good to be true, but at least one would like to believe it. The story is of the slightest, the handling graceful but somewhat amateurish; the merit of the hook is that it enables its readers to spend once more an hour in "Acadie, home of the happy."

Dominy's Dollars. By B. Paul Neuman. London: John Murray.

The piling up of a colossal fortune, with the vanity thereof, is no new theme. Yet by its breadth and thoughtfulness this book stands well out from the average money novel, no less than by its intimate study of the Jewish nature. Of Shylocks, of East Side nature studies in little and big Jews, of prophets of the Torah, we have bookfuls. Of Jews who are strongly racial and strongly human, we have few. To that limited lihrary Mr. Neuman's volume makes a serious and welcome addition.

His hero begins life in that part of New York whence an occasional western trip to the Bowery is an event. But it is the Jew, as he lives unto himself and not to his settlement teacher, that is presented to the reader. From his first street fight to his becoming the Colossus of the timber world, Dominy is a study of two sides of the Jewish character—that which aims at preëminence and that which abases itself before the Supreme One, who may not be named. Stifling the stirrings of his soul, Dominy deliberately arranges his life to command huge financial success. His girl playmate of the splendid voice takes precisely the opposite course, ahjuring fame to find blessedness. The delineation is both broad and minute, both shrewd and tolerant. The portrait of Baskervil, the English financier, is garishly vivid. He truly describes himself as "a bit of a character, a hit of a genius, a bit of a bounder, fairly honest, and terribly soft-hearted." This brings us to a defect in the book. Would such a man ever have so described himself? Would a vulgar millionaire be apt to exclaim, "I've often thanked God that I'm a parvenu"? In other words, though the characters are expressively drawn, at moments they step outside of their characters in self-comment and self-interpretation. There is a somewhat fatiguing amount of options, stock-jobbing, company-floating, and of the now fashionable lumber market. But this is a superfluity rather than a blemish in a novel which is strong, large, and wide-visioned.

The Technique of the Novel: The Elements of the Art, Their Evolution, and Their Present Use. By Charles F. Horne. New York: Harper & Bros. $1.50 net.

According to Professor Horne, the study of the novel and its developments, technically considered, resolves into an account of the origin, growth, and treatment of a limited number of "elements" —plot, motive or verisimilitude, character portrayal, emotional excitement, background, and style—whose rise and gradual convergence he pretends to follow, through the mazes of Egyptian story and Greek and mediæval romance, to their final confluence in the modern novel. Of these elements, however, it need hardly be said that they are in no wise elemental. They fail to distinguish the novel from the epic or from the drama in general, as Professor Horne is very positive that it should be distinguished; and, being common to all three forms of literature equally, they can hardly be supposed to account for any one of them more than another. The fact is that Professor Horne's investigation overlooks the determining factor of the whole prohlem. Indisputably the novel has style and plot, but its style and its plot are quite different from those of epic and drama; and the something which makes this difference and decides the *genre*, is the very matter which the writer passes over in silence, though as a matter of fact he seems to reckon with it tacitly, since he confines his research of origins to that kind of writing to which we apply the general name of story. Naturally, such an initial error vitiates, to some extent, the entire study. If the character of the novel is not determined by these "elements," why ransack them for its origin? Better to search out the fundamental convention, the peculiar attitude or motive to which this type of literature answers.

And aside from this, the historical method itself, which Professor Horne applies to his subject, is open also to serious objection. When applied, as it is here, to stringing together a number of literary productions on the few frail threads furnished by these "elements," it is exceedingly liable to mistake a historical series for a critical explanation. It is not impossible, for example, that some kind of lineage may exist as between the "Nibelungen Lied," "Beowulf," and the novel; but the mere enumeration of such a sequence does not explain fiction, but rather itself requires explanation. While, too, the affiliation of a mature product with a rudimentary form, which may belong, indeed, to the same physical series but has little or no spiritual kinship with it, is likely to be equally misleading. Possibly, as Professor Horne is fond of asserting, the origin of the novel may be found in the trick of lying with plausibility; hut to insist upon this stage of the art, without careful qualification, is to misconceive its characteristic mood to-day, which is illusion, not deception, and consequently to mistake its methods, and, indeed, its whole technique. Of these difficulties in his historical manner of approach Professor Horne himself seems not entirely unaware; for he remarks, after analyzing mediæval romance, that, so far from approaching the novel, it appears, if anything, to be developing away from it.

So much for the first part of the book, which deals with the "evolution" of the "elements." In the second part Professor Horne undertakes to speak of the treatment they have received at the hands of mature practitioners of the art. Of this part little need he said. In spite of a numher of suggestive *obiter dicta*, it is too superficial and unsystematic for such a subject. Technique is entirely an affair of detail and method; and therefore a few cursory remarks on the handling of plot or background give but little insight into the novelist's intricate *procédés* and effects. And yet, as a whole, unsatisfactory as the hook is, still as a piece of academic work it marks an advance upon the profitless editing and reëditing of school and college texts.

Pioneer Priests of North America, 1642-1710. By the Rev. T. J. Campbell, S.J. New York: Fordham University Press.

One wonders a little why Father Campbell named his volume "Pioneer Priests of North America," when, as he is at pains to explain in his preface, "only those have been chosen who had to do with the Iroquois country." But when one has got over the momentary surprise of not finding Brébeuf, Lalemant, or Daniel, to mention no others, criticism is disarmed by the admirable character of Father Campbell's work. The book, although arranged in the form of a series of separate biographical sketches, is really to all intents and purposes a history of Jesuit missions to the Iroquois, from 1642, when Father Jogues was taken prisoner on the St. Lawrence and carried down to Ossernenon on the Mohawk, to 1709, when Julien Garnier was driven out of the Iroquois country. Most of the material here presented was, of course, already

available elsewhere, in the Jesuit Relations, in Charlevoix's "Nouvelle France," and in the writings of Parkman, Rochemonteix, Martin, Winsor, Shea, and other well-known authorities on the Jesuit missions; but, except in the case of two or three of the more famous missionaries, the accounts could only be gathered piecemeal by laborious research. Students of the period are therefore indebted to Father Campbell for having brought the facts together in convenient form; and still more because he has performed his task in a scholarly manner, and with reasonable impartiality. It is not altogether surprising that Father Campbell does not always see eye to eye with Parkman in his interpretation of the character and purposes of the Jesuit missionaries. Later students, perhaps less prejudiced than Father Campbell, have perceived that the great New England historian, despite his glowing enthusiasm, was temperamentally unable to enter into the spirit of the Jesuit missions and missionaries. Father Campbell is especially severe on Parkman's characterization of Chaumonot: "the fanatical Chaumonot, whose character savored of his peasant birth—for the grossest fungus of superstition that ever grew under the shadow of Rome was not too much for his omnivorous credulity, and mysteries and miracles were his daily food." This "malignant characterization," as Campbell calls it, is nevertheless, allowing for differences in the point of view, not much more severe than the picture offered of the same Chaumonot by the Jesuit historian Rochemonteix: "simple even to credulity, timid even to fear, of an intelligence that lacked culture, impressionable, and with nothing in his character that could confer distinction." Perhaps it is the point of view to which Father Campbell really takes exception.

Though the Iroquois missions form the particular field to which this book is devoted, it has been found necessary, in sketching the lives of these priests, to follow them occasionally into other regions. Thus we get glimpses, often graphic and spirited, of the Huron missions, of Dablon's expedition to the headwaters of the Saguenay and beyond, of New Amsterdam and its worthy burghers as seen through the eyes of Jogues, Le Moyne, and other Jesuit visitors, and of the romantic and picturesque little capital of New France. Altogether Father Campbell's book is one of permanent interest and value. One may commend the numerous and well-chosen illustrations quite as heartily as one must deplore the absence of any kind of index.

The Game of Go. By Arthur Smith. New York. Moffat, Yard & Co. $2.50.

The game of go, which has been the solace of the sedentary in China and Japan for a millennium or so, is usually regarded by foreigners as similar to our checkers; whereas it is even more complicated than chess. The Japanese have a saying that one must play ten thousand times in order to be a good player. Ordinary games last an hour or two, but those for championship are often prolonged for eight or ten hours; in one classic instance, the period was continuously nine days and one night. The difficulty of the game and the time and labor that must be expended on it have prevented its adoption in other countries. Nevertheless, it is extremely fascinating and to those shut off from active occupation it is worthy of mastery.

Like chess, go is a military game, but whereas the tactics representing chess suggest a by-gone age, in which the fall of the chief meant the loss of the battle, this game, in which three hundred and sixty pieces are used, presents rather the picture of a modern campaign, in which the movement of the masses decides the victory. Several battles may occur on various parts of the board and much strategy is required. It has even been averred that the late war with Russia was planned on the principle of go, for an important part of the strategy on the board is to cut off whole armies from their line of communications as well as to besiege and capture strong positions, and to fortify threatened points. The author declares that at Liao Yang, Marshal Oyama got three of the necessary men, or "stones," advantageously placed, but the Russians escaped before the fourth stone could be moved into position. At the final battle of Mukden, the enveloping strategy characteristic of the game was carried out with complete success.

Mr. Smith's exposition, with the abundant diagrams, details of rules and methods, and illustrative games, is admirable. Hitherto it has almost been a proverb with foreigners that a German, O. Kortschelt, was the only alien who knew go so well that he could write upon it clearly, which he did in the Proceedings of the German Asiatic Society of Japan; but this work shows that Mr. Smith is successful, both as master and teacher.

Science.

THE WAR ON TUBERCULOSIS.

Sweden has seized the occasion of the international congress at Washington to recount her own experiences in the war against tuberculosis as a sort of laboratory report for the general profit of humanity. The Swedish government has published, in English, a volume entitled "The Struggle against Tuberculosis in Sweden," edited by Dr. Sture Carlsson, and has dedicated it to the specialists who were assembled at Washington. The book summarizes the strategy and tactics of the world-wide campaign, of which many features are familiar enough to us. But because of the thoroughness with which the statistical side of the problem has been developed in Sweden, the reader is here enabled to grasp, with unusual clearness, the twofold method of attack now employed.

Tuberculosis, like other universal diseases, is being fought through expert medical research and through social effort. The latter we may characterize roughly as a campaign of sanitation. Of course, no sharp line of separation runs between the two. In the last resort the broad measures of prevention and cure taken up by government or public effort must depend on the principles laid down by the expert investigator and the professional practitioner. But this distinction is to be made: while the experts are still striving towards a fundamental theory of origin and cure, the common experience of the world has revealed certain methods which may be successfully applied, even upon the basis of only a partial theoretical knowledge. We do not yet know the exact relation between bovine and human tuberculosis. When we do discover the rôle played by cow's milk in disseminating tubercular infection, we shall, of course, be better off. But already we know that adequate police regulations with regard to expectoration on the streets, and that improved housing and nourishment constitute one way of checking the malady. Such methods are slower and less striking than that longed-for serum which shall do for consumption what has been done for diphtheria or smallpox. But short of that much-desired goal, which reports made at the congress seem to bring very close, we must be content with lesser profits.

Slow enough the gains are; disappointingly so because we have often been told, with apparent authority, that the ravages of tuberculosis have been reduced by one-half within that rather indefinite period known to the newspapers as "a short time." Yet the Swedish government report declares that, whereas the general death-rate in Sweden, as in other civilized countries, "has enormously decreased during the last decades, . . . the mortality due to consumption has everywhere remained almost stationary, our own country not excepted." Here again it is a question of what the report means by the last decades. We get the answer from an accompanying chart. Between 1876 and 1905 the general death-rate for all Swedish cities fell from 24.5 to about 16 per thousand, and in the capital, Stockholm, from 29 to 17 per thousand.

During the same period the deaths from tuberculosis have fallen from 5 to 2½ per thousand. That, at first appearance, would show a more favorable rate of decrease for tuberculosis than for the general mortality. But the rather puzzling fact is that the decline in the number of deaths from tuberculosis took place between the years 1876 and 1890. Since the latter year the death-rate for tuberculosis has fallen but slightly in urban Sweden, and has been practically stationary in Stockholm. Our own experience would seem to be approximately the same. In 1890 the deaths from tuberculosis were about 163 per 100,000 of the population. In 1900 there appears to have been a drop to 149 per 100,000. But, according to the mortality statistics published in 1907 by the Census Bureau, the rate (for the registration area) was 174.9 in 1901, 163.2 in 1902, 165.7 in 1903, 177.3 in 1904, and 168.2 in 1905. The average of 172.3 for five years shows, evidently, no improvement over the rate for 1890, and tuberculosis is classified in the census report with the diseases showing neither an increasing nor a decreasing, but a fluctuating, rate.

The struggle, then, is a hard one. They have found it so in Sweden, where the mortality rate for tuberculosis is nearly 200, against our 170; but they have kept up the fight bravely by means of popular associations for combating the disease, by public lectures, a central museum at Stockholm, and by all the latter-day forms of publicity. Special areas in town and country have been minutely studied and described. And the one thing that stands out is that to raise the common standard of living is still the best way of fighting the disease. If we remember that the general death-rate for Sweden is less than 16 per thousand, we shall understand what it means that among Swedish tobacco workers the consumptives alone are 17 out of every 1,000 men and 36 out of every 1,000 women; among printers, 22 out of every 1,000 men and 19 out of every 1,000 women; among bookbinders, 24 out of every 1,000 men and 35 out of every 1,000 women. It is in the factory and the tenement house that the disease must be fought; and parks, as well as bridges, subways, and other means of rapid transit to the open country, are some of the ways of fighting it. From this point of view, civic misgovernment and graft which stand in the way of relieving congestion or of enforcing statutory regulations upon landlord and shopowner, are as deadly as the dreaded bacillus.

The volume commemorating the centenary of the birth of Darwin and the fiftieth anniversary of the publication of "The Origin of Species," to be issued by the Cambridge University Press, with the co-operation of the Cambridge Philosophical Society, will include essays by British and foreign contributors. The plan of the work is outlined as follows: I. Darwin and Evolution (Darwin's Relation to His Predecessors; Natural Selection; Variation and Heredity; Descent of Man; The Palæontological Record; Embryology; Geographical Distribution; The Minute Structure of Cells in Relation to Heredity; Instinct and Expression, etc.). II. Darwin's Geological Work. III. Darwin's Contributions to Botany. IV. Philosophical and Other Essays (The Inference of the Conception of Evolution on Modern Philosophy; Sociology; Religion; Language, etc.).

Longmans, Green & Co. are about to issue "In Search of a Polar Continent," by Alfred H. Harrison; and "Alpines and Bog Plants," by Reginald Farrer.

Dr. Charles S. Minot's "Age, Growth, and Death" is soon to be published by G. P. Putnam's Sons.

"Wireless Telegraphy and Telephony," by Walter W. Massie and Charles R. Underhill (D. Van Nostrand Company) deals fairly well with the first part of the title, giving the theory of electro-magnetic wave motion in an especially clear manner. The apparatus used is outlined in general, and is well illustrated with pictures and diagrams. Wireless telephony is but slightly touched upon. The book closes with a special article on the future of the wireless art by Nikola Tesla, in his usual optimistic style.

Despite the fact that the turtles are more widely distributed in latitude and in time than any of the other reptilian orders, the study of the group has long lagged. The reason is scarcely evident; yet it is a fact that for many years fossil hunters and other explorers in the West gave little heed to the often numerous turtles they saw, but habitually passed them by as of purely secondary interest. Even in the case of the turtles of the Upper Cretaceous marls of New Jersey but one fairly good collection was made; namely, that of Yale University. Moreover, while collectors thus ignored the fossil turtles, the forms that were described were often based on most fragmentary material. Now, however, Dr. Oliver Perry Hay, as the result of exploration in the field, and the re-examination of the older material, finds that there are 266 well-defined species of North American fossil turtles—or more than now survive on all the continents. From this it is evident that the turtles are a disappearing group, though yet so abundant as to lend a deep interest to all problems connected with their origin and distribution. Dr. Hay's investigations are set forth in "The Fossil Turtles of North America," a volume of 568 quarto pages, 703 illustrations in the text, and 113 plates (Carnegie Institution of Washington). Turtles first appeared in North America in the Upper Jurassic; they culminated in both number and size in the Upper Cretaceous, but were still very common in the Early Tertiary, since which they have declined in number. Many additional extinct forms will yet doubtless be brought to light, and their identification will be rendered speedy and accurate by Dr. Hay's really epoch-making work. For it is far in advance of any that has hitherto been written on its subject, or on the turtle fauna of any other country. As an example of book-making the volume before us deserves an additional word of praise. The general accuracy of printing, with excellence of paper and illustrations, is worthy of the institution which publishes it.

In "Beobachtungen über die Psyche der Menschenaffen" (Frankfurt: Neuer Frankfurter Verlag) Dr. Alexander Sokolowsky has just published a valuable contribution to animal psychology. Especially interesting are the records of his observations on gorillas, of which eight specimens were recently brought from Africa to Stellingen. The author, as zoölogical assistant in charge of this collection of animals, treated these gorillas with the greatest care and kindness and made efforts to win their confidence and affection, but with no response whatever. They were fed with bananas and other articles of food, to which they are accustomed, but refused to eat in the presence of human beings. Finally, they all died, not of physical disease, but of mental depression caused by their captivity. More satisfactory was his later experience with a gorilla brought by a German officer from Kamerun, together with two negro boys. These lads became strongly attached to the gorilla, and the gorilla to them, and through them it soon entered into friendly relations to white men. It enjoyed their society and developed a high degree of sensibility and a peculiar gift of humor, manifesting itself particularly in the childish form of practical jokes.

The Sammlung Göschen (Leipzig: G. J. Göschen) has recently been increased by two technological books: Prof. Max Gürtler's "Textil-Industrie," I.: "Spinnerei und Zwirnerei"; and Erich Krebs's "Technologisches Wörterbuch," containing the most important technical terms in machinery, shipbuilding, and electrical science in both German and English.

In an illustrated brochure, "Fouilles Scientifiques dans la vallée de la Vézère," O. Hauser of Les Eyzie de Tayac (Dordogne), France, gives a brief account of his palethnological explorations at La Micoque, Laugerie-Basse, Laugerie-Haute, Le Moustier, Miremont, and Longueroche in the Perigord district, which have given results surpassing all previous work in this very important region. Near Laugerie-Haute, a score of cylindrical holes containing *solutrean* flints were found. These holes had evidently been traps. The terrace in which they were dug was the only way by which animals could go to the bank of the Vézère to drink. It was easy to barricade the place and so force the animals to cross the space where the traps had been laid. The finds include a prehistoric skeleton of the Neanderthal type; evidence of the presence of the mammoth, *Bos primigenius, Bison priscus, Equus caballus,* and other fauna; an abundance of stone implements of different prehistoric periods, carved bones and picture stories; and what Dr. Hauser calls the *ateliers* of the "artists." Yet the importance of these excavations lies especially in the methods adopted to preserve accurate records of the positions of everything unearthed. First, the location of the excavations was indicated exactly. A surveyor was employed constantly taking the most accurate measurements and numbering not only every object found, but, with a corresponding number, its original location in nature and on the various charts which

were made. Photographs of each new aspect of the work were taken every day, and drawings of cross-sections of the strata were made frequently. It would be possible, if necessary, to replace exactly in its original position everything found. Anthropologists and anatomists classified the bones, and chemists examined the flints and the different strata of earth, while a skilled engineer prepared topographical maps which show the relations existing between the different stations where work is carried on. Nothing was neglected which could furnish all the proofs and guarantees which modern science exacts. Consequently, beneath what previous investigators had regarded as virgin soil, the most valuable results have been reached. An account of the season's researches will be printed in *L'Homme prćhistorique*.

The Eleventh International Congress of Ophthalmogists has been called to meet in Naples from April 2 to 7, 1909.

Commander John Baptiste Bernadou, formerly American naval attaché of the embassies at Rome and Vienna, died in this city October 2. Born in Philadelphia in 1858, he was graduated from the United States Naval Academy in 1882, and by 1906 had risen through the various grades to commander. He had served in the Bureau of Navigation, and had done work for the Smithsonian Institution. Among his writings are: "A Trip Through Northern Corea in 1883-4," "Pyro-Collodion Smokeless Powder," "Smokeless Powder, Nitro-Cellulose, and the Theory of the Cellulose Molecule," and a translation, "Questions in Naval Tactics," from the Russian, by Vice-Admiral Makaroff.

The death is announced of George Nicholson, curator of Kew Gardens from 1886 to 1901. He was author of "The Dictionary of Gardening" (1888).

Drama.

The uncommon literary quality of Percy Mackaye's "Mater: A Study in American Comedy" is much more apparent in the printed book (The Macmillan Co.) than in the present representation of the work in the Savoy Theatre. One reason is that certain passages are omitted or compressed in the acting version; another, that the players are incapable of giving due expression to the humorous or fanciful significance of the lines; and a third, that attention is distracted from the dialogue by the difficulties of an extravagant and confusing plot. These difficulties are increased rather than diminished by a perusal of the text, but, away from the foot-lights, it is possible to disregard them, and to enjoy, undisturbed, the felicity of phrase, the variety and aptness of allusion, the play of witty and satirical humor, the clever touches of characterization, and the occasional flights of poetic imagination. That there is a comic impulse in Mr. Mackaye's mind, which may yet manifest itself triumphantly in a first-class comedy, no one who reads "Mater" can doubt, but it has not yet been brought into proper subjection. Laughter may be the test of love, as his Mrs. Dean proclaims in her charming song, but it is not the test, at all events not the sole or chief test of a play which professes to be written with some definite point in view. It is all very well to make fun of a "suffragette" or an insufferably priggish young idealist, or to extol the power of diplomacy, but to justify, even by light imputation, the sacrifice of a sound principle for the sake of prospective good, is a serious matter. When her son refuses to secure his election, by what he regards as bribery, Mrs. Dean employs a gross (and quite incredible) deception to win his fight, and calls it common sense; and in this view, the idealist son finally acquiesces. The fact is, that in the last analysis, Mater is a weak, shallow, and unscrupulous creature, in spite of all the glamour with which Mr. Mackaye has surrounded her. Mr. Mackaye bas done a sparkling piece of literary work, but with a flavor of cynicism which is not altogether agreeable.

An especially attractive little volume is "Shakespeare Proverbs" by Mary Cowden Clarke (G. P. Putnam's Sons). It is convenient to handle and is full of good matter, daintily printed on excellent paper. More than sixty years have passed since the collection was first published, and the book has long been out of print. It has now been reëdited by W. J. Rolfe, who has added to the original matter, which was taken from the plays only, a number of kindred passages from the sonnets and other poems, and prefaced the whole with a sketch of Mrs. Clarke and a brief essay upon the exact meanings of the words "proverb," "saw," "adage," "aphorism," etc. He has also furnished some explanatory notes which will be useful to younger students, and has supplied the references to the pieces from which the proverbs are selected. The arrangement of the extracts in alphabetical order does not facilitate reference, but the grouping of them under special heads would have demanded much labor and might not have proved much more satisfactory. The great majority of Mrs. Clarke's selections are unexceptionable, but some of them are rather strange, being due, perhaps, to excess of zeal. For instance, such lines as these, "At hand, quoth quick-purse," and "To strange sores strangely they strain the cure" do not seem to have much proverbial or other value.

"His Wife's Family," by George Egerton, (Mrs. Bright) produced in Wallack's Theatre on Tuesday evening, is a study of Irish improvidence, which, light and undramatic as it is in texture, bears unmistakable evidence of humorous perception and skill in characterization. It has the true flavor of comedy, and is in many respects a notable little piece, but unfortunately it was presented under such puzzling conditions that much of its legitimate effect miscarried. Owing to the brogue employed, the faulty elocution of the actors, and the poor acoustic qualities of the house, two-thirds of it might as well have been given in dumb show. But enough came across the footlights to prove the vitality, distinctness, and naturalness of the different characters and the familiarity of the author with the strength and weakness of the Irish nature. Admirable sketches are furnished of a reckless, hot-headed, tender-hearted spendthrift, his son and daughters, and two old family servants; and the scenes in which they figure are often worthy of either Charles Lever or Samuel Lover. The humor is broad, but not extravagant, and is diversified with some shrewd political and social comment. The piece is well worthy of a place in the Irish Theatre. As true comedy it is more consistent with the traditions of the Wallack stage than anything seen there for a long time. But it is likely to prove caviare to the general.

Nothing need be said here of the play of "Agnes," in which Miss Nance O'Neil is appearing in the Majestic Theatre. It is a piece of lurid and inexpert sensationalism beneath contempt. But it is worth noting that Miss O'Neil, recently esteemed an actress of much more than common promise, is beginning to show the effects of bad management and misdirected effort. She has contracted mannerisms of speech and bearing which deprive her acting, to a considerable degree, of its best spontaneous effects, and make it at once artificial and insignificant. This is a great pity, for she is one of the few stage women having in them the elements of tragic power.

Music.

A chapter from the Richard Wagner Jahrbuch, 1908, to be issued soon (Berlin: Hermann Paetel), appears as a *Sonderabdruck*, entitled "Richard Wagner über Lohengrin," by Erich Kloss. It consists of a collection of statements made from the works and letters of Wagner on the origin, character, and purpose of "Lohengrin."

Otto Böckel's "Handbuch des deutschen Volksliedes" (Marburg: Elwert), while modestly described on the title-page as the fourth edition of the classical work of A. F. C. Vilmar, "Handbüchlein für Freunde des deutschen Volksliedes," is almost entitled to rank as a new work. The additional matter is fully one-third of the original contents.

The great musical event in the State of Maine every year is the festival given under the direction of William R. Chapman. This year's performances begin at Bangor October 8 and continue three days. The Portland dates are October 12, 13, and 14. Among the soloists engaged are Ellen Beach Yaw, Isabelle Bouton, Caroline Mihr-Hardy, H. L. Waterous, Daniel Beddoe, and Cecile Fanning. There is a festival chorus of 800 singers contributed by many Maine towns, and the orchestra is made up of players from the New York Philharmonic Society and the Manhattan Opera House. Among the choral works to be given are Gounod's "Gallia," Grieg's "Recognition of Land," and Rubinstein's "Tower of Babel." Verdi's "Aïda" in concert form is the feature of the festival.

Miss May Mukle, who is the most interesting of living violoncellists of either sex, is back in this country, where she begins her second season at the Worcester Festival, playing the Saint-Saëns concerto. Her first New York appearance will be in the Hermann Klein series, on October 25, when she will appear as soloist and as a member of the new Maud Powell Trio, which after that date will go on a Western tour. Miss Mukle has added to her repertory concertos by Victor Herbert and Davidoff, Dvorák's "Waldesruhe," and Massenet's "La Tzigane."

Edmund Kretschmer, composer and organist of the Catholic Hofkirche, Dresden, died September 13 at the age of seventy-eight.. In 1865 his composition "Die Geisterschlacht" won a prize at the first German Sängerfest in Dresden. He produced several operas: "Die Folkunger" (1875), "Heinrich der Löwe" (1877), "Der Flüchtling" (1881), and "Schön Rohtraut" (1887). Among his other pieces are "Pilgerfahrt," "Sieg im Gesang," and "Musikalische Dorfgeschichten."

Art.

THE NEW HALS AT THE NATIONAL GALLERY.

LONDON, September 25.

There have been several additions to the National Gallery in London: More Turners in the Turner Room, a beautiful portrait of Pitt by Romney. But all these are of lesser note, compared to the big Family Group by Frans Hals [see the *Nation* of September 10, p. 245]. The picture has been hung between the two small portraits that are the only examples of Hals hitherto in the National Gallery.

It contains ten figures, father, mother, children, and nurse, grouped out-of-doors against a background of foliage. To the left, this foliage opens to show a great stretch of the downs near Haarlem, an arrangement that recalls the background in the superb portrait of himself and his wife in the Rijks Museum at Amsterdam. The composition, however, does not prove quite so successful in this larger group, though the simple, solemn landscape under the cloud-swept skies of Holland is delightful. But you get an effect of crowding, a feeling that prevents you at first from realizing the wonderful ingenuity and rhythm of the design. The line is as rhythmical as the color is rich, the usual black, gray, and white scheme relieved by the splendid russets and maroons in the dresses of the mother and daughters. The group, as a whole, has not the serenity, the repose, of the old women at Haarlem, or the vivacity and gayety of the portrait of himself and his wife, or the swagger and exuberance of the various shooting guilds. The figures vary in strength and character. The father, though the central figure, is of lesser interest, and so are the two young sons in the background. But the face of the mother, weary, and worn, and old before her time, has the same tenderness, the same peaceful patience, of the faces of those wonderful old women at Haarlem, a quality so little looked for from Hals. The nurse, with the baby in her arms, is painted with the vigor he always brought to his peasants and coarser types; while nothing could be more graceful and charming than the two little girls in the immediate foreground. They are full of the spirit of childhood, and in their dresses the richest note in the harmony is struck. The detail, too, is treated in the same masterly fashion as in the Doelen pictures—the detail of white ruff, or collar, and cuffs, of the white caps, especially of the two little girls, their ornament suggested with a daintiness in striking contrast to the more vigorous handling of draperies and foliage.

The technique is of a much later and more mature period than that of The Laughing Cavalier in the Wallace Collection, the most important Hals up to the present owned by the nation. Altogether, the new Hals is a most interesting and important picture; for no other of the great Dutch masters was so inadequately represented in the National Gallery. N. N.

Among the books soon to be issued by Longmans, Green, & Co. are "Painting in the Far East," by Lawrence Binyon; and "The Mistress Art," by Reginald Blomfield.

The latest issue of the *Mitteilungen* (No. 37) of the Deutsche Orientgesellschaft contains a report from the director of the German Archæological Institute in Cairo, Prof. Ludwig Borchardt, concerning the finds made this last season at Abusir. The entire sepulchral temple (Todtentempel) of King Sahure of the fifth Egyptian dynasty, about 2500 B. C., was laid bare. The most notable feature is the extensive system furnishing water to all parts of the structure and its adjacent buildings, the oldest work of the kind extant. Even a section of the copper pipe used for this purpose was found. The outside of the temple consisted largely of magnificent monolith granite columns in palm form. Of these columns, a number will be placed in the Berlin Museum. The whole building represents the highest stage of Egyptian architecture. The pictures on the walls are exceptionally fine. Among them is a picture of the return of a victorious Egyptian fleet, the oldest illustration of seafaring vessels extant. It depicts vessels laden with the spoils of Asia and prisoners of war. On another wall is a picture of the King and his courtiers hunting; various kinds of animals are distinctly shown. Another picture gives a fishing scene, with full details.

The unsympathetic, uninterpretative photograph has been the sole source from which the average traveller of to-day might freshen his memory of the impressions gained along the banks of the Nile. It is the more remarkable, therefore, that the laudable and costly undertaking of Alfred Langewort, Breslau, has remained practically unknown here in America. The six etchings executed for his house by Hugo Ulbrich will undoubtedly be welcomed by a large body of Nile travellers in this country, as they have been in England. Herr Ulbrich has a broad conception of the monumental in art which serves him with brilliant success. His selection has been made with insight, and the execution of every subject conveys to the beholder the tremendous impression and the subtle quality of age and mystery so powerful in the presence of the originals and so elusive when attempted by modern artists. The subjects selected are: The Island and Temples of Philæ, The Cliff Temple of Abu Simbel, The Great Sphinx of Gizeh, The Colonnades of the Temple of Luxor, The Memnon-Colossi at Thebes, and The Valley of the Tombs of the Kings at Thebes. Philæ, with all its indefinable charm, is probably the most successful of the six, and will be especially welcome to those who know that this, the most beautiful spot in Egypt, is rapidly becoming a hideous waste, under the action of the waters raised by the great dam at Asuan. The energy, the depth, and appreciation of light and of architectural form displayed in the view of Luxor, will be a delight to all those to whom this ancient world makes any appeal. The overwhelming desolation of the Valley of the Kings' Tombs is powerfully depicted; and the monumental repose and massive poise that make up the eternal immobility of the divine Pharaoh, are impressively felt in the rendering of the Great Sphinx, the Colossi of Memnon, and those of Rameses II. at Abu Simbel. Our art museums and libraries, the art departments of our colleges and universities cannot afford to be without the entire series, and no doubt they will find a welcome in many private collections.

The Museo Stibbert is the latest addition to the public museums of Florence. Frederic Stibbert, an Englishman who died two years ago, bequeathed his villa on the slopes of Montughi, beyond the Ponte Rosso, the collections it contained, and a fund of $160,000 for its maintenance, conditionally to the English government, otherwise to the city of Florence. This Italian Communal Council has recently accepted the bequest. The gift includes paintings, statuary, and furniture, but is chiefly important for its collection of Persian carpets and hangings and of arms, which ranks next to that at Turin.

W. O. Roper, a Lancashire antiquary, died September 19. He wrote "The Churches, Castles, and Ancient Halls of North Lancashire"; an historical sketch of Hornby Castle; and, in collaboration with T. Cann Hughes, a paper on "The Corporate Insignia, Plate, and Charters of Lancashire," which was published in the *Journal* of the Archæological Institute.

Marcel Jambon, the French decorative painter, died at Paris September 30, in his sixtieth year. He was decorator of the Opéra, of the Comédie-Française, and one of the collaborators in decoration for the exposition of 1889. He was an officer of the Legion of Honor.

Prof. Friedrich Adler, the Berlin architect, who became a professor at the Bauakademie in that city in 1863, has died in his eighty-first year. Among the buildings which he designed are the Christuskirche and the Thomaskirche in Berlin, the Elisabethkirche in Wilhelmshaven, the Paulskirche in Bromberg, and the Erlöserkirche in Jerusalem. He took an active part in the excavations at Olympia, an account of which he published in collaboration with Professor Curtius. Among his writings are: "Mittelalterliche Backsteinbauwerke des preussischen Staats" (1859), "Andreas Schlüter: Leben und Werke" (1862), "Baugeschichtliche Forschungen in Deutschland" (1870-1879), "Die Weltstädte in der Baukunst" (1872), "Der Felsendom und die

heilige Grabeskirche in Jerusalem" (1873), and "Das Mausoleum zu Halikarnass" (1900).

Finance.

Gold, Prices, and Wages, under the Greenback Standard. By Wesley C. Mitchell. [University of California Publications in Economics.] Berkeley: The University Press. Price $5.00.

This stout volume of 627 pages is crammed with statistical tables bearing on the price revolutions in this country between 1861 and 1879. Five years ago the compiler published a "History of the Greenbacks: 1862-1865," and had planned, as he tells us, to extend the study up to the resumption of specie payments. Compelled to defer the continuation of his history, he has been enabled, through the aid of the Carnegie Institution of Washington, to prepare certain statistical tables essential to the completion of the task. The tables may therefore be regarded as "the statistical apparatus of a book still to be written." A new statistical method is employed; and the results, compared with analogous tables of the Aldrich Report (1893) and Weeks's Report (1880), are subjected to a running comment through page 283. Twelve charts accompany this part of the text, and the voluminous appendix comprises data employed by Mr. Mitchell in constructing his own tables.

The familiar arithmetical average is not capable, Mr. Mitchell thinks, of showing the range and variety of changes in prices. He therefore resorts to what is called the method of deciles. It is more elaborate, it probably draws the statistical net finer, and it may be serviceable, if a particular series of price-variations needs to be cross-questioned. But in general it is cumbrous, and its application in this instance seems to disclose few very important divergences from the results of the simpler methods. Indeed, the outcome of this new statistical study is merely confirmatory of earlier and broader generalizations. For example:

> Wholesale prices lagged behind gold; . . . retail prices lagged behind wholesale prices; cost of living behind retail prices [*e. g.*, stability of house rent, etc.], and wages behind cost of living (p. 282).

There is avowedly no attempt to solve the basic problem of the whole matter—the cause of the variations in the specie value of the greenback. But peeping out at the edges here and there are *obiter dicta* (pp. 15, 250) which would seem to imply that the author is not altogether an adherent of the famous quantity theory of money.

"The World's Gold," by L. De Launay; and "Investment Bonds," by F. Lowenhaupt, will soon be issued by G. P. Putnam's Sons.

R. S. HOLLAND'S

Builders of United Italy

Alfieri, Manzoni, Gioberti, Manin, Mazzini, Cavour, Garibaldi, Victor Emmanuel, with portraits. $2.00 net.

"A popular, but not flimsy, biography . . . merits commendation. . . . The general reader can hardly fail to be so stimulated that he will go on to seek a wider acquaintance with this fascinating period . . . Mr. Holland has caught the enthusiasm that upheld the Italians in their struggles for freedom and independence."—The Nation.

"Full of fervor, of episode, of heroes, garish, possibly, in the cool light of after years . . . the author has caught the spirit of the time and has treated history not as science, but as art, with its intimate human detail of affection, suffering and ambition . . . carries the reader away . . . Each essay is a dramatic monograph, and the whole a rounded and compelling conception of the spirit which lived and fought in the struggle . . . a vivid and breathing impression of the times . . . it is some time since history has been related with such fine vigor and zest."—The Chicago Evening Post.

A New Book by H. G. Wells

First and Last Things

A Confession of Faith and a Rule of Life

Mr. Wells's earlier books have fascinated tens of thousands of readers. In the present remarkable volume are human problems having to do with such vital subjects as religion, sex, love, marriage, sociology, honor, war, immortality, and all the relations of men to one another are discussed with a most startling candor and independence.

At all Booksellers, $1.50.

MUSICAL MEMORIES Net $2.75

By GEORGE P. UPTON. Mr. Upton enjoyed an intimate personal acquaintance with all of the great singers from 1850 to 1900. As a result, there is a delightful personal flavor about these reminiscences, a quality of kindliness, that makes a rare and genial volume in every sense, and a book of great value for reference.

Profusely Illustrated

HEALTH AND HAPPINESS Net $1.50

By BISHOP FALLOWS. The author is pre-eminent among the exponents of the present-day New Thought movement. His new book deals with the whole subject of the harmonization of religion and medicine, with an account of the wonderful results of the work at St. Paul's Church in Chicago.

THE FLAMING SWORD Net $1.25

By EDITH OGDEN HARRISON. *Author of "Prince Silverwings," etc.* Mrs. Harrison's newest book is somewhat different from its predecessors in that she takes as the basis of several of the tales some of the prettiest of the Bible stories, to which she gives reverent, though very original interpretations. In addition there are a number of her inimitable fairy tales.

Illustrations by Lucy Fitch Perkins

CLOTILDE $1.25

By MARGUERITE BOUVET. *Author of "Sweet William," etc.* With the old charm of her previous books, Miss Bouvet tells the story of a little French girl in the splendid capital of the old Louisiana province. The author is peculiarly at home in depicting French character, and little Clotilde will linger many a day in the fancy of her young readers.

OUR LIBRARY SERVICE

We have recently supplemented our service to Libraries, by procuring Out-of-Print and Scarce Books, and by importing English books.

Our Educational Catalogue contains a full list of Supplementary Reading, indicating the grade to which each title is adapted.

Our Clearance Catalogue contains overstock at special prices, and an alphabetical arrangement by authors of all cheap editions of Recent Popular Fiction and Standard Library 12mos in one list.

Our Library Catalogue of 3,500 approved titles, following A. L. A. lines, is of great convenience to small libraries.

Our Monthly Bulletin notices promptly every new book of importance.

These Catalogues are sent on request.

Three notable features of our service are: Promptness, thoroughness, and low prices.

The Nation.

NEW YORK, THURSDAY, OCTOBER 15, 1908.

The Week.

The list of contributions to their campaign fund which the Democrats have published may be incomplete, as alleged, and may not be wholly accurate, but it serves the purpose of the argument for preëlection publicity. According to President Roosevelt, such a giving out of the names of contributors was to be the signal for all kinds of misrepresentation, unfounded attack, and personal abuse. But nothing of the kind has occurred, or will occur. Even if the Republican newspapers were disposed to pick flaws or make insinuations, the course of their own party would bind them to silence. They could not stand up against the sharp challenge which would at once be put to them to imitate Democratic frankness and make their own list public. A man holding his cards concealed, and with a few up his sleeve, is in no position to rail at an antogonist who lays *his* cards face-up on the table. When the Democratic Committee has given out a full account of its receipts, with gifts and names stated, the Republicans will find it exceedingly awkward, with Bryan pressing the point every day, to explain their unwillingness to take the country equally into confidence. If what Treasurer Sheldon and Chairman Hitchcock complain of is well founded, it would not take many newspaper columns to print the list of Republicans who have given more than $500!

Mr. Taft insists, despite the advice of his managers, upon speaking in several Southern States. He frankly confesses, at the same time, that he has no hope of carrying a single one of them. His chief motive is to prepare the way for that break-up of the Solid South, upon which he has set his heart, and which he thinks must come soon, even if not early enough to inure to his benefit. This sentiment does credit to Mr. Taft's political judgment, so far as he speaks about the misfortune of having a section of the country where only one party exists. We cannot be so sure, however, of his sagacity or acumen in stating the reason why the South is all Democratic, or in suggesting the correction of that anomaly. Mr. Taft vaguely says that Southerners vote the Democratic ticket "just because they have always been Democrats in the South." But he surely remembers the strength of the Whigs in the South. He now appeals, as the Whigs did, to the interest of the South in the protective tariff, yet he must know that the one terrible issue which destroyed the Southern Whigs and then Southern Republicans will, so long as it persists in force, prevent the South from listening to the blandishments of even the most amiable of protectionists. We refer, of course, to the race issue and to negro disfranchisement. But this topic, Mr. Taft cannot freely discuss. If he takes an attitude pleasing to the South, he will alienate voters in the North; and *vice versa.*

We agree with Mr. Bryan that for the Republicans to predict that his election will bring on panic and hard times is the height of impudence. That cry was raised against the Democrats in 1896, 1900, and 1904. But after more than ten years of undisputed Republican ascendency, we had one of the worst panics in our history, and the hard times are still upon us. Under these circumstances the Republican orators might interest their hearers more by explaining why the miraculous intelligence and administrative skill of the Republicans failed to save us. But though we grant that the Republican argument is nonsense, we cannot go with Mr. Bryan in saying that he is the only man to rescue us from disaster. What the country needs at this moment is a quiet, steady, firm conduct of affairs at Washington. We have had enough shouting to last us for several years. Mr. Bryan is nothing if not a noisy agitator; that is the single rôle which he has thus far played successfully. Mr. Taft, on the other hand, has shown himself a capable administrator. His comparative failure as a campaign orator is due to the fact that neither by temperament nor training is he fitted to set the crowds to yelling. But that very calmness and even phlegm which put Mr. Taft at a disadvantage on the stump will greatly increase his efficiency as President.

"Labor" itself must be sick of all the coddling and trading and insincerity now being expended upon it. Gompers talks as if he carried the "labor vote" in his pocket, and were going to cast it for Bryan. Other labor-leaders hob-nob with President Roosevelt, and assure him that the honest workman bitterly resents the Gompers assumption of ownership, but will be only too glad to vote as *they* order him. Candidates of both parties are discovering a sudden fondness for the laboring man. He must be gullible, indeed, if he believes half that he is told by way of flattery, or is taken in by the transparent devices which are resorted to in order to win him over. The lowest depth was reached by Mr. Sherman last week in Ohio, when he insisted upon shaking the "grimy hands" of factory employees, with the remark: "It doesn't make any difference how much dirt you boys have on your hands, so long as your hearts are all right!"

There are many signs that the Hughes campaign in this State—and consequently the Taft campaign—is moving heavily. The local bosses who were compelled to take Hughes have not recovered from their soreness and are inclined to sulk. Nor have they the money to subsidize the country weeklies, hire "workers," pay the farmers for their "time," and get out the vote. Tammany, on the other hand, is not rent by dissensions, and promises to roll up a heavy majority in Greater New York, in spite of any possible defections to the ranks of Hearst. Mr. Chanler is helped, particularly in this part of the State, by family and social influence. The Astor connection will do something for him, not only in New York, but in those suburban districts to which fashionable New York resorts. At the clubs it is common talk that Mr. Chanler will have the "Episcopal vote." Such reports are an obvious exaggeration, for, in the nature of the case, the Episcopal vote cannot be delivered in a block, but the gossip indicates clearly enough the influences which are behind Mr. Chanler. These forces are strengthened by the sporting vote of all classes—people who are angry at being deprived of the opportunity to gamble at the race tracks

and people who fear they may be deprived of other pleasures. The Democrats, for example, are assiduously cultivating the impression that Hughes is a Puritan, and will insist on closing all the saloons. Such arguments, however baseless, are bound to have their effect, especially on the German population of our large cities. Evidently, then, with Gov. Hughes's engagements in the West finished, there must be a concentration of effort upon this State. And although Mr. Hughes alone is an effective campaigner, as he has already shown, the Republican managers are well advised in supporting him with their best speakers; for if he goes down in New York, Mr. Taft is pretty sure to go down with him.

Peace with "adequate armament" was the cry sounded on Monday by both President Roosevelt and Senator Lodge. The members of the North Carolina Peace Congress, now assembled at Greensboro, were told in a letter from the President that we cannot have international arbitration, "unless to just and peaceable intentions we add a stout heart and a strong arm." Senator Lodge at Boston was even more militant; he was quite as gory as the telegrams exchanged between the Crown Prince of Servia and the Crown Prince of Montenegro; he was almost as volcanic as Hobson. He was sure that fear alone has kept Japan from making demands on us that would have led to war; and that "if a general European war follows the Balkan trouble, this great nation will inevitably be drawn into the vortex and the danger will stretch across the sea to every American citizen." We regret that we cannot feel quite so sure as Senator Lodge does. We can only feel sure that our peril is less from Japanese aggression than from the kind of American statesmanship which Senator Lodge exhibited.

It is remarkable how every new development in international politics works in favor of a greater navy and army, once you are convinced that a greater navy and army are what every nation needs. The cable dispatches report that as a result of the crisis in the Balkans the British government will no longer think of reduction in armaments. Indeed, the shipbuilding contest with Germany will be keener than ever, and the territorial forces will be increased, and all because the "sanctity of treaties" has been violated by a great Power. Are treaties observed by your neighbor? That is because you have a large navy; make it bigger still. Are treaties violated? Then you must increase your navy. Are you anxious for peace? Build a big navy. Are you determined upon a policy of aggression? Build a big navy. Are you prosperous? Build ships, or you will be attacked. Are you poor? Build ships, or you will be prevented from attaining prosperity. The Dreadnought underlies all things, remedies all things, answers all things. It does not matter that the Balkan problem is approaching solution on the basis of fair compensation to Turkey. It does not matter that Great Britain's increased armaments would only spur on other nations and leave relative conditions as before. No, in rain or shine, in calm or storm, in hard times or easy times, against everybody and against nobody, build ships.

In connection with Austria's annexation of Bosnia and Herzegovina there are two questions to consider: What had European diplomacy in mind when, at the termination of the Russo-Turkish war of 1877-78, it gave Austria-Hungary the mandate to occupy and administer Bosnia-Herzegovina? How far is the incorporation into the dual monarchy already an actual fact? When the representatives of the Powers met at Berlin in 1878, they were called upon to reorganize the political system of the Balkan peninsula—that is, to arrange the precise manner in which the dismemberment of the Ottoman Empire in Europe, brought about by Russia's onslaught, was to be effected. The terms imposed upon Turkey by Russia in the treaty of San Stefano were to be set aside, but the disintegration of Turkey was to be accepted as an accomplished fact. Rumania, Servia, and Montenegro were cut loose entirely from their Turkish moorings; Bulgaria, for five centuries an integral part of the Ottoman realm, was erected into a Christian principality, tributary to the Porte; Eastern Rumelia was created an autonomous province under a Christian governor. The mandate which Austria-Hungary received to administer Bosnia-Herzegovina could not mean anything but permanent severance of those regions from Turkish rule. Russia was compelled to forego in great part the fruits of her dearly bought victory. The turning over of Bosnia bodily to Austria-Hungary, would, however, have been too much for Russia to swallow, and so a *modus* had to be found. The oppressed Christian Bosniaks and Herzegovinians, whose uprising in 1875 had initiated the convulsions that brought Russia to the gates of Constantinople, it was agreed, could not be allowed to remain under the Turkish yoke. Having thus been severed from her connection with Turkey, Bosnia was practically bound to remain so, even in face of the convention signed by Austria-Hungary at Constantinople on April 21, 1879, in which the Turkish rights of sovereignty were recognized. The Treaty of Berlin made no provision regarding the termination of the Austro-Hungarian administration. The article decreeing the occupation appears to have been drawn up in vague terms with the intent of enacting a disguised cession.

Did the framers of the treaty imagine that ultimately Bosnia might be turned over to Servia, which state is now convulsed over what was virtually consummated years ago? If so, European diplomacy must long since have lost sight of this purpose, else the assimilation of the region by Austria would not have been allowed to proceed without protest. In 1880, Bosnia was brought within the pale of the Austro-Hungarian customs; and in the following year compulsory military service was introduced. Roads and railways were built by the government on an extensive scale, stately public buildings were erected, the judicial system was reorganized, and measures were undertaken for the promotion of industry and education. All this, certainly, did not argue a transient occupation. Indeed, the incorporation of Bosnia-Herzegovina was so complete that Austria must soon have made some such move as has angered Servia. The really disturbing thing is the manner of Austria's action—a step suddenly taken without consulting the other signatories of the Berlin Treaty—rather than the practical result.

One who would get an idea of the essential difficulty of maintaining good relations between England and Germany, could not do better than read the article in the October *Contemporary*

by Harold Spender. He is a Liberal and an ardent peace man; was with the Chancellor of the Exchequer on his recent friendly visit to Germany, and writes with the most sincere desire to remove misunderstandings. Against the prejudiced attitude of his own countrymen, and some of their absurd misconceptions of German hopes and plans, he speaks with strong good sense. Yet throughout his pages, there runs unwittingly the very sentiment which is most offensive to Germany. It would seem that the best-intentioned of Englishmen cannot help being a trifle superior and patronizing when they treat of the position of the German Empire. Mr. Spender urges England not to be too hard upon the great nation across the North Sea! Let us, he argues, draw Germany into the circle of our benevolent international understandings—"include her in the network," is his maladroit phrase. Now that, of course, is precisely the air of Englishmen which Germans resent. They do not wish to be tolerated or indulged. Their desire is simply to "take their place in the sunlight" to which they think they are entitled. Mr. Spender is entirely willing to concede it to them, and so are all other sensible Englishmen; but somehow the appearance of condescension is thrown about what should be the granting of an unquestioned right. It is one proof more that international relations are often as much a matter of manners as of substantial interests.

WHAT BRYAN COULD DO.

The most impressive thing about Gov. Hughes's campaign in the West was his repeated driving home of the instability and untrustworthiness of Bryan. This was his theme in Bryan's own State. Admitting the Nebraskan's engaging personal qualities, his extraordinary skill as a rhetorician, and the remarkable hold which he has upon his party, Gov. Hughes asked what grounds of confidence people could have in a man who had been everything by starts and nothing long.

The Governor's speeches have rudely broken through Mr. Bryan's innocent suggestion that his past be excluded from the campaign, because it is "not in the platform." Bryan's implication is that his future will *not* copy fair his past. But this is to disregard all political probabilities, and the laws of human nature itself. Reasonable men simply cannot ignore what Bryan has been. They cannot forget that he said at Knoxville, Tennessee, in 1896:

> If there is any one who believes that the gold standard is a good thing or that it must be maintained, I warn him not to cast his vote for me, because I promise him that it will not be maintained in this country longer than I am able to get rid of it.

Can such a past as that be dismissed with a wave of the hand? Can Bryan's positive declaration two years ago for government ownership of the railroads be forgotten just because he asks us to forget it for the present? Such blunders go deep, and reveal the essential nature of the man. If he were President, none of us could tell what half-baked idea he might bring forth any morning and endeavor to force upon the country. The most charitable view is that he is a happy-thought statesman. If he is not that, he is a dangerous demagogue. In neither guise would the nation be wise to place its destinies in his hands.

"Oh, but," thousands of people are saying, "Bryan couldn't really do anything, even if he were elected. The Senate is surely Republican for four years, and his hands would be tied." This is a sentiment which the Republican managers are disconcerted to hear expressed on all sides. It lies at the bottom of the prevailing "apathy." But it is easy to show that Bryan as President could, if so minded, do endless things to check financial recovery, to keep business affairs in a turmoil, and to harry the captains of industry. There would be no need of radical or hostile legislation. Grant an opposing and unyielding Senate all through Bryan's term, there would be power enough in his hands to vex and destroy, were he disposed to use it. He would have, for example, the naming of his own Attorney-General and all the Federal District Attorneys; and he might select men who would run amuck with the corporations, starting numberless inquisitions and vexatious suits. To be sure, the courts would no doubt finally bring all such proceedings to the ground, as they have done with a number of those undertaken by President Roosevelt's Attorney-General; but the process would be long, expensive, and harassing. More than this, Mr. Bryan, if he were President, could let loose a swarm of inspectors and investigators and secret agents to pry into private affairs, make one-sided reports, recommend criminal proceedings or drastic legislation, and so keep the country on tenter-hooks. There would be no lack of power to make mischief, if the mischievous intent were present. The Presidency is like an arsenal which has not yet fully been explored; and there is no telling what unused weapon a restless or ambitious President might find in it to the discomfiture of the commonwealth.

We do not say that Bryan would do any of these things; we merely point out that he could. And we also point out the fact that this possibility would be a most powerful argument for the Republicans to use if they had not had an applauded and popular President who has actually done the terrible things which they now shudder to think that Bryan might possibly do. In a word, the man who has made W. J. Bryan cease to appear alarming is Theodore Roosevelt. The President's multiplication and use of the enginery of a bureaucratic government, to further his own ends, would leave Bryan, even if most ill-disposed, nothing to do but imitate Roosevelt's instructions; he could not better them.

In spite, however, of all that Roosevelt has done to make Bryan seem respectable, and to break down the real argument against him, that argument remains valid. To many hesitating voters, it is the decisive argument. They will not trust a man who has shown himself untrustworthy. They will not put vast power in the hands of a man who has been reckless in the use of smaller power. Dread of what Bryan might do in the Presidency would not, obviously, have so much weight if Roosevelt were the alternative. But when we look, as the real alternative, to the calm strength, the judicial temper, the high administrative ability of Mr. Taft, the comparison is fatal to a man who has done and said and been what Bryan has.

A CALM VIEW OF TARIFF REVISION.

A reader writes that he is "much disappointed to find you in the present political contest arrayed on the side of High Tariff and Monopoly." But his disappointment can be nothing to ours. If unintermitted attack upon the frauds and oppression practised under the name of protection; if consistent ar-

guing that customs duties ought to be levied for revenue only; if making as stout a contention as we know how to make for competition and individualism—if all this reduces us to the position of bondservants of High Tariff and Monopoly, then we ought to be more grievously dejected than anybody else at our sad failure to make our meaning clear. We will try, however, to see whether there is actually a prospect for reasonable tariff revision next year, and whether the desired end is more likely to be attained under Mr. Bryan than under Mr. Taft.

We start off with the fact that both party platforms pledge tariff revision. Both candidates for the Presidency have bound themselves, if elected, to call Congress in extra session for the express purpose. This state of things by itself ought to be a source of much cheer to tariff-reformers. To have the force of their arguments admitted, and their position sustained, by both parties is really a great triumph for the little band of "doctrinaires," as Roosevelt called them four years ago. Far from being despondent, they should look forward with high expectancy to the near fruition of their long-deferred but unconquerable hopes. Believing as they must in their ability to meet the protectionist enemy in the gate with irresistible economic and political argument, they should hail the certainty that, whoever is elected President, the Dingley tariff is to be thrown into the melting pot. Whether the measure that comes out is likely to be better if Mr. Bryan feeds the fire, rather than Mr. Taft, is a question regarding which we need to seek calmly all the light which we can get from political history and human nature.

Consider what happened after the great tariff-reform victory of 1892. There was then a Democratic Senate; yet tariff revision was wounded in the house of its friends. Even President Cleveland, with all his conviction and great determination, was unable to get from a Congress which his party controlled a tariff measuring up to the demands of the most moderate reformers. What chance is there that Bryan would have any better success with a Senate sure to be hostile to him? Will he be able to wrest from enemies what Grover Cleveland could not secure from friends? There is but one answer. When to Bryan's comparative indifference through many years to the iniquities of the tariff, you add the powerful partisan motives which would induce the Senate to place itself athwart his path, a reasonable man cannot come to any other conclusion than that tariff reform would have an exceedingly hard road to travel with Bryan in the Presidency.

Mr. Taft also would face many difficulties and would probably meet with many disappointments. But on his side, if he is President, there would be the advantage of a party not only with a majority in both houses of Congress, but solemnly bound to use that majority for the revision of the tariff. Moreover, Mr. Taft has taken, on the whole, a more advanced position than any prominent Republican. He has steadily fought for free trade for the Filipinos. He has repeatedly said that he regards many of the rates in the Dingley tariff as too high. He was for "immediate revision" when Mr. Bryan was saying nothing about the tariff. True, Mr. Taft's campaigning has betrayed him into praise of protection and absurdities about the Wilson bill. Yet even in the midst of these vagaries, which we have sharply condemned, the fact remains that he is convinced of the unfairness of the Dingley law and desires its modification. Now, we are confident enough of the justice of the case for a lower tariff, and of the way in which people's eyes have been opened to the inequalities and wrongs embodied in the Dingley bill, to believe that any discussion of revision will be wholesome, and that any law which finally secures the assent of Congress will eliminate some of the favoritism and fraud. So that under Mr. Taft there is a prospect of getting, if not a perfect bill, at least a better measure than the present statute.

Nor can one, finally, overlook that strange but verified law of political action, according to which it is the Conservative party which catches up and enacts Liberal proposals. The radical party spends itself in agitation; thereupon the conservatives come into power and pass the desired law. And the country which would have been convulsed at the sight of radicals putting through the same legislation, accepts it from the conservatives as a necessary and healing measure. It was the chief of the protectionist party who gave England free trade; and Mr. Taft might well be proud if he could follow in the footsteps of Sir Robert Peel, and could say with that statesman that he had made the bread of laboring men "sweeter because it is no longer leavened by a sense of injustice."

SOCIALISM AND CULTURE.

To all appearances the Socialists will not cast a heavy vote this year. Yet their propaganda is by no means insignificant in its effects. They alone have appealed directly to the cultivated classes, with dialectic, fiction, and sentiment. The result is that a thin stream of college professors, school teachers, ministers, and literary men is beginning to pour into their ranks. The stream was large enough some time ago to evoke from Grover Cleveland the anxious wish that the higher institutions of learning in America would "range themselves like a wall barring the progress of revolutionary doctrines." To-day, the size of this stream makes Prof. John Bates Clark admit, in the current *Atlantic Monthly*, that "if one may judge by appearances, this hope has not been realized." True, the number of cultivated converts is still very small; the mass of Socialism's half-million is drawn from immigrant laborers and miscellaneous rebels. But "there are enough highly educated persons (in the ranks) to prove that Socialism and higher culture are not incompatible." And the new gospel's amazing spread in English universities and the Anglican Church makes everybody ask the Columbia professor's questions:

> What is likely to be the permanent attitude of a scientific mind toward the claims of thoroughgoing Socialism? Will it be generally conservative or the opposite? Will there be an alliance between intelligence and discontented labor—the kind of union that was once cynically called a "coalition of universities and slums"? If so, it will make a formidable party.

The human mind works in America as in Europe. Does this mean that, because England's intellectuals have joined the Fabian Society, and her ecclesiastics the Christian Social Union, our own collegians and churchmen will ere long be trooping behind the red flag? So far as the American undergraduate is concerned, we may rest easy; he is not likely to take Socialism more seriously than he does his studies. But, in the case of teachers and preachers, many circumstances are working toward the realiza-

tion of the collectivist's fondest hopes. First, there is the academic charity toward all ideas, be they ever so startling or disreputable. Smug materialists may dismiss Socialism with the commonplace imbecilities: "Socialism is anarchy," the "Socialists believe in free love," "Socialism is anti-Christian, even atheistic." But the teacher abstains from such verdicts. Open-mindedness is his nature, his prerogative, his duty. To quote President Eliot, "the teacher ought always to be a person disposed to idealism and altruism." This temperament means a predilection for Socialism, which, however selfish some of its followers may be, and however crude its theories, springs from a noble aspiration for the common welfare. Just because it rests on splendid thoughts which have never been tried out, the teacher feels tempted to encourage the doctrine; for is not the university the world's agent of progress, the great feeler which reaches out, guessing, groping, testing, taking up and letting fall, until the best is found?

High specialization, save in economics, makes one more or less incompetent to handle the enormously complex problems of Socialism. Theorizing, too, forms the habit of solving puzzles outside of one's *Fach* with a few pet rules. On the other hand, he who knows poverty sympathizes with the downtrodden and so, by an easy step, with their projects for relief. Does the Philistine know that about one-third of our colleges and universities pay their full professors an average salary of less than $1,000 a year, and lesser instructors correspondingly less? And that many country and village school teachers earn $30 a month or even less? The wonder is that radical theories have made such slight headway among men of refined tastes who live so close to the margin of existence. And it is a second wonder that obnoxious displays of wealth and power in college life and college management have not vanquished academic patience more thoroughly. Seeing his class-room fill up with indolent, dissolute spendthrifts, watching vulgar millionaires make irrational endowments for self-glorification, having his politics scrutinized before receiving a call to teach, and even being obliged to soften down his lectures because a patron believes in high tariff, owns a brewery, or works children to death in the mills, the American teacher is scarcely to be blamed if he concludes that things in general cry for a lively shaking-up.

Socialism has not captured the colleges, but the present demoralization of the two major parties may assist it to victory. Scientific welfare-work is awakening interest in good government, and bringing home ever more clearly political corruption. The teacher is sorely tempted to escape the old bosses by voting for the candidate of the "intellectual proletariat." If Socialism does win him over, the old parties will have only their own scandalous tolerance to blame; and the world will not weep over their discomfiture; for an outburst of radicalism in our schools would probably do far less harm than good in the long run. It will be a scourge on the backs of politicians. It may, we hope, prod the pleasure-seeking, vapid, puttering undergraduate to think. And it will not wreck the universe. For, as the history of European Socialism has already abundantly demonstrated, the accession of a cultivated group to power in the party and the necessity of compromise for the sake of victories will steadily push grotesque economic theories further and further into the background. How thoroughly Marxian absurdities will be abandoned depends largely upon the sincerity and judgment shown by other parties in attacking the evils which make radicals.

THE BALKAN CRISIS.

Trouble in the Near East has long been a possibility; but a sign of the change which has come over political relations in the eastern Mediterranean is the fact that the latest war scare arose from the threatening action of one of the small Balkan States. This is not the Eastern Question as we have been used to think of it. That name has hitherto described a question primarily affecting the great Powers of Europe, though dealing with the Balkan sub-continent. The Balkans it has been customary to refer to as the pawn in the international game, the victim of international ambition, or at best the object of international altruism. But when the Congress of Berlin carved out of Turkish territory a number of independent or autonomous states—Bulgaria, Servia, and Montenegro—and sent them forth on the hopeful way of national growth and self-consciousness, Europe brought into being a set of new forces with which it now must reckon. Whether the Sick Man of Europe shall improve or grow worse, no longer depends solely on the fluctuating jealousies of the six great Powers. The rival ambitions of Bulgaria, Servia, and Greece have begun to count. "At Berlin," a Bulgarian agent has drily remarked, "we were not the actors we are to-day. This time all the actors, even the most modest, must be represented."

Had war come, therefore, it would have been not because Russia or Great Britain had found her interests threatened, but because Servia and Greece could not endure that Bulgaria should be aggrandized and they left without compensation. For us in this country it is particularly hard to grasp the intense gravity with which the little Balkan States speak of those vital national interests which may be seriously affected by the transfer of half a dozen villages from one jurisdiction to another. When Servia with a population of less than two and three-quarter millions sees in the Austrian occupation of Bosnia a menace to the national aspiration for a Greater Servia; when Greece, with a population not much larger than that of Manhattan, takes the idea of a Greater Hellas quite as seriously as the most ardent German patriot thinks of the future Pan-Germania; when Montenegro, with a population smaller than that of the Bronx, feels that if Servia should invade Bosnia, her own national interests will compel her to invade Herzegovina, we seem to be listening to another act of the opera-bouffe of racial politics which we usually associate with Austria-Hungary. But to the Balkan States, as to the Hapsburg nationalities, the contest is far from comic. In the ethnological welter of southeastern Europe, where every dominant nationality makes it its business to convert every other nationality to its own language and culture, the political struggle is in more than one aspect a struggle for national survival.

But, fortunately, the larger European Powers are opposed to war. In such a collision none of them could hope for substantial gain. A Balkan war would be followed by a congress, which would be sure to trim any one victor's laurels as effectively as Rus-

sia's were clipped at Berlin in 1878. But in addition to the old European jealousy which would make war for any of the great Powers scarcely worth while, there is the opposition which would arise within the Balkans to any outside conquests at the expense of Turkey. If Servia is bitter over the annexation of Bosnia and Herzegovina, she would regard with even greater resentment any attempt by Italy, for instance, to establish herself on the eastern coast of the Adriatic; nor would Greece, which looks upon the Ægean as her heritage, welcome another seizure like that of Cyprus by Great Britain or France. Austria-Hungary has gained all she can expect without rousing the entire Balkan peninsula against herself. Russia is not in condition or the mind to think of a campaign of conquest. Hence it is not too much to hope that, with no strong reason for any of the great Powers to go to war, they may all quickly recollect that war in general is undesirable, and will try to impose their views on the excited Balkan peoples.

The sentiment in favor of a congress for the settlement of the present crisis has met with opposition in various European capitals. Austria will not go to a congress unless the *status quo* of today be recognized. Other Powers fear that a congress will do Turkey more harm than good, by offering a new opportunity for territory-grabbers, big and little. But these are the inevitable preliminaries of international negotiations. Each contracting party hems and haws and would have you understand that he enters into conference with you largely as a favor, and only on this condition or that. Yet it would be best for Turkey if, once and for all, her anomalous position as a suzerain of provinces which do not acknowledge her sovereignty and ruler of territories which she does not rule, were done away with. Without Bulgaria and the provinces Austria has annexed, Turkey might betake herself cheerfully enough to the work of her internal regeneration, if a European congress were to grant her a definite period of immunity from further territorial loss.

UNDESIRABLE STUDENTS.

President Garfield's reference, in his inaugural address at Williams, to a class of students against whom the college should "close the doors promptly," is only one sign more of a searching of heart, on this subject, among academic authorities. How to get rid of the student loafer; how to combat and destroy the notion that a college is "the best athletic club going"; how to make college life appear something else than an annex to fashionable society—in a word, how to make students study—that is the problem. President Hyde of Bowdoin dealt with it in his talk to the incoming freshmen. He had some pungent words about the current maxim that "a gentleman's rank in college is C." or lower. The action of the Yale faculty in cutting off the week-end absences of pleasure-loving students is another indication that presidents and professors are waking to the scandal. The dean of one of the faculties at Harvard has said that the most difficult question before that university is how to prevent students from idling away their time without work.

For two decades at least the Philistines have been invading our Eastern colleges. The general increase in wealth and spread of luxurious habits, during that time, have bred a species of hangers-on—they cannot properly be called members—of our educational institutions, who are a disgrace to themselves and the colleges that harbor them. We do not mean the openly vicious. With them, it is usually easy to deal sternly. The students whom President Garfield described are the elegant young gentlemen without intellectual ambition or moral purpose; they dawdle away their four years with no thought of getting out of college anything but social amusement and a sort of gambler's excitement. They live lavishly. They take an intense interest in athletics—as practised by others—"supporting" the team in exactly the spirit of the decadent young Roman noble patting the muscles of the gladiator whom he had backed to kill his man. They are the kind of men whom the new president of Williams characterized as "those who loaf because they choose to, and who do not propose to change their occupation." A little study, of course, is a disagreeable necessity, but the amount of it is kept as small as a too indulgent faculty will permit. It is these men, and their growing numbers in our Eastern colleges, who have made almost literally applicable the sarcasm which Gaston Phoebus, in "Lothair," directed at English students:

> What I admire in the order to which you belong is that they live in the open air; that they excel in athletic sports; that they can only speak one language; and that they never read. This is not a complete education; but it is the highest education since the Greek.

The deepening recognition of the evil should lead to a fixing of attention upon the one remedy. It is surely no great mystery. What it is, President Garfield plainly implied. The college should have a college standard, which it should enforce absolutely without fear or favor. The standard ought not to be that of a social club, or an athletic association, but of a body of scholars pursuing the intellectual life. Something of the rigor with which technical and professional schools demand from all their students a certain measure of attainment, would be wonderfully tonic in our colleges. There would be no moral condemnation in excluding men who could not or would not do the required work, any more than there is in dropping incompetent students by the Institute of Technology or the College of Physicians and Surgeons. It would be simply the dispassionate enforcement of a sound rule, the cool facing and application of the fact: this is a society for intellectual training. You show no capacity even to appreciate it, much less to share in it, and we must therefore ask you to betake yourself elsewhere.

As the *Nation* has insisted more than once before, the cure of a good part of the athletic obsession in our colleges could be effected by simply raising the standard of scholarship, and manfully enforcing it. "Take your absences for the big games, young gentlemen, use up your quota of 'cuts,' train all day and talk athletics all night; but if you do not meet the decent requirements of a scholar, you cannot stay here." This seems easy, but we know that it is hard. It takes more courage and stamina in a professor than most people think to "flunk" the captain of the eleven or to mark the examination-paper of a "good fellow" with becoming severity. There is no surer road to the loss of immediate popularity. And from the grumbling which has been heard at Princeton over President Wilson's moderate attempts to make study something more than a trifling incidental, one can infer what complaints would be made if President Garfield

should proceed mercilessly to "close the doors" upon all undesirable students at Williams. We rather guess that the alumni and trustees and benefactors would be heard from, wailing over the needless interference with the college's "prosperity."

Ultimately, however, the thing will have to be done, if only in self-defence. Educational institutions cannot forever go on permitting the young barbarian at play to belie their very name. And we are convinced that success as well as moral distinction would come to any college that resolutely set itself against over-athletics and under-study. The kind of eminence which Balliol College at Oxford long enjoyed is within the reach of any American institution which would put the things of the mind where they belong; would not only exalt scholarship in commencement addresses, but would exact it in the long routine of the college year; would not merely erect as the ideal, but would strive unceasingly to realize, that pursuit of wisdom in which

——the smooth-slipping weeks
Drop by, and leave its seeker still untired.

UNDER-LANGUAGED AMERICANS.

The Tuberculosis Congress at Washington gave fresh occasion to foreigners to wonder at the almost entire lack of ambition on the part of the American to "understand their nonsensical language." All the papers that could be were put into English; and speakers who used French or German knew that their best points were lost upon their hearers. Moreover, the American and British delegates to the international congress on road-making, held this week in Paris, were compelled to arrange separate sessions because they could not understand the business that was transacted in French. But the Continental members of such congresses labor under no such disability. At the recent Congress of Philosophers at Heidelberg, Professor Royce's paper was easily followed by the audience, and the French professor who read a contribution on Fichte was applauded throughout. The difference is not at all flattering to our national pride. On the Continent, every educated man is expected to understand at least two languages besides his own, when spoken, and to be able to speak them himself with more or less ease and accuracy. Americans are getting to be the greatest travellers on earth, but we still take the attitude of the young Briton at the French shore resort, who would not try his slender vocabulary on his playmates for fear of "encouraging" them. In fine, the United States is content to rank with Spain for indifference to any speech but the vernacular.

Englishmen are traditionally backward in the matter of modern languages, but they are ahead of us. Being so near to the Continent, and in such close business relations with it, they have been compelled to depart from the haughty attitude of the 'bus driver, who said of his load of Italians: "Chatter, chatter, chatter, and not one intelligible word!" Mr. George Russell has lately been writing of the sluggishness of the language-centres of his countrymen. He cites the testimony of a Greek newspaper man recently in London (it might have been in New York):

> I have sought to get into contact with the English people. Alas! they speak only their own language, and despise all babble of lesser breeds; and I, too, know only my mother-tongue. True, I have some broken French; they tell me this will serve, for every Englishman knows French. I have tried French. Mine is broken, and as for the Englishman's! . . . We will put the matter mildly, and say that my French is broken, and the English French is broken —but they are not broken in the same place, and do not fit together!

Mr. Russell tells another story to show what havoc Englishmen may make when they really fling themselves upon a foreign language. A German visitor was present at Harrow speech-day. As a part of the ceremonies, the boys gave a scene from one of Schiller's dramas. A lady sitting next the German guest, asked him what play it was. He replied, with every appearance of shame: "Alas! I do not know Greek." Such tales could doubtless be matched by German or French excursions into English, which often leave the parts of speech lying about in their own blood. But the large contrast between Americans and the rest of the world is as we have stated it.

What is the explanation? Many causes, obviously, go to make the difference. Habit, propinquity, utility, the constant mingling of peoples and languages, have helped to make the Continentals the lingusts they are. But the chief reason of their superiority to us is their better teaching of modern languages in the schools. You meet boys of fifteen, who have had no instruction save that of the public schools, and you find them able to understand and to speak English, with one language more in addition to their own. You run across a business man on holiday, and when you ask him where he learned his English, which, though not perfect, is entirely intelligible, he will tell you that he acquired it years before at school. The real secret is in the higher standards of teaching modern languages. In Continental schools, the work proceeds upon the assumption that the foreign tongue is to be studied, not as a set and repulsive task, but as a useful and immediately available means of adding interest and enjoyment to life. Language is made to appear vivid and near, instead of lifeless and distant. Compare the too common American experience, where girls will spend two years over French irregular verbs without being able to speak two consecutive sentences, or a boy will "take German" for five years and not know how to direct a German traveller from dock to railway!

Some teachers, we know, loftily reject the argument from utility. They admit that their pupils can make no use of a foreign language as an instrument, but think of the insight into "structure" which they are acquiring, think of the firm grounding which they are getting in the principles of universal grammar! But even as theory, we regard this as a mistake, and in practice we are convinced that it is a wretched failure. The public schools are not set to make philologists of their children. Not one boy in a thousand is able to grasp the idea of broad principles underlying all language, or would be benefited by it if he could. The result is simply to give us confused ignorance, or ineffective pedantry, both alike inarticulate. Whatever abstract or grammatical discipline is to be gained from the study of modern languages, should be left to be incidental to their practical mastery. American boys and girls are not more stupid than foreigners; they are simply more stupidly taught, in this matter of language. As readily as French or German youth, they could be made to feel at home in a foreign tongue; to read it largely and with delight; to speak it, on occasion, as one means more of human intercourse, and of creating and satisfying

interest in the world. If taught with these ends distinctly in view, then those of them who wished to be scholars could go on to the nicer studies in philology, while those who did not, would have had a pleasant and serviceable tool put into their hands, instead of merely being left bewildered and repelled by what they did not understand and can neither like nor use.

PARIS BOOK NOTES.

PARIS, October 1.

René Behaine, in his "Histoire d'une société," has written something more than a trilogy of family fiction. His veritable biographies of his three characters—Alfred Varambaud, Céline Armelle, and their son, Michel Varambaud—are careful studies, with great personal interest, of the unstable society of our day. The other books which are to follow out the career of the little *bourgeois*, born at a time when the barriers which hitherto protected middle-class society have been broken down on every side, will be looked for with interest. "Monsieur le Principal," by Jean Viollis, is the tragic story of the headmaster of a French state college. It is a life failure between Philistine parents, politicians with influence—for education in France is a state service—and his own ideals of teaching. In an avowedly Catholic series, Science et religion, Georges Noblemaire explains "Le Complot contre la famille," the radical attempt to break up that family organization which has so far been the central stronghold of the French race. The author, who belongs to one of the greatest industrial families of France, has devoted his life and talent to these social questions; and Etienne Lamy of the French Academy gives him a preface. "L'Ame brétonne," by Charles Le Goffic, in its second series, has received a prize from the French Academy as "the work most original in form and thought" of the year's store. The soul of the Breton people, like the land of Brittany, is still full of the picturesqueness of pre-history.

The depths of family tragedy are reached in "L'Assassinat de la Duchesse de Praslin," by A. Savine. In addition to the archives and memoirs already used by writers on this *cause célèbre*, the author professes to have come to his conclusions "in the light of the correspondence seized" at the time. They are entirely favorable to the governess, who was spared incrimination by Victor Cousin's unfaltering conviction of her innocence. She lived and died in the esteem of all, after nearly thirty years of American exile, where she became the wife of the late Dr. Henry Field. It was always an imperative fact in her favor that the children of the murdered woman took her part to the end. This book brings to light what attentive readers of the case long suspected—the hysterical and utterly disordered emotions of the Duchess, who wrought up the Duke, after years of an impossible existence, to the madness of crime, if indeed she did not strike the fatal blows herself. The Duke died confessing nought.

"Les Muses françaises," by Alphonse Séché, is made up of selected examples from the French women poets. The first volume reaches from 1200 to 1891, and is illustrated by thirty-five portraits; the second is to be given up entirely to muses of to-day, when women have come to their own—in poetry, at least. The eminent rector of the University of Aix, Jules Payot, has the courage to preface a book of pedagogical selections which have great literary interest: "Les Meilleures pages des écrivains pédagogiques," from Rabelais to this twentieth century, compiled by Edmond Parisot, doctor of letters, and Félix Henry, normal school director.

"La France au dehors" is an aggressive book on the Third Republic's foreign policy, by Jules Delafosse, who is now in his thirtieth year as member of Parliament. Like all intense Conservatives of his stamp, he is given to views; and these are of very little practical importance in a question so dead as Egypt, or so living as Morocco. His one plea is a regret, for it finds neither men nor things in accordance with it:

> Our international situation would be incomparable if France only had the government and institutions which it needs; that is, a state of things solid enough for a long-term policy, and strongly armed enough to make sure, everywhere, and for and against all, that her plans would come to something.

Such talk may distract minds—but it comes to nothing. The steady advance of French occupation in the Sahara region to the south of Algiers—and Morocco—lends interest to the first volume of "Sahara algérien," by E. F. Gautier, member of a government mission of studies. The substantial text is illustrated by many figures and maps, and by sixty-six inset phototypes. With photographs, also, and a map, A. G. P. Martin publishes "Les Oasis sahariennes"; these oases of the Morocco frontier include some of the central "zaouïas" of the Mohammedan brotherhoods, which count for so much at present. "A la Cour de Fez," by Count Conrad de Buisseret, is illustrated by photographs which portray a régime that is past, whatever may happen to Abd-el-Aziz in the future. "La Suisse au XXe siècle," by Pierre Clerget, is an economic and social study of present-day Switzerland. It belongs to the same carefully prepared and well-edited series as Pierre Leroy-Beaulieu's study of the United States. The author is a professor in the Ecole supérieure de Commerce of Lyons. "En Allemagne," by Jules Huret, is a book of good literature, though devoid of fine writing, sentiment, and theory. It is written by a man all eye and all ear, who has gone through the Germany of to-day looking and listening with the most intense curiosity and giving a clear report of everything. The present volume, which is the second to appear, goes from Hamburg to the Marches of Poland, by Kiel, Bremen, Mecklenburg, Dantzig, Königsberg. Steamships and figures of commerce, universities and students' *kneipes*, pedagogy and *kartels* of manufacture, Poles holding stoutly to their farms against Prussian pressure, and an interview with Prince von Bülow—all are equally good matter for this well-equipped reporter of the universe. From the reading of these volumes, one rises with an impression that he now knows something definite of modern Germany, even when he has himself travelled indefinitely through the country beforehand. "Chez les Français du Canada," by Jeon Sionnet, is an intelligent and sympathetic Frenchman's view of French Canadians, whom he has studied in Quebec, Montreal, and Ottawa, in the great West and Vancouver.

The Musée Océanographique of Monaco publishes several noteworthy volumes (*dépôt exclusif*, R. Friedländer & Sohn, Berlin). "La Caverne d'Altamira (Espagne)" is an extra-large folio of 287 pages, with 204 figures in text and 37 black and white and colored inset plates, reproducing the mural paintings and engravings of this palæolithic cave. It follows the previous publication of 1906-7, devoted to similar caves in France and Spain, and printed at the Prince of Monaco's press. The text and editing are by Emile Cartailhac, the well-known authority in prehistoric archæology, and the Abbé Henri Breuil, who has done so much in the discovery and exploration of such caves. "Les Grottes de Grimaldi (Baoussé-Roussé)" comprises a first volume of description by M. de Villeneuve and geology by Marcellin Boule, with 14 plates, and the first fascicle of a second volume of anthropology by Prof. Henri Verneau. The remainder—palæontology by M. Boule and archæology by M. Cartailhac—is in press. These grottoes form the completest cemetery yet discovered of the earliest races of fossil man.

In philosophy there are several volumes of interest. Under the auspices of the Institut supérieur de Philosophie of Louvain University, Dr. Paul Nève publishes a critical essay on "La Philosophie de Taine." It is an advantage to have such a neo-scholastic review of Taine's materialist, rather than positivist philosophy, which profoundly influenced French scientific thought until its author lost prestige by going in for re-

actionary history. It was in sympathy, rather, with the historian than the philosopher that the French Academy this year chose for the subject of its prize of eloquence a discourse on Taine; the award—3,000 francs—has recently been made to Charles Picard, a *normalien*, with 1,000 francs to A. Lerey, a *lycée* professor. Marcel Hébert, from the Modernist standpoint, discusses "Le Pragmatisme" in its divers forms, Anglo-American, French, and Italian, and in its religious value. Two posthumous volumes gather together certain scientific papers of relative timeliness by A. Hannequin, late professor of the university faculty of Lyons, under the title, "Etudes d'histoire des sciences et d'histoire de philosophie.' Léon Bloch, a doctor of letters (which comprises philosophy in French university titles), exposes with required fulness "La Philosophie de Newton." It is one of Newton's glories that his discoveries and works stir perennial questions, which no advance in science can still—the nature of force, of attraction and repulsion, action at a distance, and the other fundamental notions underlying all theoretical physics. To these works should be added "Agnostiques français," by Paul Cottin. The author is at once a Count and a former member of Parliament; but this does not withdraw his book from the general movement of the new thought, which leaves all men over fifty—Conservatives and Radicals alike—hopeless old fogies. Under the significant heading, "Positivism and Anarchy," the author deals with Auguste Comte, Littré, and Taine, in doctrine, method, social consequences, and criticism.

A. Carpentier of the Paris Court of Appeals and lecturer in the Law Faculty, publishes "L'Année législative et judiciaire" for 1907—a valuable summary of laws made and legal decisions rendered in France. Prof. A. Landry, in his "Manuel d'économique" of nearly 900 pages, sums up economic science handily and sufficiently for the needs of those university students who choose for their examination the new division of the doctorate of laws. Those who desire to know the authentic principles of the Radical party which has governed the French Republic for ten years can find no better instructor than "La Politique radicale," by Ferdinand Buisson. His almost over-subtle distinctions—for he is intent on conserving that somewhat forced unity of Radicals and Radical Socialists, of which he has been a foremost leader—will not prevent a clear appreciation of the differences existing between the various Republican doctrines. A portrait of the Radical patriarch, Henri Brisson, and a prefatory letter by Léon Bourgeois, who constituted the first homogeneous Radical government in the Third French Republic, appropriately introduce the book. It belongs to the valuable Collection des doctrines politiques edited by A. Mater. The "Catalogue général de la librairie française," begun by O. Lorenz and continued by Dr. Jordell, publishes its eighteenth volume, which is the first for the period from the year 1900 to 1905. It is an octavo of 804 two-column pages, covering the letters A to H. The nineteenth volume will conclude the period. An Annuaire des bibliothèques et des archives is published under the auspices of the French Minister of Public Instruction. The volume for 1908 comprises 360 pages. S. D.

NEWS FOR BIBLIOPHILES.

The first collected edition of the poetical and dramatic works of Goldsmith was published in Dublin in 1777 as "Poems and Plays. By Oliver Goldsmith, M.B. To which is Prefixed, The Life of the Author. Dublin: Printed for Messrs. Price, Sleater [and thirty other booksellers]. M,DCC-LXXVII." This seems to be a little known book. On the verso of the title is a note: "This Edition contains several Additions and Corrections never before printed; being the only perfect one ever printed of this celebrated Author's Poems." We have recently seen two copies on large and thick paper, a form not known to Anderson and apparently undescribed hitherto. One copy, in modern calf, has a leaf measurement of 7⅞ by 5 inches, and, except in size and quality of paper, is identical with the small-paper copies, one of which, in original sheep, has a leaf measurement of 7 3-16 by 4¼ inches. The other large-paper copy, in old binding, measures 8 1-16 by 5⅛ inches, and has a different title pasted on a stub. The first seven lines are the same, though a different setting of type. Line 8 is "Printed for," below which is an impression of a copper plate, evidently the "shop-card" of one of the booksellers, reading: "Wm. Wilson | Bookseller & Stationer | at Homer's Head | No. 6 Dame Street | the corner of | Palace Street | Dublin." Wilson's was the fourteenth name in the original list. This Dublin edition was reissued in London as a small volume with imprint: "London, Printed for B. Newbery and T. Johnson, St. Paul's Church Yard. MDCCCLXXX." It has a frontispiece, engraved title, and three other plates, not in the Dublin edition. This edition is not mentioned in Anderson's Bibliography of Goldsmith, and seems to be undescribed. Another edition was published in 1780 in two small octavo volumes: "The Poetical and Dramatic Works of Oliver Goldsmith, M.B. Now first Collected." This, which is comparatively common, is generally accepted as the first collected edition. Though it contains more poems than the Dublin edition, the arrangement is the same, and it was probably reprinted from that, with the additional poems added at the end of Volume I. The second volume contains only the two plays, "The Good-Natured Man" and "She Stoops to Conquer." The "Life" prefixed is fuller than in the Dublin edition, but corresponding paragraphs are practically identical. Anderson notes that the Life in the Dublin edition is "a slightly varied issue of the 'Anecdotes of the late Dr. Goldsmith,' which appeared in the Annual Register in 1774."

In connection with the Church Congress which opened at Manchester, England, October 6, the John Rylands Library of that city prepared an exhibition of illuminated manuscripts, principally Biblical and liturgical. This library contains a remarkable collection of some 7,000 manuscripts, of which about one hundred were chosen for exhibition. The catalogue of the exhibition, issued from the Manchester University Press, contains not only a detailed description of each of the items shown, but a list of the works on palæography in the library and a general account of the whole collection of manuscripts. Among them are a number of unusual personal interest; for example, the Gospel Book of Emperor Otto the Great; the Gospel Book of Queen Elizabeth; the Book of Hours of Mary, Queen of Scots; a Book of Hours, written and illuminated for Charles VII. of France; the Psalter of Jane of Navarre, Queen Consort of Henry IV.; the Missal which was painted (according to tradition, under the direction of Raphael) for Cardinal Pompeo Colonna; and Nicholas de Lyra's "Postilla," written and painted for the Malatesta family.

The library of a New Hampshire collector (name not made public) which is to be sold by C. F. Libbie & Co., Boston, on October 21 and 22, includes one item of great rarity and interest: "A Short Narrative of Mischief done by the French and Indian Enemy, on the Western Frontiers of the Province of Massachusetts-Bay. . . . Drawn up by the Reverend Mr. Doolittle of Northfield in the County of Hampshire; and found among his manuscripts after his Death." Boston: 1750. Only one copy seems to have been sold at auction, Henry C. Murphy's, which brought $100 in 1884 and is now in the Lenox Library. Other notable items are: The first edition of Mrs. Eddy's "Science and Health," 1875 (which has sold as high as $114); Lowell's "The President's Policy," 1864, and his "Il Pesceballo," 1865 (the second edition, printed in two signatures); and Hawthorne's copy of "The Vicar of Wakefield," with his autograph "Nathaniel Hathorne, Salem, Mass.," three times on the fly-leaf. This was the way he spelled his name when at Bowdoin College, and it is so printed in the college catalogues.

The Anderson Auction Co. of this city begins the season on October 19, with the sale of the library of Dr. John W. Francis and William C. Nell. Among the more important lots are: A set of Hakluyt's "Voyages," a large paper copy of the scarce reprint of 1809-12, with the supplementary volume; Depons's "Voyage to the Eastern Part of Terra Firma," 3 vols., 1806, translated by Washington Irving, his first published work; the first edition of Locke's famous Moon Hoax, "Great Astronomical Discoveries lately made by Sir John Herschel, at the Cape of Good Hope," 1836; the second American edition of Shakespeare, 8 vols., Boston, 1802-4; and first editions of Hawthorne, Thoreau, Stevenson, Wilde, and others. In the sale of October 21 the Anderson Co. offers in manuscript and printed matter more than two thousand pages relating to the Tilton-Beecher affair of thirty-five years ago—a collection made

by a member of the Tilton family, including 285 autograph letters, the correspondence of Tilton, his wife, and their children. Important books in the same sale are Barlow's "Vision of Columbus," 1787, first edition of his epic afterwards expanded into the "Columbiad"; first editions of Washington Irving, Holmes, Howells, Longfellow, and other American authors. Part I. of Henry W. Poor's library will be sold by the Anderson Co. on November 17 to 19, Part II. on December 7 to 11, and the remainder after the holidays. In the course of the season the Anderson Co. will sell the libraries of E. N. Lapham of Chicago, the late E. C. Stedman, and the late William L. Stone, besides the Chamberlain collection, postponed from last season.

On November 4, Hodgson & Co. of London offer a library, including two fifteenth-century manuscripts of Gregorio Dati's poem "La Sfera," with marginal maps (a similar manuscript sold last December at Anderson's bringing $105); Burton's "Anatomy of Melancholy," 1621, first edition; "Gulliver's Travels," 1726, with the portrait in the first state, but lacking two of the maps; and Peter Martyr's "Decades," translated by Richard Eden. 1577.

Correspondence.

A FURTHER NOTE ON THE DATE OF "KING LEAR."

To the Editor of The Nation:

Sir: The communication, "The Date of Shakespeare's 'Lear,'" written for the *Nation* of September 3 by Dr. R. G. Usher of Washington University, treats a subject on which some two years ago I happened to print a brief article in Modern Language Publications. I venture, therefore, a few words of comment on the points raised by Dr. Usher:

(1.) Dr. Usher greatly underestimates the amount of evidence that Shakespeare is indebted to Harsnet. His sole statement as to the evidence is:

> In Act iii., Scene 4, are mentioned the names of various hobgoblins—Modo, Mahu, and Flibbertigibbet—and these names are found in a tract published by Dr. Harsnet in 1603.

This sentence would seem to imply first that only these three names of "hobgoblins" are common to both works, that the names are found only in Act iii., Scene 4, of the "Lear," and that the whole argument for Shakespeare's indebtedness to Harsnet rests on these three words. As a fact, Edgar in his speeches alludes to all these devils, and to Frateretto (Harsnet's Frateretto), to Hobbididance and Hopdance (Harsnet's Hoberdidance), to Smulkin (Harsnet's Smolkin), and to Obidicut (Harsnet's Hoberdicut). These names occur in "Lear" iii., 4; iii., 6; and iv., 1; while another significant passage to be discussed later occurs in ii., 4.

But the evidence does not stop here. In "Lear," iv., 1, 60, Edgar alludes to Flibbertigibbet as the fiend "of mopping and mowing, who since possesses chambermaids and waiting women." Now, when we remember that Harsnet's tract was based largely on the alleged experiences of three demon-possessed chambermaids in the family of Edmund Peckham, it is hard not to see a definite allusion to these events in the line. But "mopping and mowing" used in the sense of "grimacing" are certainly unfamiliar words. In the light of what we already suspect, are these phrases from Harsnet's tractate not somewhat significant: "If she have a little helpe of the mother, . . . make antike faces, grinne, mow and mop, like an ape"? Another passage from the "Lear" which requires glosing is ii., 54-6.

> O how this mother swells up toward my heart!
> *Hysterica passio,* down, thou climbing sorrow,
> Thy element's below!

A quotation from Harsnet clarifies the lines. The mother, he says, "riseth . . . of a winde in the bottome of the belly, and proceeding with a great swelling, causeth a very painful collicke in the stomack, and an extraordinary giddines in the head." In another passage Harsnet says: "Ma: Maynie had a spice of the *Hysterica passio,* as seems, from his youth, he himselfe termes it the *Moother.*" Lack of space forbids mention of several other lines in Act iii., Scenes 4 and 6, more or less closely resembling other passages from Harsnet. These may all be found in connection with the corresponding lines in the Variorum edition, from which Dr. Usher quotes. From this edition comes practically all the information given above. It has seemed worth while to mass together in substance several of these notes in order to show the real basis of the argument for Shakespeare's knowledge of Harsnet's tract.

(2.) The results of Dr. Usher's investigation are apparently to discover a widespread knowledge of Weston's "miracles," and hence to demonstrate the possibility of the view that Shakespeare came to his whole acquaintance with these facts without seeing Harsnet's "Declaration of Egregious Popish Impostures." More than this, I think, cannot in justice be said. The argument from parallel passages seldom establishes a fact indisputably; and it must be admitted that Dr. Furness (not Dr. Furnivall, as Dr. Usher has it) overstated his case in declaring the proof of Shakespeare's indebtedness to Harsnet "sure beyond a peradventure." At the same time the evidence just recapitulated points to the printed account as the direct source of the dramatist's information rather than other possible sources suggested by Dr. Usher. This evidence has been examined by numerous competent critics since the time of Theobald, and, so far as I know, has convinced them all. Even so distinguished a Shakespeare scholar as Prof. G. L. Kittredge in recent years, upon a thorough examination of a copy of the original 1603 edition of Harsnet's tract, found no reason to query the correctness of the view which generally prevails.*

(3.) No one doubts that Harsnet's "Declaration" first appeared in 1603, and if Shakespeare used it, he must have written at least large parts of "King Lear" after that date. But Dr. Usher is mistaken in believing that the date of Harsnet is the sole reason for assigning the "Lear" to this period of Shakespeare's life. His suggestion that the "unidentified play" of 1594 might have been Shakespeare's first edition is improbable in the highest degree. The identification of this play with the anonymous "Leir" printed (for the second time?) in 1605 may be said to be established beyond a reasonable doubt by internal evidence. A hundred marks in the "Leir" point to its composition in the days of Marlowe, Greene, Lodge, and Peele, a decade before 1605. But on its title-page the publishers declare the play to have "bene diuers and sundry times lately acted," and the belief is general among scholars that it was Shakespeare's play that had been lately acted, and that the title-page was intended to deceive unwary book-buyers. This was in 1605, and we know that Shakespeare's play was acted at Whitehall in 1606. It cannot be believed that the play in any form was written much earlier. But aside from this purely external evidence, no competent scholar of Shakespeare's works on the literary and dramatic side would be willing to place the "Lear" far distant in composition from "Hamlet," "Macbeth," and "Othello." There are separate reasons for dating each one of these plays within two or three years of 1605, and the "Lear" undoubtedly belongs somewhere near them.

LADY MACBETH'S COURAGE.

To the Editor of The Nation:

Sir: In his Phi Beta Kappa address at Cambridge last June, since published in the *Harvard Graduates' Magazine* for September, Dr. H. H. Furness discussed very interestingly the well-known lines in Macbeth:

> That which hath made them drunk, hath made me bold;
> What hath quenched them, hath given me fire.

If I summarize Dr. Furness rightly, his contention was that Lady Macbeth would never have done anything so undignified as to resort to "Dutch courage" and he suggested another very ingenious interpretation of the lines. I should not venture an opinion on so delicate a question; but an interesting passage occurs in "Love's Cruelty" (1631) by James Shirley, which, if it is, as seems probable, an imitation of the lines in "Macbeth," shows the view of at least one contemporary. Sebastian, who has reason to suspect that his daughter has been insulted by the Duke, resorts to wine for courage to resent the affront. When he has out-drunk his pot companion, he declares (iii., 1) in words which closely paraphrase Lady Macbeth's:

> He's drunk already.
> That which has raised me but to noble anger
> Is his distraction.

Wellesley Hills, Mass., October 4.

A REMARKABLE PROPHECY AS TO DARWINISM.

To the Editor of The Nation:

Sir: With reference to Dr. Francis Darwin's recent presidential address to the British Association for the Advancement of Science at Dublin, will you permit me to call attention to the following remarkable words written by Samuel Butler, whose book on "Unconscious Memory" was issued so long ago as 1880:

> Lastly, I may predict with some certainty that before long we shall find the original Darwinism of Dr. Erasmus Darwin (with an infusion of Professor Hering into the bargain) generally accepted instead of

the neo-Darwinism of to-day, and that the variations whose accumulation results in species will be recognized as due to the wants and endeavors of the living forms in which they appear, instead of being ascribed to chance, or, in other words, to unknown causes, as by Mr. Charles Darwin's system (p. 280).

Dr. Darwin's address exactly carries out this prophecy even to the extent of using Hering's name as the chief source of his views. This is scarcely doing justice to Butler, though Dr. Darwin, it is fair to add, refers to him in a rather contemptuous footnote. It was Butler's insistence upon the three identities, (1) of life and memory, (2) of parent and offspring, (3) of instinct and inherited memory, which has brought about this complete reversal of the Darwinistic position on these points. It is true that Butler had been anticipated by Hering, as Butler himself fully acknowledged, even in the passage I have quoted; but Hering's pamphlet of twenty-two pages would have been entirely forgotten but for the five brilliant volumes in which that eccentric genius, Samuel Butler, insisted upon the importance of the new conceptions, and their complete divergence from the later Darwinistic views.

It is indeed remarkable that Dr. Darwin should have pronounced so strongly in favor of the Neo-Lamarckism, which his illustrious father had spent his whole scientific career in opposing. American biology has also some right to plume itself on having, under the leadership of the late Prof. E. D. Cope, consistently advocated the earlier evolutionary views, though opposed by the whole consensus of English biological opinion. This was shown most strikingly by the violent protest made against the London *Athenæum* in 1884 for its attitude in advocating the views held by Hering and Butler, which have now, after a quarter of a century, been adopted by Dr. Francis Darwin. The protests at the time were written by such authorities as Dr. G. J. Romanes, Sir Edwin (then professor) Ray Lankester, and even the redoubtable Herbert Spencer. I happen to remember these *Athenæum* articles, because —I happen to have written them.

JOSEPH JACOBS.

Yonkers, N. Y., October 8.

AN ARGUMENT FOR BRYAN.

TO THE EDITOR OF THE NATION:

SIR: Allow me to make an addition to your imputation of reasons (October 1) why the voter proposes to vote this way or that. There are two reasons that do not touch either candidate:

(1.) The Republican party should be turned out to a few summers of high hill pasturage and a few winters at corn stalk fodder on the north side of the barn. It has been too long in the stall and eating of the best in the crib, and greatly needs a change.

(2.) It should be turned out as a "rebuke" to the Great Rebuker, and as a decisive "No" to those who imagine it to be the proper thing for the President to name, and, having named, to elect, his successor. To permit such action, to approve it at the ballot box, might easily turn out to be a rather expensive error. You comment on the action of the President very justly, but what can be done about it if everybody is to vote for Taft?

Here are reasons, either of them very nearly, if not quite, conclusive, why one should vote for Bryan. But there are other reasons more personal:

(1.) He is sound and always has been on the vital question of Imperialism. Note his speeches in his first campaign. You say the extreme anti-Imperialists will vote for him. But why only extreme anti-Imperialists? And what is an extreme anti-Imperialist? If a man has any jot of the other thing in his blood he is no anti-Imperialist at all.

(2.) He is sound as to the tariff, and sound, it would seem, because he understands it; *i. e.*, in principle (in detail nobody does or can), both as it affects economics and as it affects social and political morality.

(3.) He is sound as respects the Trusts and capitalistic monopolies; or, if not wholly sound (*e. g.*, as respects remedies), sound enough to be trusted to steer a straight course and a resolute in the enforcement of the law.

Here are vital matters about which the *Nation* is also sound. Why, then, the *non sequitur* of "our best wishes" to Taft, who is sound as to none of these things? Because Bryan was once (very honestly and consistently) partly wrong upon the money question. But that is a matter of no present consequence. As you say, that vagary remains, notwithstanding the silence of the present platform, but the question does not remain. It is out of politics. And, how far back do we go with the history of our candidates' opinions? How far back must there be clear proof of impeccability with respect to these recondite matters? Too much is made to turn upon this. We look too anxiously to our pocketbooks and too little to our principles. You call Bryan a demagogue. If to stand stiffly up to unpopular ideas is demagogic, then your position is sound; for there is no little evidence that that is what the man does, although he undoubtedly loves popularity. He has obviously made a wide and deep impression upon sober folk here in the Middle West as of a sincere man who believes not only what he says as to matters of policy, but what he says to the people of the people. He might be called an enthusiast (if one liked him one might say idealist), but demagogue I believe he is not.

Let me add that I have never voted for Bryan (though I voted for Cleveland), but I incline to think it time for something radical to be done. We are running upon rocks, and there must somehow be a change of course. The old American optimism may be presently comfortable, but it is not safe.

J. KENDRICK KINNEY.

Madison, Wis., October 4.

THE LATE LOUIS DYER.

TO THE EDITOR OF THE NATION:

SIR: To what you said in your issue of July 23 in regard to the late Louis Dyer, I would add a word.

From the first day he came to Oxford in 1875, he showed an extraordinary power of sympathy with all sorts and conditions of men, which soon made him the most conspicuous and certainly the most popular figure in the college. He was the first of a long series of such young Americans. Their vitality, their intellectual curiosity, their tolerance, their freedom from British conventionality, exclusiveness, and shyness, the very novelty of their mode of speech and their mental outlook, all contributed to make each of them a point of union for different "sets" and an invaluable element of friendliness and public spirit in a college. They brought a breath of freer air with them, and they were generously ready to allow that they, too, gained something. The great success of the Rhodes scheme as an Anglo-American experiment, owes not a little to these pioneers. This attitude Dyer kept up and developed when, after his English marriage, he settled again in Oxford years ago, to be "the American consul in Oxford," as he was called. No American visitor here, young or old, ever appealed to him in vain; and in every case of difficulty, when help, advice, supervision, or wise admonition was necessary, "Send him to Dyer," was the panacea. He had in fact a genius for friendship and sympathy. The peculiar difficulties of his own domestic life, due to the dark shadow which hung over it so continuously, elevated and purified this quality into the most absolute unselfishness.

These difficulties broke up his own work and tended to fritter away energies that might have done much if concentrated. But let no one deplore this. He was always at the service of any friend, at the call of any noble cause; and no one in Oxford since Jowett showed a higher public spirit. He threw himself into such unselfish work with an ardor that most men can hardly muster for their own closest interests; and his universal popularity and bonhomie made him an unrivalled canvasser. Some have spoken of his life as tragic: one friend has chosen a truer term, heroic. As a young man he had superabundant high spirits and a delightful gayety of nature; and he retained enough of these, with his keen sense of humor and his serene practical philosophy, to make his life not only a blessing to others, but a thing not unhappy to himself. He was one of those rare natures who seem to bring sunshine with them. Some called him too optimistic; and it is true he generally saw the better side both of men and things; and it is not too much to say that no one ever knew him bitter or angry or unfair. He was generous in every sense, perhaps to a fault, if there can be a fault in that direction. But in an over-critical close academic atmosphere such a never-failing charitableness as was in him is what can least be spared. Nor was he other than a shrewd judge of character, and well able to put a verdict on a charlatan or an evildoer, in a conclusive form, though always with a humorous touch that redeemed it from malice. It was his sense of humor again that helped, with his strong good sense and his broad humanity, to save him from the danger of pedantry, into which otherwise his own laborious diligence and his high literary standards, might have led him. So, too, his modesty, his gentleness, saved him from being over-critical and minute; and from the scholar's absorption and aloofness he was saved by his strong impulses of civic duty, which had led him to devote much time to social work, especially in organizations connected with his church, and with the care of neglected children. It was said that Dyer always had on hand some oppressed cause, some lame dog to help over a stile.

With all this, he never ceased to be an intensely patriotic American. When, after taking his Oxford degree, he had offers to settle here, he was delighted with Jowett's saying to him, "Nemo potest exuere patriam"; and he returned to his own country till his English marriage. Probably the one thing he would have chosen to be recorded of himself, was his success in inaugurating first an annual reunion between American residents here and leading members of the university, and, second, a service in the Cathedral on Thanksgiving Day. For he not merely believed in the spiritual and intellectual alliance of the two kindred nations: it was his highest aspiration, and he has shown what one man can do by living for others and for a high ideal. As was finely said of another scholar, from his very calamities he won a wider outlook upon things, and a deeper sympathy with men.

ARTHUR L. SMITH.

Balliol College, Oxford, September 30.

"A SUGGESTED AMENDMENT TO GERMAN GRAMMARS."

To the Editor of The Nation:

Sir: Allow me to point out that the "serious defect" which Prof. J. M. Hart, in your issue of October 1, seems to have discovered "in all German grammars within" his "reach" is anything but serious:

(1.) The monosyllables "das Ei" and "der Schaft" have nothing to do with "the stock rule for gender that nouns ending in -el, -heit, -in, -keit, -schaft, -ung are feminine." Professor Hart will find this rule more accurately stated in all the following books, some of which ought to be within his reach: Whitney ("Compendious Grammar," §61); Whitney ("Brief Grammar," §45); Joynes-Meissner (§125); Brandt (§161); Edgren and Fossler (p. 20); Otis (p. 228); Sheldon (§10); Otto ("German Conversation Grammar," 26th edition, p. 54); Learned (§34); Dippold (§53); Bierwirth ("Beginning German," Lesson 8, and Abstract, §63); Bierwirth ("German Inflections," §45 D). Moreover, the hyphen before "ei" and "schaft" indicates that they are suffixes, and that the rule, therefore, applies to nouns of more than one syllable.

(2.) "Das Petschaft," which is indeed an exception, occurs, according to Käding's "Häufigkeitswörterbuch," only fifteen times in 10,910,777 words, or in reading matter amounting to about eight times the bulk of the Bible.

(3.) The "hundreds and thousands of scientific terms" ending in accented -in, like "Alizarin, Anilin, Morphin, Quinin, Strychnin," are no more likely to prove "a stumbling block to the ordinary reader" than the solitary "Petschaft," and the beginner, for whose benefit rules are made, is not likely to come across them at all.

H. C. BIERWIRTH.

Harvard College, October 3.

Notes.

In a few weeks the Chicago University Press will bring out Charles Richmond Henderson's "Social Duties from a Christian Standpoint." It is meant to be a practical manual, especially for young men and women "at the threshold of actual responsibility." From the same press is coming Dr. Walter Fairleigh Dodd's "Modern Constitutions," which contains in English the constitutions or fundamental laws of the Argentine nation, Australia, Austria-Hungary, Belgium, Brazil, Canada, Chili, Denmark, France, Germany, Italy, Japan, Mexico, Netherlands, Norway, Portugal, Russia, Spain, Sweden, Switzerland, and the United States.

From the list of the Fleming H. Revell Co. we take the following titles: "A Soldier of the Future," by W. J. Dawson; "Poems," by Mrs. Merrill E. Gates; "The Life and Work of Dr. Austin Craig," by W. S. Harwood; "The Life of Chaplain McCabe," by Bishop F. M. Bristol; "The Life of Sheldon Jackson," by R. L. Stewart; "Life of James Robertson," by Ralph Connor; "Levels of Living," by H. F. Cope; "The Gift of Influence," by Hugh Black; "Frugality in the Spiritual Life," by W. L. Watkinson; "The Jungle Folk of Africa," by R. H. Milligan; "Drugging a Nation," by Samuel Merwin; "Twenty Years in Persia," J. G. Wishard; "Letters from a Working Man," by an American mechanic; "The Call of Corea," by H. G. Underwood; and "In the Valley of the Nile," by Charles R. Watson.

The new publications of Brentano's will include "American Supremacy," by George W. Crichfield; "The Book of Georgian Verse," edited by William Stanley Braithwaite; "Two in Arcadia," by Lucine Finch; "Famous French Salons," by Frank Hamel; "The Tourist's India," by Eustace A. Reynolds-Ball; and "The Poems of John Keats," edited by George Sampson, 2 vols., in an edition limited to 350 copies for sale in the United States.

John Lane Co. will soon publish "Two Dianas in Alaska," by two women sportsmen; "Some Women Loving or Luckless," containing sketches of Queen Caroline Matilda, the Queens of Henry VIII., the Queen of Etruria, the daughter of the poet Monti, Mary Wollstonecraft, and Fanny Burney.

The autumn list of the Dodge Publishing Co. contains, among others, the following titles: "Love Poems of Robert Browning and Leigh Hunt"; Boswell's "Life of Johnson," 6 vols., edited by Augustine Birrell; "Wells and Palm Trees," by the Rev. Charles F. Aked; and "Seen and Unseen," and "Do the Dead Depart?" by E. K. Bates.

Next month Houghton Mifflin Company will publish a translation of Virgil's "Æneid" by Dr. Theodore C. Williams, headmaster of the Roxbury Latin School. They have added to their list Dr. Williams's translation of "The Elegies of Tibullus."

Saint Bernard's great treatise on "Consideration" is to appear, for the first time in English, in the Oxford Library of Translations. The translator is the Rev. George Lewis.

From Sherman, French & Co. will soon come a narrative poem in blank verse, by Howard V. Sutherland, entitled "Idylls of Greece."

The thinnest possible veil of anonymity is drawn over the recollections of one of the daughters of Frith, the English painter, "Leaves from a Life" (Brentano's). Her book has some of the qualities of her father's pictures; it is a good-natured, simple-minded, humorous presentation of a great slice of mid-Victorian England, a canvas full of figures rendered with practically no technique at all. The lady knew thoroughly the bourgeois Bohemia of 1860, and reproduces it artlessly:

I have only to close my eyes for a moment, and I see once more the Shirley Brookses, Mama, the Calderons, and Dolly Storer in a seaside drawing-room, while Mrs. Du Maurier, Yates, and I are at one end of the balcony, and Papa and Mrs. Yates at the other, I very much fear playing at flirtation, which naturally shocked me intensely when Papa was the victim, when suddenly Mr. Du Maurier began to sing; a perfect silence fell on us all. "Den lieben langen Tag" wailed out across the night, and I was listening to the mingled ripple of the waves on the shore and the lovely voice, my eyes filling with tears.

Royalty came to Bohemia sometimes, and the author records that she once rapped the naughty little fingers of the pretty delicate lad who is now the Emperor of Germany. She has the courage to repeat some very old stories, notably that of the death of Mrs. Proudie; on the other hand, she presents, now and then, a vivid observation of her own, such as the picture of Kyrle Bellew's father, the Rev. J. C. M. Bellew (whose real name was Higgins) raising his cassock as he mounted the pulpit to show his open-worked silk socks and patent leather shoes with broad steel buckles. The slipshod condition of the author's style is almost incredible. The everyday dilemmas of the English language are too much for her. She does not intend to imply group-marriage, when she speaks of "one of my brothers' wives," and means well by the friend whom she credits with the following knotty repartee:

"Read *Punch*!" said a man once, before Shirley Brooks, to me, "I thought no one ever did anything but look at the pictures." "They never do when they can't read," growled Shirley.

Alfred T. Story has published in "American Shrines in England" (The Macmillan Co.) a convenient summary of the English antecedents of a number of well-known Americans. Six chapters are devoted to a careful presentation of the evidence in regard to the Washington family, the last link in which was completed by the accidental discovery in the State Department at Washington, in 1902, of the will of Mrs. Martha Hayward, née Washington. The ancestry and English home of Franklin, of Standish, of Winthrop and Penn, of Yale and Harvard, of the Lees and the Adamses, are discussed in greater or less detail, with knowledge and with perspicuity. The book is attractively illustrated in color and in monotone.

Mrs. Elizabeth W. Champney has added another volume, "Romance of Roman Villas: The Renaissance" (G. P. Putnam's Sons) to her deservedly popular series of books in which history and legend are woven into descriptions of famous edifices. Rome saw in the Renaissance the building of villas which remain to attest the worldliness and splendor of their Papal owners and the genius of the architects, sculptors, painters, and decorators who found in them their opportunity. Mrs. Champney has chosen the Belvedere at the Vatican, the Farnesina, and Villas Madama, Aldobrandini, d'Este, Borghese, Mondragone, Medici, and Albani, with Hadrian's Villa and the Colonna Palace as the scenes of her stories. These are judiciously varied so as to introduce many notabilities. The Borgias and the Medici, Caterina Sforza and Charles of

Anjou, down to Murat, with painters and poets—Raphael, Sodoma, Cellini, Tasso—and Agostino Chigi, the Renaissance Rockefeller, are some of the *dramatis personæ* who act over again their tragedies or their comedies. Mrs. Champney has caught very well the air and accent of the Renaissance folk, and these stories, supposed to be based on fact, are often as good as Mr. Hewlett's fictions, while free from the preciosity of style into which he sometimes falls. The excellent illustrations, which comprise portraits, views, and paintings, deepen the impression of actuality made by the book, which ought to be a favorite.

"The Life of Lazarillo de Tormes" has been translated from the edition of 1554 (printed at Burgos) by Sir Clements Markham (The Macmillan Co.). The volume contains also an account of the Mendoza family, a short life of the author, Don Diego de Mendoza, a notice of the work, and some remarks on the character of Lazarillo de Tormes. It is evident that for this most recent English translator of the famous Spanish novel of roguery, such scholars as A. Morel-Fatio of the Collège de France and R. Foulché-Delbosc, to the latter of whom we owe the best available edition of the Spanish text and a noteworthy commentary, have written in vain. Their names he fails even to mention; still, in a foot-note to his unnecessary account of the Mendoza family and of the clever noble, Diego Hurtado de Mendoza—who, with all due respect, does not seem to have written the "Lazarillo"—Sir Clements naïvely remarks: "Doubt has been thrown on the authorship, but without sufficient reason. See Antonio, Bib. Nov. i., 291." That in the seventeenth century Nicolás Antonio doubted the ascription to Mendoza should be enough to alarm any scholar and even any modern virtuoso; yet in the present case Antonio is calmly overridden, and all recent investigations of the troubled question of authorship are ignored. Obviously this new version is published irrespective of easily accessible *apparatus criticus*. In its rendition of the Burgos edition of 1554, the present edition is relatively faithful. There are manifest, however, some failures to apprehend the Castilian idiom, and one is prompted to ask why, in a book which does not pretend to use archaic English spellings, there should appear such forms as "Castille" and "Castillian."

"Rothenburg on the Tauber," by Hermann Uhde-Bernays (Leipzig: Klinkhardt & Biermann; imported by Charles Scribner's Sons), is a little volume that will interest all who have visited or are planning to visit this beautiful city. The illustrations by M. Ressel, some in the text, some full-page cuts, are competent but not striking. In half a dozen chapters the author sketches the history of Rothenburg, and guides the reader to the principal points of interest within and without the walls. The English is clear and interesting, though marred by an occasional unidiomatic turn.

The manifest connections between Buddhism and Christianity, both in points of resemblance and historical relation, have been noticed by many scholars, but hitherto there has been more conjecture than demonstration. Prof. Arthur Lloyd, in the Transactions of the Asiatic Society of Japan, Vol. XXXV., Part ii., giving the results of many years of study, produces evidence to show the derivation of much of Japanese Buddhism from later Judaism, and early, especially Alexandrine, Christianity. His four lectures treat of Manichæism and Kobo, Daruma and the Buddbist Canon, Tendai and Shinshiu (the two most popular sects in Japan), and Nichiren and the Hokekyo. An essay on Food and Wealth, by a mediæval Japanese author, is a good specimen of native political economy.

Not the least interesting or important of apocryphal books is the Gospel of Nicodemus. Mediæval versions of it, or allusions to it, are almost endless. English literature from the eleventh century on is full of it. The old English versions were edited in admirable shape by Prof. William H. Hulme, some years ago, in Publications of the Modern Language Association of America, Vol. XIII., and in *Modern Philology*, Vol. I. And now the same editor offers with like fulness and accuracy all the *metrical* Middle English versions, in the Early English Text Society, Extra Series C, 1907. We have italicized the word metrical in order to give to it the prominence which is its due. Strangely enough, the editor has omitted the term from his title-page, and at p. v. of his preface describes the present volume as an attempt to make accessible "all the known Middle-English versions." In point of fact, he reserves the prose versions for a future volume. Apart from this slight awkwardness of wording, the editor's work is of the very best. Especially interesting and helpful are pp. lx.-lxx., "A Brief Account of the Origin and Growth of the Descent Legend." Brief the account is, but lucid and comprehensive, and of the kind to give the reader a good start in the right direction. At two points only might we venture to grumble. The glossary, like nearly all in the Early English Text volumes, is not, according to our notions, quite adequate. Had we the space, we might adduce more than one word or phrase in need of elucidation. And even where the glossary does explain by a brief definition, it often fails to bring out the significance of the word. Thus, "corked," S. 605, is curtly defined "purple." This is true, but does not go far enough; one is forced to turn to the "Oxford Dictionary." Our other complaint is at the absence of notes. Professor Hulme justifies himself, p. v., on the plea that they have been reserved for "a special edition of one of the versions" now about ready for the press; but in all the texts and in all the versions there are passages sorely in need of annotation. Besides, in our opinion, each volume of the Early English Text should be, so far as possible, complete in itself. Among the questions calling for an answer is the allusion to the Septuagint as a collection of "sixty and ten" books, G. H. S. 1717, also Pilate's characterization of his wife as a *Saracen*, G. H. S. A. 206. This last feature is decidedly late mediæval, and to derive it from a Latin original (see p. vii.) is at least questionable. Still, we can scarcely be too thankful for Professor Hulme's patient toil among manuscripts.

The "Bilderatlas zur Bibelkunde," (Stuttgart: Theodor Benzinger) by Dr. H. Frohnmeyer of Nagold, and Dr. I. Benzinger of Jerusalem, although a work of less than two hundred pages, brings in its five departments more than five hundred Bible illustrations, all accompanied with explanatory texts. The five departments are the following: Biblical History, History of Israel, Cultus, Daily Life of the Old Israelites, Biblical Fauna and Flora.

The Moravian Brethren, the most active of all Protestant denominations in the foreign mission field, have just issued, through the Missions-Buchhandlung, Herrnhut, a "Missionsatlas der Brüdergemeinde," consisting of eighteen charts with explanatory text, which includes also valuable geographical and historical data.

E. G. Seeliger, in his "Der Schrecken der Völker: Ein Weltroman" (Berlin: Concordia deutsche Verlagsanstalt), pretends to portray the coming fierce struggle between England and Germany, and he assigns a particularly important rôle to the balloon as an instrument of war.

The Deutsche Verlagsanstalt Union, Stuttgart, has just issued a richly illustrated work of Ernst von Hesse-Wartegg, "Amerika als neueste Weltmacht der Industrie: Neue Bilder aus Handel, Industrie und Verkehr in den Vereinigten Staaten." There are eighty illustrations.

Alexander Brückner has enlarged five lectures originally delivered in Frankfurt-a-M. into an interesting account of Russia's intellectual development as expressed in the works of its great writers. The title is "Russlands geistige Entwicklung im Spiegel seiner schönen Literatur" (Tübingen: J. C. B. Mohr).

The members of the International Congress for Historical Sciences received as a souvenir a work of over five hundred pages, entitled "Berlin." It contains a full account of the institutes, museums, archives, libraries, the university, academy, and scientific societies, etc. Copies of this work can also be procured by others from the publisher, W. Weber, Berlin.

The latest addition to the series known as Meyers Klassikerausgaben, is a critical edition, in four volumes, of Jean Paul's works, edited by Rudolf Wustmann (Leipzig: Bibliographisches Institut). The editor has added an excellent account of Jean Paul's life, a special introduction to his writings, and explanatory foot notes. A portrait of the author and a four-page reproduction of his manuscript in facsimile are found in the first volume.

The original manuscript of Eckermann's "Gespräche mit Goethe" has been found among the papers of the firm of Brockhaus. A number of letters have also been brought to light with it, dealing with the publication of the first edition in 1836.

A Thüringisches Wörterbuch, to cover in full the three leading Thuringian dialects, is to be prepared by a commission of scholars, headed by two Jena professors, B. Delbrück and V. Michels. The teachers of Thuringian schools, high and low, are to collect the data.

For the protection and development of modern Hellenism in the Orient, a number of French scholars have organized a Ligue française pour la défence des droits de l'Hellénisme, with headquarters in Paris, rue de Lille 44. This society has now begun the publication of a series of works, the first to appear being entitled "La Grèce" (Société française d'imprimerie et de librairie, Audin & Cie). It contains con-

tributions from Théophile Homolle, Charles Diehl, Gaston Deschamps, Gustave Fougères, Michel Paillarès, Jean Psichori, Édouard Théry, Henri Houssaye, Alfred Berl, and Théodor Reinach.

The first Russian Press Congress decided to establish a Tolstoy museum in St. Petersburg, and to begin by collecting all the articles that appeared in Russia and in foreign countries on the occasion of Tolstoy's eightieth birthday.

In many of the schools of Connecticut the one hundred and fiftieth anniversary of the birth of Noah Webster will be celebrated to-morrow. In Hartford, where Webster was born, the exercises will be of special interest.

Jerusalem was the scene of three noteworthy events on September 14, all of which are indicative of the awakening of Asia. The principal one was the opening of the first public reading-room in Palestine, the inaugural address to an assembly of Moslems, Christians, and Jews being made by the Moslem judge and acting-governor. The room is well furnished, and supplied with Turkish and Arabic papers, to which will soon be added foreign papers, especially French and English. In the afternoon the first Arabic newspaper published in the Holy City, the *El-Kuds* (The Sanctuary), appeared. In the evening a night school was started, in which free instruction is given in the Turkish language and international law.

Daniel Coit Gilman died at his birthplace, Norwich, Conn., October 13. Born July 6, 1831, he was graduated from Yale in 1852, and continued his studies at Cambridge, New Haven, and Berlin. For a time he was attached to the United States legation at St. Petersburg. In 1856 he returned to Yale as librarian, and later he became professor of physical and political geography and secretary of the Sheffield Scientific School. From 1872 to 1875 he was president of the University of California, where his skill as an administrator was strikingly displayed. In 1875 he was called to be the first president of Johns Hopkins. His success in the conduct of this notable experiment in education we cannot now discuss in detail. It is enough to say that he made the name of Johns Hopkins synonymous with the highest ideals of scholarship. On his retirement from the Johns Hopkins in 1901 he served for three years as president of the Carnegie Institution of Washington, and he thus gave form and direction to that great undertaking. His interests, however, were not confined to these several institutions: he had been a member of the Board of School Commissioners of Baltimore, vice-president of the Archæological Institute of America, president of the John F. Slater Fund for the Education of Freedmen, vice-president of the Peabody Education Fund, a member of the General Education Board, a trustee of the Russell Sage Foundation, and a member of many learned societies, American and foreign. Public affairs also engaged his attention; he helped to draft a new charter for Baltimore; and from 1901 to 1907 he was president of the National Civil Service Reform League. He made many public addresses, and wrote for various magazines and periodicals. The *Nation* is particularly indebted to him both for contributions and counsel. Among his published writings are: "Bicentennial Address at Norwich, Conn." (1859), "Inaugural Address" (1876), "Life of James Monroe" (1883), "University Problems" (1888), Introduction to De Tocqueville's "Democracy in America," "Life of James D. Dana, Geologist," (1899), and "Launching of a University" (1906). He also edited the miscellaneous works of Francis Lieber and Joseph P. Thompson, and he was editor-in-chief of the "New International Encyclopedia."

Elbridge Henry Goss, a banker of Melrose, Mass., died October 9 in his seventy-eighth year. He was a local historian of some repute. Among his books are: "The Melrose Memorial" (1868), "Early Bells of Massachusetts" (1874), "Bibliography of Melrose" (1889), "Life of Colonel Paul Revere" (2 vols., 1891), and "History of Melrose" (1902).

Sir Henry Drummond Wolff, the British diplomat and author, died October 11. Born in 1830, he became a clerk in the Foreign Office at the age of sixteen. He held various positions in the diplomatic service, and finally rose to be ambassador extraordinary and plenipotentiary at Madrid, 1892-1900. He was author of "A Life of Napoleon at Elba," "Memnon Letters on the Suez Canal," and "Some Notes of the Past."

SWEDENBORG, SCIENTIST AND THEOLOGIAN.

Swedenborg's Works. Rotch Edition. 32 vols. Boston: Houghton Mifflin Co. $35.

The question of Swedenborg's place among the mystics is raised again by this recent publication of his theological works. These volumes represent scarcely more than half of Swedenborg's prodigious literary output; and it is to be regretted that the editors of a series at once so extensive and so incomplete should let it lack the advantage of some sketch of the author's life and account of the omitted works. For Swedenborg's writings, far more than most men's, need the key of his life and character for their unlocking.

Emanuel Swedberg, later Baron Swedenborg, was born in Stockholm in 1688. The son of a Lutheran bishop, he was from a child deeply interested in religion; but the bent of his mind was eminently practical and till his fifty-fourth year he devoted himself to science and engineering with an industry and ability that won him high reputation. He was graduated with some distinction from the University of Upsala in 1709, and soon afterwards went to England, and later to Holland and France, to pursue his studies in mathematics, physics, and astronomy. He greatly desired the establishment of a chair of mechanics at his native university, and urged that, if funds were lacking, a professorship in theology might well be spared. He started a scientific journal, *Dædalus Hyperboreus*. At twenty-eight he was appointed assessor of the State Board of Mines. This post he occupied for twenty-six years, being detached from time to time for special services, or for prolonged foreign tours of study and inspection. These last took him all over Europe and brought him into contact with most of the learned men of the day. The letters he wrote on these journeys are of the greatest value as showing those mental characteristics which colored all his work. No detail of commerce or manufactory escapes him; his observations are shrewd and to the point. But to art and beauty he is blind. He tells us of the hidden wealth of the mountains, but never of their grandeur. The stones and dimensions of a cathedral elicit his praise, but of its feeling and spirit he knows nothing. He never rises above the machinery of life. His mind, absorbed in analysis, lets him see nothing whole.

Yet for this whole he is always searching, and for its discovery he sets himself to a task whose boldness and magnitude are equalled only by the unflagging energy with which he pursued it:

> The end I propose to myself in this work is a knowledge of the soul, since this knowledge will constitute the crown of my studies. I have chosen to approach by the analytic way; designing to consider and examine thoroughly the whole world, or microcosm, which the soul inhabits, for I think it is in vain to seek her anywhere but in her own kingdom. Thus I hope that, by bending my course inward continually, I shall open all the doors that lead to her, and at length contemplate the soul herself by the divine permission!

Some twenty years before he had published a dissertation to prove that the transmission of sensation in the body was due to vibration in the nerve fluids, even advancing the hypothesis of sympathetic vibrations as an explanation of what we now call telepathy. To these anatomical studies he returned, and for some years pursued them untiringly, seeking the greatest anatomists as his teachers. The result was the publication in 1740 and 1741 of his "Economy of the Animal Kingdom," and in the three following years appeared the first three volumes of what was meant to be a much greater work—abandoned, however, because he became conscious of its futility. As he put it:

> Nothing is farther removed from the human understanding than what at the same time is really present to it; and nothing is more present to it than what is universal, prior, and superior; since this enters into every particular and into everything posterior and inferior. What is more omnipresent than Deity—in Him we live and move and have our being—and yet what is more remote from the sphere of the understanding?

So, he tells us, is the soul in man. It is no secretion in our arteries or brains, no organ of the body. It is the Self, transfusing all, using all, giving life to all.

Yet his failure to find the soul where

he had sought it was by no means barren. From it emerges his doctrine of representations and correspondence—that every physical fact is but the representation of a spiritual truth. This doctrine, old as the history of thought itself, and carried far in the philosophy of the East, came to him as a fresh revelation. From this time on he took this principle for his guide, and bent all his energies to the perception of the spiritual significance within familiar things. In 1745, he published what is usually regarded as the work which marks the transition from his scientific to his theological writings, "The Worship and Love of God." It is full of strange imagery, strange allegory of the birth of the universe, emanating from God; of the birth of the planets from the sun; of the animal kingdom from the vegetable; and the vegetable from the mineral. Each higher form lay concealed within the lower, gradually evolving and manifesting itself in unbroken series.

It was written at a time of great stress, in which, we learn from Swedenborg's private diary, his whole nature was undergoing an inner revolution. He dreams strange and terrible dreams. His conscience sears him for impurity of mind and heart. He falls into trances and has visions of both heaven and hell. Gradually, from their initial chaos, these visions become more ordered and more stable. He deems that he was taught of the Lord that spiritual truth is not to be known by the intellect, but by spiritual vision; and that he is bidden to record his conversations with angels and devils, and to interpret the inner sense of the scriptures—a sense which is to apply not only to the creation of the physical world, but to the creation of the spiritual man. At the age of fifty-seven, he begins this task and labors ceaselessly in its fulfilment for the thirty years left him of life. The thirty-two volumes before us constitute a monument to his fidelity.

Such was the man's life. The immensity of his mind is revealed in his works. His writings are encyclopædic. Methodical, logical, taking nothing for granted, despising nothing as small or unimportant, he gives to every detail of his themes the most painstaking treatment. Under the title of "The Heavenly Arcana Disclosed," he considers, sentence by sentence, the books of Genesis and Exodus, using his doctrine of correspondences to support the spiritual meaning which he finds in them, or which his visions have revealed. These volumes are full of rare insight, but are couched in a theological anthropomorphism repellent to our modern thought. In like manner he deals with the Apocalypse, and in "Heaven and Hell" and "Divine Love and Wisdom" he continues the record of "the wonderful things heard and seen in the world of spirits." Always analytic, dispassionate, unmoved to wonder or ecstasy, he passes with a cold, calm majesty through as varied a phantasmagoria as ever entered the human brain.

"Swedenborg, or the Mystic," such was the title and place which Emerson gave him. But as we read that essay, and even more as we ponder Swedenborg's own writings, we question whether Swedenborg was, after all, really a mystic. And this question rises and confronts us on every page, so dissonant is the message which seeks expression and the mind which seeks to formulate and convey it; for mysticism, we take it, is of the emotions rather than the intellect. Swedenborg's pages breathe the deepest intellectual truths, yet, untouched by passion, they leave us cold. His philosophic teaching is one of love—that love is the life of man and the Being of God—yet we rise from reading with no kindled spark in our hearts. In his pages love becomes a cold and distant thing—his joys are joyless:

> I see them all, so excellently fair,
> I see, not feel, how beautiful they are.

His mind, his great gift, proved also a barrier he was never able to transcend. Though his spirit strain the net of his logic and his incurable anthropomorphism, he never breaks through to freedom. "How different," exclaims Emerson, "is Jacob Behmen. *He* is tremulous with emotions, and listens awe-struck, with the gentlest humanity, to the Teacher whose lessons he conveys; and when he asserts that, 'in some sort, love is greater than God,' his heart beats so high that the thumping against his leathern coat is heard across the centuries. 'Tis a great difference." It is indeed a great difference, and as we look back through the succession of the *illuminati*, through the long roll of Christian mystics, Molinos and Fénelon, St. Teresa and John of the Cross, St. Catherine of Siena and St. Francis of Assisi, Tauler and Nicholas of Basle, and behind these to the mysticism of the East, which Swedenborg repeats in so strange a guise, the very identity of doctrine makes the difference more marked.

In the Mandukya Upanishad, whose date is so ancient that it is lost to us in the mists before the Buddha, we find such a division of the worlds and of consciousness as Swedenborg portrayed. Beyond the physical world of waking consciousness is the psychical world, where, as on a window-pane lit from within and from without, are reflected and blended images of things natural and spiritual. Here are shadows of the outer world, of old thoughts and old desires. Here, too, the truths of the spirit and the movement of the creative will take form and imagery. This is the world we enter in dream consciousness, as it is also the world of the clairvoyant and clairaudient. Beyond it is the spiritual world, the world of dreamless consciousness which we enter "when we enter into rest, desiring no desire, beholding no dream," when the mind is still and the consciousness passes to the heart. Here is the "womb of all"; beyond it is but the Infinity of God. This is the inner world of the mystic where, in silence and stillness, his heart is open to the Infinity above him and lays hold of spiritual knowledge at its root. To this third world, where the faculties are centred in the heart, Swedenborg was lifted; but in it he could not remain, for, as his whole life showed, he was always at bottom an analyst, and never attained to that mystic emotion in which the details of vision are swallowed up in a sense of ecstatic union with the whole.

No, Swedenborg was no mystic, but in his search for the soul, mysticism seeks voice and utterance. The mind of the scientist was torn open to dream and vision, but beyond the barrier of form he could not go. Yet if his heart lay dumb and silent, his will never faltered, and through the long years of his labor he earned the one title he ever gave himself:

> *Emanuel Swedenborg,*
> *Servant of the Lord Jesus Christ.*

Even in these days of psychical research there are few more interesting problems than those presented by Swedenborg's theological writings, and patience is rewarded by sayings of pure gold. Their study is made easy by this uniform edition, with its attractive format, its good print and paper, and unusually full indices.

CURRENT FICTION.

Holy Orders. By Marie Corelli. New York: Frederick A. Stokes & Co.

Once again Miss Corelli takes occasion, both in her preface (to American readers) and in her text, *passim*, to express her active contempt for that poor worm, the reviewer, who, we are not greatly startled to learn, is a "descendant of Ananias," and in the habit of deliberately distorting and "grossly falsifying" the substance of her numerous masterpieces as they fall from the press. It would be a pity if this impression of hers were just, for whatever her shortcomings, she must be recognized as a person who is in the habit of speaking effectively to a very large audience; and no reviewer with a soul ought to wish to misrepresent such a person. The fact is, we suppose, that Miss Corelli does not find that favorable criticism which expresses itself in number of copies sold altogether confirmed by the men of ink. In crude force and sincerity her stories are well beyond the average, and in art just sufficiently beyond it to impress the general. Add her belligerency and cocksureness, her air of reformer, and you have a recipe well-nigh infallible—when you have once caught your audience.

"Holy Orders" is not a theological novel. Its simple proposition is that the English rural community is being ruined by adulterated drink. The demonstration is conducted with the usual exultant ingenuousness. And as usual the book will be made tolerable in not a few eyes because of one or two human figures in it, which do not care whether they help Miss Corelli demonstrate anything or not. Her young English clergyman is a rather flabby person; but there is a French priest who really engages one's attention, and even affection.

Every Man for Himself. By Norman Duncan. New York: Harper & Bros.

From Gloucester down to the provinces James B. Connolly, George S. Wasson, and Henry M. Rideout have taken their readers, harbor by harbor, but no one is likely to carry us much further east than Mr. Duncan, who here collects ten stories of the bleak and sad Newfoundland coast and the grim, slow-witted, hardy men who earn a precarious living by cod-fishing on the Banks or "swile-" (seal-) hunting on the drifting ice along "the Labrador." Naturally, these stories are not cheerful. Clinging fog and bitter cold, wicked gray skies and everlasting east winds, chill the reader to his marrow, and the moral traits developed by the struggle for life under these cruel conditions are foreshadowed by the title Mr. Duncan has chosen. Across this sinister background shoot occasional gleams of tenderness, pathos, and heroism, and once, in "The Revolution of Satan's Trap," the author indulges in a delightfully romantic instance of poetic justice. There is an attempt, too, at variety through the introduction of two Syrian peddlers, one a tender-hearted poet, the other "thee mos' bes' business man in Newf'un'lan'," whose flashing black eyes and soft, wheedling speech contrast almost too sharply with the gray scenes and lives that offset them. But the author is at his best, on the whole, in such a strange and haunting tale as that of Abraham Botch, whose "soul went cavortin' over the Milky Way" while his body "lied in the wet like an unloved child," and who thought out for himself the Darwinian law while he drifted to open sea on a pan of ice; and in the grim tragedy of "slow Jim Tool," the kindly, gentle fellow who is finally goaded to murder by his vermin-like rival. An unforgettable scene from this story ("The Squall") is that at which the narrator peers over from the crumbling edge of the sheer cliff—Archibald Shott, "stickin' like plaster t' the face o' the cliff, . . . finger-nails an' feet dug into the rock, his face like a year-old corpse"; slow Jim Tool, "swarmin' up with cautious eyes an' feet, his face as white an' cold as the ice below, thin-lipped, wolf-eyed"; and "so far below that they looked like fat swile on the ice, the skipper an' the crew o' the Billy Boy, starin' up, with the floe an' black sea beyond, lyin' like a steep hill under the gray sky."

The Point of Honor: A Military Tale. By Joseph Conrad. New York: The McClure Co.

This is essentially a short story, slightly expanded, and by the device of large type and thick paper made into a little novel. It tells of a long feud between two officers of Napoleon's army—an affair, which began when they were lieutenants, lasted till they were generals, and even after that till Napoleon was defeated at Waterloo and taken to St. Helena. The tale is swifter in movement and holds the attention better than "The Secret Agent" or "Nostromo." It will therefore be more pleasing to readers who like a naked story, stripped of accessories. The characters of the principals are well delineated, with touches of quiet humor. Here, as in his earlier novels, Mr. Conrad shows himself a stylist of distinction, and his passages of description, though rare, are admirably done. The third chapter, with the retreat from Moscow as its setting, is particularly effective.

The Big Fellow. By Frederick Palmer. New York: Moffat, Yard & Co.

From the moment the Big Fellow steps upon the scene, that is, the first page, the limelight follows him, all against his will, but directed by the hand of his admiring creator. First it is his classmates who worship him. Then his landlady—his mother, aunt, and adopted girl cousin being, of course, *ex-officio* adorers. The man who holds a mortgage on Big's house next falls a victim; then the Irishman who is his neighbor in the "mixed gang" in which for a time he labors. The editor and the eminent lawyer take beneficial fancies to him; clerks and reporters cling to him. Barring a few passing hostilities with a politician or two, and a few "scraps" with socialistic Italians, ballot-stuffers, and their kind, adulation pours her copious libations upon his burly form. The President (of the United States, we mean) finds him the man of men to send to certain new island possessions of America, and thither he repairs, carrying his weight, his compelling smile, and his firm faith in the civilizing power of education and of confidence won by patient kindness. Here fall down new brown victims before his magnetic perfections. If fever, a few Spaniards, and an insurgent or two are unkind, they are in a very tiny minority. When he returns to the United States for his well-earned vacation, not only an ardent neighborhood welcomes him, but an eager public can hardly wait to nominate him Governor of his State. Meantime, the author's attitude toward him has been one of almost awed worship. And the reader—yes, the reader has long since fallen in line, after an instinctive but vain struggle not to yield to the mingled sugar and solemnity of the enveloping atmosphere. It is useless to hold out against the simple straightness ("not so damned simple, either," said the political enemy), the unconsciousness, the human power of the big boy-man. To the question, "Is he a portrait?" the author distinctly says, "No, he is the American policy of education and kindness."

Mr. Palmer's earlier book of stories, "The Ways of the Service," showed that he had a marked talent for the military and colonizing sketch. He has done larger and better work in this elaborated picture of America in the tropics, the Flag personally conducting the Constitution.

Flower of the Dusk. By Myrtle Reed. New York: G. P. Putnam's Sons.

What could make the public more comfortable than two or three pairs of lovers belonging to the past, the present, and the future; a blind man, who, thinking himself rich, is in reality dependent on the exertions of a lame daughter; a doctor who heals them both; a copper-haired heiress, a blighted aunt, a boy dreamer of dreams and reader of books, with accessories in summer boarders, an eccentric old lady devoted to novels, an irascible judge and his omnivorous dog? The interest lies largely in the tenderly-meant deceptions practised toward the blind man, which weave a tangled web. The slight little luminary of a story twinkles here and there with fun and revolves in a vast atmosphere of songs, dreams, parables, rhapsodies. Perish the thought that the world will ever outgrow its liking for lucent syrup tinct with cinnamon.

Louise de la Vallière and the Early Life of Louis XIV. By Jules Lair; translated from the fourth French edition by Ethel Colburn Mayne. New York: G. P. Putnam's Sons.

The court and amours of Louis XIV. have become a favorite theme for English and American writers in the last two decades. The protagonist in this field of late has been H. Noel Williams, who has given us vivid pictures of the Mancini girls, and of the haughty and imperious Montespan. But for the last twenty-five years the standard work on the private life and early love affairs of the Grand Monarque has been Jules Lair's "Louise de la Vallière," first published in 1882, since then thrice re-edited in French, and now translated into English for the first time. The story is most pathetic. A gentle, loyal, trustful girl, deliberately placed by Anne of

Austria in the path of her susceptible son, for the sole purpose of breaking up his intimacy with his sister-in-law, Henrietta of England, which threatened to become scandalous, is whirled away, almost before she knows it, into a life which was soon to make her profoundly unhappy. She loved the King tenderly and for nis own sake, and was to learn through years of humiliation and misery that Louis was far less constant. When, some months after she had become his mistress, she first fled, in deep grief at a trifling slight, to a convent at Chaillot, Louis at once followed her thither in person, and, after an affecting reconciliation, brought her back in triumph. Nine years later, when for far greater cause she fled a second time, the King sent a messenger after her—the iron, inexorable Colbert—not because he loved her any longer, but because he needed her presence at the court to cover his relations with M. de Montespan, whose advent was the cause of the change. The contrast between the two women reminds one of Gabrielle d'Estrées and Henriette d'Entragues, in the days of Henry IV. In 1674 Louise de la Vallière obtained at last permission to retire. "I leave the world," she said, "without regret, but not without pain." At the age of thirty she entered the Convent of the Carmelites, in the Rue d'Enfer. Sister Louise de la Miséricorde was to expiate, by thirty-six years of seclusion, the whole-souled, unselfish passion of her youth, the only fault of her entire life. The news of her death did not seem to affect the King in the least. He exhibited throughout a cold-blooded egotism, the extent of which is well-nigh impossible to describe, and at the same time that almost inhuman reserve and self-control which enabled him to divide his life into water-tight compartments, as it were, and to write in his "Mémoires" the famous advice to his son:

> Comme le prince devrait toujours être un parfait modèle de vertu, il serait bon qu'il se garantit des faiblesses communes au reste des hommes. . . . Mais comme il peut tomber dans quelqu'un de ces égarements, il doit observer deux précautions: la première, que le temps que nous donnons à notre amour ne soit jamais pris au préjudice de nos affaires; la seconde, c'est qu'en abandonnant notre cœur il faut demeurer maître absolu de notre esprit, que nous séparions les tendresses d'amant d'avec les résolutions de souverain.

The translator of this interesting volume seems to have done her work faithfully, though her style is occasionally marred by unfortunate soliecisms; one cannot pass without protest, for instance, the rendering of "un de ces châteaux posés sur la cime des monts," by "one of those perched sort of castles" (p. 177). The illustrations are numerous and well chosen, and M. Lair's valuable footnotes and references at the bottom of the pages have been retained, though his documents and bibliographical comments at the end of the volume have not. Books of this type are becoming increasingly frequent nowadays, when the regular historical monograph is growing so specialized and technical that the general public does not care to read it, and, though these works can scarcely be regarded as the bone and sinew of history, they still serve a useful purpose in giving pictures of the past, if, as in the present case, they are honestly and thoroughly done.

Literary Reviews and Criticisms. By Prosser Hall Frye, New York: G. P. Putnam's Sons.

The first defect of this book is its title. Seen on the shelves, the back suggests too easily a bundle of those fagots with which the columns of daily newspapers are stoked: pitiful "reviews," half summary and half comment, phrased less to instruct the reader than to disguise the ignorance of the reviewer and soothe the publisher. Nothing however, could misrepresent the work more: here are thirteen studies of the kind which some persons still think impossible outside of France, studies which help deliver men now from the flippancies of modish tastes and again from the solemn arrogance of perverted scholarship. Ranging from "Iphigenia in Aulis" to "Tess of the D'Urbervilles," Professor Frye contemplates authors and their books with eye undistracted by linguistics, or textual criticism, looking only for intentions and artistries. His subtle analyses will doubtless be called psychological, after the fashion of the hour. Yet the themes are literary, and no less literary is the handling. Mr. Frye's style, generally, combines finish with ease; its errors are those of too eager or too conscientious craftsmanship. Wielding a large vocabulary, the essayist occasionally seems to be exhibiting his dexterity; an over-polished phrase, a rare word now and then, but more often the elaboration of a thought by a string of nouns or adjectives, each fringing the bull's-eye, provoke this suspicion. Then, too, foreign words are frequent, where virtually the same shade of meaning might have been given in English: *Gens de lettres, Umgangssprache, procédé, aperçu, etc.*, dot too many pages with their italics.

As to the subject matter—the Elizabethan sonnet is first considered, historically and critically, with the conclusion that it may have been a deliberate experiment in ingenuity by a group of "wits." Then Balzac's character is dissected, not without originality; likewise the characters of George Sand, Zola, and Swift. Hardy's naturalism and Hawthorne's supernaturalism divert one briefly from men to philosophy. The longest contribution, on Dryden and the critical canons of the eighteenth century, is at once a piece of history and an essay on the relation criticism bears to art. In the last three essays there is a return to philosophies of life and art, when Anatole France, Sainte-Beuve, and Emerson are scrutinized. For all this miscellaneousness, the book is not inchoate. Its topics are texts for sermons on the foundations of Mr. Frye's literary faith; and, although the preacher is kept well in hand by the critic and historian, he manages to suggest unifying ideas. Because the unity is only hinted at, because the writer flits back and forth from description to comment, from comment to an interjection about contemporary affairs, and thence to the ultimate things of art and life, the pages are seductive; but this same charming variety has distracted him from the deeper consistencies. We have in mind a certain roughness in Mr. Frye's criteria and a lack of precision in applying them. For example, the writer's doctrine that great literature must have a moral purpose and his sharp distinction, brought out admirably in the essay on George Sand, between writing with such a purpose and writing for the exploitation of social or religious theories are irreproachable as points of departure. But the critic does not always hold to their direction unswervingly. Not that he changes his course; the trouble is rather that, not having charted it in full detail, he swings aside now and then unconsciously. In the essay on Dryden, we read:

> "The proper study of mankind is man"; in this sense every great literature is moral. . . . It is, as Matthew Arnold says, a criticism of life.

But later Sainte-Beuve's ideal of criticism, the connecting of an author and his works "on all sides with this earth," is censured because "it proposes to itself an end impossible of complete attainment; for such a criticism as this is nothing less than a criticism of human nature as a whole." "It amounts to a denial of all method, . . . it implies nothing less than absolute universality of mind and sympathy on the part of its wielder." The verdicts jostle each other. In requesting the novelist to bring to the study of life no preconceived ideas, is not Mr. Frye calling for "absolute universality of mind and sympathy"? And how can he make literature the criticism of life while denying this function to the critic of literature?

Moreover, in his comparison of neo-classic with Greek tragedy, Professor Frye seems to subscribe to the ancient conception of the relation between sin and suffering; at least, he describes as "thoroughly and consistently moral" a consciousness to which "the human creature would appear, by the illusion of moral order, accountable for what it is as for what it does." And there is more than a suggestion of this Greek

belief in his studies of naturalism. Hardy's pictures of "the dark, irrational side of nature's dealings" show the worm crushed by the unwitting foot; but, adds the critic, "it is just this blind liability to accident which makes the worm a thing so contemptible." But is the worm contemptible, as men now think? Or has our morality gone astray? Again, while properly insisting, in his criticism of Zola, that the novelist must give us a sound conception of life, he complains of Hardy's lugging in "mischance and miscarriage—all, in short, that literature and art, with their passion for neatness, order, and clarity, have discarded as impertinent." But what if a sound conception of life must reckon with its fortuities? Here Mr. Frye appears to be swinging back and forth between a lofty realism and a very practical idealism. His wavering answer to the question whether literature should depict or inspire shows him still a trifle unsure about the utter falsity of this dilemma.

Science.

This week sees the first issue of a new monthly magazine devoted entirely to aeronautics. It is published, under the title of *Fly*, by Lawson & Kelley of Philadelphia.

At the Lowell Institute in 1907, Prof. C. S. Minot gave a series of six lectures on the question of senescence—a question which he has made peculiarly his own. These lectures were printed with abundant illustrations in the *Popular Science Monthly* last year. The same material is utilized in the newest volume of the Science Series (G. P. Putnam's Sons) bearing the title: "The Problem of Age, Growth, and Death: A Study of Cytomorphosis." In the main, this is a reproduction of the lectures as already published, but various minor changes and some additions, both to illustrations and text, do much to clarify the subject and to inform the reader concerning the literature. The additions are particularly noticeable in the chapter on "Differentiation and Rejuvenation," and in that on "Regeneration and Death." Then, too, there is an entertaining introductory letter to Angelo Mosso, to whom the volume is dedicated, in the course of which some account of the method of Minot's studies is given. Six appendices contain new details about the rate of growth in rabbits and chickens, and a discussion of the death of protozoa and some other problems closely related to the subject of the lectures. With his usual skill and lucidity the author develops his views concerning these questions which he has studied carefully for many years and to which he has called attention in many well known articles and addresses. A brief statement of such complex problems is dangerous but it may suffice to say here that the main contention of the book is: that there is a progressive differentiation of cells in animals, with certain characteristic variations for the various tissues and even for various animals, leading finally to death; that the animal ages as the cellular protoplasm increases in comparison with the nucleus, the degree of senescence determining the rate of growth. All this rests upon a number of hypotheses, which will perhaps long remain matters of controversy, and involves some apparent paradoxes whose exposition will delight the careful reader, even though he may here and there doubt the validity of the conclusion.

The "Functional Nerve Diseases" of Dr. A. T. Schofield of London (E. P. Dutton & Co.) hardly appeals to the general reader as much as the series to which it belongs (New Library of Medicine) was intended to do and in most of its volumes actually does. For the medical man, the book is perhaps too unsystematic and rather diffuse, although often undeniably stimulating. After a somewhat unsatisfactory consideration of mental processes and of the unconscious mind, much of the volume is given over to discussions of hysteria and neurasthenia, little space being allowed for the other ten diseases accepted as functional. The chapter on the "rest cure" is helpful and that on general treatment contains much that is good. The chapter in "psychotherapy," in which indirect suggestion appears to be the really important thing, is disappointing, partly because the author seems to be unacquainted with some of the more successful methods and partly because he does not present the methods with which he is familiar in such a manner that the reader may understand how to apply them. The therapeutic results of hypnosis in functional nerve diseases he regards as very disappointing—being most effectual in the production of sleep and in the relief of pain. Dr. Schofield's remarks on the various aspects of quackery are illuminating and his protest against the neglect of mental therapeutics is in the main just, but he is far more successful in stating the need than in exemplifying the means.

"Gray's New Manual of Botany: A Handbook of the Flowering Plants and Ferns of the Central and Northeastern States and Adjacent Canada" has been rearranged and extensively revised by Benjamin Lincoln Robinson and Merritt Lyndon Fernald (American Book Co.). The first edition of Gray's "Manual" was published in 1848, soon after Professor Gray entered upon his duties at Harvard. Previous to that time there had been a few useful handbooks of our Eastern flora, but they were all under the influence of the Linnæan classification. Dr. Gray broke with this artificial system, and brought to the attention of American students the natural system, which was at that time just beginning to make its way. From the outset the new treatise was received with favor, and enlisted the hearty coöperation of American students. Notes of additions to our flora followed each other with rapidity, were promptly recorded in the pages of the *American Journal of Science*, and were embodied in new editions or new issues of the "Manual"; and, with the advance in botany, the aid of collaborators was enlisted for special sections. After Dr. Gray's death, a revision (the sixth edition) was carried through by Drs. Watson and Coulter, in 1890, and until now this has had to serve. Professors Robinson and Fernald, who have long been connected with the Gray Herbarium, are fully conversant with the exacting demands of the "field" botanist. These demands they have met very largely on the lines of the former editions in a convenient and scholarly work, fully abreast of the times. Many new features have been introduced in order to facilitate identification of species, but these additions have been made without materially changing the "Manual" in size or appearance.

It is a pleasure, in the midst of the increasing output of nature-books, to come upon one, like "The Sport of Bird-Study," by Herbert K. Job (Outing Publishing Co.). It is quite devoid of unwholesome sentimentality, and yet shows for the bird world as loving sympathy as man can well have with the lower species. Mr. Job was one of the first to look upon the camera as a nobler weapon than the gun, and he is certainly to be numbered among the three or four most successful photographers of birds and their nests, besides being undoubtedly a field ornithologist of the first rank. In his latest book he endeavors to disclose to his readers a new sport, describing vividly the fascination, the difficulty, the healthfulness, and even the dangers of "hunting with the camera," in which the bag is made by the exulting sportsman without hurting even a feather of the quarry. Mr. Job has no need to go after mountain lions or grizzly bears for excitement. Witness his hunt for the worm-eating warbler, a specimen of which he had as yet never seen except in the pages of Audubon:

> Just as I raised my field-glass it flew, but in that instant I thought I saw bold stripes on the head. Instantly Audubon's picture of the Worm-eating Warbler flashed into my mind. I am fortunate enough to own a set of Audubon, and it was probably that which started me out as a child with a passion for birds. Though confident that I had just seen my first "worm-eater," I must have a better view to be sure. So I followed after it along the strip of trees and shrubbery, hoping that I might start it again. About a hundred yards further on a bird flew from the ground which I thought was the one. It kept flitting on and on, after brief stops among the patches of fern, until I was about in despair of getting a good look at it. Finally it seemed to stay in one spot and I stole up with caution. Peering through the bushes, I was thrilled and delighted to see it sitting motionless on a log, within a very few feet of me, an undoubted Worm-eating Warbler, with the bold stripes on its head.

The volume is beautifully got up, as regards both paper and type, and the half-tone reproductions of the numerous interesting and valuable photographs by the author are excellent.

Drama.

The authoritative life of Henry Irving, by Austin Brereton, is about ready to be published by Longmans, Green & Co.

"Getting Married and Other Plays," by George Bernard Shaw will soon be published by Brentano's.

One of the latest additions to the body of unacted poetic drama, which of late has been growing somewhat rapidly, is the five-act tragedy "Hero and Leander" (Henry Holt & Co.), by Prof. Martin Schütze of the University of Chicago. It is a work showing some power of dramatic invention, literary facility, and occasional flights of poetic fancy, although the language in

which these are expressed is likely to degenerate into unmistakable prose. Felicitous lines are frequent, and imaginative passages are not rare, but the flashes of eloquence are too far apart to make the illumination general. The author has not allowed himself to be fettered by undue reverence for the old legend or for classical restrictions. He has created a new story, new personages, and a new catastrophe, making Hero stab herself over the body of her drowned lover, instead of letting her leap into the sea. That, however, is not a matter of much moment, perhaps, when weighed against the necessity of a stage tableau. It may be said in favor of this play that it is more fitted for actual representation than many pieces which glow more brightly with the divine flame, giving opportunities for spectacular display which might prove tempting to a practical manager, while good actors in the parts of Hero and Leander might provide some thrilling moments. The consecration of Hero in the Temple of Venus Urania, the apparition of Leander, his encounter with the temple guards, the episodes attending Hero's surrender, and the storm with its tragic outcome are all valuable theatrical incidents. As for the play itself, if it is not a brilliant example of poetic tragedy, it is a capable, dignified, and interesting composition which would be a credit to any theatre producing it; and the verse would present no insuperable obstacle to players of ordinary competence.

Beerbohm Tree promises a number of interesting performances for his London theatre. These include an Egyptian play, in which Louis N. Parker and Hall Caine are to collaborate; the presentation of "Macbeth," in which Gordon Craig will have a great deal to do with the scenery; a revival of "a great English comedy"—"The School for Scandal" at a guess—with an all-star cast; a fairy piece; and a new poetical play by Stephen Phillips and Comyns Carr.

Mr. and Mrs. Kendal appear to have been rather successful in London with "The Whirlpool" of Herbert Swears, in which the former plays the middle-aged American speculator and the latter the sentimental spinster. It is a conventional tale of gambling, dishonesty, lost fortunes, and self-sacrifice, with some sentimental passages for Mrs. Kendal.

The site of Shakespeare's Globe Playhouse in London, on Bankside, Southwark, is to be marked. An executive committee of the Shakespeare Reading Society of London has charge of the matter, and has engaged Prof. Edward Lanteri to execute a mural tablet from the designs of William Martin. The tablet will be in bronze relief, and will depict Bankside in the time of Shakespeare, a bust of the poet appearing as an inset. Permission for the erection of the bronze has been obtained from the owners of the site, and an appeal is to be issued for subscription.

A new theatrical journal of considerable ambition has been started in Vienna, the *Wiener Theater-Courier*. Rudolf Huppert, Alex. Hengge, and R. F. Jamök are editors.

Gerhart Hauptmann is at work on a new play, "Griselda," for the Lessing Theatre.

Music.

Musical Memories. By George P. Upton. Chicago: A. C. McClurg & Co. $2.75 net.

Mr. Upton wrote the first musical criticism printed in a Chicago newspaper, and for about half a century he has heard and discussed pretty nearly everything worth hearing produced in that city. It is therefore quite in order that he should write a chronicle of music in Chicago from its humble beginnings, more than seventy years ago, "when Indians and coyotes outnumbered whites there almost ten to one," to the present day. It was in 1833 that the village of six hundred residents heard its first music in the strains of Mark Beaubien's fiddle. An exciting event in the village was the arrival, two years later, of the schooner which brought the first piano. Thirteen more years elapsed, however, before the first great pianist, Richard Hoffman, visited Chicago. In 1850 the first opera troupe captured the town, and thenceforth the progress was steady, if slow. It was interrupted temporarily by the great fire of 1871; but even in that emergency there were entertainments which helped the people to bear up against the calamity during the gloomy winter following.

By far the most important event in the musical history of Chicago was the formation, in 1891, of a permanent orchestra, with Theodore Thomas as leader. For the first time in his life that great conductor had players whose salaries were guaranteed, and hence he had little difficulty in procuring first-rank men and was not harassed by personal financial responsibilities. Nothing short of such an advantage could have induced him to leave New York, to which he felt attached, in spite of much shabby treatment. Some disappointments he bad in Chicago, too. The failure of his World's Fair scheme was a tragedy to him. His intention was to exhibit in a series of concerts the world's musical progress from the early classical period to the present day. His plans were frustrated, as Mr. Upton has shown in detail in his biography of Thomas, "by the incompetency of some of his assistants, the ignorance of some of his official superiors, and the jealousy and greed of commercialism." He retired from tbe field in August, instead of in October, as he had intended; and when, subsequently, the managers of the St. Louis Exposition invited him to take the musical directorship, he promptly declined and advised them to confine their music to the band stands in the open air. In one respect Theodore Thomas must have felt much more at home in Chicago than in New York. It was his conviction that "a symphony orchestra shows the culture of a community, not opera." Now, in New York, concerts have always played second fiddle to the opera, whereas in Chicago the Thomas and other concerts are preferred. One looks with amazement at the list of operatic performances at the Auditorium in nineteen years (pp. 308-9)—only 278 in all, or fewer than New York has in three years. Among the seventy-nine different operas in the list eighteen were for the first time in Chicago; and of these eighteen, ten failed to pay expenses.

Of the 345 pages in Mr. Upton's volume only the last 134 are devoted to a record of purely local matters. The first fifteen chapters are filled with reminiscences of musicians of various grades, and their managers, who visited Chicago. With most of these artists—and the list comprises nearly all the celebrities heard in this country during the last half century—the author had personal acquaintance of a more or less intimate kind. He does not content himself, however, with a mere record of what he heard and saw, but adds miscellaneous information to fill out his sketches. It is worthy of note that after hearing all these, he still regards Jenny Lind's singing as the ideal exposition of the art of song. He was a college freshman when he caught the Jenny Lind fever, which raged on both continents, so that even Berlioz wrote to a friend: "I shall not go to London this season. The Lind fever makes all musical enterprises impossible." She was the first really great singer to visit this country, and her enormous success soon set the tide of rivals flowing in our direction; all of which was water for Mr. Upton's mill. He heard Patti in the early fifties at the Tremont House, Chicago, where she sang in a dining-room concert. Amusing accounts are given of the wars between Patti and Gerster, Minnie Hauck and Marie Roze, Lydia Thompson and the editor of the Chicago *Times;* also, of the stupendous national and international peace jubilees of Patrick Gilmore. This Irish bandmaster once told the author that he would be delighted if he could only have church bells, cannons, and anvils with every piece he played, not merely for their effect upon audiences, but because he enjoyed them himself. He found out, however, that a chorus of 20,000 singing to an audience of 50,000 produced no more effect than a smaller number of voices in a proportionately smaller hall; and he acknowledged to Mr. Upton that he was done with "tornado choruses." Of the violinists our author has heard these fifty years, he found Wilhelmj the most impressive, and Rubinstein among the pianists. This great Russian never practised; "he almost utterly ignored audiences, and the more frantic the applause, the less likely was he to recognize it." One may surmise that this was due largely to the fact that the ap-

plause was not likely to be in proportion to the merit of the music:

He found he was expected to lower his own standards, and this he was too honest to do, so his tour was a disappointment.

The author lost an opportunity here to comment on our progress in musical culture, for Paderewski and other great pianists are no longer expected, when they come to this country, to lower their standards. The change is still more emphasized when we contrast the present with the time of Gottschalk, who regaled his audiences with his "Bamboula," "Ojos Creollos," "Le Savanne," and "Banjo," reserving Beethoven and Mendelssohn for his intimate friends.

Mr. Upton's book is one of the most valuable contributions to American musical history ever issued, and the numerous personal sketches and anecdotes interspersed make it as interesting as a novel to music lovers. While enjoying the delights of recollection, he has no doubt that his successor, who will write the story of the next fifty years of local music, will have as great names and more important events to discuss; Mr. Upton is optimistic enough to believe that "the musical future of Chicago will be greater than its past or present, notwithstanding its increasing materialism and commercialism."

The centenary of Mendelssohn's birth will be celebrated by the Oratorio Society on January 4, by the performance of his "Elijah" at Carnegie Hall. This will be the third concert of the season. Wolf-Ferrari's "La Vita Nuova," which made such a favorable impression last year, will be sung on December 2. "The Messiah" will be given on December 26 and 29. "The Dream of Gerontius," by Elgar, will be revived on March 20; and on April 8 the season will close with Bach's "St. Matthew Passion."

Gustav Mahler will conduct three of the concerts to be given by the New York Symphony Orchestra; the others will be under the direction of Walter Damrosch. Among the soloists will be Geraldine Farrar, Jeanne Jomelli, Lhévinne, Albert Spalding, Sasslavsky, Mannes. Among the works to be heard will be Mahler's second symphony, Berlioz's "Romeo and Juliet," Brahms's first symphony, Dvorák's "In der Natur," and Elgar's symphony; also, the opera overtures of Mozart and his concertos for flute and clarinet, a group of Italian overtures by Donizetti, Rossini, Bazzini, and Sgambati, George Schumann's variations and double fugue on "ein lustiges Thema," Richard Strauss's "Don Juan," Raff's "Im Walde," Chadwick's third symphony, and Loeffler's "La Villanelle de Diable," The Mendelssohn centennial concerts will include, besides the Scotch and Italian symphonies, the fragment of the unfinished opera "Loreley." The symphony "Antar" will be performed in memory of Rimsky-Korsakoff. A Tchaikovsky cycle, consisting of Tchaikovsky's works performed in chronological order, will be begun during the second series of the Sunday afternoon concerts.

Art.

Denkmäler ægyptischer Sculptur. Herausgegeben und mit erläuternden Texten versehen, von Fr. W. Freiherrn von Bissing. Munich: Verlagsanstalt F. Bruckmann.

Familiar only with the cold, placid, and monumental sculptures of Egypt's Greek and late pre-Greek period, both Winckelmann and Ottfried Müller failed to discern the powerful individuality which the discriminating eye can now perceive in the older work, recovered and studied since their day. Yet the verdict of these two men on the character of Egyptian art is at the present day still current. It was therefore an admirable project undertaken by Prof. Baron von Bissing to collect in this splendid series of plates the greatest works of Egyptian sculpture of all ages, and to accompany them with a text containing a systematic attempt by modern methods, such as obtain in classical archæology, to examine them exhaustively, estimate them intelligently, relate them to each other and to their period, and thus trace for the first time on an adequate basis of observation the great lines of the development. Now that the enterprise has progressed to the seventh fascicle (there are to be twelve in all), the character of the work emerges more clearly than in the first two *livraisons*, already reviewed in these columns. (See the *Nation* of October 4, 1906, p. 291.)

The text contains many permanently useful discussions, and the main results may be regarded as a distinct contribution to our knowledge of the subject, even though some reservations in this verdict must be made. In the discernment of the gradual emergence of the individual, as observable in Egyptian art, the text falls short. This is noticeable in the discussion of portraiture (Text-plate 39), where only the conventional and all powerful "typical" style is treated, whereas there are unmistakable examples in which the sculptor, even as far back as the Old Kingdom, before 2500 B. C., abandons the prevailing types of the Egyptian nobleman, and likewise violates the ruling canons of drawing, to produce the individual as he was actually discerned. Some striking examples of this have been recently published by Capart in his "Une Rue de tombeaux," showing that portraiture really existed in the remote age of the Old Kingdom, whether the subject actually *sat* for the sculptor or not. The sharp distinction between these two schools, as the author in some periods does not fail to notice, can be traced throughout the course of the history of Egyptian art, just as the intimate and informal style of portraiture alternates with the formal and conventional school in the history of European art. In the Saitic age, however, just as in the Old Kingdom, this individuality has not been discerned by the author, for the reason that the marvellously individual portraits of that age are incorrectly dated by him in the Ptolemaic period. Yet the evidence for their Saitic date is complete and convincing. A relief unquestionably of the Saitic period, at Berlin, contains a portrait head displaying all the characteristics and peculiarities of the remarkable Saitic portraits in the round, and leaves no possible question as to the date of the latter. The question is of importance to all students of the history of art, for it is the question whether an Oriental civilization produced such matchless portraits as the well-known "Green Head" at Berlin—portraits unsurpassed in the ancient world anywhere—or whether they were to some extent a product of Greek influence, as they must have been if produced later in the Ptolemaic period.

To the question of the rise of the group as a problem in sculpture, discussed by the author (Plates 29 and 55A), must now be added the remarkable evidence found by Prof. Ludwig Borchardt at Amarna, showing that in the court of the palace there, there once stood a group in the round, depicting the king in his chariot urging his speeding horses after the wounded lion. This discovery must profoundly alter our whole conception of Egyptian art.

Another criticism of the text is that the author seems occasionally unfamiliar with the ancient inscriptional material bearing upon the works or the problems under discussion. He takes up the question (Plate 58) of the alleged statement in an obscure passage of a hymn to the Nile-god, that no stone images of him were ever made—evidently without knowing that the Papyrus Harris (40b-41a, 55a, 73:1, 13, etc.) records the making of scores of such statues of this god by Ramses III. Likewise, discussing Wiedemann's extraordinary assertion that the Egyptians made no cultus images of their gods, the author (Plate 57) can cite only late Greek literary evidence against Wiedemann's impossible position, whereas there is plenty of contemporary inscriptional evidence to disprove it, especially the Papyrus Harris just mentioned. Querying whether the commonly pictured posture of the Pharaoh, seizing a vanquished enemy, particularly a hostile chief, by the plume on his head, may not depict an act of especial humiliation to the foe (Plate 33A), the author might have found the answer in the inscription on the well-known "Israel Stela," where the humiliation of the defeated Libyan king is rendered the more vivid by the statement that he fled "with no plume

upon his head," showing clearly that loss of the plume was a disgrace. Sometimes, also, the modern evidence has escaped the author, though he shows wide acquaintance with it. In the discussion of Colossi (Plate 54) there is, strangely enough, no reference to the fragments of the vast colossus, some ninety feet high, the greatest known, found by W. Flinders Petrie at Tanis (Petrie, "Tanis I.," pp. 22-4).

Some inaccuracies of an essential character have crept into the author's descriptions. Plate 37 exhibits a fine sphinx portrait termed by the author in the legend, "Sphinx der Koenigin Hatschepsowet," and so again in the text to Plate 38 (with a different spelling); but in the text to Plate 37 no name is given, and the evidence of the inscription is conclusive against the identification with the well-known queen. The text to Plate 37 also calls the Great Sphinx of Gizeh beardless. That he is at the present day, to be sure; but large fragments of the beard were found in the sand before the breast by Vyse in 1837, and one considerable piece at least is in the British Museum.

The presentation of the greatest sculptures of Egypt in some hundred and fifty plates is not an easy task; but just for this reason no plates should be wasted. For example, in Plates 60-61, 62-63, 65-66, and 67-68, we have in each pair two plates devoted to one head, when both points of view might have been fairly combined on one plate, involving a loss of four plates unnecessarily. We must ask also, why in a series of Egyptian sculpture we find no example of the greater colossi? The best preserved, those at Abu Simbel, should unquestionably be given in at least one plate. Again, we would express the hope that before the series is closed at least one piece, like the charming little relief of Ikhnaton and his queen at Berlin, may be reproduced in the original colors. No ancient art possesses so many examples of well-preserved color, and this work will be incomplete without at least one example. The execution of the superb plates is what we have learned to expect from the experienced *atelier* of Bruckmann. It is occasionally evident, however, that these skilled photo-engravers were not always furnished with a sufficient negative. It is a pleasure to turn from the very few insufficient plates to the matchless reproduction of the Turin Ramses on two of the finest plates in this series. We commend them to any one who desires an adequate impression of the refinement of which the greatest sculpture in ancient Egypt was capable. Although we have not been able to agree with the author in all points, we are glad to congratulate him on the progress of his work, which will form an indispensable basis for the study of Egyptian art.

The Metropolitan Museum of Fine Arts has secured a Madonna and Child by Giovanni Bellini, the most important work of the Venetian school which the museum has yet acquired. The picture, painted in oil on a poplar-wood panel, measures about thirty-five by twenty-eight inches. In front of a dull orange red curtain the Madonna is seated holding the Infant Christ in both hands. The curtain is drawn aside, revealing behind the Madonna's figure the outskirts of a small hill town; a winding road leads toward houses which have chimneys in the Venetian fashion; there is a single fortress tower, and beyond a vista of mountain ranges. Throughout December there will be an exhibition of the material gathered by the Egyptian expedition of the museum. Albert M. Lythgoe, curator of the Egyptian antiquities, reports substantial progress in the excavation of the Pyramid of Amenehat. The season for working ended about the middle of June. He will begin again in November, with six assistants, the largest number that has engaged in the work.

A fine Roman sarcophagus in excellent preservation has been found in the Vicolo Malabarba, outside the Porta S. Lorenzo. It is 5 feet 7 inches long by 1 foot 6 inches wide, and the cover measures 5 feet 8 inches by 2 feet 4 inches. The front and one side of the sarcophagus are covered with scenes in relief of a Roman victory over barbarians, probably the Parthians or the Dacians. One of the most spirited incidents is a Roman soldier forcing a captive barbarian to bow down and do obeisance to a youthful figure, representing either a Roman emperor or an imperial general. Other scenes represent a barbarian in chains with his wife and child; a bearded barbarian led by a Roman soldier; and a fine figure of Pegasus, which Prof. Dante Vaglieri believes to have been the standard or ensign of the legion to which the dead man belonged. Inside the sarcophagus were a skeleton, a glass vase, and a silver denarius coined under Titus.

A few days ago the cable dispatches announced that Leonardo da Vinci's fresco of "The Last Supper" had been saved from the ruin which seemed inevitable. *La Rassegna Contemporanea* gives further details of the process. Luigi Cavenaghi, director of the Industrial School of Milan, and a competent fresco-painter, had the work in charge. The chief damage to the picture came from the curling up and peeling off in little flakes of the colored surface. This came partly from the disintegration of the original plaster and partly from the restorations made in the eighteenth and nineteenth centuries. Sig. Cavenaghi has discovered a means of re-attaching these tiny scales to the wall by the use of resinous gums, with the result that it is possible to clean the dust from the entire painting, and so to distinguish between the original colors and those added by later restorers. "Thus is exploded the legend," says the *Rassegna*, "that the Cenacolo was wholly done over in the eighteenth century."

The death is announced of Madame Bon (formerly Marie Viaud), sister of Pierre Loti. She was an artist of some distinction, and is said to have left a number of finished pictures.

Finance.

THE "WAR SCARE" IN WALL STREET.

The events of last week in Southeastern Europe excited on the stock exchanges a real "war scare." The week's decline of 6¼ points in Turkish bonds, of 1⅝ in British consols, 1½ in German public securities, ¾ in the French, and 3¾ in Russians, showed what Europe thought. The 4 to 7-point decline on the New York Stock Exchange, the sales of 220,000 shares of our securities by Europe, and the resultant rapid movement of foreign exchange against us, indicated the character of the market here. But hardly had this alarm reached its climax last Friday, when the home and foreign markets turned, and in forty-eight hours regained the greater part of their losses of the week. Obviously, this recovery was in the main a response to the peaceful tone of the European dispatches of Monday, as compared with the threatening news of Saturday. It also, doubtless, reflected relief at the disappearance of last week's Stock Exchange tales of the Servian guerrillas who had invaded Austria, the Turkish gunboat which had fired on a Bulgarian ship, and the armament embarked from Constantinople to subdue the Cretans. The question remains, however: How much genuine basis, from the point of view of the financial market, was there for this flurry?

In recent years we have become rather familiar with war scares, and on the whole, that experience has not inspired great dread of them. Three "war scares" of the last decade were faithful forerunners of real war—those of April, 1898, of September and October, 1899, and of January, 1904. But even in these instances the financial disturbance turned out, in two cases out of the three, to be a temporary affair. The Spanish war and the Japanese war upset the New York Stock Exchange to some purpose at the outset, but this fall was quickly followed by recovery and return of real prosperity, even while the fighting was in progress. With the Boer war, the outcome was different: the "industrial boom" in Germany was pricked; bank rates went up to 6 per cent. at London, to 7 at Berlin, and to 4½ at Paris; call money touched 186 per cent. in New York; our own speculation in newly promoted "industrials" collapsed; and English finance was so far injured that it has never since been able to win back the hegemony of the financial world from Paris. But it is even now a matter of dispute, how far the later financial shock of the Transvaal war was due to the war itself or rather the large loans raised to conduct it, and how far to the complete embargo placed on the $80,000,000 gold which

European markets had been annually receiving from South Africa.

No consideration of this kind could be involved in such a war as last week's confused dispatches first suggested—a fight, say, between Turkey and Bulgaria. Our markets and Europe's, after a preliminary shock, passed through the two other recent conflicts in that part of the world, the Greco-Turkish war of 1897 and the fight of 1885 between Servia and Bulgaria, with something like indifference. As for the other recent war scares which did not result in war—those started by the wrangle of 19 over French prerogatives in Morocco, and by the half-comic outburst of 18 at Paris, over the Fashoda affair—these, on the whole, produced the impression that European high finance was merely going through the motions of alarm.

There is, however, another side to the present affair. When the London dispatches described the situation as the most serious that had arisen in Europe since the Franco-Prussian rupture in 1870, the average American reader put the statement down as an extravagance of excited minds. Yet there was at least a grain of reason in the report. That popular forces which might not be subject to restraint were violently at work; that every signatory of the Treaty of Berlin might have claims to push; and that the great Powers might thus be involved over Austria's annexation of two minor provinces—all this suggested possibilities far transcending those of a fight between two second-rate governments in the Balkans. What the disorder on the stock exchanges reflected was therefore a possibility, not a probability; but the possibility, though remote, was so grave that the decline was proportionately violent. When the little Transvaal war drew from the money markets, in the form of loans or increased taxes, nearly $1,000,000,000 capital for purposes of waste and destruction, and when the Manchurian conflict similarly dissipated $2,000,000,000, the actual prospect of a European collision now would not be comfortable, even in the present era of cheap money rates and idle capital.

A Woman at Bay

(Una Donna) By Sibilla Aleramo

Translated by Maria H. Lansdale. $1,50

"Una Donna made a great sensation in Italy at the time of its appearance. It has received great praise and great blame. In fact, it would be impossible to read this story, so vivid, so direct, so poignant, without more or less taking sides for or against the 'woman' whose story it tells. . . . The book vibrates with passion, conviction and revolt. From a literary point of view *Una Donna* is a novel of value, a noted and striking début."—*Journal des Debats.*

OUR LIBRARY SERVICE

We have recently supplemented our service to Libraries, by procuring Out-of-Print and Scarce Books, and by importing English books.

Our Educational Catalogue contains a full list of Supplementary Reading, indicating the grade to which each title is adapted.

Our Clearance Catalogue contains overstock at special prices, and an alphabetical arrangement by authors of all cheap editions of Recent Popular Fiction and Standard Library 12mos in one list.

Our Library Catalogue of 3,500 approved titles, following A. L. A. lines, is of great convenience to small libraries.

Our Monthly Bulletin notices promptly every new book of importance.

These Catalogues are sent on request.

Three notable features of our service are: Promptness, thoroughness, and low prices.

WANTED: Two copies of each number of the Nation from the time of its foundation to its consolidation with the New York Evening Post in 1881. Address, stating price, L. G., Nation Office.

Economic Prizes

—FIFTH YEAR—

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, Chairman,
Professor J. B. Clark, Columbia University,
Professor Henry C. Adams, University of Michigan,
Horace White, Esq., New York City, and
Hon. Carroll D. Wright, Clark College,

have been enabled, through the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, to offer in 1909 prizes under two general heads. Attention is expressly called to a new rule that a competitor is not confined to subjects mentioned in this announcement; but any other subject chosen must first be approved by the Committee.

I. Under the first head are suggested herewith a few subjects intended primarily for those who have had an academic training; but the possession of a degree is not required of any contestant, nor is any age limit set.

1. German and American methods of regulating trusts.
2. The logic of "Progress and Poverty."
3. What are the ultimate ends of trade-unions and can these be gained by any application of the principles of monopoly?
4. In view of existing railway progress, should the United States encourage the construction of waterways?
5. Is it to be expected that the present and recent production of gold will cause a higher level of prices?

Under this head, CLASS A includes any American without restriction; and CLASS B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Any member of CLASS B may compete for the prizes of CLASS A.

A First Prize of Six Hundred Dollars, and A Second Prize of Four Hundred Dollars

are offered for the best studies presented by CLASS A, and

A First Prize of Three Hundred Dollars, and A Second Prize of Two Hundred Dollars

are offered for the best studies presented by CLASS B. The committee reserves to itself the right to award the two prizes of $600 and $400 of CLASS A to undergraduates in CLASS B, if the merits of the papers demand it.

II. Under the second head are suggested some subjects intended for those who may not have had an academic training, and who form CLASS C:

1. The best scheme for uniform corporation accounts.
2. Desirable methods of improving our trade with China.
3. The proper spheres of the trust company and the commercial bank.
4. The relations of oriental immigration to American industries.
5. The relative efficiency of American and European labor in manufacturing industries.

One Prize of Five Hundred Dollars

is offered for the best study presented by CLASS C; but any member of CLASS C may compete in CLASS A.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. If the competitor is in **Class B**, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1909, to

J. Laurence Laughlin, Esq.

The University of Chicago
Chicago, Illinois

The Nation.

NEW YORK, THURSDAY, OCTOBER 22, 1908.

The Week.

Mr. Taft's references to the tariff in his speech at Trenton, on Monday, were much more satisfying than what he had to say in Dakota. They were also much more to the point. He is doubtless aware that in New Jersey the Cleveland Democrats are a powerful element. Their votes certainly cannot be won by foolish talk about the Wilson bill of 1894 causing the panic of 1893. It was well, therefore, that Mr. Taft should be more explicit than he has before been about his intention to secure a thorough and honest revision of the tariff. To this he deliberately pledged himself and his party. He boldly took up the charge that the protected interests control the party and will not permit any reductions in the tariff. If they have such power, he asked, why did they not prevent the Chicago Convention from declaring for revision? The Republican candidate added that the party is simply "obliged" to put through a genuine and complete revision of the tariff, and that it had shown itself able "to pass any law in the face of any corporate opposition, when the law addresses itself to the justice and to the honor of the Republican party." Such frank and explicit declarations ought to be worth many votes.

His Chattanooga audience must have been greatly pleased, last Friday, with Mr. Taft's hearty and frank attitude. He made it plain that he scarcely dreams of getting a single electoral vote from the South, but he had promised to make speeches in Southern States, and there he was, to make his word good, and to express friendly feeling. Southerners know how to respond to such advances, and it is not surprising that the candidate expressed a fear of the danger of—not over-confidence—but of "over-hospitality." Mr. Taft's classification of Southern voters into those who would vote for him, those who would not vote at all, and those who would vote for Bryan while hoping that Taft would be elected, was very close upon the facts. It was a good way of bringing out the anomalous political conditions which prevail in the South. And all sensible men must agree with Mr. Taft in deploring the "tradition" which keeps the South solid. But the motives to which he appealed, in pleading that Southerners support the Republican party, were not very exalted. He did not urge them to get rid of their prejudices and their fears on the race question but exhorted them to join the party which is "in favor of distributing the favors of protection all over the country." This, we must be as frank as Mr. Taft in saying, is but an attempt to solve a question of political justice and human rights by shifting it to a mercenary basis.

Just as Chairman Hitchcock announces that money is "coming in more freely" to the Republican Committee, Mr. Bryan raises his voice to charge that the Republicans are collecting $1,000,000 with which to buy the election. This accusation he will surely repeat, with variations, as he comes East. Harping upon Republican concealment of the campaign fund, as contrasted with Democratic frankness, he will allege that contributions are being secretly obtained from corporations and rich men interested in legislation. This is probably a slander. Yet there is only one way effectively to meet it. That is to make public the list of contributors. It is hardly to be supposed that the treasurer has accepted improper or suspicious gifts. He is to publish them after the election in any case, and there is no real reason why he should not do it before. Every Republican member of the House of Representatives voted last spring for the McCall bill, which provided that all contributions be made public ten days before the election. That ought to be sufficient precedent and warrant for the committee. The President, it is true, has decided offhand that there must be no pre-election publication; but it may be better to disregard him than to give Bryan a taking cry. Mr. Sheldon should promptly open his books.

Both parties are, of course, getting down on their marrow-bones before the labor vote, but need they be so petty about it? Here is the Attorney-General of the United States descending to tactics of which a ward boss ought to be ashamed. In his statement showing how active and victorious the Roosevelt Administration has been in prosecuting offenders under the Sherman law, he inserts a repetition of his former fling at President Cleveland for having brought injunction and other proceedings against labor unions:

> I have included among the prosecutions of the Democratic Administration resistance to the petition of Eugene V. Debs for a writ of habeas corpus; it is to be noted that five out of nine proceedings under Democratic rule were directed against labor organizations and their leaders; under Republican rule there have been in all three such proceedings out of fifty-six.

Mr. Bonaparte is well aware, as are all Republicans old enough to remember 1894, that nothing in Mr. Cleveland's course as President deserved better of the country, or, in fact, received more general applause from good citizens, irrespective of party, than his resolute grappling with the gigantic conspiracy headed by Debs, and intended to throttle the commerce of the nation. It was a strong assertion of the power of the general government to protect its property and its agents against the raging of a labor mob—an assertion which will be one of the landmarks in American constitutional history. No less a person that Theodore Roosevelt wrote in the *Forum* of February, 1895:

> It was a most fortunate thing that the action at Washington was so quick and so emphatic. Senator Davis of Minnesota set the key of patriotism at the time when men were still puzzled and hesitated. The President [Cleveland] and Attorney-General Olney acted with equal wisdom and courage, and the danger was averted.

Such, too, must have been the attitude of Mr. Bonaparte. Yet now, for campaign purposes, the Attorney-General intimates that the firm and patriotic stand of a Democratic Administration proves that the Republicans are the true champions of "labor"—Codlin's the friend not Short. A political argument could scarcely be more hypocritical.

As if to intensify, by contrast, the mean spirit of this insinuation by the President's legal adviser, Judge Taft himself took up the subject of court proceedings against organized labor in his speeches to Ohio workingmen last

week. It is, indeed, the very sarcasm of fate that it was Mr. Taft who, when on the Federal bench, made decisions upholding the course of the Democratic Administration in suing out injunctions against Debs and other labor leaders. Mr. Bonaparte mentions the Debs case. Well, it was a lieutenant of Debs, one Phelan, whom Judge Taft sent to jail for contempt of court, in disobeying an injunction. And far from crawling on his stomach before union labor in Ohio with an abject apology for what he had done, Mr. Taft stood by his record like a man:

> If in issuing an injunction and in punishing a man like that a judge following his oath is to be voted against and kept out of the Presidency, that is the privilege of the voters of the United States, if they take that view of it. But I mistake my men, I mistake the intelligence of the American voters, if they are not going to stand by judges who do their duty and carry out the law as it is interpreted to them.

That furnishes a very useful measure of Attorney-General Bonaparte's stature.

Campaigns which confidently determine in advance the chief topics to come before Congress and the country after the election, are often wofully wide of the mark. In 1896, who dreamed that the most critical work to be laid upon the new President would be the war with Spain, and the complications growing out of it? Similarly, this year, it is entirely possible that the issues which we are all talking about now will be pushed aside, when the new Congress meets, by something to which nobody is giving attention to-day. Take, for example, the condition of the Treasury. The deficit keeps piling up ominously. With somewhat less than one-third of the fiscal year elapsed, it is already $38,828,000. At that rate, Chairman Tawney's prediction of a deficit of $150,000,000 for the year may not be far out of the way. Yet no politician is saying anything about this danger-signal. The question of possible retrenchment, or the certainty of added taxation if things go on as at present, does not enter into this campaign at all. Yet it may easily be the most imperative duty of the next Administration to attack exactly that problem of finding the money to meet the expenses of the government.

Mr. Chanler has at last attempted to reply to the questions of Gov. Hughes. These questions are entirely pertinent, for they relate strictly to the issues of the campaign in this State. Mr. Chanler, however, is evasive. The subject of gambling, he says, is not mentioned in either platform. But, in or out of the platform, that topic is distinctly before the people, and the fact that Hughes opposed race-track gambling is one of the chief arguments which the Democrats are urging against him. He is therefore well within his rights in saying to his opponent: "Do you favor race-track gambling?" Mr. Chanler professes a desire to enforce "all the laws, including the laws against gambling." But this statement does not cover the whole ground, for there is a movement to repeal the laws passed at the extra session of the Legislature, and people are entitled to know whether Mr. Chanler will lend his aid to that movement. On Gov. Hughes's other points—whether, for example, Mr. Chanler will want to abolish the Public Service Commission—his rival remains silent. He has retorted, however, by asking Mr. Hughes ten questions; some of them merely personal and nagging, and some that may be regarded as relevant. To all of them, however, Gov. Hughes has made a convincing rejoinder. As a sample of the Governor's method we may quote a single passage:

> He [Mr. Chanler] says: "(3.) Why did you refuse to appoint a railroad man upon the Public Service Commission? Was it because there was no practical railroad man in the State having the ability, in your opinion, to fill such a position?" Answer: "I did appoint a practical railroad man upon the Public Service Commission of the Second District, which has general supervision of the railroads outside the counties composing Greater New York. He was a man of large and varied experience in the different branches of practical railroading. I refer to James E. Sague. One of those who recommended him to me was Lieut.-Gov. Chanler."

If Mr. Chanler cannot now step forward and dispose of the questions put to him, his candidacy should be extinguished in laughter.

And there are other matters in regard to which we are entitled to an explanation from Mr. Chanler. Doubtless the keenest enmity which Gov. Hughes has aroused rankles in the hearts of the political bosses, big and little, whom he has sent about their business, while he has gone about his. Now, Mr. Chanler is making a great point of his personal independence. No man can dictate to a Chanler of Duchess County. Yes; but there has been a time when one man could dictate to this particular Chanler, and when he declared that his chief aim in office would be to do what this man wanted. We refer, of course, to Hearst. Mr. Chanler's alliance with him, and readiness to take orders from him, are a part of his past which needs explaining. In a speech which Mr. Chanler made on November 11, 1906, after the defeat of Hearst in the State election, he said:

> Knowing Mr. Hearst, believing in Mr. Hearst, I felt my own election of infinitely small importance. . . . We are men, most of us, with comparatively little experience in State affairs. . . . There is only one thing we can do. . . . When we do not know where to go for guidance, turn back to the principles as enunciated by him [Hearst], and . . . say to one another, "What would *he* have had us do were he here?"

Well, Mr. Hearst is now "here," and making it clear that what he would have us do is to vote against Chanler. But letting that pass, is Mr. Chanler ready to repeat or to repudiate what he said with the utmost deliberation less than two years ago? This is the conclusion of his Hearst threnody:

> I believe myself that, to a great extent, the future of Democracy in this State of New York, for the next few years, depends upon how far we can make good to the people of the State the promises made to them by Mr. Hearst, the pledges given to them by Mr. Hearst, the promises and pledges which would have been kept if we to-night could greet him as we should like.

Nothing could better prove the friendliness of the Japanese toward America than the warmth of the welcome to our battleship fleet. For this cordiality every man of affairs not obsessed after the manner of Lodge or Hobson must have been largely prepared. The jingoes will, of course, say that this is the tribute of a weaker nation to the might of our guns, and that the Japanese are merely hiding their enmity and chagrin under an Oriental mask of assumed friendliness. Persons who wish to hold such a belief will do so, in spite of all possible evidence of Japanese friendliness. They will still see in the right-hand of fellowship extended to us merely a mailed fist; precisely as after the fall of Manila they were certain that every effort of the German Emperor to win our good will was but an attempt to lure us to destruction.

With considerable merriment, the members of what the court described as an "association of adventurers," who combined in 1905 to speculate with Charles W. Morse in his Ice Trust stock, have been describing their achievements on the witness stand in this city. The exploits of Mr. Morse, it will be remembered, had not a little to do with the bringing on of the panic last autumn. He may be credited with aristocratic tastes, financially speaking, in his selection of associates; they comprised the ex-president of the United States Steel Corporation and present head of the Bethlehem Steel Company, the treasurer of the American Smelting and Refining Company, the president of the Knickerbocker Trust Company, the president of an up-State trust company with an old-time record as a Tammany Hall insider, and, along with them, the most notorious "plunger" in the stock market of the day. The "Ice Trust speculation," as Stock Exchange people will recall, had acquired a very disreputable name in Wall Street at that time, and Morse was commonly regarded as a dangerous figure in finance. Mr. Morse had an argument, however, which quite superseded such considerations. When questioned on the witness stand, John W. Gates declared that he bought Ice stock because Morse told him it was "selling at less than its value." Charles M. Schwab's recollection was that he bought it because "Morse told him Ice securities were a good thing to hold." Isaac Guggenheim bought 10,000 shares in the "pool," no doubt on similar convincing grounds, and "later raised it to 20,000 at Morse's request." John F. Carroll's motive for joining the group, aside from habit—he had "been in Ice with Morse for ten years"—was suggested by a loan of $114,000 to him from one of Morse's banks and a letter from the bank's cashier, stating that the loan "would be taken care of as per what Mr. Morse had said."

To our mind, the really interesting part of this testimony is the light it throws on the methods of the distinguished financiers concerned. They were induced to "put their money into Ice" through precisely the same arguments as are used with the simple "outside public" by the Thomas W. Lawsons, the Franklin syndicates, and other worthies of that type, and the result, according to the testimony, was strikingly similar. They "went in twice." The first time, the enterprise was a great success; its members, in Mr. Guggenheim's language, "received a handsome dividend." This preliminary result will be recognized, by all such outsiders as may in the past have "gone into" copper mines and "zinc prospects" and "National stocks," as the regular order of the day. The second experiment fared badly; there were dark rumors, even in Wall Street, that somebody had "sold out on the other members of the pool"; at all events, it was dissolved at a loss, Mr. Morse went to Europe, and the participants, as one of them recalled, "had to take up their stock." Thus the end as well as the beginning of the enterprise duplicated the experience of obscure outsiders with an itch for speculating in things of which they know nothing. It used to be a favorite argument, in allaying discontent among the poor, to describe to them the physical torments, worry, and indigestion, which the unhappy millionaire encounters. We suggest that emphasis be laid hereafter on the magnitude of the losses which credulous millionaires incur in their investments in gold bricks, as calling for the sympathy rather than the envy of the proletariat.

Rumors of war over the Balkan question continue, of course, but are rather gratuitous in view of the fact that the main point is as good as settled—that is, the calling of a new European Congress. On this, all the great Powers are now practically agreed. Each one of them knows that if it were to make a mad rush into war, the results of the contest would, in the end, be passed upon by a Congress. The lesson which Russia learned when she saw her treaty of San Stefano torn up at Berlin, cannot so soon be forgotten. Doubtless there is danger of a clash on the Servian frontier, or between Bulgarian and Turkish troops, but even if that were to occur, it would not mean that "general war in Europe," of which newspaper writers from Warrington down have been so fond of discoursing when other themes failed. The chief difficulty remaining is to fix the programme which the coming Congress will discuss, and to determine with what demands and stipulations Austria and Germany will consent to attend it. But diplomacy is busily at work, and should be able speedily to dispel the slight war-clouds remaining.

A cynical Englishman who was once asked to define American "graft," replied that it was the same thing as British "incorruptible honesty." The element of truth in this is certainly suggested by the inquiry, now going on, into the fraud and stealing practised in connection with an asylum in Poplar. A sordid and sickening story of official dishonesty and looting of the public funds has been brought out. Some of the details imply that neither Tammany nor the Republican machine in Philadelphia could teach evil-minded politicians in England anything about nest-feathering. The board of managers of the asylum took money and other gifts for the wasteful contracts which they awarded, in the finest style of our best-known thieves. One witness, for example, swore to the way in which work was made for him. A manager said to him:

"We must find some work somehow for you. What about this chimney-shaft? We shall have to take that down and rebuild it." The witness said: "Good God, Jack! That won't do; they won't stand that"; and he said, "That will be all right. They will stand anything. You do what I tell you." The witness said, "What shall I do?" Peacock replied, "You go inside and tell the matron the chimney-shaft is out of the upright and is falling down, and if it is not soon taken down it will fall through the kitchen roof and injure some of the patients." The witness went inside and told the matron the chimney-shaft was dangerous. Shortly after that he got an order to attend to the chimney-shaft, and in consequence he sent in an estimate of £45 10s. There was nothing the matter with the chimney at all, although if one looked at it sideways it would appear out of the upright

Equally illuminating was the explanation by the same witness of the method by which he got a timber contract for the asylum, though he knew nothing whatever about the business. There was the inevitable secret meeting with the managers in a public house, the familiar arrangement to "freeze out" the lowest bidders, the calling off of inspectors, who found fault with the material delivered, and so on. It all reads like a chapter—or page—of Tammany. The revelation does not, of course, prove English politics to be rotten, but neither are the American people as a whole to be judged by samples of similar villany.

DETAILS LATER.

Mr. Bryan evidently feels the destructive power of Gov. Hughes's analysis of his plan of corporation control, for he has devoted several speeches to reply. What the Governor did was to ask respecting the Bryan scheme for forbidding any corporation to supply more than 50 per cent. of the demand for the kind of wares it produced, how it could be made to work. He specified enormous if not insurmountable difficulties, first in obtaining the facts, and then in applying the Bryan principle to them, and called upon Mr. Bryan for further information and explanation. But the Democratic candidate, in his rejoinder, while firmly standing by his original theory, contented himself with saying on the point at issue that "the details could easily be adjusted later." The phrase illustrates one of the capital defects of Mr. Bryan's mind, in dealing with political questions. He does not see that, as an old English statesman put it, "in legislative proposals, the details are everything." Any man of warm and benevolent instincts, such as Mr. Bryan undoubtedly has, can suggest grandiose plans for making the world better, but the putting them into practical effect is a painful drudgery from which his type of intellect shrinks. It is so much easier to dismiss every difficulty as "a mere matter of detail"! But every man who has had to do with the drafting of laws, or even the organization of a club, knows that the "mere details" are the really back-breaking things, often decisive of the fate of a bill or the life of a society. It is one thing jauntily to propose a scheme for bringing in the millennium; it is another to proceed to the preliminary work of binding Satan.

In this quality of Mr. Bryan, which leads him to think he can ride cross-country without jumping fences, there is something to remind one of the way in which the French National Assembly set about reforming the world by a series of votes, leaving the details to be adjusted later. That hard-headed and clear-sighted Englishman, Sir Samuel Romilly, who was in Paris in 1789, observing the "violence" and the "rash measures" of the Assembly, made the shrewd remark:

> If one single rule had been adopted, namely, that every motion should be reduced to writing in the form of a proposition, before it was put from the chair, instead of proceeding, as was their constant course, by first resolving the principle, as they called it (*décréter le nrincipe*), and leaving the drawing what they had so resolved (or, as they called it, *la rédaction*) for a subsequent operation, it is astonishing how great an influence it would have had on their debates and their measures.

There could hardly be a more exact description of Mr. Bryan's favorite method. Grant him his "principle," and he cares nothing about the ways and forms of embodying it. Yet they are of the very essence of the debate. Nine-tenths of all controversies about projects of legislation turn upon what Mr. Bryan or Mr. Roosevelt would call unimportant technicalities. But without the small details, there can be no large measure. And the real statesman thinks things through to their minutiæ before announcing that he has any solution whatever. Gov. Hughes not merely advocated a Public Service Commission, he saw to it that a bill was drawn specifying all its powers and duties. Mr. Bryan prefers to dream amiable things about his pet utopias. Actually to locate them on a real earth, is a task which he lightly says he will attend to "later."

Mr. Bryan's fondness for percentages is a sign of the speculative tendency of his mind. His old silver ratio, once so sacred and eternal, was not his own invention, but he has since run to others. His classification of corporations into those which, at 49 per cent., are blameless, and those which, at 50, are to be outlawed, is purely fanciful. It is not drenched in fact. That Mr. Bryan ever sat down and gave himself a headache by trying to see clearly just how his percentage theory would come out in practice, no one believes. He has neither time nor inclination for dry details. His forte is happy thoughts—like government ownership of railways; and if the hard grasp of reality shows them to be most unhappy thoughts, then he drops them as readily as he propounded them. So it would be, no doubt, that grotesque idea of his which Robert Underwood Johnson reported in the New York *Times* of last Friday, to divide all the Federal offices among the different parties in proportion to the vote they cast. Here, again, is the obsession of a percentage, which Mr. Bryan seems wholly unable to resist or cast off.

In such considerations may be found the true force of the objection made against Mr. Bryan that he is without experience. The candidate complains of this. He points to many men who have made good executives, though previously untried. Yes, but such men had displayed painstaking and constructive minds, with a firm grip on facts. The trouble with Mr. Bryan is that he is a cloudy theorizer. People have confidence in the goodness of his heart, but they distrust the workings of his intellect. They shrink from the experiment of putting into a great office a man who is capable of bringing out every morning his dream of the night before, and of delegating to others the duty of making it real.

PUBLISHING LOVE LETTERS.

It is curious that the publication of a great man's love letters is sure to set the world a-wrangling over the propriety of such an act, and that the gentlest of emotions is so easily made the cause of animosity. It is thirty years since the letters of Keats to Fanny Brawne were printed by H. B. Forman, thereby arousing the indignation of Sidney Colvin and Matthew Arnold and other admirers of the poet. To-day comes Prof. A. E. Hancock with a new "literary biography" of Keats, and a fresh turning of the old question:

> We believe the publication of these letters was justifiable. The gain for Keats is greater than the loss. Our sympathies are deepened and our understanding is quickened. Keats, the lover, is still the poet. He loved a woman as he loved his art. The defects of the lover are the virtues of his poetry.

Professor Hancock exclaims shrilly against the word "Cockney" which had been so persistently associated with the poet's name, and which was revived by the publication of these letters. He will see in them no vulgar lack of restraint, and no sign of enervation. He quotes with approval that ninth letter: "I have a sensation at the present moment as though I was dissolving," etc., which Matthew Arnold had pointed out as particularly discreditable to the writer's character.

In a matter of personal taste it would be enough, no doubt, to agree with Matthew Arnold, and no more words. But the question involved is a pretty one and constantly recurrent. It would not occur so often if editors recognized the simple fact that most human beings (as most dumb beasts, for that matter) are

a trifle ridiculous when they make love Adam Smith, with his clear, imperturbable judgment, set the matter right once for all in his essay on "Moral Sentiments":

> The passion appears to everybody, but the man who feels it, entirely disproportioned to the value of the object; and love, though it is pardoned in a certain age, because we know it is natural, is always laughed at, because we cannot enter into it.

When we pass from the observation of love in actual life to its expression in letters, we are perhaps oftener impressed by its unreality than its absurdity; but in either case the effect is due to the purely personal character of the emotion and to our inability "to enter into it." Read the "Love Letters of Mary Wollstonecraft," Shelley's mother-in-law, which have just been reprinted with an excellent introduction by Roger Ingpen, or the greater letters of Julie de Lespinasse, which Mrs. Humphry Ward has brought to the attention of English readers, or the "Letters from a Portuguese Nun," or almost any other of the famous collections, and the first thing you will remark is their coldness, their inability to convey any of that warmth which must have been in the heart of the writer. A poet is a poet just because he takes these personal emotions and renders them universal by interpreting them deliberately through the mind and imagination. Thus, our sympathies are aroused by artifice, when nature leaves us cold. Take "The Last Sonnet" of Keats himself:

> Bright star, would I were steadfast as thou art!

in which he sums up for the world the same passion he had been pouring out privately in his letters to Miss Brawne. It is not merely the difference in beauty that impresses one, but the difference in realism. The sonnet seems the substance of which the letters are the impalpable shadow.

Now and then a man of genius has been able to carry this transmuting power into the private actions of the heart. Swift did it in the little language of his Journal to Stella; Bulwer Lytton tried to imitate Swift in the letters to his "poodle," and merely wrote himself down an ass. Nor is it difficult to see why we cherish the letters of one and despise the others. Through all the childlike expansion of Swift's familiar talk there run hints of great things doing in the world, glimpses into the secret wells of human nature, and echoes of a tragedy that is not of the writer alone, but of mankind; the very consciousness in the writer of these general interests and of himself as merely an actor in the drama in which all men have their parts, shows there was always present in Swift something besides "complete submission of the mind to love." Whereas in Bulwer's letters we read only the outpourings of a private emotion and of an unrestrained self-abasement. Restraint is the exact point of difference.

Now, Professor Hancock can find nothing to choose between the relaxation of Keats's love letters and of Dante's "Vita Nuova" except "a difference of style. . . . The experience, however, is precisely the same, the complete submission of the mind to love." *Difference of style!* quotha. It is enough if by style Professor Hancock means in the one case that addition of ideas and imagery which makes of the "Vita Nuova" something utterly different from a private complaint, and in the other case that commonplace exasperation of the nerves which makes these letters of Keats, say what you will, sound like the writing of any surgeon's apprentice read in a police court. We expect, and have the right to expect, of the poet that he should carry some sense of his high calling into his personal affairs. If his letters show neither the force of genius nor the restraint of breeding, it is treachery to his memory to publish them.

The serious aspect of the matter is that such letters throw into more prominence a corresponding trait in the writer's formal works. The relation, for instance, between Bulwer's foolish letters and certain weaknesses in his fiction would occur to any one. And so with Keats: these letters, if we allow ourselves to consider them, tend to force our attention upon certain Cockney traits, which, *pace* Professor Hancock, do show themselves too frequently in the earlier poems. It was the misfortune of Keats that as a boy he fell under the influence of men like Leigh Hunt and Benjamin Haydon, cheap radicals and egotistic dreamers, who encouraged him in the romantic revolt against taste and common-sense. The interest of his life is the story of a man of strong will and sensitive genius seeking to create for himself the discipline he utterly failed to receive from his home and friends. What he sought and what he found may be seen by comparing "Endymion" with "Hyperion"—found, but never fully enjoyed, for then came the abhorrèd shears. And even in his later work the hand slips back at times into the old faults. Now, the love letters, though written at the end, show the untrained man still lurking beneath the polish, and, in so far as they have any effect at all, nullify the years of thought and labor, presenting to us in place of the singer of the world's beauty that "good Johnny Keats" he deliberately tried to outlive and to conceal.

THE NEW CHRISTIAN APOLOGETIC.

"How May Christianity Be Defended To-day?" is the title of a significant paper by Prof. A. C. McGiffert of the Union Theological Seminary, in the October number of the *Hibbert Journal*. This new method of maintaining the faith once delivered would have made the Christian apologist of a generation ago—perhaps even a decade ago—gasp and stare. It is not that any one thing which Professor McGiffert says is novel; each of his utterances could be matched in the writings of some theologian who is professedly orthodox. The editors of the *Biblical World*, for example, tell us in their latest issue that miracles, at least in the old acceptation of the term, are probably not a vital part of religious faith. Professor McGiffert's article is notable as gathering up into a few pages these scattered views and presenting them in a *Summa* of religious radicalism. His thesis, in brief, is this:

> An apologetic which should succeed in showing these four things: first, that the ideal of human sympathy and service is the highest of all ideals; secondly, that this is the Christian ideal in such a sense that the man who shares it may properly call himself a Christian, and that the man who would be truly a Christian must make it his own; thirdly, that this Christian ideal is a divine ideal, supported and promoted by God; and, fourthly, that the Christian church is an institution in the long run indispensable for the promotion and realization of this ideal—an apologetic which should succeed in showing all this would seem a sufficient and indeed complete Christian apologetic, leaving out nothing essential and including nothing unimportant.

This bare outline of conclusions is less striking than some of the details

of Professor McGiffert's argument. He does not attack the traditional doctrines; he holds that they are largely irrelevant, not worth either attacking or defending. Thus by a single sweep of the hand he would demolish the whole vast structure of apologetic so laboriously erected through the centuries:

> A new age has dawned in the history of Christianity and the old apologetic is out-of-date, not because it attempts to prove so many unbelievable things, but because it attempts to prove so many things in which men have no interest.

Hence Professor McGiffert urges that the emphasis must be laid not on man's duty to God or to himself, but on his duty to his neighbor. He adds:

> If all good men can be enlisted in the promotion of this end it matters little by what name they call themselves, Christians, Jews, Ethical Culturists, Humanitarians, Free-thinkers, Agnostics, or Atheists.

Whatever their formal designation, and even though they may "reject all else that commonly goes by the name of Christian," they are working for "the controlling purpose of Christ himself." Furthermore, the belief in the divinity of Christ "represents a sound instinct. It voices the conviction that the Christian ideal . . . must come from God and have His support." But, of course, "Christians to-day may recognize that the traditional doctrine is defective, and may see that there are other and perhaps better ways of conserving the interest which it has conserved." Modern disbelief in God, Professor McGiffert continues, "is due in large measure to the persuasion of the self-sufficiency of the phenomenal universe, to the feeling that God is needed to account neither for its origin nor for its continuance." And yet:

> With this disbelief Christian apologetic has nothing to do, and its wide prevalence is no ground for alarm. If Christian faith were dependent upon the overcoming of this unbelief, we might well be discouraged. But Christian faith moves wholly in another realm, the realm of ethical values.

As to the Church, Professor McGiffert is equally tolerant. His point is that, in spite of the "failures and mistakes of the church, in spite of its frequent distortion of values, and its all too common emphasis upon the wrong things," a church is necessary in order that there may be "conscious community of purpose and conscious combination of effort." In short:

> Not sacraments, or doctrines, or historic descent, or ministerial succession makes the Christian church in which the modern apologist is interested, but an organized body of men, enlisted for the promotion of the one great end, wide enough to embrace them all, and of such a character as to call out their best effort and enthusiasm.

In a few sentences torn from the modifying context we cannot pretend to do justice to the argument. But this bald statement of conclusions makes it clear that Professor McGiffert's church is substantially Matthew Arnold's conception, that of a society for the promotion of goodness; his God is certainly no more definite than Arnold's power, not ourselves, that makes for righteousness. In these views Professor McGiffert may be said to represent fairly both the rising generation of Protestantism and the Modernists of the Catholic Church. Each year the question presses more insistently: What is to be done with these radicals? The Papacy has answered by drawing back sharply into the ancient way. The Episcopal Church unfrocked Dr. Crapsey, but hundreds, perhaps thousands, of its clergy, who in essentials agree with him, remain unmolested. To-day Protestantism as a whole seems to be trying to steer an impossible middle course—to believe in God and yet not believe in Him, to declare the church divine and yet assert that the terms *divine* and *human* are virtually synonymous, to profess credence in miracles, with the stipulation that there is nothing supernatural about them, to say one thing and really mean another. But the Protestants cannot long continue to have it both ways; for that is not the method of truth and honesty. The attempt thus to play fast and loose is an abdication of moral leadership. Sooner or later the Church must stop dealing in ambiguities, and unreservedly cast in its lot with the reactionaries, or else, with Dr McGiffert and his school, frankly abandon traditional creeds and interpretations

It is natural that the church, made up as it is of human units, should shiver on the brink of such a tremendous decision, and should prefer to drift along. If it goes with the reactionaries, it repels a large number of the better educated and the more progressive, and may thus lose the intellectuals, those who insist that its formularies, in substance and expression, shall be adjusted to the findings of science. In order to hold those men at whom Dr. McGiffert's argument is aimed—some outright rationalists, others "light half-believers of our casual creeds"—the church must abandon the whole baggage of anthropomorphism and miracle. But how, then, shall the church answer the needs of the plain and often unlettered millions for whom abstractions and broad generalities mean little or nothing? Is it possible for our vague creeds and still vaguer gods to move the hopes and fears and passions as they were once moved by the enraptured vision of a pitying Father, and his only Son, a bleeding Christ who consciously and deliberately died for our sins? The truth is the truth, and we must have it at any cost. We do not go with those who would perpetuate a superstition for the sake of controlling or edifying the masses. But since the truth is the truth, we must face it and ask whither under our new creed those men will turn who, with Augustine, cry to God: "Fecisti nos ad te, et in quietum est cor nostrum donec requiescat in te."

MODERNISM IN FICTION.

Twenty years ago this fall President Eliot in an after-dinner speech referred to the most important book of the season, which all his hearers had, of course, been reading; and when he went on to show that his reference was to Mr. Bryce's "American Commonwealth," there was a little gasp of half-ashamed surprise, for that large company of serious, middle-aged men had taken for granted that he meant "Robert Elsmere." Certainly, since 1888 no novel has been the book of the season in the sense in which that phrase may be applied to Mrs. Humphry Ward's first important work. Old and young, orthodox and radical, literary and "practical"—all read and discussed "Robert Elsmere." That this success was not due to its literary merits, solid as those are, is sufficiently proved by its subsequent submergence. The most faithful admirers of its vivid portraiture and clear, high-bred English would never claim rank for it as a classic. Moreover, were it to appear now for the first time, it could not take the place it held twenty years ago. In short, it was the book of the day because it expressed in concrete, dramatic form the typical thought of the day, and it is well worth returning to, if only as a landmark by which to judge how far and in what direction the tide of intellectual battle has rolled.

One of the most decided impressions made by a re-reading of "Robert Elsmere" in the light of contemporary problems is that of a certain narrowness and hard-and-fastness. Elsmere's own nature is warm and rich, open to all

æsthetic and humanitarian emotion, but his crucial experience is a purely intellectual one, attained in the study by means of a single line of thought so direct and sharply defined that his rapid progress along it scarcely needs to be followed, the goal is so clearly foreseen. One is almost tempted to compare it with that delicious episode of Gibbon's youth, when, according to Birrell, he, "without the aid of a priest or the seductions of ritual, read himself into the Church of Rome and was one fine June morning in 1753 baptized by a Jesuit father. By Christmas, 1754, he had read himself out again. Gibbon's conversion was perfectly genuine, . . . but it was entirely a matter of books and reading." Having thus read himself out, moreover, Elsmere has not a moment's hesitation as to his duty. On one side is all that makes his own happiness and—far dearer to him—his wife's; on the other is honesty. For him, or for Mrs. Humphry Ward, thus envisaging the case, there can, of course, be but one solution, and there is something refreshing and bracing in the prompt decision with which the hard choice is made. Undoubtedly, too, there is room for selfishness and cowardice, for quibbling and self-deceit, under the ample mantle of the new ecclesiastical liberalism, which holds such choice unnecessary. Nevertheless, in its inclusiveness, its emphasis on the mystical, the moral, the institutional, and the practical, rather than on the intellectual side of religion, the present liberal movement within the churches shows a far surer instinct for human nature and bids fair to lay a more lasting, because a broader, foundation for the religion of the future than rationalism can ever achieve. At all events, consistently or not, honestly or not, the more educated Protestant churches have by this time assimilated the results of that historical method which was the fatal solvent of Elsmere's orthodoxy, and in spite of an occasional *cause célèbre* it is clear that they are not—to change the figure—going to be wrecked on the rock of miracles. The question of the present and the future, indeed, is not so much, Can these churches square themselves with modern knowledge? as, Can they so square themselves with modern life—with its tremendous moral and social problems—as to be of any real use and leadership? By their power to produce prophets, not critics, will they stand or fall.

Meanwhile, the intellectual ferment has passed on to the Roman Catholic Church and has again reached the point of expressing itself through the medium of serious fiction. By this expression it has awakened widespread interest throughout the non-Catholic world. Fogazzaro's "Il Santo," in Italian, French, and German, "has been the storm-centre of religious and literary debate." and the momentum thus gathered, the interest attaching to its condemnation for heresy, and its enthusiastic introduction by William Roscoe Thayer, have all helped to win for it a wide public in this country, in spite of the extreme foreignness of its ascetic ideals and emotional temper. An aspect of the Modernist movement really far more comprehensible by the reader of English race is presented in "Out of Due Time," a very distinguished piece of work which has strangely failed thus far to make any mark in America. Written by Mrs. Wilfrid Ward—herself a Hope-Scott of Abbotsford, and a descendant on the mother's side of the great Catholic house of Norfolk—whose husband, a son of the well-known "Ideal" Ward of the Oxford Movement, is the editor of a leading Catholic review, this novel expresses from the inside, very eloquently and persuasively, the views of representative French and English liberal Catholics.

Taken together, these two novels give an illuminating picture of what Modernism really is. To read them immediately after "Robert Elsmere" is to be freshly and sharply struck by the contrast between the Protestant and the Catholic temper. If the principle of authority is enthroned in any Protestant church, it is surely in the Church of England, yet Elsmere's decision lies wholly between himself and his conscience. That he might hold his opinions in abeyance, distrust them just because they are his own, even that he might refrain from expressing them, at the behest of any human authority whatever, never so much as enters his mind. For the Catholic, on the other hand, obedience is a primary virtue; "an absolutely rebellious Catholic is a contradiction." The first definite effort of the Catholic Modernist, therefore, must be to convert his superiors, to get the principle of authority invoked on *his* side. A fair comparison is with that of the difference between Luther and Savonarola. Even in excommunication, even in open revolt against the actual, individual Pope, the great Dominican is never a rebel to the Church, never a heretic or schismatic. And it is along Savonarola's lines that Fogazzaro's Saint would work. The reform he urges is moral and spiritual, it uses the language of the great mystics of all ages, and, like Savonarola's, it includes a certain puritanism, a simple and severe ideal of life. But, with all his fearlessness and his sense of immediate inspiration, the Saint is unfailingly true to the essential ideals of historic Catholicism, even to the almost repulsively mediæval one of asceticism. As for schism, he exclaims:

> What manner of faith is yours, if you talk of deserting the Church because you are displeased with certain antiquated doctrines of her rulers, with certain decrees of the Roman congregations, with certain tendencies in the government of a pontiff? What manner of sons are you who talk of denying your mother because her dress is not to your taste? Can a dress change the maternal bosom? When, resting there, you tearfully confess your infirmities to Christ, and Christ heals you, do you speculate concerning the authenticity of a passage in St. John, the author of the Fourth Gospel, or the two Isaiahs? When, gathered there, you unite yourselves to Christ in the sacrament, are you disturbed by the decrees of the Index, or of the Holy Office? When, lying there, you pass into the shadows of death, is the peace it sheds about you any less sweet because a Pope is opposed to Christian Democracy?

Truly may the professor say,

> With Benedetto there is no danger of heresies or schisms. At the very last meeting he demonstrated that schisms and heresies, besides being blameworthy in themselves, are fatal to the Church, not only because they deprive her of souls, but because they deprive her of elements of progress as well; for if the innovators remained subject [mark the word] to the Church, their errors would perish, and that element of truth, that element of goodness, which—in a certain measure—is nearly always united to error would become vital in the body of the Church.

Nor is this ideal of loyal work within the Church confined to what may be called the moral wing of the movement. The "intellectuals" are also represented in Fogazzaro's book, and their spokesman, Selva, defining "the ills afflicting the Church" as in substance "the result of discord between her mutable human element and her immutable element of divine truth," would engage those who lament these ills in only what he calls "a negative accord," which "we must strive to widen that it may embrace the majority of the intelligent faithful, that it may even reach the hierarchy."

The scholarly, intellectual side of the Modernist movement, however, is far more fully developed and presented in our English Catholic novel. This presentation is of extreme interest on account of the ability, subtlety, and persuasive charm with which the ideals of liberalism and of Catholicism are harmonized. In Mrs. Wilfrid Ward's method, indeed, the influence of Newman is almost amusingly visible. Her task is to show that the most modern scholarship, the freest thought, the finest culture, are compatible with absolute loyalty to the Catholic Church and heartfelt obedience to the Vatican. How shall she prove this to the average Englishman, with his inherited hatred of "Popery," his mistrust of subtlety, his contempt for servility? How better than by embodying her philosophy in a *man*, and a typical Englishman at that, one whose transparent honesty, sober kindliness, and steady, pervasive commonsense will so win the reader's confidence as quite to disarm his prejudice? Need-

less to say, this feat requires real creative power, and the character of George Sutcliffe is enough to rank Mrs. Wilfrid Ward high among artists as well as apologists. In contrasting, too, his character and opinions with those of the brilliant, impatient French scholar, with his fascinating, tyrannizing intellect, his relentless logic, his fatal inability to compromise or to wait, whose high hopes and terrible disappointment form the central theme of her book, the author makes a most subtle, never emphasized, appeal to national prejudice, so that in the end one feels that submission to the Vatican is a thoroughly English attitude! It is impossible, however, to do any justice to Mrs. Wilfrid Ward's convictions or to the sweet reasonableness of her method without some fairly long quotations. For example, Sutcliffe says:

> We must remember that the business of the authorities is to preserve revealed truth, not to teach history or science. The Christian revelation has been developed and applied more or less accurately in the dogmatic theology which has gradually grown up under pressure of the controversies of ages. This theology is in possession. It is, as it were, the common law of the Church. Authority accepts and administers it. Where positive science shows it to be imperfect, to need some change, the man of science must urge his case in the field of debate. The individual theologians will, in deference to his criticisms, eventually correct it, and then authority will regard the new theology—the amended law—as their rule. But they can no more, on their own responsibility, supersede the existing theology, than the magistrate or judge can give a ruling contrary to existing civil law. . . . Theology is the outcome of thought in the Church which has been approved. Its authority is a recognition of the functions of thought in the ecclesiastical polity, and thus it protects our liberties while it also at times curtails them.

Again:

> The Church here [in Rome] seems to me far more like the early Church than I expected it to be. It is the absolutely living centre of spiritual life, of heroic devotion, throughout the world, to the souls of men. I do not say that I am in love with all the officials; I am not. But I do think that the width and the wisdom and the sense of spiritual values here are enormous. I know that there is a danger in being more keen about two additional missionaries to the Indians than the founding of a chair of philosophy; but I think St. Paul would have been in the same danger. . . . But, d'Etranges, don't think me quite a fool if I go further still, I don't think only that there would be a danger of tyranny and of upsetting the spiritual life of the many, if they always adopted the guidance of the intellectual men of the moment, but I think it is actually in the interests of thought in the long run that they should act as a drag upon progress. . . . You are not more alien to the government of the Vatican than you would be to that of the House of Commons. The nation in the world which has been the quickest to put theories into practice is France, and we do not all think that she has been the happiest and the wisest. I think this difference in pace is in the nature of things, because the men of action have a true instinct that mankind to decide truly must decide slowly, and I believe that those men of thought who are before their time must of necessity suffer, and suffer very much.

Modernism, then, so far at least as it expresses itself in these two representative novels, remains distinctly a movement within the Church, and one, moreover, which is well on its guard against undue intellectualism. Its leaders are permeated with the idea of "the littleness of the human mind, in comparison with its moral and its spiritual life." And its motto is that sentence of Fogazzaro's which Mrs. Wilfrid Ward places on her title-page, "La modernità è buona ma l'eterno è migliore."

L. W. H.

DANIEL COIT GILMAN.

The great achievement with which the name of President Gilman will always be chiefly associated is that of having naturalized in America the idea of a true university. It would be difficult, if not impossible, to point to any other instance in which a fundamental advance in the aims of the higher education in a great nation has been so clearly identified with the work of one man. To say this is not to claim for Mr. Gilman any great originality of conception, on the one hand, or, on the other hand, any monopoly in the work of shaping the methods by which the ideas underlying the creation of the Johns Hopkins University were brought into definite and concrete form. It is perfectly true that the time was ripe for the great forward step that was taken in Baltimore in 1876; vague aspirations in that direction existed in a number of places, and fragmentary efforts toward higher university work were made here and there, by some exceptionally gifted or exceptionally equipped professor in one or another of our leading institutions of learning. But there is no telling how long a time the actual ripening might have required if it had been left to the gradual increase of these sporadic efforts, which had no systematic support, and which were not even recognized, by any but the merest handful of men, as pointing toward any broad or significant result. The first great merit of President Gilman was that, from the moment that he was called to Baltimore, the object which he set before himself was that of making the institution which was to arise there under his guidance a means of supplying to the nation intellectual training of a higher order than could be obtained at existing colleges and universities, and thus distinctly raising the standards of American science and scholarship. The wisdom of Johns Hopkins in placing no restrictions on the discretion of his trustees, and the intelligence and broad-mindedness of the trustees themselves, gave President Gilman a rare and enviable opportunity to carry out this high purpose; but it must not be forgotten that, in the practical execution of such a task, there arise a thousand difficulties, temptations, and insidious dangers, any one of which may portend serious damage, and all of which, taken together, may mean utter failure. To be firm against local prejudices or desires when in conflict with the great end in view; to be uninfluenced by personal claims and unafraid of temporary complainings; to disappoint the natural hopes of those who were anxious to see imposing buildings and big crowds of students, and to await the recognition which attends the genuine achievement of a vital but not superficially showy result—these are things that look easy in the retrospect, but that did not seem by any means matters of course before the event.

As to the actual methods adopted in the inception of the Johns Hopkins University, it would be an error to attribute them to the unaided initiative of President Gilman. He felt his way; he had at his side, in the original group of six professors, men who were not only eminent scholars, investigators, and teachers, but able advisers. Three were American and three English; and of the three Americans, two had been thoroughly imbued with the methods of the German universities in which they had been trained. It was, of course, in the main the adoption of German university standards and methods that characterized the new university at Baltimore, and differentiated it from anything that had theretofore existed in America; and in determining just how far to go in this direction the views of two such men as Gildersleeve and Remsen were naturally of the utmost value and influence. Anything like an exact imitation of the German university was not attempted; but the conclusion was soon arrived at that the German doctorate of philosophy must be set up as the fixed goal of students, and that the German *Seminar* must be one of the chief instruments of instruction. That before receiving the university degree the candidate must have shown the training of an investigator in his chief subject, as well as the acquisition of a certain amount of specialized knowledge, was thus fundamental in the Johns Hopkins plan from the beginning; it need hardly be added that, as a matter of course, productive research was, generally speaking, understood to be an indispensable part of the activities of the professorial body. That the combination of the work of research

with the work of teaching was a cardinal part of President Gilman's programme from the outset is evident from his inaugural address delivered February 22, 1876, half a year before the university was opened; and the promptness with which the university began the publication of the *American Journal of Mathematics*, the *American Chemical Journal*, and the *American Journal of Philology* gave evidence of the prominence, in President Gilman's mind, of the idea of furnishing all necessary facilities and encouragements for the prosecution of research.

The project of establishing twenty fellowships, to be held for a period of from one to three years by young men of good attainments and of unusual promise, had been adopted by Mr. Gilman before he had gathered his professors together, and it proved to be a factor of the first importance in the creation of that inspiriting atmosphere which distinguished the early years of the Johns Hopkins and which all who shared in the labors and the enthusiasms of that time cherish among the brightest memories of their lives. The fellowship and scholarship method of attracting students has, in the past thirty years, spread to great dimensions in our country, with results that are not without their objectionable side; but neither at the Johns Hopkins nor elsewhere is the idea of the fellowship now what it was when Mr. Gilman gathered in the aspiring young men who held the Johns Hopkins fellowships in the first few years. It may be somewhat difficult to point out the exact difference; but perhaps this may best be indicated by saying that the Johns Hopkins fellowship in those days did not seem a routine matter, an every-day step in the regular process toward a doctorate or a professorship, but a rare and peculiar opportunity for study and research, eagerly seized by men who had been hungering and thirsting for such a possibility. Of course not every one of the twenty was a *rara avis*, nor was every one equally enthusiastic. But, on the whole, here was a little phalanx of gifted and ardent young men gathered from every quarter of the country, some of them fresh from study in Germany, and nearly all filled with the idea that a new world was opening out for American learning and that they were the first to be admitted to the privilege of entering upon its intellectual joys. At least one member of the first band of fellows, a man who has reached the highest distinction as a philosophical thinker and writer—Professor Royce—some years ago recorded in a charming way his recollections of those inspiring days, and what he says about them is no more than those who were his contemporaries at Johns Hopkins will recognize as true.

Among the qualities of President Gilman to which the splendid success of the young university was due, none is more frequently or more justly pointed to than his rare talent in the choice of men. With the small faculty with which the work was begun, it was of essential importance that every appointment, or nearly every appointment, should be of preëminent excellence; and such was the case. Moreover, the qualities of the various professors—their temperament, their predilections, their methods, their origin and antecedents—were extremely diverse; and it was in a measure this very diversity that gave Johns Hopkins that peculiarly intense and picturesque vitality that was so marked in its early years. It would never in the world have done to have a whole faculty of Sylvesters; anything like a systematic programme would have been out of the question, and still more out of the question would have been the carrying out of any programme whatever. But on the other hand, the presence of *one* Sylvester was of absolutely incalculable value. Not only did he fire the zeal of the young men who came for mathematics, but the contagion of his intellectual ardor was felt in every department of the university, and did more than any other one thing to quicken that spirit of idealistic devotion to the pursuit of truth and the enlargement of knowledge which is, after all, the very soul of a university. It was one of the finest traits of President Gilman that he not only appreciated qualities like Sylvester's sufficiently to lead him to select such a man in the first place, but—what is far more noteworthy—was capable of such genuine sympathy with him, such participation in his aims and enthusiasms, as to overcome all the barriers and difficulties and vexations that necessarily attended dealings with a man having in so extraordinary a measure the trying temperamental peculiarities that are the privilege of genius. It was not only in the selection of men, but in dealing with them, that Gilman showed the gifts of a remarkable administrator. Nor does this adequately express the source of his hold on his colleagues, for that was due not merely to skill or sagacity, but also to the really extraordinary breadth of his interests. There was nothing great, nothing significant in any field of effort, that failed to appeal to his imagination and to arouse in him the keen interest of a man whose mind was ever open to the possibilities of achievement and to the promotion of culture in all its forms.

Mr. Gilman's career did not begin with the foundation of the Johns Hopkins University, and did not end with his retirement from its presidency after twenty-five years of service. Nor was his activity during that twenty-five years confined to his university work. He took an important and sometimes a leading part in every movement for educational and social betterment in Baltimore; he was selected by President Cleveland as a member of the Venezuela Boundary Commission, and effectively applied his skill as a geographer and his talent for the organization of a complex work to the task of that body; he succeeded Carl Schurz as president of the National Civil Service Reform League; he took an active and important part in the administration of the Peabody Fund, the Slater Fund, and the General Educational Fund. Before the Johns Hopkins days, he had done fine work at Yale, especially in the development of the Sheffield Scientific School; and his acceptance of the presidency of the University of California resulted in its almost immediate transformation from an insignificant to an important institution. He edited the works of Francis Lieber and wrote a life of James Monroe and a number of papers on subjects connected with education and with government. After his resignation from Johns Hopkins, he became the first president of the Carnegie Institution, and continued at that post during the years in which its work was taking shape.

But, after all, the central fact of his life, and that which gives it genuine historical importance, was the formation of the Johns Hopkins University. From this event will always be dated the raising of America's chief institutions of learning to the plane of real universities, and indeed the beginning, in our country, of productive intellectual activity on a large scale in the higher fields of research. If anybody is inclined to think that there was nothing but coincidence in this—that it was only a matter of the time and the money coming fortunately together—it is worth while to call his attention to the way in which history repeated itself when, seventeen years after the foundation of the university, the gift of the moderate sum of half a million dollars, by Miss Garrett and others, rendered possible the opening of the Johns Hopkins Medical School. It was not an accident that such men as Welch and Osler—not to mention others—were found for the work then undertaken; it was not an accident that the result of that work was such as was characterized by President Eliot when he spoke of "the prodigious advancement of medical teaching which has resulted from the labors of the Johns Hopkins faculty of medicine." However ripe the time may have been, it awaited the awakening touch of the right men, set on the right track, encouraged and aided to do the right thing, before the result was accomplished. President Gilman was, all his life, a centre of hopeful and creative activity; he had a genuine love of large and useful achievement, and he had

both the steadfastness of purpose and the clearness of judgment necessary to the realization of such achievement; he took a keen interest in those who worked with him and those who worked under him; he was quick to discern excellence of every kind, and eager to help its possessor to the best opportunities for the exercise of his powers; he filled every year of his long life with energetic and beneficent activity; he was kindly and generous; he never lowered the dignity of his office; and he leaves behind him a rare record of high and lasting service to his country and to the cause of learning.

FABIAN FRANKLIN.

Baltimore, October 16.

NEWS FOR BIBLIOPHILES.

R. A. Peddie, librarian of the St. Bride Foundation, in London, has begun to publish, in the *Library World*, what will undoubtedly prove to be a valuable tool for the student of ancient and mediæval literature as well as for the student and collector of early typography, namely, a short title author index to fifteenth-century books. Of bibliographies and catalogues of incunabula there is hardly an end, and there are several indexes to printers; but a comprehensive list of the authors of the books has been lacking ever since the publication of Hain's "Reportorium," in 1826-1838. This gap Mr. Peddie is now proposing to fill. He gives for each work a chronological list of editions (preceded by those without date), and for each edition references to bibliographies containing full descriptions, and also to facsimile reproductions. The first two instalments of the index bring the alphabet down to Albertus Magnus.

No better specimens of book-making have appeared in America than the volumes of William Loring Andrews, printed at the Gillis Press. Mr. Andrews does more than write the text; from the time the book begins to take form until it is bound, it has his closest attention. Then, too, he has the coöperation of Mr. Gillis, a practical printer with ideas of his own. The latest issue—Mr. Andrews says it is his last—is "The Heavenly Jerusalem: A Mediæval Song of the Joys of the Church Triumphant," reprinted from "The Song of Mary the Mother of Christ," a rare Elizabethan collection, "Printed by E. Allde for William Ferbrand," 1601, of which Mr. Andrews owns one of the three known copies. Besides this early version the volume contains numerous variants and copious notes and quotations. Among the illustrations are two original engravings on copper by Sidney L. Smith. The work is published by Charles Scribner's Sons, 120 copies on handmade paper, 27 copies on imperial Japan paper, and 5 copies on special French Japan paper.

On October 27 to 30, C. F. Libbie & Co. of Boston sell the library of the late Gen. John Marshall Brown of Portland, Me. The collection is mainly Americana, with a specialty of books relating to Maine and the Northeastern Boundary. There are few high-priced rarities, but the collection is especially rich in local histories, genealogies, publications of societies, and historical reprints. Among the more important sets are Savage's "Genealogical Dictionary," 4 vols.; "The New England Historical and Genealogical Register," Vols. I.-L.; Thwaites's edition of the "Jesuit Relations," 74 vols.; Force's "American Archives," 9 vols.; Charlevoix's "Description of New France," translated by Shea, 6 vols.; and the Publications of the Hakluyt Society, 152 vols., lacking only Vol. XIII. of the Second Series of being complete. The Bibliophile Society Publications comprise the Horace, André's "Journal," Dibdin's "Bibliomania," the Lamb Letters, the two Thoreau volumes, and several others.

On October 26, the Anderson Auction Co. of this city sells a miscellaneous collection containing twelve early tracts by Martin Luther, printed in Wittenberg from 1520 to 1543; and books on the Indians and on Mexico. On October 27, the firm offers a similar collection, including a copy of Myles Cooper's Tory tract, "A Friendly Address to all Reasonable Americans," printed by Rivington, New York, 1774; "The Harbinger," 1836, O. W. Holmes's first book, and other first editions. On October 28 and 29 the library of Dr. Howard J. Rogers of Albany will be offered. It contains Burton's "Arabian Nights," the original edition, 16 vols.; Alken's "Real Life in Ireland," 1821, and other books with colored plates; publications of the Bibliophile Society and the Caxton Club; a series of works on Christian Science. There is also a collection of bibliography, including Sabin's "Dictionary of Books Relating to America" (on large paper); Smith's "British Mezzotints"; Bigmore and Wyman's "Bibliography of Printing"; and the Rothschild, Rowfant, Gosse, and other scarce catalogues.

On November 16 and 17, Sotheby, Wilkinson & Hodge of London sell a collection of autograph letters and documents, the property of the late Mrs. Julia Davies of Cheltenham. Included are letters of Michael Angelo (with a drawing attributed to him), Cotton Mather, Lord Nelson, Capt. Cook, Henrietta Maria (Queen of Charles I.), John Wesley, Sir Joshua Reynolds, Sir Walter Scott, Charles Lamb, and Jonathan Swift. The original assignment of copyright from John Keats to Taylor and Hessey of his "Poems" and "Lamia," the consideration being £100, is an interesting document; as is also an original Latin epigram, 24 lines, in the autograph of Erasmus.

Correspondence.

SOME CURIOUS MISPRINTS.

TO THE EDITOR OF THE NATION:

SIR: In my work on literary texts I have come across many misprints and corruptions, some that are very surprising. I doubt whether any poem of moderate length has been oftener reprinted or more widely read then Gray's "Elegy." But when I edited it with other of his poems in 1876 I found that it had not been printed correctly for at least a hundred years. There are three manuscript copies of it extant in Gray's handwriting, and many critical editions of his poems (from Wakefield's in 1786 down to Gosse's in 1884) have been published, in which some or all of these corruptions are reproduced. They began with the *editio princeps* of the "Elegy" in 1751, of which Gray says in a letter to Walpole: "Nurse Dodsley has given it a pinch or two in the cradle, that (I doubt) it will bear the marks of as long as it lives." It bears some of them still in the latest editions of the best anthologies (Bryant's and others), and in collections of poetry for educational use. It was given correctly in Gray's first collected edition of his poems (1768), a book in which I found but one typographical error and that somewhat doubtful. The second line of the "Elegy" is almost invariably made "The lowing herd *winds* slowly o'er the lea"; but Gray wrote "wind," as all the manuscripts and the edition of 1768 give it. The blunder mars both the meaning and the metre. The poet does not see the herd as an aggregate but the animals that compose it, as "lowing" also implies. Tennyson said that he "had almost rather sacrifice the sense than have two *s*'s come together," and some of the alterations in his poems were evidently made to get rid of this juxtaposition of sibilants. In one of our conversations we happened to touch upon this point, and I asked him if he had noticed the "winds slowly." "Why, no," he replied, "I have always *read* it *wind*"; but all the copies of the poem at hand had "winds." A worse error in the "Elegy," to refer to only one more, is "Await" for "Awaits" in the ninth stanza, which perverts the syntax and makes nonsense of the passage. The "inevitable hour" awaits the rich, the noble, and the powerful, who do *not* look forward to it or think of it.

Of longer poems, I suppose that "The Lady of the Lake" has passed through more editions and been read by more thousands of people, young and old, than any other in our literature; but when editing it in 1882 I found so many discrepancies and inconsistencies in the various texts that I had to suspend the work until I could obtain a copy of Scott's first edition (1810), which, after vainly hunting in Cambridge, Boston, and other libraries, I got through a London bookseller. This edition was in elegant quarto form and remarkably accurate. In the second edition (octavo, 1810) misprints began to appear, and they multiplied from that time until 1834, when Lockhart professed to have collated the former editions with the manuscripts, and to republish Scott's poems, as the player editors of the 1623 Folio proposed to reprint Shakespeare's plays, "cur'd and perfect of their limbes" and "absolute in their numbers"; but his editing, for a literary man of these latter days, was much worse than theirs. So far as I could find, he very rarely corrected an earlier misprint or corruption, while he added, or allowed his printers to add, a multitude of new ones; and he repeatedly recorded readings of the first edition as "manuscript" readings, and *vice versa*. The accumulated corruptions of this "standard" edition have been perpetuated in almost all the Scottish, English, and American reprints from that day to this. All those in "The Lady of the Lake," for instance, appear in an illustrated edition of the poem published in Edinburgh two or three years ago, with an introduction by Andrew Lang. Many of these corruptions are almost incredibly bad—un-

grammatical, ridiculous, or absolutely nonsensical—but I must not take space for illustrating them here.

"Marmion" has been even more unfortunate, for it was never printed correctly until I edited it in 1884. Scott overlooked sundry bad misprints in the first edition, and did not detect them afterwards. Lockhart, of course, retained them, adding some of his own (double negatives, for instance, which Scott, with all his archaisms, never uses); and I found nearly all the other poems more or less corrupt when revising them for the complete Boston edition of 1887. Let the reader look into any edition of "Marmion," except mine and a few of the more recent ones, and he will find a period at the end of the fifth line of the second canto, instead of the comma which Scott meant to put there; and he will see what an absurd change this makes in the syntax and the sense of the context. He will find a similar oversight of Scott's in the full stop (period in first edition, and colon in others) at the end of the tenth line ("As hurrying, tottering on") of the last (thirty-third) section of the same canto, where there should be a comma. Of the many other corruptions in "Marmion" one is specially noteworthy because it is common in editions of Shakespeare and other authors—the confounding of the obsolete "vail" (to lower or let fall from the French *avaler*) with "veil," a word of entirely different etymology. In Canto iii, Section 14, Scott wrote:

> And proudest princes vail their eyes
> Before their meanest slave;

that is, from shame at the exposure of their secret crimes. Shakespeare uses this "vail" at least ten times, or oftener than "veil"; as in "Hamlet," i., 2, 70:

> Do not forever with thy vailed lids
> Seek for thy noble father in the dust

(with downcast eyes); and in "Measure for Measure," v., 1., 20 (where veil would be absurd):

> Justice, O royal duke! Vail your regard
> Upon a wrong'd—I would fain have said, a maid!

But I have seen editions of Shakespeare in which the word was invariably printed "veil." We have a play upon it in Marlowe's "Hero and Leander": "Vail'd to the ground, veiling her eyelids close."

Sometimes misprints make good sense, and a careful editor who cannot refer to other standard editions may not detect or suspect them; or where two good texts vary, it may be difficult to decide between them. In Tennyson's "Princess," for example, I found such pairs of words as "couched" and "crouched," "regal" and "legal," "royal" and "loyal," the second of each pair being a misprint, though liable to be taken for a reading altered later by the poet. In Browning's "Colombe's Birthday," Act i., the early London editions had "crowning attestation," changed to "crowding" in 1885. I adopted the former in editing the play (1887), but the accomplished supervisor of the Riverside edition (H. E. Scudder) insisted that "crowding" was certainly the poet's own alteration for the better (the context favored it in a way), and he adopted it. In writing to Browning a little later, I referred to the question, and he said that "crowding" was "a vile misprint." It was corrected in the Cambridge edition, if not in the later issues of the Riverside.

A change made by an author may, however, be taken for a misprint. A teacher once pointed out to me what he supposed to be a printer's corruption in "The Wreck of the Hesperus," in the line, "Had sailed to the Spanish Main," which for many years had read "Had sailed the Spanish Main." But it was Longfellow's own correction of a very common misapprehension. Yellowplush, it will be remembered, when he came to Boulogne-sur-Mer, was surprised to find that it was on the land, not on the sea; and the poet found out, one day, that the Spanish Main was the mainland bordering on what he—like nine people out of ten—had supposed to be the sea called by that name. So he quietly inserted the preposition in the next reprint of the poem; but the editors of some school collections of poetry have not found it out. Tennyson, after the lapse of forty-seven years, corrected a similar mistake in "The Poet's Song," which, from 1842 to 1889, had read "The swallow stopt as he hunted the bee"; but an ornithological friend informed him that the bird never meddled with bees, and "the fly" took the place of the long-pursued insect. When "The Palace of Art" was first printed (1832), the poet inserted in a foot-note some stanzas that he decided to suppress, one of which was:

> She saw the snowy poles and moons of Mars,
> That marvellous round of milky light
> Below Orion, etc.

But when he let his friend Palgrave reprint this in his "Lyrical Poems of Lord Tennyson" (1885) he revised the lines thus:

> She saw the Snowy poles and moons of Mars,
> That marvellous field of drifted light
> In mid Orion, etc.

The two moons of Mars had been discovered in the meantime. When the lines were first written the poet must have known that the great nebula of Orion, though "below" the belt of the starry giant, was obviously within the constellation; but apparently he could not at the time decide on a more specific description and thought that "below Orion" might be allowed to pass in a suppressed stanza. But he could not let it stand when reprinted fifty-three years later.

Misprints occasionally find their way into the best dictionaries; like "pornial" (for "primeval"), which appears in the "Century" and the "Standard," if in no others, defined as "meretricious" and assumed to be from the same Greek root as "pornographic," etc. The "New English Dictionary," Oxford, I see, calls attention to this inaccuracy. Mr. Halliwell-Phillipps in 1887 printed privately a "Dictionary of Misprints" "found in printed books of the 16th and 17th centuries" and "compiled for the use of verbal critics, and especially for those who are engaged in editing the works of Shakespeare and our other early dramatists." It was a "mere instalment" of what he hoped to "expand into a larger work"; but his death in 1889 prevented his carrying out the plan. The book contains much curious matter, but the length to which this random letter has already extended forbids me to make any extracts from it.

WILLIAM J. ROLFE.

IGNORANCE OF THE BIBLE.

To the Editor of The Nation:

Sir: Have you room for a word of protest against the vast and growing national ignorance of the Bible? Before long, if tendencies continue, we shall have only a dead Scriptures embalmed along with the dead languages in the memories of a conservative minority. Some recent experiences of mine have accentuated the apprehension that we are soon to be an un-Bibled people.

As a substitute Sunday-school teacher I asked a class of boys from the best families in this refined New England community where a college has been disseminating culture for more than a century, "What is meant by the words 'prodigal son'?"

One lad immediately vouchsafed, "It's the sun that rises and sets each day, isn't it?"

But he was immediately corrected by a wiser boy who said, "No, 'tisn't. The prodigal son means Jesus Christ."

I had occasion to lead a Bible study meeting of college students, and to wake them up to the need of greater familiarity with the Scriptures, I ventured as a test-question: "How many of you college men think you could find the book of Hezekiah in the Bible without using the index?" One man inquired how much time I'd give them, and when I permitted them five minutes for the search, fifteen out of the forty men were sure they could accomplish the feat, and actually set about it. Hoping against hope that this experience was exceptional, I carried the same question to Boston a few weeks later, where I had occasion to conduct a Bible class of Harvard and Technology men. In that class, numbering thirteen, every man was sure he could achieve this impossibility.

It was in still another college community where I was residing that an allusion was made in a philosophy recitation to a sentiment to be found in "Corinthians." "What is Corinthians?" was the serious question asked by one student after class; "I always supposed it was one form of architecture."

Bibles are being printed to-day by the millions, we learn from the salaried secretaries of the Bible societies, but these copies are being circulated for the most part in foreign lands as accessories to the missionary activity of the church. Increasingly the Bible is becoming like a military fortification: it does its work on the frontier, where Christendom and heathenism are in conflict, rather than back within the lines of Christian tradition and inheritance. College students graduate from alma mater having been thoroughly drilled in the literature connected with the founding of the Papacy, for example, and yet hopelessly ignorant of the colossal spiritual value and literary worth of the literature that emanated from the young years of the Christian church. Isn't it an anti-climax of culture to be sent forth into life well informed with regard to Shakespeare and Milton, but unacquainted with Isaiah and Jesus? And yet the colleges that offer courses in the English Bible or in Biblical literature are almost a refreshing exception to the rule. And as to the Bible in the public schools, alas!

The Bible is an unopened mine to multitudes of young Americans. It is high time

that those who determine the policies of our educational institutions should sink shafts and furnish smelters so that the ore to be found in this "library of the world's best literature" can be worked up. Perhaps when this is done there will be reproduced the surprise of a young friend of mine aged ten years, who, after happening to read the Bible for a while, looked up in amazement to his mother and said, "Why, ma, I should say this is just as interesting as any other book!"

THE RECORD OF THE RHODES SCHOLARS FROM THE UNITED STATES.

TO THE EDITOR OF THE NATION:

SIR: The article on the American Rhodes scholars in your issue of September 17 by F. J. Wylie, secretary of the Rhodes trustees, interested me very much; for I have inquired of Oxford friends about this very subject, and in July, 1907, I discussed it with Mr. Wylie himself. With his natural courtesy he has made the best presentation of the matter possible, but any fair-minded reader can see that the paragraph on the point of view of the tutor is decidedly apologetic. I cannot decide whether Mr. Wylie excludes the Canadian scholars from the list of Americans, but judging by his figures I feel that such must be the case. I shall, therefore, speak only of scholars from the United States in performing the ungracious but useful function of the devil's advocate. My purpose is to determine the intellectual achievement of these young Americans, according to the ordinary tests, viz., the honor lists of the final examinations. This is the proper time to take this reckoning, for the career of the first set of Rhodes scholars, entering in 1904 or 1905, is completed. I propose to give a fair answer to the following questions:

(1.) What schools (or courses, to use the American phrase) did they enter?
(2.) How did they come out in the finals, as compared with the Englishmen or the colonial Rhodes scholars?
(3.) What rewards of distinction in the shape of open scholarships, or fellowships, or official appointments, have they won?

Of the final honor schools at Oxford, leading to a bachelor's degree, the first in difficulty is that of Literæ Humaniores, "admitted on all hands to be the premier school in dignity and importance." Of the 43 Rhodes scholars entering in 1904, 4 took this course. In the honor lists for 1907, the names of 3 are found: 1 in the first class, 1 in the second, and 1 in the fourth. Of the 38 entering in 1905, 8 took this course. In the "greats" list for 1908, 3 of these are found, none with a first or second, 2 with a third, and 1 satisfied the examiners. The remainder either were plucked or did not take the examination. The honor list for 1907 has 150 names; 29 in the first class, 57 in the second, 50 third, 14 fourth. In this list for 1908 there were in all 147 names; 25 in the first, 56 second, 54 third, and 12 fourth. There is not a Rhodes scholar of any sort in the first two classes.

Next comes the school of Modern History, first in numbers, second in importance. In 1904, 9 from this country were enrolled; in 1905, 5. In the honor lists for 1907, there were 1 first, 2 seconds, 4 thirds; in 1908, 1 first, 2 seconds, and 2 thirds. The honor list for 1907 has 138 names: 9 in the first class, 52 second, 56 third, 21 fourth. This year there are 146 names: 12 in the first class, 50 second, 65 third, 19 fourth.

Eight entered the school of Jurisprudence in 1904, 4 in 1905. In the honor list for 1907, 4 were in the second class and 1 in the third; in 1908, of 4 men, 1 was in the first class and 1 second. The honor list for 1907 has 84 names: 4 in the first, 31 second, 32 third, 17 fourth. The list in 1908 has 71 names: 4 in the first, 26 second, 25 third, and 16 fourth.

A similar course is that for the degree of Bachelor of Civil Law. Six entered in 1904, and 5 in 1905. The record of those in 1907 is 1 first, 2 seconds, and 1 third; in 1908, 1 third.

The School of Theology attracted 2 in 1904, 5 in 1905. Both of the men won firsts for 1907; in 1908, 3 were in the second class, 1 in the third. The full list in 1907 is 65: 10 in the first, 23 second, 25 third, 7 fourth. The list in 1908 is 63; 7 in the first, 19 second, 31 third, and 5 fourth.

The newest school (a very small one) is that of English Literature. It is by some supposed to offer the path of least resistance. Four took it in 1904, and 5 in 1905. In 1907, 2 were in the third class and 1 in the fourth; in 1908 2 in the second, 1 in the third. In 1907 there were twelve in all: 1 first, 4 seconds, 6 thirds, 1 fourth. In 1908 there are 16 names, while on the honor list for women, there are 13 names, 4 of whom won firsts.

It is remarkable that the school of Natural Science has attracted so few from this country. It comprises seven distinct courses in which a degree may be taken: (1) physics, (2) chemistry, (3) animal physiology, (4) zoölogy, (5) botany, (6) geology, (7) astronomy. Yet only 2 Rhodes scholars from America have entered, and 1 took first honors in geology. There were 57 names in the honor list in 1907 and 73 in 1908.

The same thing is true of the School of Modern Languages. One entered it in 1904, and got a second; 1 entered in 1905, and was placed in the third class in 1908.

The record for the Mathematical School is even worse. One Rhodes scholar from this country has entered it, and he took a fourth.

The comparison of these results with those achieved by the Englishmen themselves or by the colonials is not favorable to the United States, especially in the two most important schools of Literæ Humaniores and Modern History. In the two years 1907 and 1908 there were in round numbers 300 names on the honor list. We had 1 first in Literæ Humaniores and 2 in Modern History. The 2 scholars from Quebec entering in 1904 both took firsts in Literæ Humaniores. Of the 7 from Australasia in 1904, 4 took firsts and 2 seconds. Firsts are the chief criterion by which Englishmen measure scholarly achievements at Oxford. In the Public Schools Year Book, no mention is made of anything but firsts. Recently Rugby, with perhaps 12 men in the finals, won 4 firsts and Marlborough had practically the same record. This is the more notable when we remember that the Englishmen are possibly two years younger than those from this country. Of the 81 scholars from this country all but 6 were college graduates, and presumably twenty-one or twenty-two years old. No English boy is allowed to remain at the great fitting schools after he is nineteen, and he presumably enters college at that age.

In outside honors, such as prizes, scholarships, fellowships, official appointments, we have done very little as compared with the colonials. One Canadian won the Ireland, the Craven, the Chancellor's Prize for Latin Essay, was made an honorary scholar of Balliol and honorary fellow at Exeter. Two Australians have taken the Vinerian Law Scholarship, and one of them took also the Eldon Law Scholarship, besides passing first class in the two schools of Bachelor of Civil Law and of Jurisprudence at Oxford, and also in the London Bar examination. He was appointed Law Lecturer at University College. The only three official appointments for men from this country which I have noted are to the positions of demonstrator to the professor of physics and to the professor of geology, while one was appointed tutor in English literature at Magdalen.

As a proper close of this review, it may be well to print the roll of honor of those who have won firsts. In 1906, Tucker-Brooke of Virginia in English Literature; Hinds, North Dakota, Geology. In 1907, Fobes, Massachusetts, Literæ Humaniores; Kirkpatrick, Alabama, History; Barnes, Montana, and Sperry, Michigan, Theology; Kieffer, Maryland, for the B. C. L. degree. In 1908, Schmidt, Tennessee, in History; Ford, Mississippi, Jurisprudence. This makes the nine mentioned by Mr. Wylie. Five came from south of Mason and Dixon's line, a creditable showing for that part of the country.

GEORGE L. FOX.

New Haven, Conn., October 12.

A TRIBUTE TO PROFESSOR WILAMOWITZ.

TO THE EDITOR OF THE NATION:

SIR: On December 22 Professor Ulrich von Wilamowitz-Moellendorff of the University of Berlin will celebrate his sixtieth birthday. Following the time-honored custom of the fatherland, his associates in Germany planned to commemorate the occasion by offering to their distinguished colleague some appropriate mark of their admiration and esteem. But as the plan took shape it was soon realized that the services of Professor Wilamowitz to scholarship and his influence as a teacher and writer would not receive a recognition at all adequate if its expression were confined to his pupils and friends in Germany. For many years he has been regarded by his fellow-workers of all countries as the foremost Hellenist of his time; his spirit and sympathies are singularly catholic; his pupils are found in every land where classical studies flourish; and his writings have been a source of inspiration to scholars and teachers everywhere. Accordingly, to give an opportunity to all who would delight to do him honor on his birthday, an international committee of twenty-two members has been organized. In their opinion the most appropriate memorial which could be presented to Professor Wilamowitz would be a fund placed at his disposal for the prosecution of some large scholarly un-

dertaking. In organizing and directing plans for scholarly research Wilamowitz has no equal to-day. His counsel and active participation have had a marked influence upon the publications of the Berlin Academy in recent years, and have immensely enlarged the scope of its undertakings in classical fields. To a scholar of his great learning, his knowledge of the unsolved problems, and his ability as an organizer, the presentation of a large fund which would enable him to extend his activities at this the most fruitful period of his life will prove a gift in whose beneficent results all scholars will share. The fund presented some years ago to Theodor Mommsen furnishes the precedent which the committee proposes to follow.

The call for subscriptions to the Wilamowitz Fund is now being sent out on the Continent. The time is so short that it may not be possible to reach by personal communication all classical scholars, archæologists, and friends of classical learning in America. This means is therefore taken of calling the matter to their attention. The response should be generous, for American scholars are in many ways more deeply indebted to Wilamowitz than to any other scholar in Europe. Each contributor will receive a copy of the list which will be presented to Professor Wilamowitz, together with a statement of the amount of the fund. All who would like to contribute are requested to send their subscriptions to the undersigned at as early a date as possible.

EDWARD CAPPS.

Princeton University, October 15.

ANCIENT OLYMPIC GAMES AND MODERN.

To the Editor of The Nation:

SIR: Apropos of the disagreeable features attending the Olympic games recently held in London, it would be well to recall the advice given to the Greeks by the wise men of Egypt:

In the reign of Psammis, ambassadors from Elis arrived in Egypt, boasting that their arrangements for the conduct of the Olympic games were the best and fairest that could be devised, and fancying that not even the Egyptians, who surpassed all other nations in wisdom, could add anything to their perfection. When these persons reached Egypt, and explained the reason of their visit, the King summoned an assembly of all the wisest of the Egyptians. They met, and the Eleans having given them a full account of all their rules and regulations with respect to the contests, said that they had come to Egypt for the express purpose of learning whether the Egyptians could improve the fairness of their regulations in any particular. The Egyptians considered awhile, and then made inquiry, "If they allowed their own citizens to enter the lists?" The Eleans answered, "That the lists were open to all Greeks, whether they belonged to Elis or to any other State." Hereupon the Egyptians observed, "That if this were so, they departed from justice very widely, since it was impossible but that they would favor their own countrymen, and deal unfairly by foreigners. If, therefore, they really wished to manage the games with fairness, and if this was the object of their coming to Egypt, they advised them to confine the contests to strangers, and allow no native of Elis to be a candidate." Such was the advice which the Egyptians gave to the Eleans.—Herodotus, ii., 160, Rawlinson's Translation.

LOUIS N. FEIPEL.

Annapolis, Md., October 16.

SIR OLIVER LODGE EXPLAINS.

To the Editor of The Nation:

SIR: It is hopeless to answer all misrepresentations, and quite impossible to remove their bad effects; but when they are unintentional an effort in that direction may be made.

Under the head "Messages from the Dead," you have quoted in your issue of September 17 (p. 249) a verse of doggerel from an analytical and critical paper entitled "On the Automatic Writing of Mrs. Holland"—recently published in the Proceedings of the Society for Psychical Research—and have said that it was painful to attribute such a verse to the late Mr. F. W. H. Myers. I quite agree; it would be painful to attribute it to the developed intelligence of Mr. Myers or any other poet. But on what evidence do you assume that we have done so? Ought a schoolboy exercise in a foreign language or a rhyme constructed between sleep and waking to be esteemed part of the output of a man of letters?

Let me put the question in another form. Imagine a barn in which the produce of a wheat field is being threshed out, and let a passer-by have some of the result blown out to him through the open door by the wind. Would he be justified in expressing contempt for the result of so much labor, and surprise that any one should consider it a satisfactory sample of grain?

As if answering such a superficial critic, I notice that Miss Johnson concludes her first chapter thus:

> Though many of the sensations and experiences connected with the script are probably subjective in origin, . . . it may be that when we know more of the subject, we shall find significance in some incidents which now seem unimportant. It seems better, therefore, for the present to err on the side of recording too much rather than too little.

OLIVER LODGE.

Birmingham, England, October 9.

Notes.

A new theory of Junius is afloat. Henry Stevens, Son & Stiles of London are about to publish "Thomas Pownall, M.P., F.R.S., Governor of Massachusetts Bay, Author of the Letters of Junius," by C. A. W. Pownall. According to the author of this book, Pownall "employed Philip Francis to write from his draughts or dictation."

The Earl of Ilchester has edited "The Journal of Elizabeth Lady Holland," and the book is to be brought out this season by Longmans, Green, & Co. This is the famous leader of the Whigs, the mistress of the salon where met the statesmen and wits recently described in Lloyd Sanders's "Holland House Circle" (see *Nation*, October 8, p. 336). The journal now to be made public gives an account of her early unhappy marriage with Sir Godfrey Webster, and continues the record after her marriage to Lord Holland down to 1814.

Doubleday, Page & Co. announce for publication this month: "Following the Color Line," by Ray Stannard Baker, with twenty-four illustrations from photographs.

Prof. E. G. Sihler of the New York University has collected a volume of essays and sketches dealing with classical subjects, which is to be published soon by G. E. Stechert & Co.

From the De La More Press are coming two essays of the Russian critic Merejkowski, "The Life-Work of Flaubert" and "Marcus Aurelius," translated by G. A. Mounsey.

A new edition of Dr. Edward Caird's "Critical Philosophy of Immanuel Kant" is to be issued by MacLehose & Co. of Glasgow. The same house is publishing "The Book of Faith," a fifteenth-century tractate by Bishop Pecock, edited by Prof. J. L. Morison.

Harpers are bringing out Creasy's "Fifteen Decisive Battles of the World" in new form, with accounts of eight additional battles.

Kipling's "Light that Failed," in the Pocket Edition issued by Doubleday, Page & Co., is for the generous-sized pocket. The type is large and the paper thick enough to leaf without crumpling.

The Reader's Library, edited by William J. Dawson and Coningsby W. Dawson, is announced by Fleming H. Revell Co. The plan, as outlined (though subject to revision), is to issue fourteen volumes under the following titles: "The Great English Letter Writers" (2 vols.), "The Great Essayists," "The Great Historians" (2 vols.), "The Great Biographies," "The Great Lyric Poems," "The Great Short Stories," "The Great Novels" (2 vols.), "The Great Confessions," "The Great Nature Lovers," "The Great Devotional Writers," and "The Great Accusers." The professed purpose is "to present in succinct form a survey of English literature." We doubt whether that purpose can fairly be fulfilled. Letters, essays, poems, short stories, sermons, orations, and the like are legitimate material for the anthologist; but brief extracts from history, biography, or novel do not convey an adequate idea of the work as a whole. We feel therefore that the inclusion of such fragments adds very little to the value of a collection. The first two volumes of the Reader's Library, "The Great English Letter Writers," just from the press, are well printed and neatly bound. Each volume contains a superficial and commonplace introduction; but that does not make the letters themselves less interesting. They are not arranged chronologically, but, as in E. V. Lucas's "The Gentlest Art," under such headings as "Tribulations of Genius," "Secrets," "Crises," "Letters to Eminent Persons," "Portraits," "Literary Verdicts," and "Rhymed Epistles." But the selection is entertaining (how could it be otherwise?); for we have examples of all the best English letter writers from Edmund Spenser to Robert Louis Stevenson.

"The Mirrour of the Blessed Lyf of Jesu Christ," edited by Lawrence F. Powell (London: Henry Frowde), is a beautiful devotional work printed at the Clarendon Press in a manner that does honor to mediæval piety. The English version, presumably from the Latin of Cardinal Bonaventura Baduarius, was made by a Carthusian prior in Yorkshire some time previous to 1410. In this reprint, apparently the first since the edition of Wynkyn de Worde in the sixteenth century, the old spelling is preserved. It is easy to under-

stand why this life of Christ had a wide popularity in the days of the Canterbury pilgrims. Composed for "lewed men and wommen and hem that ben of symple understondynge," it aims to present the gospel narrative with realistic familiarity and homely amplification, so that these "symple soules" may grow virtuous by example and "be fedde with mylke of lyghte doctrine and not with sadde mete of grete clergie and of highe contemplacioun." To say nothing more of its religious interest, the poignant simplicity, and antique freshness of the style are delightful.

Volumes V. and VI. of "The Works of W. E. Henley" (London: David Nutt) contain his Views and Reviews—short, brilliant essays in journalism which, in our opinion, show his powers to better advantage than did the longer essays published in earlier volumes (see *Nation*, July 2, p. 9). The epigram, the sharp cut and thrust of his style, gain in effectiveness from restraint of space, and are less likely to run into tedium. Such a sentence as this on George Meredith: "He writes with the pen of a great artist in his left hand (n. b. *left*) and the razor of a spiritual suicide in his right," is capital as the keynote of a brief piece of journalism, whereas it would sound like falsetto in a formal essay. It is in virtue of this ever-ready pungency of epigram that we can reckon Henley, as he says of Berlioz, "one of the few—the very few—journalists the worth of whose achievement has been justified by collection and republication." And his wit generally has sound judgment at the core. Thackeray's philosophy he may just miss, but he is excellent on Dickens, George Eliot, Victor Hugo, Alexandre Dumas, Philip Sidney, Izaac Walton, Hood, Richardson, and a host of other writers, not to mention the artists who furnish material for the sixth volume. And if for nothing else, we could love him for his vigorous championship of the old "Arabian Nights" against the recent pedantic intruders iuto that field of magic. On this point we must quote Mr. Henley at some length:

> For me the real author of "The Arabian Nights" is called not Burton nor Payne, but Antoiue Galland. He it was, in truth, who gave the world as much exactly as it needed of his preposterous original; who eliminated its tediousness, purged it of its barbarous and sickening immorality, wiped it clean of cruelty and unnaturalness, selected its essentials of comedy and romance, and set them clear and sharp against a light that Western eyes can bear and in an atmosphere that Western beings can breathe. Of course, the new translations are interesting—especially to ethnologists and the critic with a theory that translated verse is inevitably abominable. But they are not for the general nor the artist. They include too many pages revolting by reason of unutterable brutality of incident and point of view—as also for the vileness of those lewd and dreadful puritans whose excesses against humanity and whosc devotion to Islam they record—to he acceptable as literature or tolerable as reading. Now, in Galland, I get the best of them.

The seventh, and concluding, volume contains the plays which he wrote in collaboration with R. L. Stevenson. These are "Deacon Brodie," a melodrama of excellent theatrical as well as literary quality, produced in this country with considerable success by the late E. J. Henley; "Beau Austin," which was played by Beerbohm Tree; the somewhat lurid "Admiral Guinea," also produced experimentally in London, and the fantastic "Robert Macaire."

In Miss Agnes Repplier's charming volume, "A Happy Half-Century" (Houghton, Mifflin Co.), literary history is refined and, one is tempted to say, elevated to the rank of gossip. Miss Repplier professes particular envy of the extinct celebrities, many of them "female" novelists and poets, who flourished in mediocrity's golden age from 1775 to 1825. In that fortunate epoch, she insists, mild sensibility, a good stock of commonplaces, and a fluent pen were enough to secure an authoress ardent admirers, not only in England and on the Continent, but even in the backwoods of America. To prove the point, she conducts the reader with smiling malice through the wan shadows of colossal reputations to the magic circle where Mrs. Hannah More, Mrs. Barhauld, Miss Joanna Baillie, Miss Jane Porter, Mrs. Montagu, and Mrs. Felicia Hemans talked soft platitudes and adulated one another. At her entrance the dead ladies renew their conversation and resume their voluminous correspondence, while in a vein of gentle mockery the ironical visitor comments on their old-fashioned sentiment, middle-class pietism, the nurture of children, the education of young ladies, the polite accomplishment of making ornamental gim-cracks, the "accursed annual," and the autograph album. Miss Repplier feels the expressiveness of so-called insignificant things, and by an artful accumulation of trifles restores a vanished society; so that in the end one has been instructed in much half-forgotten lore, as well as refreshed by the instructor's twinkling wit and clear, quiet humor. In the Elysian Fields critics will not compare Miss Repplier's talent with the golden plenitude of Elia; but more than one will suspect her cousinship with the author of "Pride and Prejudice."

The life of "John Keats," by Albert Elmer Hancock, does not offer many points for discussion, or, unfortunately, much to praise. The style is of that spasmodic sort which allows the reader no rest, and the critical tone is of the ultra-romantic. One good point Professor Hancock makes in criticism, explaining the change in Keats's inspiration with "Hyperion" and the consequent change in public opinion regarding him. Before "Hyperion" he had been "great as an artist of beauty in repose." But "the Anglo-Saxon," says Professor Hancock, "is particularly receptive to the genius of energy; the poets who have been scant in energy have had to wait for recognition." Hence, in part at least, the slowness of the English in acknowledging Keats as a poet, until "with 'Hyperion' he lifted the beauty of repose into sublimity," and to that element of grace added the power of mass in action. The point is well made. We may add that the book is handsomely got up by Houghton Mifflin Co., and contains a number of excellent illustrations.

"The Love Letters of Mary Wollstonecraft to Gilbert Imlay" are well presented by the Lippincott Co. in a small volume to which Roger Ingpen provides a biographical preface. Imlay, it may be necessary to add, for the Letters are not much read to-day, was an American, with whom Miss Wollstonecraft, in 1793, formed a connection which she expected to endure through life. Their daughter was the Fanny to whom Shelley, who married her stepsister, wrote the stanza beginning:

> Her voice did quiver as we parted.

The connection with Imlav lasted for two years, and during that time were written the woman's letters, first of affection, then of douht, and lastly of protest at his desertion. They were published after her death by William Godwin, whom she had married in 1797. Perhaps their chief interest is in the curious ethical problem of a person appealing to a moral code whose basis she has herself taken away. The character of the American is typical in no flattering way. He stands out as a man absorhed in money-making to the exclusion of all other aims and emotions.

Robert William Wood has followed up last year's ingenious booklet "How to Tell the Birds from the Flowers," with a light-hearted treatise on the same lines, entitled "Animal Analogues," heing No. 24 in the Denatured Series published by Paul Elder & Co. As in the earlier contribution to comparative hiology, the humor is almost all in the parallelistic nomenclature, and in the pictures which, like attractive suhurhan homes at reasonahle prices, must be seen to he appreciated. The puss and the octo-pus take on a really startling resemblance under the author's clever pencil. Happy also is the hitherto unsuspected similarity hetween the pipe-fish and the sea-gar, the doe and the dodo, the cross-hill and the sweet-william, the pitcher-plant and the fly-catcher, the P-cock and the Q-cumber, the pansy and the chimpansy.

In this year of the visit of the American fleet to help in celebrating the fiftieth anniversary of the opening of Yokohama to foreign commerce, through the work of Townsend Harris, Henry Satoh issues, in a neat volume (Sinico-Japanese, pp. 85; and English text pp. 108. Tokyo: The Hakuhunkan), his biography of "Lord Hotta, the Pioneer Diplomat of Japan." Count Hayashi, recently ambassador to England, whose father served as physician to Hotta when the latter was daimio of Sakura, furnishes an introduction. The thirteen chapters reveal the state of opinion horn of ignorance, both in Yedo and Kioto, when Mr. Harris arrived from Shimoda to begin negotiations. It required prodigious courage in 1857 to urge the opening of the country to foreign trade and residence. To secure Imperial signature to the American treaty, Hotta went in person to Kioto, hut the intrigues of the reactionaries at the palace made success impossihle. The premier, Ii, was assassinated hy an infuriated hand of exclusionists, March 23, 1860. Hotta was dismissed from office and sentenced to life confinement in his own house, dying in 1864, at the early age of fifty-five. The little hook gives a vivid picture of the difficulties in the path of the few far-sighted men of Japan, who, in the days of the rule of the sword, braved public opinion and lived for the good of the nation.

A history of the growth of a habit or state of mind—that, perhaps, hest characterizes Prof. William I. Hull's extremely useful volume, "The Two Hague Conferences," which Ginn & Co. have published for the International Society of Peace. To most people, the two international con-

gresses which met at The Hague in 1899 and in 1907 have been either farce or tragedy, according as individual temper has prepared us to look upon futility. But the thoughtful minority which knows how slow is the progress of political evolution, will recognize that, in spite of magnificent promises and meagre results, of loud diplomatic protestations and quiet diplomatic manipulation, these two "parliaments of man" have left a deposit of tangible gain. Is such gain to be computed in terms of human brotherhood and peace? That is what our author believes, although he shows how moderate is his expectation by making his sub-title: "Their Contributions to International Law." In the sense that the growth of law works for peace, the Hague Conferences have not failed of their chief object, even if on the main issues of disarmament and of obligatory international arbitration they have moved forward by painful inches. But, at the same time, Professor Hull insists that the work done in the two conferences has been greatly underestimated. When the first Hague Conference adopted its pious "wishes" on disarmament, and let it go at that; when the second Conference worked out the scheme for a permanent international court of justice, and left the scheme an empty husk by disagreeing over the fundamental question of how to appoint the members of the court, the jeers of the cynical were seemingly merited. But consider, says Professor Hull, how but a short time ago the nations would have received the very suggestion of disarmament, or of obligatory arbitration, as an insult, and it will be apparent that appreciable progress has been made. Concrete results may thus be enumerated, but, better still, a certain habit a state of mind, as we called it at the beginning, has been engendered—the habit of talking, and to a minor extent thinking, peace. The arrangement of Professor Hull's book renders it particularly convenient for ready reference. He has analyzed and compared the work of the two conferences by topics and sub-topics, so that we are enabled at a glance to see what advance on any special point—disarmament, arbitration, naval warfare, land warfare, etc.—the Conference of 1907 marked over its predecessor.

A Finding List of the fairy tales and folk stories in the children's rooms of the Boston Public Library has just been published. It consists of about two thousand main titles, as "Little Red Riding Hood," with a list of the books in which the story will be found. "In general, only the old and familiar fairy tales and traditional folk stories have been included, though exceptions have been made in the case of a few collections of modern stories."

Dr. Casper René Gregory, the American professor of theology in Leipzig, has published a brochure of sixty-six pages, with seven photographic reproductions, entitled "Das Freer-Logion" (Leipzig: J. C. Hinrichs), in which he discusses the four Greek manuscripts purchased by Charles L. Freer of Detroit, Mich., from a cloister at Akhim in Egypt. These manuscripts are described in the *Nation* of January 2, p. 8. One of them contains a saying attributed to Christ after the Resurrection. Jerome, in his "Dialogus cum Pelag.," ii., 15, had already reported that in some Greek manuscripts after Mark xvi., 14, words were found that may be translated as follows:

But these excused themselves and said: "This world of unrighteousness and unbelief is in the power of Satan, who works through the unclean spirits, so that we do not comprehend the true power of God; for this reason, reveal Thou Thy righteousness."

These words appear in the third Freer manuscript, together with the answer of the Lord, viz.:

The measure of the years of the rule of Satan are fulfilled; but other terrible things are at hand, and I will go into death for those who have sinned, so that they may return to the truth and sin no more, in order that they may inherit the spiritual and imperishable glory of the righteousness in Heaven.

Then follows Mark xvi., 15-16. The conclusion of Dr. Gregory is that this is not a genuine *logion* of Jesus, but a tradition of a Pauline character, dating from the beginning of the second century, and later added to the spurious conclusion of Mark xvi., 9-25.

Der Luther Kalender für das Jahr 1909 (Leipzig: H. Haessell), edited by Dr. Georg Buchwald, the leading Luther specialist of the times, is intended as a preparation for the fourth centennial of the Reformation in 1917. The special value of the volume lies in its new matter concerning Luther, *e. g.*, biographical data, his catechisms, his use of proverbs, and his out-of-door pleasures. The book contains rare Luther portraits, facsimiles, etc.

"Christentum und Wissenschaft: Sechs Vorträge," by Gerhard Hilbert (Leipzig: J. C. Hinrichs), is an attempt to make peace between Christianity and scientific thought, by showing that religion and science are entirely independent of each other, and rest on altogether different foundations, and accordingly can neither help nor harm one another.

"Monistische und christliche Weltanschauung," by Emil Weiser (Stuttgart: Steinkopf), is one of the able replies to Haeckel, and particularly to his monistic vademecum, "Welträtsel," which in Germany alone has reached a sale of more than 200,000 copies. Weiser does not undertake the impossible task of showing that the Scriptures are a last court of appeals in scientific matters.

Beginning with this month the Schriftenvertriebsanstalt of Berlin publishes a new literary monthly, *Eckhardt*, which is to treat of German literature, chiefly from the æsthetic side. Each issue is to contain sixty-four or more pages of text.

Eduard Fuchs has begun to issue in parts an "Illustrierte Sittengeschichte vom Mittelalter bis zur Gegenwart," the whole to be completed in three volumes, entitled, "Renaissance," "Die galante Zeit," and "Das bürgerliche Zeitalter" (Munich: Albert Langen). Each is to contain four hundred and fifty text illustrations and from fifty to sixty double-page illustrations, most of them in color.

In the series known as Angewandte Geographie: Hefte zur Verbreitung geographischer Kenntnisse in ihrer Beziehung zum Kultur- und Wirtschaftsleben, edited by H. Grote, Martin Hartmann has just issued a "Chinesisch-Turkistan: Geschichte, Verwaltung, Geistesleben, und Wirtschaft," with two charts (Halle: Gebauer-Schwetschke). The author, an Orientalist of standing, gives here the results of his own investigations in 1902. In addition, he has been able to make use of Russian sources, which are practically indispensable for the study of Central Asia.

"Issos," by Walter Dittberner, with the subtitle, "Ein Beitrag zur Geschichte Alexanders des Grossen" (Berlin: Nauck), discusses chiefly four topics: the ancient accounts of the battle of Issos, the numerical strength of the opposing armies, the genesis of the battle, the battlefield and the battle at the Pinaros. His conclusions are that Arrian's account is, with the exception of three additions, taken from Ptolemy; that Diodoros is correct in assigning 32,000 infantry and 5,100 cavalry to the Macedonians; that Arrian's report of immense numbers for the Persians deserves no credence; and that the battle of Issos was fought at the Pajas-Tsai and not at the Deli-Tsai.

Friedrich Warnecke, in his "Goethe, Spinoza, und Jacobi" (Weimar: Böhlaus Nachfolger), aims to show the origin of Goethe's judgments on Spinoza, and the connection of these views particularly with the third and fourth parts of "Dichtung und Wahrheit."

Raoul Hoffmann's "Kierkegaard et la certitude religieuse: Esquisse biographique et critique" (Geneva: Jeheber) is another evidence that this Danish philosopher and theologian, notwithstanding his mystical tendencies, is finally coming into his own. Kierkegaard is a fascinating writer, but Hoffmann preserves his independence and succeeds in judging him objectively. Religious certitude is the central problem of Kierkegaard's system.

That the Dante scholarship of to-day is not confining itself to the "Divine Comedy" is made particularly clear by the recent appearance of two admirable works on the "Vita Nuova"—Melodia's copious and well-informed commentary and Bardi's critical edition of the text. Of a different character, but attractive in outward form and not uninteresting in substance, is A. Cossio's "Sulla Vita Nuova di Dante" (Florence: Leo S. Olschki). The author, who was at one time a pupil of Kraus, has lived in England, and his volume seems to be the fruit of lectures delivered before the Dante Society of Manchester. After a convenient but not always reliable bibliography and a very inadequate study of the poets before Dante, Cossio briefly treats of the "sweet new style," and then proceeds to paraphrase the "Vita Nuova," with abundant quotations and a running fire of comment, after the usual "Lectura Dantis" method. He next applies the same process to those parts of the "Divine Comedy" in which Beatrice appears. A discussion of the different views concerning Beatrice and the "Vita Nuova" forms the concluding part of the volume. The pleasantly written and prettily illustrated book makes little claim to originality; in fact, the preface modestly declares that it is not intended for those already familiar with the great poet.

As we go to press news is received of the death at Cambridge of Charles Eliot Norton. His loss will be keenly felt in the academic world, for though of late years he had retired from active teaching, his

presence was still felt as an influence for sound taste and human values in scholarship. He was a friend of the *Nation* from its beginning, and we shall in our next issue have more to say of his career.

Joseph Leycester Lyne, better known as Father Ignatius, died October 16, at Llanthony Abbey, Abergavenny, England. Born in 1837, he was educated with a view to entering the Church of England, and he was ordained in 1860. Ten years later he founded Llanthony Abbey. As a preacher he attracted vast crowds, but in the latter years of his life he refused to preach in the churches owing to the "rationalism" permitted by the bishops. He has published sermons and orations, volumes of tracts, and books entitled "Hymns with Music," "Brother Placidus," "Leonard Morris," "Tales of Llanthony," and "Tales of the Monastery."

Antoine Jules César Vencelas Ermanigilde Muzzarelli, a teacher of French, died by his own hand in this city October 15. Born in Angoulême in 1847, he studied at the University of Lyons and École Centrale des Arts et Manufactures, Paris. He entered the French army in the corps of engineers and served through the Franco-Prussian war. After various political fortunes both in France and South America, he came to the United States in 1877, where he had since been engaged in teaching. He wrote "Histoire de la guerre du Pacifique" (1880), "Étude sur la situation politique de l'Amérique du Sud" (1881), "La question du canal de Panama" (1881), "Les Antonymes de la langue française" (2 vols., 1888), "The Academic French Course" (2 vols., 1892), "A Brief French Course" (1901), and "La Pays de France" (1902). He edited "Le Barbier de Séville" and a number of other French classics.

Machado de Assis, president of the Brazilian Academy, has died at Rio de Janeiro at the age of seventy. He was the author of many books, including the popular romance, "Memorias posthumas de Brar Cubas," and the volume of verse, "Phalenas Americanas."

News comes of the death in his fifty-ninth year of Bomonji Byramji Patel, a Parsi writer of Bombay. His most important work is the "Parsi Prakesh," a history of the Parsi community from its immigration into India down to 1875. He also wrote a "Life of Firdusi" and a "History of Persia."

STUDIES IN HISTORY.

Germany in the Early Middle Ages, 476-1250. By William Stubbs; edited by Arthur Hassall. New York: Longmans, Green & Co. $2 net.

William Stubbs is still a name to conjure with in a certain field of historical study, and his seal as Bishop of Oxford makes a very pretty decoration on the cover of the handsomely bound and printed volume which Arthur Hassall has edited; but a great reputation and a high dignity in the church cannot quite justify the publication of so insignificant a contribution as this. The editor tells us that Professor Stubbs "some thirty-five years ago had in contemplation the publication of a volume somewhat on the lines of the present one." He bases his present venture on the lack of satisfactory histories of Germany, "as keenly felt now as it was when Bishop Stubbs was Regius professor of modern history at Oxford."

That no really great treatment of German history has yet appeared, even by a German, we should be inclined to admit; but in sketches of the type here attempted we are much better off than we were thirty-five years ago. Nor can we feel that this volume goes far toward supplying any lack that really exists. It appears to be simply a reprint of Dr. Stubbs's lectures, "covering" in two hundred and thirty pages the long period of German history from 476 to 1250. If Dr. Stubbs had confined himself to the development of the German Constitution, a subject for which his studies would seem especially to have qualified him, he might have given his students and now the public a valuable guide to an important phase of European history. The constitutional side of the matter, however, is not here especially emphasized, except now and then by way of comparison with England. We should like to believe with the editor that Dr. Stubbs was "as conversant with the history, political and constitutional, of Germany as he was with that of the British Isles"; but certainly there is little evidence of it in this volume. We have discovered no reference to any modern historian except Gibbon, Hallam, Milman, and Mosheim. Apparently, these are the authors whom the lecturer expected his students to read. The references to originals are very scanty indeed. In one place the author apologizes for going at some length into a certain matter on the ground that Milman had insufficiently treated it. He finds it worth while to give three pages to a very ill-tempered attack upon Hallam for what he thinks a display of "pure Whiggery" in estimating the reign of Henry III. We can quite understand that an author or an editor should wish to conceal the "mechanism of scholarship," but if we are to have references to scholarship at all, we may fairly ask that they be less than a half-century behind the present stage of historical learning.

Mr. Hassall praises Dr. Stubbs's skill and accuracy in sketching the character of each German monarch; but these sketches seem to us distinctly the weakest part of the whole book. They betray the hopeless tendency to explain history by the personal quality of rulers, which is the dominant note of the author's method throughout. If this be ever a helpful way of approach to an understanding of historical movements, it can nowhere be less helpful than in studying the history of Germany—a history in which the monarchy is never felt as the real unit of power, but rather as an invader of the local, provincial or, as Dr. Stubbs also calls them, national traditions which are the real political entities of the German people.

In preserving the lecture form under the thin disguise of chapters, the editor has left us in painful uncertainty as to the public for whom the volume is intended. The lectures continually assume an acquaintance with historical matter quite impossible to expect from the general reader. On the other hand, the student can find little here to illuminate or guide his more detailed reading. Bibliography is confined to a random list of a score or more of books without discrimination or proportion. The narrative is scrappy in the extreme, following no well-marked plan and no principle unless it be that of a persistent comparison with English men and events, not often enlightening and frequently of doubtful accuracy. The whole field of the history of culture is entirely left out.

The Elizabethan Religious Settlement: A Study of Contemporary Documents. By Henry Norbert Birt. New York: The Macmillan Co. $4.50 net.

The author of this welcome study of certain documents relating to the religious settlement under Queen Elizabeth belongs to that school of Roman Catholic historians of which Ludwig Pastor is the chief representative on the Continent and Abbot Gasquet the leading exponent in England. It is the pride and boast of this school that it relies solely upon documentary evidence, and that it uses this evidence without any prejudice whatever. It is frank to a degree in its criticism of what it thinks ought to be criticised in the characters and actions of its co-religionists. It makes its point by a display of learning which is expected to crush opposition by its mass and gravity. Above all, it keeps its temper, and holds thus the advantage that an even disposition always has in any discussion.

All these qualities are well displayed in Father Birt's volume. In a field where Froude has preceded him, he has indeed an easy task to dispose of that particular opponent, but he has not addressed himself specially to this task. He has rather tried to make his point by utilizing a series of contemporary utterances to prove his main thesis. This thesis is that the common opinion, expressed by such a Protestant authority as the late Bishop Creighton, that "the religious settlement was welcomed by the people and corresponded to their wishes," is only very partially true. Of course, he denies having had any thesis to prove when he began his work; but that is not important. The book is one long demonstration that the change in Church government under Elizabeth after the Marian restoration was bitterly resisted and was carried through only by violence and pressure of every

kind in which the laity, as well as the clergy, were brought over against their will. Father Birt's method is to pile up illustration upon illustration, all, of course, in one direction, and then to point to the aggregate as proof of the proposition with which he started. It is a captivating method to all those who, like himself, are convinced beforehand; but the weak point in it is evident. It carefully leaves out all consideration of the other side in which an equally great mass of illustration could readily be presented. Very much of Father Birt's criticism of the process of "purification" is apt but superfluous. An Act of Uniformity is not a pretty thing to administer, no matter in whose hands it may be. It is not an edifying sight to-day to see a government struggling with the anachronism of an established church, and in the sixteenth century the spectacle was more repellant still. It is as easy to find scandals under Elizabeth as under Mary, and the pot gains no lustre from the blackness of the kettle.

In calling this a welcome volume we have not meant to imply that it settles the question as to whether the English people approved the Elizabethan settlement. The only answer to that is to be found in the long history of religious conflict in England from that day to this. A religious condition that has lasted over three hundred years, with a steady tendency to change in the direction precisely opposite to the Marian paradise which is Father Birt's ideal, must have its foundations deep and strong in the hearts of the people as a whole. We mean that every such contribution of material not generally presented or emphasized by conventional historians, even when it is thus marshalled so as to tell a purely partisan story, is welcome to every fair-minded student. Whoever desires henceforth to gain a complete picture of the struggle which marked the early days of the final establishment of a national church in England will be forced to set the evidence here accumulated over against that of the apologists of the prevailing system.

CURRENT FICTION.

The Moneychangers. By Upton Sinclair. New York: B. W. Dodge & Co.

This is a continuation of "The Metropolis," which may in turn be continued indefinitely, or at least as long as fit material, whether social, commercial, or political, continues to be raked to Mr. Sinclair's hand by our journalistic scavengers. In "The Metropolis," he showed (with the aid of photographs), how corrupt and extravagant the "smart set" are; now, he produces similar exhibits as to the rottenness of Wall Street. We all know what these exhibits are; only some hermit, some inconceivable recluse, who did not read the papers at all would find anything fresh in Mr. Sinclair's anecdotes; and the veil of fiction cast over the given data is so thin as to give little excuse for their rehearsal. To say the truth, Mr. Sinclair is neither a Dickens nor a Zola, but (as promised by the "Stirling" episode, which opened his career), a successful sensation-monger.

A Little Brother of the Rich. By Joseph Medill Patterson. Chicago: The Reilly & Britton Co.

This is much upon the order of Mr. Sinclair's "The Metropolis" of recent memory. It deals with the follies and indiscretions of the rich, and the sycophancy of their imitators. We believe it was Mr. Bunner who invented the phrase "little brother of the rich," to fit the social parasite. He had in mind that creature in its simplest form. Mr. Sinclair's Oliver Montague, the go-between who is in a position to install the rich in "good society" for a consideration, is a leech of a higher order. The Paul Potter of this narrative is yet another type. At the outset he is a "Hermes in Flannels" from the upper reaches of the Wabash—raw material brought to the front at Yale by athletic prowess, and even made fit for the society of certain wealthy youths from Gotham. At the end of his course (through which he has worked his way) he is offered a respectable position in his native town, but declines it, and incidentally gives up the girl to whom he is betrothed, to take a place in a New York broker's office which has been made for him by the influence of one of his rich classmates. He sells himself to Mammon, and, by virtue of his truckling not so much to persons as to the habits and aims of the millionaire cult, becomes a sad spectacle indeed—the toady of a false ideal. Time brings in its revenges: he lives to see his own poltroonery, but not to amend it. The story of him has that fatal element of weakness which marks so much of our fiction. Great cities, prosperous societies, are full of weak-kneed gentlemen of this type; but they are merely data to be cited. The newspaper, the preacher, the statistician, are able to handle them adequately; there is little in them for the artist. There is no tragedy, no débâcle, in the ebbing of a Paul Potter: he has, at most, the slight significance of a cipher.

The High Adventure. By Hugh De Sélincourt. New York: John Lane Co.

Profane souls, who require in a novel character, action, life, should not approach this book; it is for choice spirits. Vulgarians will find in it only an effeminate young man of literary tastes who after some hesitation and thin and watery debate marries a colorless girl to the increase of his happiness. From no point of view can much be said for it as a novel. In intention, it is a delicate and very serious study of an idealistic temperament perplexed by the facts of sex till, under the stress of an innocent love and marriage, the problem solves itself. In the execution of this admirable intention, the author seems to have been hampered by a shortage in ideas, lack of acquaintance with men, and immaturity of mind. If Shelley had read Ibsen, Pater, and Maeterlinck, he might possibly have written some such book at seventeen. The only figure of any coherence and interest is the hero, Bernard. On an occasion comparable only to that on which Daniel Deronda and Gwendolen dry each other's eyes with their respective pocket-handkerchiefs, he comes to understand for the first time the mysteries of life and death. One day, after his marriage, he sees a kitten killed by a dog, and the spectacle deeply troubles him. He finds it difficult that night to speak to his wife of the affair:

> He lay as a bruised child lies in his mother's arms. [His age was thirty.] And she held him closely to her, to shield him with her body from every ill. "Tell me," she said. Her voice was low, etc. Still he did not speak, etc. "There is death," he moaned. Her hand caressed his forehead. "Everywhere waiting . . . and without you emptiness . . . blackness . . . fear," etc.

In real life there are unquestionably such persons as Bernard; but in fiction, one feels safe in saying, a hero more free from the characteristics of the male sex had not hitherto appeared.

A Lord of Lands. By Ramsey Benson. New York: Henry Holt & Co.

A red-haired Irish switchman of a philosophic turn of mind, married to a thrifty German wife, falls upon an economic pamphlet which arouses him to the fact that as his family increases his income is slowly but surely falling below the line of subsistence. Pondering in depressed mood upon the approach of the wolf, he chances to see in a newspaper a proposition for the subsidizing of British immigrants on lands traversed by the Canadian Pacific. Out of this suggestion spring agitations, with the result that a little colony of sixteen families emigrate from the city and take up farming. The narrative is a sort of Farmers' Almanac, containing a double plea for farm-colonizing and for small farming on common sense ideas. There is no evasion of drawbacks, and there is suggestion of many modifications of hide-bound traditions in agriculture. Success for some; content even without riches; at the worst, poverty without misery, are the guerdons the author offers in his message, making of his book not alone a calendar, but a missionary effort.

Decrying old usage as a hindrance, our farmer is nothing if not old-mannered as a writer. The Vicar of Wakefield could not have written in more placid disregard of the passing moment. Indeed, the first person and the ever-consulted prudent wife and educated daughter give a reminiscent touch of the Vicar, of whom the author's good sense and humor are not all unworthy. Many, too, are the practical hints administered with an Irish twinkle:

> Too many people, when they start out to make their poultry comfortable, consult their own feelings as to what constitutes comfort, overlooking the fact that a hen's point of view is not a man's.

Hilary on Her Own. By Mabel Barnes-Grundy. New York: The Baker & Taylor Co.

Doubtless, in the end, Hilary, who was a very real girl, became a genial home-maker and an amiable wife and mother; for even in her effervescent youth, her nature and tastes were essentially wholesome. But in the neighborhood of her twentieth year, caged in the domesticity of an old country house, with her piquantly prosaic family, she experienced a revolt, humorous, but violent, against the routine of her daily life. When she had reached the bursting point, she informed the household with shocking abruptness that she was going to London, as secretary to some doctor at that time not discovered. The rest of the narrative deals with her adventures in search of a position, her exuberant joys as a "typist," and her ultimate return with a doctor of her own. Hilary tells her own story with unflagging ebullience, much cleverness, and a quick eye for effective realistic detail. Young ladies in their storm and stress period should not, however, take her for a model; she is disrespectful to her mother, frivolous on religious questions, impertinent with strangers, and her cleverness is at times overdone. She may be criticised also for failing to show any signs of development through her variegated experiences. Yet, passing over her manners, which would have horrified Jane Austen, she is a genuine living being, wortn knowing for her hearty picturesque talk and her power of humorous characterization.

The Alps in Nature and History. By W. A. B. Coolidge, New York; E. P. Dutton & Co., $2.50 net.

This admirably arranged volume stands quite apart from the many books on the same general subject. While based on the long experience of a distinguished Alpine climber, it is not, like Whymper's "Scrambles Among the Alps," a record of such personal experience, and it lacks therefore the dramatic qualities which belong to the detailed description of famous Alpine ascents. It is rather a vast encyclopaedia of Alpine knowledge, arranged in a systematic, available form, and especially full in respect to topographical detail. In a work covering the ground so completely one cannot but regret that the author has purposely avoided all discussion of origin, of geological formation, as well as all explanation of the natural phenomena of this stupendous region. This side of the subject he expressly states is left to the special treatise. The Alps are studied as they now exist and as related to man, his occupancy and conquest of them, with but the briefest mention of scientific investigations. A chapter on the mountain grazing grounds, the struggle for their possession and the complicated rights of ownership, is followed by one on the snow regions and two interesting accounts of Alpine flowers and animals contributed by George Yeld and Howard Knox, respectively. The following one hundred and fifty pages are devoted to the Alpine folk, their early occupancy of the valleys, their political allegiances, mother tongues, and religious proclivities, and to a very complete summary of the political history of the Alps from the Col de Tenda in the west to the Semmering Pass in the east. One of the most interesting portions is an enumeration of the great historical passes whose rôle in history as the channels of emigration and conquest is so important. The seven skeleton maps are most illuminating and give a far more exact idea of the influence of these passes upon travel and intercourse than that afforded by any general map.

The remaining half of the volume is concerned with the exploration and conquest of the High Alps from the point of view of the mountaineer who, aside from all practical ends, finds his reward for peril and fatigue in the satisfaction of obstacles overcome. In earlier times material reasons governed the Alpine dwellers in the exploration of their mountain home. In fact, the stimulus to peak climbing came from without, and with few exceptions the higher and more difficult summits were not conquered before the tide of travel set in. Mr. Coolidge assigns 1760 as "the true date of the origin of mountain climbing" and the period between 1840 and 1865 as that of the "almost complete conquest of the High Alps." Two lists, one of the principal peaks and passes arranged in the order of their altitude, the other of the principal peaks in the order of their conquest, afford interesting study and form one of the most valuable reference features of the work. It appears from these lists that a considerable number of the more celebrated peaks were ascended before 1840. The year 1865 saw the greatest number of virgin ascents, but the record was scarcely less brilliant down to the close of the century, when only some of the lower, but more difficult climbs of the Mount Blanc *aiguilles* and Dolomite needles remained. It is noticeable, however, that the Picco Luigi Amedeo, third in height of the Mont Blanc range (14,673) and thirteenth in the general list, was not conquered until 1901, and the Mont Brouillard of the same range (13,298), not till 1906.

In a chapter on modern mountaineering, the author handles with merited severity what he terms "the plague spot in Alpine matters"—guideless climbing by incompetent persons. Growing familiarity with the Alps, which by no means implies a knowledge of their perils, the increase of maps and other publications which tempt the inexperienced to a false self-reliance, and probably also the desire to cut down expenses, are responsible for a majority of the rapidly increasing number of Alpine accidents. The worst of it is that there seems to be no practical way of saving a fool from the results of his folly. The restrictions with which medical advisers and trainers surround other forms of exercise are ignored by the amateur climber. The reviewer, when making his first ascent in the Bernina group, remembers well his disappointment, after reaching the summit of Piz Zupo, on learning he was only 153 feet below the Bernina, the highest point of the range. To the question why the Bernina had not been chosen, the chief guide, to whom the choice had been left, replied with a quizzical smile: "Because I did not know to what kind of man I was to be tied." This very proper attitude on the part of one who knew how much more trying for a novice the Bernina was than the Zupo is one which the tribe of Tartarin cannot be made to appreciate.

Excellent photographs illustrate Mr. Coolidge's volume, and an admirable feature is the detailed description accompanying each illustration, by which the reader obtains an accurate idea of the relative position of the various objects represented. Finally, a list of the principal works relating to the Alps, a general map, and a full index complete a work which is a distinct contribution to Alpine literature, a résumé of remarkable interest, accuracy, and thoroughness.

The French Influence in English Literature. By Alfred Horatio Upham. New York: The Columbia University Press; the Macmillan Co., Agents.

This work undertakes the period from the accession of Elizabeth to the Restoration. Though the predominant foreign influence through these years is admittedly Italian, the mass of evidence showing contact of French literature and society with English is astonishingly large. The task of beating this

material into tractable shape and presenting a coherent account of it demanded, in spite of the work of numerous pioneers, a literary historian of wide reading, vigorous organizing power, and a sound, very cautious judgment. On the whole, Dr. Upham has met these requirements remarkably well. He has diligently collected, assimilated, and recorded the results of his predecessors' labors; his text, notes, and appendices are packed with clues to his tributaries. It is a pity that the index is so incomplete. His style is, with few exceptions, alert and interested. The exposition, however, is obscured here and there by lack of transitions between paragraphs and a disposition to keep the secret till the end of the paragraph. Among the baffingly complex problems of literary relationships, he moves with great discretion; if he sometimes presses a bit of evidence overhard, he seldom rests his argument on a doubtful point. The divisions of the subject, suggested rather by the convenience than the logic of the investigator, are as follows: The Areopagus Group; the Elizabethan Sonnet; Du Bartas; Rabelais; Montaigne; Seventeenth Century Précieuses and Platonists; Romance, Drama and Heroic Poem; Minor Literary Forms. There are also a general introductory survey of the field and a brief summary of results obtained. In every chapter the main contention of the thesis is sustained and the quickening influence of French contact demonstrated beyond cavil.

The nature of the subject precludes forever a definitive treatment, yet it is, perhaps, worth while to point out a few places at which this work would be improved by condensation or amplification. In dealing with the supposed relationship of the "Areopagus" to the "Pléiade," Dr. Upham elaborates an argument of Prof. J. B. Fletcher's without making it convincing; a common inspiration in the works of Plato and Aristotle will still seem to many a sufficient explanation of the parallelism of the two groups, and the theory of conscious and detailed imitation superfluous. Rabelais, Dr. Upham feels, was an equal force with Aretino in the later work of Nash, whereas Nash acknowledges Aretino as his master and pays no tribute to Rabelais; in order to establish the contention there should be developed at this point a critical distinction between the French and Italian models. At present, the argument rests too much on circumstantial evidence and impressions of questionable accuracy. Again essays, according to our author, "were popular forms of literature in England for a number of years, largely on account of Montaigne's example, and his work furnished a model by which most of the writers worked"; but Nicolas Breton, one of the writers in question, saluted Bacon as the model and prolific father of essayists, and Dr. Upham fails to make out any profound indebtedness even of Bacon to Montaigne. In discussing the vogue of pastoral and heroic romance in the reign of Charles I., there is a similar shortcoming in the failure to distinguish between the impulse from France and the continuous English stream proceeding from the "Arcadia." The difficulty is confessed, but the arrangement of the material would mislead the unwary reader. Finally, the last two chapters are much congested, though the field is comparatively virgin and bristles with possibilities for the literary explorer.

Yet, in spite of all deductions, the book is thoroughly interesting, substantial, and of indispensable value to the student of comparative literature.

Science.

Birds of the Plains. By Douglas Dewar. New York: John Lane & Co. $4.

In this volume, Mr. Dewar has collected some forty short essays on various interesting birds of the plain region of India. The style is excellent and there is a pervading sense of humor which is all too rare a quality with writers on natural history. The author can select some bird of which most of us have never heard, and in a few paragraphs vividly portray its specific personality.

He records many new observations; for example, the tailor-bird's method of sewing. First a row of punctures is made down each side of a leaf and the two edges are drawn together and stitched with cobweb. Then the nest is built in the leaf and later the web is strengthened with strands of cotton:

> The cotton used is soft and frays easily, so that that part of it which is forced through a tiny aperture issues as a fluffy knob, which looks like a knot and is usually taken for such. As a matter of fact, the bird makes no knots; she merely forces a portion of the cotton strand through a puncture, and the silicon which enters into the composition of the leaf catches the soft, minute strands of the cotton and prevents them from slipping.

Another example of careful observation is the account of the clever ruse practised by the parasitic koel cuckoo, or brain-fever bird:

> Crows appear to dislike the cry of the koel quite as much as men do. But whereas man is usually content with swearing at the noisy cuckoo, crows attack it with beak and claw whenever an opportunity offers. This fact is turned to account by the koel. The cock alights in a tree near a crow's nest and begins to call. The owners of the nest, sooner or later, "go for" him. He then takes to his wings, continuing to call, so as to induce the crows to prolong the chase. As he is a more rapid flier than they, he does not run much risk. While the irate corvi are in pursuit, the hen koel, who has been lurking around, slips into the nest and there lays her egg. If she is given time she destroys one or more of those already in the nest. She does this, not because the crows would detect the presence of an additional egg, but in order that her young, when hatched, will not be starved owing to the large number of mouths to feed.

The author professes no profound knowledge of ornithology, but nevertheless he dabbles in such deep waters as "The Stability of Species," "Birds as Automata," and "Do Animals Think?" On these topics, he occasionally becomes rather confused. For example, on one page, in speaking of a flock of peafowl containing several albino cocks, he says:

> As a matter of fact the hens select the white cocks, not because they are white, but because of the strength of the sexual instincts of these latter. The white cocks continually show off before the hens.

On the following page he generalizes thus:

> Abnormal individuals are comparatively few in number, and they beget comparatively few of their kind, so have no chance of establishing themselves and crushing out the normal type.

We note that the author believes in sexual selection and also that he takes issue with the extreme position of John Burroughs in regard to the thinking ability of animals. But here, the comparison which Mr. Dewar draws between the idiotic impulse of a certain wealthy man to smash the china within his reach and the first nest-building instincts of a young bird, seems far-fetched and meaningless in the light of the usual theory of the genesis of instinct. The sixteen illustrations of individual birds are remarkably good examples of bird photography.

The eighth International Congress of Hydrology, Climatology, Geology, and Physical Therapeutics is to be held at Algiers on April 4-10, 1909.

The Seventh Congress for Applied Chemistry will meet in London May 27 to June 2, 1909.

Frederic Auten Combs Perrine, a well-known electrical expert, died at Plainfield October 20. He was born at Manalapan, N. J., in 1862, and was graduated from Princeton in 1883. He held important positions in a number of large corporations, including the John A. Roebling's Sons Co., the Germania Electric Co., the Standard Electric Co. of California, and the Stanley Electric Manufacturing Co. of Pittsfield. From 1893 to 1900 he was professor of electrical engineering in Leland Stanford; from 1894 to 1896 editor of the *Journal of Electricity*, San Francisco; and from 1896 to 1898, of *Electrical Engineering*, Chicago. He contributed to various journals and society transactions on topics connected with his specialty, and was author of "Conductors for Distribution" (1903).

Drama.

Other Days: Being Chronicles and Memories of the Stage. By William Winter. New York: Moffat, Yard & Co.

William Dunlap's chronicles of the American stage cover the period between 1750 and 1810; the works of William B. Wood and F. C. Wemys carry the tale to 1850; while Ireland's records extend from 1750 to 1860. Mr. Winter says that one of the objects of his book is to bring these annals down to the present time. He has peculiar qualifications for the task—including a profound acquaintance with his subject, the zeal of a student with regard to matters of fact, high ideals of the functions and scope of the theatre, and rare powers of narration. His volume will be a welcome addition to every dramatic library. It is full of fresh and illuminative detail, of analytical character studies, of sound theatrical philosophy, of witty comment, eloquent appreciation, and wholesome scorn. In its historical aspect, it is orderly, discriminatory, and, within its range, comprehensive, omitting little that is essential, but avoiding the empty repetitions and trivialities which make most books about the stage so tedious. On the critical side, it exhibits the brilliant perceptive and descriptive abilities of the author, together with some of his defects. Few old playgoers will be prepared to give full assent to some of his most glowing appreciations, in which judgment is somewhat warped by heat of affection and poetic sensibility. Mr. Winter, in recognizing the talents of his friends, deals in no half-measures of praise, and it must not be forgotten that many of his subjects were, as he is careful to point out in his preface, his daily and intimate associates. In such cases he is likely to appear as eulogist rather than critic. But free from sentimental influence, his insight is as clear as his diction is trenchant and copious.

Of Edwin Forrest, one of the most overrated actors of the nineteenth century, he says that he "was an uncommonly massive and puissant animal, and all of his impersonations were more physical than intellectual, while no one of them possessed any spiritual element whatever." He adds:

> In the manifestation of terror he lolled out his tongue, contorted his visage, made his frame quiver, and used the trick sword with the rattling hilt. In scenes of fury he panted, snorted, and snarled like a wild beast.

Forrest had no spark of the divine fire that burned in Cooke, Kean, or the elder Booth. This last-named actor, Mr. Winter only saw in his decadence, as Pescara, but even then, he says, "his terrific aspect, his thrilling voice, and his magnificent action imparted a sense of overwhelming power and splendor." In discussing the attributes of these notable performers Mr. Winter enunciates a truth, almost disregarded in the modern theatre, that great actors do not trust to inspiration. They may become the objects of sudden illumination, but all their effects are, as a rule, the result of calculated design. An interesting confirmation of this dictum exists in E. T. Mason's pamphlet, "The Othello of Tommaso Salvini," in which almost every motion of the actor is set down in black and white. Without this antecedent study there can be no impersonation. Mr. Winter insists upon this point in speaking of the Rip van Winkle of Joseph Jefferson, one of the most natural embodiments of modern times. Nevertheless, it was, from first to last, a compound of most elaborate artifice. Of Jefferson himself, the man, Mr. Winter furnishes a delightful study, and few competent judges will dispute his estimate of him as the most accomplished comedian of his day, but that he was "essentially an impersonator" may well be questioned. He was a greater artist than actor. William J. Florence much excelled him in the power of assuming contrasted identities, as did Edwin Booth. Concerning the latter an interesting anecdote is given. He said, talking of his Richelieu, one of his most notable achievements: "I am conscious of an interior personality standing back of my own, watching and guiding me." "This," remarks Mr. Winter, "was his clear intellect." But the peculiar significance of the actor's expression lies in its suggestion of a constant mental effort to vitalize an imaginative ideal by the suppression of purely personal impulse. And herein consists the whole, but now generally forgotten, secret of acting.

It is unnecessary to do more than refer to Mr. Winter's estimates of either Edwin Booth or Henry Irving. To both men he was bound by ties of close affection, and in the enumeration of their artistic and personal virtues he employs his choicest literary skill. With much of what he says everybody will be in accord. Booth was the last of the great tragedians and for many years had no rival on the English-speaking stage. Salvini alone was his superior. Fine as he was in Shakespeare, he was perhaps greater still in such parts as Overreach, Sir Edward Mortimer, and Pescara. Before him Mr. Winter puts Henry Irving, whom he calls "the greatest actor of my time, because he evinced a deeper knowledge of human nature, a broader comprehension and firmer grasp of the ideal, . . . and an ampler facility of dramatic expression than any other actor whom I have seen." This is strongly and adroitly put, and there is much truth in it, but there are those who think that Irving's actual achievement as an actor often fell far short of his ideals. Many will hesitate long before they admit his greatness in "Macbeth" or "Lear." But he was a wonderful man, an extraordinary actor, and set an ineffaceable mark upon the stage.

One of the most admirable and characteristic essays in the book is that upon Dion Boucicault, in which the fullest justice is done both to the merits and demerits of that brilliant but unscrupulous adventurer. Especially effective is the exposition of his sources of dramatic inspiration. With regard to the old controversy concerning the authorship of "London Assurance" a letter from Ben Webster is quoted to prove that half the proceeds of the first production was paid to John Brougham. No less interesting, and far more edifying, are the intimate personal chapters on John McCullough and Lawrence Barrett, men widely different, indeed, in character, ability, and aspirations, but alike in their dauntless courage against adverse circumstance and their zeal in self-education. Barrett had not the histrionic genius of Booth, but infinitely surpassed him in artistic devotion. Mr. Winter throws much light upon the personalities of both men. He pays also a fine and just tribute to Charlotte Cushman, a rare combination of genius and common-sense. His account of her closing hours is very pathetic, and he deduces from her example a pregnant lesson on the social value of noble acting. "She did not," he writes, "fill their [the spectators'] minds with images of decadence and promptings to degeneracy, recklessness, and failure. She was a minister of the beautiful."

With the modern developments of the drama Mr. Winter has little sympathy, and he does not attempt to treat them. It is eminent actors, not plays, that he is discussing, and in these days eminent actors are rare. Contemporaneous dealers in the mystical, the abnormal, the problematical, and the unclean he dismisses with a few brief sentences, barbed with contempt. Modern stars he scarcely mentions. The present system of commercial production is to him an abomination.

In its original estate the "Samson" of the French dramatist Bernstein belongs t the same category as its predecessor, "The Thief." It is melodrama, pure and simple, of disagreeable character, but theatrically effective and animated by a definite satirical motive, apart from its main object of entertainment. But in no sense is it a work of much philosophic or social significance. Its leading theme is trite, and is not handled, except in its final outcome, with any notable freshness or originality. All its types are conventional, but in the study of the heroine there is the truth of human nature. Briefly, the story is this: A foolish old marquis and his worldly wife, supposed to be representatives of a decadent aristocracy, have practically sold their daughter—already committed to a lover in her own station—to a self-made man, a millionaire speculator, uncultivated

in manners, but honest in affection, and of invincible will. Miserable in her bondage, the young wife turns to her old lover, and, during her husband's feigned absence (one of the oldest of theatrical tricks), is taken by him to a disgraceful resort, whence she escapes disgusted and disenchanted, to confront the man she has wronged. Having forced a confession from her, the husband resolves to punish the seducer by stripping him of his fortune. To this end the husband precipitates a financial panic, in which both men are involved in common ruin. In this scene he has invited his victim to luncheon, and keeps him an involuntary prisoner while the stocks fall. As the panic proceeds, the husband taunts the seducer with his dishonor and his helplessness, and half-strangles him when he tries to escape. Manifestly, this episode is wholly theatrical and incredible, but, properly acted, there can be no question of its exciting character. In the closing act there is a reconciliation between the now bankrupt speculator and his wife, the latter responding at last to a love whose depth she had not before suspected. The moving qualities of this story, when powerfully presented, may be easily imagined, but they were not conspicuous in the version produced in the Criterion Theatre, in this city, on Monday night. In the first place, the adapter, William Gillette, who also assumes the central character, supplies an inferior text; and, in the second, he is destitute of the emotional eloquence and dramatic power essential to such a part. His passion was noisy, but impotent, and at times bordered upon the ridiculous. Moreover, the supporting cast was far from brilliant. Thus the representation of the play was generally inadequate, and there was little to compensate for its disagreeable atmosphere.

The death was announced from Boston last week of Edwin Reed, a voluminous writer on the Shakespeare-Bacon question. He was born in Phillipsburg, Me., in 1835, studied abroad, engaged in shipbuilding and management, was superintendent of the schools of Bath and later Mayor of the city, and was also a member of the Maine Legislature. His first book was "A New View of the Temperance Question" (1889). His writings on Bacon and Shakespeare are: "Brief for Plaintiff, Bacon vs. Shakespeare" (1896), "Francis Bacon, Our Shakespeare" (1902), "Bacon and Shakespeare—Parallelisms" (1902), "Noteworthy Opinions Pro and Con, Bacon vs. Shakespeare" (1905), and "Coincidences, Bacon and Shakespeare" (1906).

The death of Mrs. George C. Howard, the original Topsy in the first dramatic adaptation of "Uncle Tom's Cabin," was announced last week from Boston, where she had lived in retirement since 1887. She played the character for nearly forty years, appearing in all parts of this country and in Europe. Few performers of her time were more widely known.

The death is announced from London of Robert Soutar at the age of eighty. In his day he was a good stock actor in various London companies, and was for many years stage-manager at the Gaiety. He also wrote a number of farces and pantomimes.

Music.

A MUSICAL MYSTERY.

In summing up the results of the spring and summer season of opera in London, the critics agreed that a great success had been won by Miss Destinn, the dramatic soprano of the Royal Opera in Berlin (who is to be heard at our Metropolitan the coming season), but that nevertheless the chief honors went to Mme. Melba and Mme. Tetrazzini. The latter represent the florid style of singing. The submarine cables almost melted from the glowing accounts of their triumphs. When Mme. Melba celebrated the twentieth anniversary of her début in London, society, headed by the King and Queen, filled the house; and when the prima donna came to the tremendous piece of virtuosity which brings the first act of "La Traviata" to a close, "the audience," according to one of the London journalists, "held its breath." The reporter adds:

> Her vocal gymnastics were simply amazing, and her own intense enjoyment of them was delightful. Up and down the scale she went, in trills and runs and roulades, and when she ended, like a fireworks display, with a brilliant shower of golden notes, the whole house rose and applauded with all its might.

When Mme. Tetrazzini made her first appearance in London, last autumn, she created a sensation such as few singers in our generation have achieved. This achievement she repeated in New York a few months later, and changed Oscar Hammerstein's mood from despair to delight. But for her timely arrival, New York would not be likely to have two opera houses the coming season. Her second engagement in London proved no less successful. Yet she is not one of the really great artists. It is only by her top notes in highly ornamental music that she actually shines, for she is mediocre or worse from every other point of view, including the histrionic. That a vocalist with such a limited equipment should have created so astonishing a sensation is certainly strange, if not mysterious; but this is not the mystery we have in mind at present. That is of much wider scope, the mystery of florid music in general. Why have the composers of all countries given up writing such music when the public at large evidently likes it better than anything else, demands it with applausive violence, and showers diamonds on the Pattis and Sembrichs, the Melbas and Tetrazzinis who provide it?

The Italians who founded opera, three centuries ago, had high ideals. They were so anxious that the hearers should understand the words to which the music had been wedded that they deliberately avoided not only ornament, but even melody (Caccini boasted of his "noble contempt" for it), using instead of it a dry, tuneless recitative. But the public soon tired of that sort of thing, and the shrewd composers, willing to please, began to supply not only tunes, but highly ornamented arias, which the singers still further embroidered in a most lavish style. This fashion continued throughout the seventeenth and eighteenth centuries; even great masters like Handel and Mozart were compelled to bow to the will of the public. Gluck raised a protest, but it had little effect except in Paris, where Rameau had prepared the ground for him. It was not till Beethoven, Weber, and Wagner came forward and stubbornly refused to cater to the demand for meaningless staccati, trills, rapid scales, cadenzas, explosive and long-drawn-out high tones, that the spell was broken.

And now happened a strange thing—a phenomenon belying the teachings of the economists regarding demand and supply. All the composers of all countries, the great as well as the small, followed in the footsteps of the men just named, defied the paying public, and contemptuously and persistently ignored its eager demand for ornamental music. In the German operas since Wagner, including those of Humperdinck and D'Albert, you will listen in vain for florid airs; you will not hear them in the popular operas of modern Frenchmen; Gounod employed them very sparingly, Bizet not at all; florid music is not to be found in the works of Charpentier, of Bruneau, of Saint-Saëns; while the latest of the Frenchmen, Debussy, eschews not only all ornaments, but has gone back to the recitative of the first opera composers. Stranger still, the Italians, who originated florid music and for centuries enraptured all the world with it, also have given it up completely. Verdi, in his early operas, still made some use of it, but when his genius matured and he came to write "Aïda," "Otello," and "Falstaff," he avoided it as scrupulously as Wagner or Debussy; and all the young Italians followed his example. In the operas of Mascagni and Leoncavallo, of Boito and Puccini, and their colleagues, the decorative style known as colorature is absolutely tabooed. Why?

When the late Joseph Joachim, the "violin king," was once asked why he had so little sympathy with the admirers of a certain prima donna who was famous for her *fioriture*, he gave this memorable answer:

> What would you have? Here have I been endeavoring all my life to imitate on the violin the exquisite tones of the human voice; this singer, on the contrary, only seeks to imitate my violin.

From this point of view one can see why the really great composers have turned their backs for all time on florid

music, which reduces the voice to the level of instruments lacking the faculty of articulate speech. But why should not the minor composers try their luck with the meaningless trills and top tones and cadenzas on which the musically illiterate public dotes? Here are Mascagni and Leoncavallo, for instance. They have tried to write like Wagner, like the modern Frenchmen, like Verdi, but they have persistently avoided the florid style. Should they try it and succeed, as Goldmark appears to have done in his latest opera, "A Winter's Tale," it would be a satisfaction even to those who regard such ornaments as meretricious; for, since apparently we must have such music for the clamorous public, it would be a relief to have it at any rate in new operas. We might then bury the silly old "Sonnambula" and its companions for good and all. It is with a feeling of dismay that one looks forward to the coming season with Melba, Sembrich, and Tetrazzini all appearing week after week in the same half-dozen operas which alone have survived of the hundreds belonging to the florid school.

While the musical season in London has gradually expanded and now covers practically every month in the year, New York's season has shrunk at both ends. An attempt is being made this year to restore the month of October to its former estate; Sunday concerts began in the first week, and there have been song recitals by such favorites as Mme. Gadski and George Hamlin, while Hermann Klein's series of Sunday afternoon popular concerts at the New German Theatre has brought forward a number of artists, some known, others new. The first musical entertainment on a large scale occurred in Carnegie Hall on Monday evening, when Emil Sauer and the Philadelphia Orchestra coöperated. The German pianist began his second American tour by playing his own concerto in E minor. It had its first hearing here, and presumably its last; for while it is replete with dainty ornaments which suit the style of Mr. Sauer, it has not sufficient substance to tempt other pianists. The performance of Liszt's "Faust" symphony was extremely interesting. Philadelphians are to be congratulated on having an orchestra which, if somewhat less polished than two or three others in the country, is excellent, and has in Mr. Pohlig a conductor who enables it to get at the heart of good music as few orchestras do.

Philadelphia got ahead of New York in hearing "Little Nemo," the new musical comedy by Harry B. Smith and Victor Herbert; a run of several weeks there ensured a remarkably smooth performance at the New Amsterdam Theatre in this city on Tuesday night. While based more or less on a series of newspaper cartoons, it is in reality one of the most amusing of Mr. Smith's productions in the realm of librettos, and Mr. Herbert's music is such as only he could write—popular and of genuine musical value at the same time, like that of Johann Strauss. In the way of scenic effects and rapid changes, "Little Nemo" marks a climax of the stage painter's and machinist's art. One of Mr. Herbert's waltzes seems likely to become as popular as the "Merry Widow" waltz.

The letters of Johann Strauss, the writer of waltzes, are soon to be published in Berlin.

The Adele Margulies Trio will give its usual three concerts at Mendelssohn Hall in this city, on December 1, January 19, and February 23.

Art.

The Domestic Architecture of England During the Tudor Period. By Thomas Garner and Arthur Stratton. Part I. London: B. T. Batsford. New York: Imported by Charles Scribner's Sons.

The many methods of presentation at the disposal of a writer on architecture have in the past few years been tried out in a process of selective survival. This work happily adopts a form which is perhaps the best—a large folio, with gelatine prints of actual photographs, taken from points chosen for the double purpose of giving the facts clearly and comprehensively, and yet preserving as far as possible the atmosphere and sentiment of the subject. These photographs are supplemented by good drawings of details—some in plates and some as illustrations in the text. The pictures make the book, however, and the descriptions are wisely limited and assigned a subordinate place. In short, this volume, in size and general plan, resembles the issues by the same publishers dealing with the "Renaissance" and "Later Renaissance" in England by Gotch and Brown and by Belcher and Macartney, respectively. The three works, taken together, constitute a complete and valuable record of the evolution of the modern English house.

The introduction, a well-written exposition of the character of the Tudor style of architecture, traces its rise in the growing desire for comfort and luxury among the prosperous English people. In the Tudor period that desire found its great opportunity in the cessation of internal wars and disorders, and the consequent disuse of fortified castles. The increasing wealth of producers and traders, especially of wool growers, who led the new industrial advance; the luxury of the ecclesiastical offices; and, at last, the further adaptation of these ecclesiastical properties by the drastic process of confiscation and redistribution, in which abbeys and priories often became private residences—all these influences caused that rapid development of the English rural home characterizing the Tudor period.

The completeness of that development is indicated by the present acceptability of most of the charming examples here collected. Except a few of the more massive and castle-like houses, nearly all of them are such as appeal to lovers of country life in the twentieth century, and many of them need nothing but a few sanitary appliances to make them ideal modern houses. They have, if we may so describe it, that refinement of simple poetry and that expression of feeling—of familiar affection and happiness—which is lacking in the stately renaissance dwellings of France, and even of later England, and still more in the modern chateau or villa. The artistic elements are allied with those of nature; the composition appears to have grown as a group of elms grows; and the details are as indigenous as the materials. The views of these buildings are lessons in that art of picturesque grouping which the architects of this country were the first to revive in the present period, and which they cannot afford to abandon just when their European coworkers are taking it up. Such a book as this ought, then, to help toward recovery from the attack of academic formality, which has lately spread from the fitting field of the world's fair into the inappropriate territory of the home farm.

To pass from the general to the particular—the Abbot's House, Muchelney Abbey, is almost perfect for modern use, although it is an elaborate Gothic building of the fifteenth century. South Wraxall (about 1430) and Great Chalfield Manor House of Henry VI.'s time, show how with but little modification such features as pointed arches and tracery may become perfectly domestic and homelike; and the more stately compositions, such as Forde Abbey (1525), display, on the other hand, a dignity which is almost palatial. We may admire also the adaptability of the details to different materials. This style, which revels in wrought and carved stone when that is to be had, becomes even more fascinating in its "half-timber" guise. Ockwell's Manor House, the Mote House, Ightham, and others need no change or apology; and in brick and terracotta East Barsham and the remnant of Great Snoring Rectory are equally successful.

It is not too much to say, then, that country-lovers and home-makers will value this folio quite as much as architects. It appeals to that increasing public appreciation of art which demands detailed information instead of the popularized and abridged smattering which used to suffice. Without being technical—almost without a word of art idiom—the work presents its subject simply, clearly, and effectively.

MacLehose & Co. will soon publish a folio volume on "The Glasgow School of Painters," with more than fifty reproductions, by J. Craig Annan, of representative pictures, and an essay by Prof. G. Baldwin Brown.

"The Furniture of our Forefathers," by Esther Singleton, is to be issued this month by Doubleday, Page & Co.

The *International Studio* publishes a special extra number devoted to Augustus Saint-Gaudens, containing forty-five reproductions of his works, a chronology of his life and another of his production, and an agreeably written, if not very profound, "Appreciation," by C. Lewis Hind. There are, also, reproductions of Kenyon Cox's portrait of the sculptor in his fortieth year, and of a late photograph of him by DeWitt C. Ward. The subjects for illustration are well chosen, and the reproduction, with a few exceptions, is fairly successful. The chronological list of works is very full, and we have noted few errors in it. The worst of these is copied from the early editions of the Catalogue of the Memorial Exhibition, held at the Metropolitan Museum, in which, by an error of transcription, the relief portrait of Bastien-Lepage was dated 1889, instead of 1880. The error was corrected in later editions, but it was impossible to place the entry where it properly belonged in the series, and it was therefore natural that Mr. Hind should have been misled. This is the more unfortunate, as the relief in question is distinctly in the sculptor's earlier manner, and its misdating makes its style incomprehensible.

Vol. XXXV. of the *International Studio,* comprising the regular numbers from July to October inclusive, of 1908 is now complete. The magazine devotes more space than formerly to American art, and is consequently more interesting to American readers. Its choice of works for illustration is somewhat miscellaneous, but it gives a fair notion of current production in several countries. The text is less interesting than the plates. It is regrettable that the editor has not been able to enlist writers of more authority.

The A. Wessels Company publishes "Evolution in Italian Art," by the late Grant Allen, a book "practically complete at the time of the author's death, but . . . revised and brought up to date . . . by Mr. J. W. Cruikshank." Mr. Allen makes no pretence of connoisseurship, and no attempt at art criticism, his object being, rather, to consider the evolution of certain subjects and the progressive development of their treatment, from what may be called a biological standpoint. That the traditional subjects of Italian art had a kind of personality apart from that of the artists who treated them, and that the modifications of traditional treatment were often more a matter of school and of date than of voluntary choice on the part of the painter, will be no news to the well-equipped student; but it is interesting to have the point clearly brought out by dwelling upon it, as Mr. Allen has done, to the exclusion of other matters. The volume contains sixty-five reproductions of works of Italian art, from the mosaics of Ravenna, to the decorative canvases of Veronese.

The Chicago Art Institute's annual exhibition of oil paintings and sculpture by contemporary American artists was opened October 20. There were 340 exhibits—chiefly oil paintings and sculpture—by 219 artists.

Frederick Keppel & Co. of this city are exhibiting till November 2 engraved portraits by Robert Nanteuil (1630-1678).

An exhibition of One Hundred Beautiful Portraits of Women will be open in Paris next April.

OUR WHEAT CROP AND PROSPERITY.

Early in the present year, the exceptionally brilliant prospects of the American wheat crop were regarded as favoring industrial recovery. Estimates indicated a yield of 737,000,000 bushels, which would have compared with only 634,000,000 in the relatively short-crop season 1907, and with 735,000,000 in the abundant year 1906. The crop promised, in fact, to exceed all precedents save that of 1901, whose 748,000,000 bushels had much to do with the maintenance of high prosperity at that time. Equally important was the fact that, as the season advanced, it became increasingly evident that Europe would take all the wheat which America could spare. In July, the Liverpool expert Beerbohm estimated that Europe's crop would run only 20,000,000 bushels over that of 1907, when the yield was so small that the reserves in granaries were heavily drawn down; and that India, one of the largest wheat producers and exporters of the world, would not provide within 104,000,000 bushels of last year. The harvests of Europe and India combined, in 1907, fell short 192,000,000 bushels. or nearly 10 per cent., of either 1906 or 1905, and the wheat in Europe's granaries, in the middle of 1908, was 30 per cent. below the level of the four preceding years. It was not difficult, then, to see how the almost unprecedented wheat harvest foreshadowed in the United States would affect our export trade, our railway traffic, and our financial welfare generally. Similar conditions in the international grain trade had pulled this country out of a slough of financial depression in 1879 and 1897.

As regards a "bumper yield" in the United States, these high hopes of early summer have not been realized. Owing to bad weather, our Agricultural Department's final estimate for October is only 659,000,000 bushels, which falls far short of the crops of 1906, 1905, 1902, 1901, 1898, and which runs only 25,000,000 bushels over 1907. But, by a curious coincidence, the earlier estimates of Europe's crops have been similarly curtailed: the Dornbusch calculation of September is 60,000,000 bushels below Beerbohm's of midsummer, and indicates a crop smaller even than the short yield of 1907.

From these facts there are two clear inferences. Europe will need an unexpectedly large amount of American wheat this winter, and America will have much less wheat to spare than we had supposed. The immediate result was a movement of grain during September, from our farms to inland markets, so extraordinarily large that the railway earnings of the month, even in the face of the industrial dulness and the small shipments of general merchandise, rose in many cases to the level of the month in 1907. Simultaneously, our wheat exports in September exceeded by nearly 50 per cent. those of the same month in 1907. On top of this came Europe's war scare, which led some persons to believe that our grain export trade must now break all records. It did not do so. The 4,400,000 bushels, shipped in the seven days ending with Friday of last week, compared with 5,600,000 in the war-scare week itself, and with 6,400,000 in the week preceding, when the September movement reached its climax. With two exceptions, last week was the only one since the new crop began to move out, in August, in which we exported less wheat than in 1907.

What did the decrease mean? It meant that Europe has not imported wheat as an immediate consequence of a "war scare." If Germany, for instance, had announced that it would resist by force of arms any effort of other Powers to restore the *status quo* in Southeastern Europe, we might have seen an outgo of wheat from here to Liverpool, up to the full capacity of departing ships; for if England is nervous about anything, it is about being caught in a war blockade with only a few weeks' provision in its granaries. But England did not really apprehend such a war.

The reason why wheat exports decreased so suddenly, and why arrivals of grain from farms at our own interior receiving markets simultaneously fell to barely two-thirds of what they were a fortnight before, was that the much-depleted storehouses of the world have been fairly well filled. At the opening of September, the "visible supply" in American granaries was less than in 1907 by 33,000,000 bushels, or 67 per cent., and Europe's stock in hand was barely two-thirds what it was a year before. This week, the "American visible" is practically the same as at this date last year. During the eight weeks' interval in 1907, the supply decreased 6,000,000 bushels; in the same weeks this present season, it increased 25,000,-

000. The same thing has now happened to Europe's storehouses.

September's export of wheat was not a "record": September of both 1902 and 1901 surpassed it. Nor did the 6,473,000-bushel export of the last week of September break all precedent; there was a 9,000,000-bushel outgo in the second week of August, 1901, another of 8,800,000 in the ensuing week, and one of 7,400,000 in November, 1898. But it has few other parallels, and meantime the receipts of 12,000,000 bushels at the interior receiving points, three weeks ago, broke all those records in our history. The 9,800,000 bushels delivered in the last week of October, 1902, held the record to that date. But the pace of 1908 was too fast to be maintained; our farmers have shipped to market, since midsummer, 15,000,000 more bushels of wheat than they shipped in the same weeks from the crop of 1907, larger by 76,000,000 bushels. There is much less left upon the farms. The question now is, just how the decrease will affect our market for international exchange, and our railway earnings, which received such timely help from the wheat shipments of September. But of the influence of this heavy marketing at the present high prices, on the wealth and prosperity of the agricultural West, there can be no question whatever.

BOOKS OF THE WEEK.

Adler, Elkan Nathan. Auto De Fé and Jew. Henry Frowde.

Aldrich, Thomas Bailey. Marjorie Daw. Houghton Mifflin. $2 net.

Aleramo Sibilia. A Woman at Bay. Putnam. $1.50.

Dewey and Tufts's Ethics

By JOHN DEWEY, Professor in Columbia University, and JAMES H. TUFTS, Professor in the University of Chicago. 618 pp. 8 vo. (*American Science Series.*) $2.00.

G. H. Palmer, Professor in Harvard University: It is a scholarly and stimulating production, the best, I think, for college use that has yet appeared. Indeed, from no other book would a general reader obtain in so brief a compass so wide a view of the moral work of to-day, set forth in so positive, lucid and interesting a fashion. Twenty years ago the book could not have been written, for into it have gone the spoils of all the ethical battles of our time. While I often find myself in dissent from its opinions, I see that whoever wishes to comprehend the deeper social tendencies of recent years will do well to study this book, and that he will carry away from his reading as much enjoyment as instruction.

NOW READY

The Life of Henry Irving

By AUSTIN BRERETON. With numerous Illustrations. 2 vols. 8vo. $6.50 net.

It tells the history of his career from his birth to his death, and it contains a large amount of material which will be entirely new to the public. Mr. Brereton was an intimate personal friend of the actor of long standing, more especially during the last nine years of his life. The numerous illustrations include a fine, and hitherto unpublished, photograph of Sir Henry Irving, taken shortly before his death.

LONGMANS, GREEN, & CO., New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 29, 1908.

The Week.

There is at least no apathy in election forecasts. That pleasing industry is one of the few that are not waiting to burst into activity after the election. Party leaders think that their great function in the last week of the campaign is to "claim everything." Chairman Mack is electing Bryan by majorities as large as those which Chairman Hitchcock is assigning to Taft. Slight reflection, however, will convince any student of elections that there is little to fasten to in this hurly-burly of cocksure and conflicting prophecies. If a manager knew the other side was going to win, he could not be got to admit it. What he says, either publicly or privately, is to be taken with the discount that necessarily goes with his position. In 1892, Chairman Carter was just as sure that Harrison would win, as Chairman Hitchcock is this year that Taft will. The impending Cleveland landslide had not entered into the imagination of the Republican managers. We do not say that there will be a Bryan landslide this year—for we frankly confess that we have no accurate or satisfactory means of knowing how the election is going—but we do say that it might be about to occur without the Republican chairman being aware of it. The same thing is true, *mutatis mutandis*, of Chairman Mack. As for the confident newspaper seers, their visions have so often shadowed forth the thing which was not to be, that we wonder at the airy grace with which they again mount the Delphian tripod. All the bawling about certainties does not make the judicious shut their ears to the truth that this has been a Presidential campaign so mixed and peculiar, so difficult to judge, owing to the fact that great sections of the population have given no clear sign of their intention, that prediction is more than usually futile.

The President's latest appeals to the labor vote are a confession of acute apprehension. If there were any real confidence among Republican managers that the labor vote was not actually disaffected, we should not see these renewed and rather forced efforts to prove that labor unions have every reason to be grateful to Taft, and to hope that he will fulfil all their desires. But some general truths are agreed upon by all men who have had to do in a large way with the employment of labor. One is that laboring men do not like to be coddled. More can be got from them by honest brusqueness than by wheedling. And especially will they repel condescending advice about who is and who is not their "friend." They have a sneaking idea that they know it themselves. Judge Taft has spoken for himself, on the labor issue, and has done it with force, courage, and self-respect. He does not need another to urge his suit. In particular, he does not need such advocates as are now being pressed into his service—for example, the First Vice-President of the New York Central Railroad.

In spite of the strong campaign which Gov. Hughes has made, and the demonstration of his continued hold upon the reason and conscience of the State, the air is filled with rumors that he is to be defeated by secret opposition and discreditable party "deals." The talk is of Taft and Chanler as the combination that is to win in New York. This is based, in part, upon the bitter and persistent antagonism to Hughes of Republican local leaders, and the strong suspicion that the party machine will not honestly support him. On the other side, it is broadly hinted that Tammany will not be loyal to Bryan, and will trade votes for Taft in return for Republican votes for Chanler. Ardent Bryan men are already charging openly that such a dicker is afoot. If so, it would only bear out what prominent Western Republicans told their New York friends from the beginning. They said that there need be no fear of Bryan carrying New York, since a bargain would be struck with Tammany, whereby Taft would get the electoral vote and the Governorship be thrown to the Democrats. In other words, a repetition of 1888 was to be seen, when Cleveland lost New York, but Hill was elected Governor. Such a plot, if it exists, involves great danger for Mr. Taft himself. We may be sure that he would not be a party to any such "deal," for the simple reason that it is nefarious. He is, in fact, speaking earnestly in behalf of Hughes, as he is bound to do in gratitude and common honor. But even if he were not impelled by such worthy motives, he would strongly urge the election of the Governor, if only as a means of improving his own chances of success. Splitting tickets under our complicated election laws, is a difficult and hazardous process. Voters know from experience how great is the danger of having ballots rejected altogether for improper marking, and the probability is great that, if the idea be got into the heads of Republicans that they are to "knife" Hughes, they will find that voting the straight Democratic ticket is the easiest way. Therefore the movement to defeat Hughes cannot help also being a movement to defeat Taft. If Hughes goes down before subterranean opposition, Taft is only too likely to go down with him.

If any one has thought that the opposition to Speaker Cannon is confined to the West, he must have been undeceived when on Sunday ministers of various denominations denounced his coming to Philadelphia to speak for Taft. One of the leading Methodist clergymen declared that this step would make votes for Bryan, while Episcopal and Presbyterian ministers joined in saying that his coming was "an insult to the city." Former Representative W. H. Palmer of Wilkes-Barre has announced that, if elected this year, he will not favor Cannon or any one else who opposes the Taft-Roosevelt policies. In New Jersey, the fight against two Congressmen deemed too friendly with Cannon goes on apace. Out West hardly a week goes by that some Representative is not compelled for his own safety to promise to vote against Cannon. As for that gentleman himself, he is so confident of reëlection that he is willing to leave his district and speak for the national ticket in the East. But it is clear that, even if the Republicans control the next House by a large majority, there will be a determined effort to choose another Speaker.

If, in the coming election, the Socialists cast anything like the 1,000,000 votes which they are now counting upon, we shall hear them positively forecasting a speedy supersession of the old parties, and a capture, ere long, of the entire political machinery of the nation. But that would not in the least follow. The Socialists, like the rest of us, must deal with the great capacity of men and women to change their minds. They could profitably consider, for example, the article on "A Slump in French Socialism," in the last *Contemporary*, by Laurence Jerrold. That keen-eyed and well-informed writer points out the severe reaction which Socialism in France has lately undergone. A few short years ago Socialism boasted that no public man could withstand it; with comrades in the Cabinet and an old associate as Prime Minister, it was about to complete the conquest of the nation; yet it has now fallen into political feebleness. Many causes have contributed to its present low estate. They were alluded to in the speech which Premier Clemenceau made at Var the other day. It was the spirit of violence displayed by Socialists which had aroused the sober citizens of France against them. A decline in their strength set in immediately after the terrible strikes at Pas-de-Calais. Clemenceau then put down riot by force, with the result, as he said, of bringing "anathemas" upon his head, because, in spite of "long companionship" with the Socialists, he had conceived it to be his first duty to suppress forms of violence which, if they were not suppressed, "would be the end of civilization." With sure touch, M. Clemenceau pointed out the folly of hoping to attain social justice by a "coup de force," and reminded the "doctors in revolution" of the unescapable laws of political evolution which were certain to bring their impracticable schemes to the ground. On the verge of triumph to-day, they would be plunged into the abyss to-morrow. "We must," said the French Premier, "accept liberty with all of its risks." One of these is that the people will grow weary, will hesitate, will draw back. Nothing is so certain in politics as its accompanying uncertainty. Hence the mistake of those who would deal with great masses of men as if they were but so many figures in a mathematical problem, and not human beings compact of fallible judgment and changing wishes.

The Panama merchants who are complaining about the importations by United States commissaries must be silenced, if the Republican party is to be spared unnecessary embarrassment. By some oversight, it appears, the Federal government arranged, in its treaty with Panama, to give Americans in the canal zone a taste of free trade (well diluted, to be sure, but still genuine). Commissaries are allowed to import free of duty all "necessaries of life." Under this provision, Germany is sending thither her toys, Ireland her linens, England her tobacco and leather, to the great indignation of local traffickers. What objection can our officials raise against the plan of the aggrieved to cancel this privilege? At every turn the Isthmian merchant will meet them with a paragraph from some Republican campaign book or platform wherein the rightful appetite of infant industries, the sacred standard of living, and other glorious old orthodoxies are set forth. On the other hand, it will be awkward to accept a tariff schedule and thereby double retail prices. There are several thousand intelligent Yankees in the canal zone, many of whom would carry tales home which might plant more thorns in the "standpatter's" path.

Southern lawlessness is something more than the fruit of race prejudice or the antagonism of industrial classes. The murderers who descended the other night upon Walnut Log, Tennessee, were simply squatters, like those who gave Adirondack residents trouble some time ago. Their attack was open, bold, and successful because the State, like all its neighbors, has never inspired respect for order by the only possible means—strong police and prompt, unflinching judges. In proposing that the six most sorely afflicted Southern commonwealths establish a rural patrol and coöperate in other ways for the extermination of "night-riders," the Governor of Tennessee goes straight to the heart of the matter. The sooner his people recognize that they are thought semi-civilized, the better for everybody. Canada, by the creation of the famous mounted police, for whom even desperadoes have wholesome respect, long ago showed how a sparsely populated, wild territory must be governed. So long as the South, ignoring this example, leaves the maintenance of peace to village constables, white men and black will be tortured, murdered, or ruined by any gang with a grievance or a grudge. Even though the projected conference of Governors meets at once, conditions will probably grow worse before they are better. Cotton growers all over the South are imitating the night-riders of the Kentucky tobacco counties in their effort to keep up the price of their staple. In the face of ugly opposition from influential planters, who now number about 10,000 and may double that figure before their Memphis convention shall have adjourned next month, Governors may find it hard to secure money or men for State constabularies destined to interfere with would-be cotton monopolists. Unless legislators are enlightened enough to look beyond narrow, greedy class interests, and unless fearless patrols can be found, the civil war which has been raging in Kentucky may spread through the whole cotton belt.

The question whether the War Department should rule the Philippines was earnestly discussed at Lake Mohonk last week. At present, the real control is in the hands of a brigadier-general at the head of a special bureau of insular affairs of the War Department. Upon him the Secretaries of War rely, and it depends largely upon him how much information goes out as to actual conditions. To our mind, if we are to be in the colonial business for a long time, there should be a separate department or bureau. If our forests or our Indians are worth placing under an independent head, our Filipinos are, and they should profit by the change. The Secretary of War is now much over-burdened, charged, as he is, not only with the army, but with our islands, the Panama Canal, river and harbor problems, and other matters. The result is likely to be, as in the case of Mr. Taft, that the army gets only the remnants of the Secretary's time. But aside from that, military spirit and tradition are not ideally suited to deal with the activities of civil government.

Building needless battleships so as to

make work for the unemployed, seems to be the latest thing in statesmanship. The Prime Minister of England has apparently taken up with it. In his statement in the House of Commons, when asked what the government proposed to do in face of the great numbers of men without work, he said that the Admiralty would spend $12,500,000 on new construction sooner than had been planned. And President Roosevelt went over to the same idea in replying, the other day, to a delegation from a steel company, who urged him to do something to give them government contracts and keep the men from starving. "Ah," said the President, "if Congress had not voted down my recommendation of four battleships, every man in your plant would have had employment." If this principle is to be frankly adopted, we may be perfectly sure that its application will not be limited to vessels of war. A battleship is a most unremunerative investment. It cannot be sold, and produces nothing that can be sold. If the money required to build it were put into a government manufactory—say, of hats or blankets—the capital would go on turning itself over and furnishing continual employment. The workers, moreover, would be highly favored in the matter of hours and privileges. Simply as a means of making work for those who cannot easily find it elsewhere, the building of warships is a clumsy expedient. It is also very indirect. A good deal of the money paid out goes to wage-earners, but far too much of it goes to assure employers that "reasonable profit" which, according to our latter-day Republican doctrine, it is one great end of lawmaking to provide.

To Mr. Thayer's tribute to Professor Norton, which we print elsewhere, we must add a word in our own behalf. Professor Norton was, as Mr. Thayer notes, one of the chief founders of the *Nation*—the last survivor among them, in fact, now that President Gilman is also gone. Mr. Godkin was emphatic in asserting the inestimable aid he rendered in those early years of trial. "If the paper succeeds," said Mr. Godkin in one of his letters, "I shall always ascribe it to you"; and after the success of the *Nation* was assured, Mr. Godkin declared: "Its existence is largely due to the support and encouragement which you gave me." This support and encouragement were continued through the editorship of Mr. Garrison down to the present day. For what it was and is the *Nation* is Professor Norton's everlasting debtor.

In the Canadian general election of Monday, the Liberal government came out better than anybody expected. The prophets all said that Sir Wilfrid Laurier would be supported by the country, but that his majority would be cut in half. In the actual result, it is diminished by only three or four seats, at most. Sir Wilfrid has a new lease of power, though it will be for the last time, as he has announced his retirement, after this term in office. His present triumph is more personal than political. A "native" statesman—as against Sir John Macdonald, who was always thought of as essentially "British," and who left that reproach as a legacy to the Conservative party—Sir Wilfrid Laurier has wonderfully kept his hold on the Dominion. But it must be confessed that he has done it, in part, by stealing the political clothes of his opponents. An old free-trader, he has, since coming to power, simply taken over the "national policy" which he used to attack, and extended it. The system of protection and bounties has been even more strongly intrenched at Ottawa under the Liberal government than it was under the Conservative. With it has unhappily come that intrusion of business into politics, and that mercenary aspect of public affairs, with which protectionists in the United States have made us too familiar.

How deeply the enthusiasm for universal peace has stirred Italy, the ceremonies at the recent unveiling of a monument to Alberico Gentili at Sanginesio, the great jurist's birthplace, made evident. Three centuries have sped since the distinguished author of "De Jure Belli" died at Oxford, where his lectures on international law had made him famous. The predecessor of Grotius, both in point of time and with respect to his dream of a parliament of nations, Gentili is regarded, particularly in his own country, as the first apostle of world-peace. The monument at Sanginesio was the least of the honors paid to the jurist. A better one was the great assemblage of nobility, officials, and university leaders, Italian and foreign, including Thomas Erskine Holland, the venerable successor to Gentili at Oxford, whose investigations have proved that the Italian scholar conceived universal peace before Grotius. The highest respect, however, was shown in the eulogies of Gentili's revolutionary idea, and in the spontaneous applause they called forth from the large throng of spectators and assisting dignitaries. It was doubtless without much exaggeration that the speakers, and after them the Italian press, declared that, could a vote have been taken on the day of the unveiling, the whole peninsula would have spoken for that great peace of which the child of Sanginesio dreamed.

THE CLOSE OF THE CAMPAIGN.

The campaign closes with the issues yet undefined and with many thoughtful men still dubious as to the proper way to vote. Both the large parties and all the minor ones are radical. With the general purpose of this radicalism we are in hearty sympathy. The managers of many of our railways, Trusts, and other great corporations have been guilty of stock-watering, stock-jobbing, discrimination, oppression, and extortion; they have flagrantly defied both the written and the unwritten laws of fair dealing. Their outrages upon the people cry to heaven for redress, and yet that redress must come by orderly process and must be in accord with the fundamental laws of State and nation. We need public service commissions; we need statutes as drastic, perhaps, as the English Companies Act. Nevertheless, we must frame our healing measures in terms that can be enforced; we must not take away the right of appeal to the courts for the protection of vested interests; we must not attempt to abolish an old wrong by substituting such a new wrong as discriminating or class legislation. The essential question in regard to the parties, then, is whether their radicalism is sane and practicable.

For controlling the Trusts, the Democrats propose a scheme, supported by an elaborate argument by Mr. Bryan, which is fantastic and absolutely impossible. We have already analyzed (see the *Nation* of September 3, p. 195), this wild proposal to limit the output of any company to 50 per cent. of the amount of its commodity consumed in the Uni-

ted States. There could be no more striking instance of a vaguely conceived and impracticable remedy. As to labor legislation, both parties have drawn planks that are unsatisfactory. Of the Republican resolution the best that can be said is that it is probably meaningless. The Democrats have frankly made a higher bid to labor and have succeeded in catching Mr. Gompers and his personal followers. About the only important issue on which the Democratic platform speaks more intelligently and courageously than the Republican is tariff reduction. Both parties are for revision; but the Republicans want a tariff that will not only protect the dear workingman, but will also afford the manufacturer a "reasonable profit." This is so gross a piece of favoritism, in its sacrifice of the consumer to the greedy producer, who pays the expenses of political campaigns, that were the platforms the only thing to consider, one might swallow Bryan's absurd plan for regulating Trusts and without many qualms vote the Democratic ticket.

But other, and in this case more important, elements are to be reckoned into the account. Between the *personnel* of the parties there is not much to choose. The Republicans are cursed by the prominence of Aldrich, Cannon, Payne, Dalzell, and their tribe. They are hidebound devotees of the tariff. Close to them stands a group of corruptionists, who have been the subservient tools of the large corporations. Notorious among these creatures is Senator Foraker, whom the publication of the Archbold letters has just exposed. But in fairness it must be admitted that these men are not the whole party. Throughout the North there are many capable Republicans of high character, like Crane and Guild of Massachusetts, Hughes of New York, and Burton of Ohio. On the other hand, Bryan has unfortunately driven from the Democratic ranks those steady and conservative men who formed its main strength under Cleveland. In the North to-day, the Democracy is too largely made up of the rag-tag and bob-tail. Some of the older and wiser heads are returning to the ranks, but they have not control of the organization. In Massachusetts, the late William E. Russell is succeeded by men like George Fred Williams. In New York, Murphy, McCarren, Conners, and others almost as unspeakable are the dominant forces. The brains of the party are to be found in the South; but, in that region, the statesmen—if we may so dignify them—are parochial. Their views are neither long nor broad. They look at all questions in the light of the "race problem."

The result of this demoralization has been a terrible loss of efficiency. If the Republican party has "stood pat" on the tariff, it must also be said that the Democrats, destitute of leadership and divided in purpose, have been unable to organize an able and intelligent opposition. For such constructive legislation as we have had in the last twelve years—and there has been considerable of it—the Republicans are entitled to the chief credit. It is this pitiable inefficiency of the Democrats—to say nothing of the probable attitude of a Republican Senate—that makes us doubt whether, in the event of Bryan's election, we shall secure substantial reforms in the tariff. The Republicans, who are solemnly pledged to reduction, seem rather more likely to give it to us. In point of party *personnel*, then, and of probable accomplishment, the Republicans have a certain advantage—slight though it may be—and seem more deserving of support.

And the Republican candidate is immeasurably superior. We would not underestimate Mr. Bryan's amiable traits. He has a warm, benevolent heart; he is a kind husband and father, a good neighbor, a worthy member of an evangelical church. These are admirable qualities; but a man may have them all, and yet lack the stuff of statesmanship. He may be a brilliant orator as Mr. Bryan is, a skilful agitator, an unrivalled campaigner, and yet not be exactly the man for President. There is where Mr. Bryan falls short. Free silver is no longer an issue, but that inability to think straight and clear which made him an advocate of free silver still persists. That is at the bottom of his successive vagaries and of his present freakish scheme for the Trusts. That threatens to make trouble for us if he ever becomes President. The overshadowing issues to-day, several correspondents assure us, are anti-imperialism, anti-militarism, and tariff reform. But, apparently, that is not Mr. Bryan's idea. He has spoken on all these topics, but he seems not much interested in them, and he is not making a hard fight on any one of them. No man who has read his hourly harangues can seriously regard him as the champion of these causes. His chief energy is devoted to beating the air; he indulges in general denunciation of corporations; he appeals to the wage-earner and endeavors to stir up class feeling just as he did in 1896 and 1900. He has not been able to destroy the impression which he then made, that his temperamental inclination is toward noise and irresponsibility. Indeed, his programme is far less lucid and coherent than in the former campaigns.

We would not be understood as imagining that Mr. Taft's speeches have been beyond criticism: far from it. Some of his utterances on the tariff, his attempt to connect the panic of 1893 with the Wilson bill—these have indicated anything but a grasp of the problem. But we believe that Mr. Taft. who on the side of the domestic virtues is quite as strong as Mr. Bryan, far surpasses him as a man of affairs. His successful experience as judge, Governor-General of the Philippines, and Secretary of War have afforded him an exceptional training for the executive duties of the Presidency. And Mr. Taft's speeches, somewhat dull and unimaginative as they are, have been, in the main, tolerant and broad-minded, free from the bitterness and spirit of class rivalry which Mr. Bryan so constantly provokes. On the labor question, in refreshing contrast to Mr. Bryan's sophistries and flatteries, Mr. Taft has been direct and firm. In the years of slow recuperation from a financial panic, anything like rashness or flightiness in the conduct of government might do incalculable harm. This is the very moment when coolness, sagacity, steadiness—even phlegm, if you will—are the qualities that should command a premium. Because these are the qualities by which Mr. Taft is chiefly distinguished; because he has been bred in a tradition of public service; because he is a man of high ideals and strict integrity, we are persuaded that, in spite of all the arguments for Mr. Bryan, Taft is the man for President.

HUGHES AS A PRACTICAL MAN.

Before Gov. Hughes was renominated, the chief complaint against him from his own party chieftains was that he was "unpractical." That is a serious charge; but we are hearing less of it as the progress of the campaign brings out more clearly the facts in regard to his administration and makes more and more evident his effectiveness as a political leader. What Woodruff, Barnes, Hendricks, Ward, and the rest of the little bosses really meant was that Hughes would not let them meddle with his affairs and those of the State. They wanted the offices and the contracts for their henchmen; they desired legislation that would further their personal ambitions and fill their pockets. When Mr. Hughes refused to sacrifice the welfare of the people to such base ends, they turned against him and denounced him as "unpractical." This procedure recalls that pregnant phrase of Buckle's about those "who, on account of their ignorance, are termed practical men." But if we take the word in its ordinary meaning—"practical: capable of applying knowledge or theory to practice"—we see that Mr. Hughes is the most practical Governor New York has had, at any rate, since Cleveland.

He was certainly a capable lawyer. Ask any man of affairs whether, on the basis of achievements as a legal practitioner, he would prefer Hughes or Chanler in the conduct of a complicated negotiation, a difficult case, or an important enterprise. He would instantly tell you that, from the point of view of practical ability, Hughes has shown himself far superior. His handling of the insurance investigation, to go no farther, was a complete demonstration of his power. Yet some persons are gravely proposing to entrust the most complicated, difficult, and important undertaking in New York State to a man of obvious inferiority. A private business managed on that principle of throwing the responsibility on the less fit would go bankrupt in a year. Why, then, should we apply the theories and methods of bedlam to public business?

This question comes home with tenfold force in view of Mr. Hughes's extraordinary record as an Executive. Nothing like it has been seen within a generation. He has, as we have said, kept his eyes steadily on the needs of the State as a whole. He has never turned aside from that aim in order to accede to the demands of the machine hacks or "keep the organization satisfied" in Albany County, Westchester, or anywhere else. He has never, as Mr. Roosevelt happily turned it, supposed that to be practical was to be base. He has not traded offices for votes for the measures he has urged; he has not won support by threats or promises as to the exercise of the veto. He has relied absolutely on the justice of his cause. He has put pressure on the legislators in but one way—and that of the very essence of a government by the people—an appeal to popular sentiment. He has simply asked the Senators and Assemblymen to consult their constituents rather than the corrupt lobby which has so often dominated the Legislature.

This defiance of time-honored traditions was, in the opinion of experienced politicians, bound to lead direct to failure. It did nothing of the kind. It succeeded brilliantly. It secured, for example, the law establishing the Public Service Commissions—a great piece of constructive legislation. By that we would not say that the law is perfect or the *personnel* of the Commissions ideal. We mean that here is a practicable device for avoiding the appalling evils of unrestricted private ownership of public-service corporations on the one hand and municipal or State ownership or control on the other. The law will be amended as its defects are disclosed by actual trial, but already it can put a stop to the stock-watering, the looting of shareholders, and the cynical disregard of the comfort of patrons which have marked the operation of our street railways and lighting companies. We need not dwell on the other accomplishments of the administration—such as the important amendments to the banking laws and the acts against race-track gambling—for the story is a familiar one. It is enough to say that, in the teeth of the bitterest opposition from predatory corporations and race-track gamblers, Gov. Hughes has triumphantly carried through his programme of reform. He has been able to do this because the people have been behind him. Thus his career is the most apt illustration we can recall of that noble passage in which Morley denounces those "whose one cry to an advocate of improvement is some sagacious silliness about recognizing the limits of the practicable in politics, and seeing the necessity of adapting theories to facts. As if the fact of taking a broader and wiser view than the common crowd disqualifies a man from knowing what the view of the common crowd happens to be, and from estimating it at the proper value for practical purposes."

It was Gov. Hughes's skill in estimating and interpreting the higher aspirations of the people that forced the Republicans to renominate him. They were aware that in a State which is normally Democratic the ticket is always in danger of defeat; but they were also aware that there is not another Republican who stood the slightest chance of an election. And as a campaigner Mr. Hughes has been exceedingly practical. It is the unanimous testimony that in the West he was the only Republican speaker who made a strong impression. In this State there is no Republican platform orator within sight of him. He has considered the problems of our State government in a disciplined and serious manner, and has presented a definite and coherent policy. It is not too much to say that the opposition of Mr. Chanler has been futile and floundering. He has hesitated to avow his principles and to point out his plan for applying them. He has evaded plain questions on the vital issues. Morally and intellectually, he has shown himself far below Gov. Hughes. We grant, of course, that this community contains a large class which cares nothing about principles, because it does not understand them. Had Gov. Hughes disregarded the best interests of these men, they might still have supported him enthusiastically; but because he has interfered with their pet amusement of gambling or, in some cases, of stock-jobbing, they are ready to defeat him. But we trust that there are still enough and to spare of voters who are clear-headed and practical.

CORRUPT BANKING AND THE PANIC.

Whether regarded as a sidelight on the panic of last October, or as a picture of banking methods which were possible in New York during the period which led up to that event, the disclosures in the trial of Charles W. Morse are of great significance. Since

October, 1907, we have heard much of the "unreasonableness" of the panic. "Inexplicable" is the word some high authorities have used; "senseless" is E. H. Harriman's epithet; and we are reminded that the fact that, one after another, the suspended New York institutions have resumed payments, is sure evidence that there was no excuse for the public's sudden fright. On these allegations the testimony elicited in the Morse trial has an obvious bearing.

Of the fact that the disturbance of last autumn was world-wide, and that, as all trained students of finance now admit, the strain on capital had become so tense that a break somewhere was inevitable, we shall not now speak. Nor shall we discuss the stupendous demands which our railway capitalists and our millionaire stock-speculators had placed on the heavily depleted capital and credit fund of the United States. That of itself might explain why America was the severest sufferer. But it does not answer another question, about which more of the subsequent controversy has arisen than about any other phenomenon of the panic—namely, why New York city, the stronghold of financial resources, should have been the storm centre and the unquestionable point of weakness. Here the run on fiduciary institutions reached proportions not paralleled in thirty-five years; here the actual hoarding of money by depositors touched the largest figures in the history of banking; and here the temporary suspension of payments really began. How are we to account for these conditions?

Mr. Morse's character; the power which he had obtained over half a dozen banks, and the way in which he had obtained it; even the manner in which he had been using it—all this was as well known to observant bankers, months before the panic of 1907, as was the insecure position of the trust companies, and the certainty that, with their practices regarding investments and cash reserves, under the imperfect law of the day, they could not possibly stand a run. All that the pending criminal suit has done is to place the facts regarding misuse of fiduciary funds plainly in sight. It is now obvious to everybody that the Mercantile Bank's distress, in the week before the panic, had immediate and logical effect on subsequent events. Indeed, on reading the daily testimony one is tempted to suspect that the panic-stricken depositor had, in at least some instances, a far clearer view of the real situation than the Wall Street authorities, who should have known what was going on, but who announced, three days before the panic, that the other banks had made good the Mercantile's shortage in its daily balances at the Clearing House, and that all the trouble had consequently blown over.

Briefly summed up, the testimony shows that Morse had bought control of half a dozen depository institutions by raising loans on collateral of one bank's stock for purchase of another's; that in at least one case, stock of a bank was bought through proceeds of loans obtained from that bank itself; that "dummies" were used with the utmost brazenness, in procuring these loans—clerks and a woman secretary figuring as Morse's stool-pigeons; that, as a result, the deposits of these banks were used by Morse in a series of daring gambling ventures on the Stock Exchange; that he utilized his opportunities for stirring up the Stock Exchange, during three successive years, with "wash sales" and "matched orders"; and that he borrowed half a million dollars from one bank, in the manner and for the purposes above described, in the very week of the panic outbreak, when the bank's cash reserve was below its legal minimum. These operations, let it be observed, did not affect one obscure institution, and they were not confined to one financial adventurer. A "chain of banks," here in the heart of New York city, was being victimized; and associated with Morse, in his unprincipled speculations, were the heads of two or three great industrial corporations and the president of the Knickerbocker Trust Company.

The chief concern of most people, in the light of these disgraceful revelations, will presumably be to learn what may be done about it. This question has been answered already, so far at least as banking institutions under the New York State laws are concerned. At the instance of the present Governor of New York, the banking law of the State has put an end, once and forever, to such performances. The law forced upon the statute-books, in the face of angry resistance of interested parties, by Gov. Hughes and Banking Superintendent Williams, requires the trust companies to keep an adequate reserve; prevents both them and deposit banks from lending to "inside manipulators" or on private speculative ventures; and forbids the transfer of control of a deposit bank through purchase in the market, unless the Banking Superintendent is convinced of the good faith of the purchaser and gives his public assent to the purchase.

There remains the problem of safeguarding the national banks—three of which, all in New York city, Morse had in his clutches. In view of these recent revelations, it is not possible that Congress, in considering the banking question in its approaching session, can ignore the matter. The Comptroller of the Currency has given certain drastic instructions as to the future inquiries by bank examiners, especially regarding the action of bank directors. The purpose of these inquiries is well enough, but some of them are scarcely practicable, and fail to meet the real needs. The law itself needs intelligent reform, and, as experience has taught, needs it as badly as did the New York statutes.

SMALL MUSEUMS.

Small museums—we mean especially those in small cities—are mostly dead museums; and since these institutions are increasing rapidly among us, an inquiry into the causes of their failure to attract the public is not without value. One readily understands why the numerous German museums that are composed largely of the leavings of the metropolitan galleries are not beloved of the local public. But the same indifference is shown in the case of collections which, though small, are world-famous. You may have, for example, the Bergamo galleries pretty much to yourself at all seasons, while to enter the superb Wicar Museum at Lille it is frequently necessary to ring and summon a guardian. The neglect of the public for whose benefit these institutions have been founded does not seem, then, to depend upon the quality of the exhibits. Good and bad alike, the dear public shuns them.

Many reasons might be assigned for this fact. Unquestionably, much of the popularity of the great museums among their own people depends on the stimulus afforded by throngs of foreign tour-

ists—an aid that the small museum necessarily lacks. Under no circumstances can one imagine the galleries of Paris, Rome, or Florence deserted; but undoubtedly many of the good citizens who come out regularly of a Sunday would stay at home but for a consciousness that what thousands of foreigners gladly pay to see during the week, is worth seeing for nothing on a holiday. But perhaps we find the real cause of the attractiveness of the great museum in its character as a vast grab-bag. It furnishes infinite surprises. You can never be sure you have seen it all. You cannot exhaust it. It, on the contrary, exhausts you. You honor it for the achievement, and revisit it humbly. But at the small museum, perhaps really a more visitable place, you pass quickly through its modest suite of exhibition halls, and hurry out with the satisfactory conviction that you have seen it all, and need never see it again.

Here, founders and managers of small museums, is the enemy. It is this state of mind that you must combat on penalty of being reckoned among the constructively dead. The problem of injecting a little disturbing mind into this mass of complacency, is, if difficult, not unlike that which confronts the director of a small public library or the pastor of an institutional church. These bodies, too, though far better established in public esteem than museums, also lose patronage unless their policy be aggressive. So the management of a small museum cannot feel that its duty is done when deserted halls are handsomely filled with meritorious exhibits. It is not enough that the people ought to want to come. They must be made to come.

The true weapon of the director is variety. He can and should turn his stock over, so that some new and attractive exhibit is always dangling before the averted eyes of demos. Obviously, an entire museum cannot be rearranged several times a year. Certain departments lend themselves to the policy of change, others do not. Most of our smaller museums make a feature of an annual display of contemporary art. This is evidently a suitable and attractive fixture, but it provides for only a few months of each year, and it leaves untouched the more serious and important task of fostering the love of the great art of the past. Lectures in the museum, and informal conferences in the galleries, are also very useful, but they presuppose a public already kindled to the visiting point, and there is some danger that such interpretation may stiffen into pedantry or deliquesce into mere gush. The important thing, after all, is to get people to enjoy certain works of art.

The centre of public appeal may appropriately be a well-organized department of photographs of works of art, and prints, both originals and facsimiles. To these should be added a library of art, large or small, according to the means of the museum and the receptiveness of the public, and a small gallery in which several shows should be arranged every year. Such exhibitions are given successfully in the public libraries of Washington, New York, and Boston, and doubtless in many other cities. The surprising thing is that the smaller museums have let a work essentially theirs go so readily to the libraries. No possible form of museum benefaction can give such good results for a small expenditure. The price of a dubious Reynolds will start a department of art facsimiles on an adequate basis, and that of a second-rate Titian would endow it in perpetuity. The curator of such a department may play legitimately upon all the keys of public curiosity. Surely, no print department that upon Whistler's death could hang a dozen of his etchings was unvisited, and there is no reason why every museum should not have its little group of fine contemporary prints, besides the old masters, in reproductions of almost perfect quality.

If the department of prints and facsimiles—uniting as it does the academic and æsthetic interests of the museum—must bear the brunt of an aggressive policy, many other departments may well do their part. Almost all of the smaller exhibits should be shown in carefully selected groups, and for a limited period, and this implies a system of storage exhibition in which all objects are accessible to accredited persons, while usually withdrawn from the general public. These changing exhibits, none too large and tiresome, should keep alive a curiosity in the doings of the museums. And those who think they come merely to catch a casual show before it gives place to the next will hardly fail incidentally to renew their acquaintance with the permanent exhibits which otherwise they would have taken for granted at home. Of course, methods will vary according to the *personnel* of museums and the tastes of their public, but without some such observance of the law of variety we are satisfied that even the most fortunately situated small museum is doomed to join the somnolent ranks of the living dead.

CHARLES ELIOT NORTON.

At Shady Hill, Cambridge, in the house in which he was born, Charles Eliot Norton died on October 21. For two or three years past his health had been frail, but only during the last few weeks was the end seen to be near. He was born on November 16, 1827, his father being Dr. Andrews Norton, one of the most forcible Unitarian divines of his time, and professor of sacred literature in the Harvard Divinity School from 1819 to 1830. Dr. Norton's wife, Catharine Eliot, was the daughter of Samuel Eliot (a prosperous Boston merchant) and aunt of President Eliot. The Nortons were of Puritan stock, whose pioneers came early to the Massachusetts Bay Colony. They and their kinsmen filled pulpits, feared God, and served their town and State. Two of Mr. Norton's ancestors were Mrs. Anne Bradstreet, "the Tenth Muse," and the Rev. Michael Wigglesworth, orthodox of the orthodox, whose epic poem, "The Day of Doom," published in 1662, curdled the blood of sinners and brought grim comfort to the elect of at least two generations. Outspokenness and courage, practised by his forerunners, came to Mr. Norton as an inheritance. He had, further, the tradition of cultivation, and, better still, its environment; for, although the Cambridge of seventy years ago may seem in the retrospect provincial, if not parochial, it was a community in which the best men and women devoted themselves to the highest concerns of the intellectual and moral life.

Mr. Norton had lessons from a tutor and attended a private school in Boston. He was graduated from Harvard College in 1846, having among his sixty-two classmates Francis J. Child, the first scholar, and George M. Lane, the second—subsequently his colleagues in the university—and George F. Hoar, destined to become a United States Senator. He himself stood tenth, having "highly distinguished" himself in Greek and Latin, and "excelled" in political economy; and he delivered at commencement a dissertation on "Santa Croce." He entered the East India house of William S. Bullard in Boston, and for several years had practical ex-

perience in the business methods of the time. Sent in 1849 as supercargo to Calcutta, he saw something of India and the East, and returned home by way of Egypt and Europe. This first European visit may have confirmed in him the decision, which he had been slowly arriving at, that neither his talents nor his inclination fitted him for a mercantile career; but he did not yet escape from the counting-house. Nor were the years he spent with Mr. Bullard wasted, since they taught him a certain businesslike directness in dealing with practical affairs which the public in his later years hardly dreamt of, but which was apparent to any one who consulted him.

On returning to Cambridge, he received a temporary appointment as instructor in French at Harvard, to supply the place of a friend who had fallen ill. Meanwhile, he was already absorbed in the study of the great problems which were then agitating progressive thinkers at home and abroad, and in 1853 he published a volume of "Considerations on Some Recent Social Theories." The death of his father in that autumn caused him to devote the following two years to editing the elder Norton's posthumous works. Before he had completed this pious task, however, his own health, which was never robust, gave way; and as soon as he could he went again to Europe, with his mother and sisters, for a long stay. The two years he passed there proved most important in his development. They revealed to him the significance of Italy—which came later to play a great part in his life-work. It was at this time, also, that he began to form friendships with interesting Englishmen, above all, with John Ruskin, who, although the elder by eight years, found in the young American the wisest and truest friend he ever had. That friendship produced a lasting effect on both. It fired Mr. Norton with Ruskin's enthusiasm for the fine arts as a register of culture, and with admiration for Ruskin's genius, which he had already known through his books; but Norton's poised mind, and his searching, critical faculty restrained him from accepting Ruskin's doctrines in their extreme form. He studied the paintings and monuments of Italy for himself, controlled his flood of new opinions by personal examination, comparison, and reflection, and came home after two years equipped for the higher criticism of art which was then almost a sealed book in America. Italy, and his dear friend Lowell, who was now professor of the Italian and Spanish literatures at Harvard, quickened Mr. Norton's study of Dante, in which he became a master. He printed a translation of "The New Life" and, in 1860, a volume of "Notes of Travel and Study in Italy," which retains, after fifty years, its interest.

Mr. Norton settled at Shady Hill and mixed, as "to the manner born," with the group of scholars and poets and authors who gave lustre to Cambridge and Boston. Longfellow and Lowell were at the height of their fame; several of the Harvard professors had a national reputation; Holmes came often from Bostou to that circle; Hawthorne and Whittier and Emerson were familiars; Sumner reported news of the great issues which were being fought over in Congress before they were settled on the battlefield. It was the time when Boston, including Cambridge, was the acknowledged Athens of America. The *Atlantic Monthly* had begun its brilliant course, and to Lowell, its first editor, Mr. Norton had brought from England a satchelful of contributions, besides promises of support from many of the eminent British writers of the time. He himself constantly aided Lowell, who was not a willing editor, with advice and with an occasional paper.

When the civil war came, Mr. Norton consecrated his energy to upholding the Union cause. From 1862 to 1868 he served with Lowell as joint-editor of the *North American Review*, which he made a mouthpiece of patriotism. He contributed to it in about equal proportion literary and political articles. He believed in Lincoln at a time when stanch supporters of the Federal government mistrusted, undervalued, or misunderstood "the Illinois rail-splitter." He edited the leaflets of the Loyal Publication Society, which reached thousands of newspapers throughout the North and spread patriotic doctrines and courage. Recognizing the need of an enlightened journal, which should furnish independent authoritative criticism of politics, books, and art, and should represent the best conscience not less than the best scholarship of the time, he discussed with Frederick L. Olmsted, Edwin L. Godkin, and a few others the feasibility of starting such a journal, and their discussion led to the founding, in 1865, of the *Nation*. Mr. Godkin was as dauntless and self-sustained an editor as America has ever had; but we know now from his letters that it was the approval of the quiet scholar at Shady Hill that more than once gave him courage to fight on. Mr. Norton's support of the *Nation* in its early days was not merely financial and consultative, for he contributed freely to it articles and critiques; and he continued this connection during more than forty years.

Mr. Norton married in 1862 Miss Susan Sedgwick, daughter of Theodore Sedgwick, a lawyer of New York. In 1868 he went to Europe with his family and spent five years in England and on the Continent. Upon his return he found at Harvard a new régime and in Cambridge a new atmosphere; and President Eliot, the young head of the university, persuaded him to undertake a course of lectures in 1874. The next year the Corporation appointed him professor of the history of art, and during the following twenty-three years Mr. Norton's courses were the most notable in the university. In 1898, having passed three score and ten years, he retired. But his activity did not cease. Up to the last few months nothing that greatly concerned Harvard, or the public interests, or movements for social and intellectual advance, passed without his cognizance: usually, indeed, he was consulted in regard to them, and often he gave the originating suggestion.

Such, briefly, are the dates and outwardly marking events in the life of Charles Eliot Norton; but how little they convey of the man! How little they explain for a stranger the influence, deep and refreshing, which he exerted during nearly half a century! He held a unique position in America, whether as an expounder of æsthetics or as an unwavering critic of the modern tendencies towards gilded vulgarity and conscienceless money-making. When he began to utter his protests, the land was still at the stage where public men and popular writers gauged the prosperity of the country by the size of its crops, the growth of its population, the expansion of its railways and industries. Mr. Norton taught that these are very fallible meters of civilization. His teaching may sound trite now, when all the world repeats it, and yet the number of the vulgar rich increases on one side, and of the joyless, angry poor on the other. The surprising thing to many persons who, having known of Mr. Norton merely as a severe critic, came into acquaintance with him, was that the critic was without sourness or asperity. He was a man who had the truth ever before his eyes; he saw her beauty, and desired, by stripping away the false or the ugly, to let others see her as beautiful. Hence, he was never a carping critic: he always had a better to substitute for the bad which he condemned.

This quality went into all his life, and, being reinforced by sympathy and by charm, made him the chosen friend of the best men of two continents. He had a rare genius for friendship, and it mattered nothing whether its object were Ruskin or Lowell, or a college undergraduate in whom he discovered signs of promise. And here, two points are to be emphasized which reveal his nature. The terms of his friendship were perfect equality. Even when, as a young man, he entered into comradeship with men already famous, with Longfellow and Emerson and Carlyle, he was their companion and not their disciple. He never surrendered his per-

sonality, he sat at nobody's feet. His intellectual and moral qualities, coupled with sympathy and downrightness, made men of genius take him for their intimate. And in like manner he always treated younger men as equals. He never expected them to conform to his opinions, nor would he have tolerated satellites. Among the hundreds of brighter undergraduates who came somewhat closely under his influence in the course of a quarter of a century—not a few of whom have since made their mark in the world—it would be hard to mention any who could be classed as a "Nortonian." He would have been sorry to have it otherwise: for he held that the mission of culture is to emancipate and not to enslave, to train up independents, not echoes or mimics.

To his friendships the world owes some of its most precious biographical records of the nineteenth century. He edited the Correspondence of Carlyle and Emerson, the Letters of Ruskin, the Letters and Memorials of Lowell, the Letters and Works of George William Curtis. For Carlyle he did even more: because, when Froude brought out the falsified version of the "Reminiscences," Mr. Norton gave them in their authentic form, and went on to edit Carlyle's Correspondence with Goethe, and several volumes of Carlyle's general correspondence. As editor, perfect veracity and taste guided him: what he printed, was ungarbled, but he had a severe judgment as to what was essential, and as to how much the public has a right to know of the private or petty details of a great man's life. This body of editorial work will keep Mr. Norton's memory fresh as long as posterity has any interest in the great names in this list. His chief original book, "Church Building in the Middle Ages," grew out of his lectures on Venetian and Florentine Art. But his translation of Dante's "Divine Comedy" ought to rank also as original, for it remoulded in English prose one of the world's masterpieces, and is not likely to be superseded. A monograph, all too brief, on Dante, and the early translation, already mentioned, of "The New Life," belong in this reference to his Dantean studies. After resigning from the *North American Review*, he published from time to time articles in the magazines, but he was too fastidious to write copiously, and as he held that far too many books are published, he never gathered his essays into a volume. As a part of his activity as critic should be reckoned his work as stimulator and suggester. He gave the inspiration which other men carried out. The Dante Society, the Boston Museum of Fine Arts, the Archæological Institute of America, Radcliffe College—these are some of the causes which he either founded or encouraged during their years of struggle for existence.

The secret of Mr. Norton's influence as a university teacher lay in his power to humanize knowledge. In his elucidation the mere special fact became irradiated by its connection with general laws. Thus the pertinence, the applicability to yourself of whatever art or history or nature presents to you, he unfolded very simply, but with unforgettable impressiveness. What he touched, lived: there was no dead knowledge; even erudition took on an unwonted glow. If Ruskin first introduced him to a perception of the spiritual significance of the fine arts, he proceeded, as was his habit, to investigate for himself; and he found in the beautiful severity of the art of Greece the proper counterpoise to Ruskin's romanticism. So his criticism of art had the long perspective which Ruskin's lacked, and it was free from the quality of magnificent impressionism, with its inevitable tendency to "pathetic fallacy," which troubled many readers of Ruskin. Here, too, Mr. Norton's inborn taste, strengthened and refined by ceaseless cultivation, never failed him. For many years he has been at Cambridge the Oracle of the Humanities; and from Cambridge his influence has been shed afar.

Any sketch of him, to be true, should lay stress on his strong human sympathies, his helpfulness, his good comradeship in the highest sense. Persons who suppose that he held himself aloof, in a sort of academic isolation, should be reminded that he was long the genial president of the Boston Tavern Club. So, in earlier days, those who imagined him to be a pre-Raphaelite æsthete were as mistaken as those who imagined that he read nothing more recent than Plotinus. In fact, Mr. Kipling's "Plain Tales from the Hills," and Mr. Dooley's first papers, were read at Shady Hill, and appreciated there, long before the general public had heard of them. The best contemporary works seemed to gravitate naturally to his library. But although he was up-to-date in his manifold interests, he believed in the rights of the individual to privacy, and he set himself firmly against the shameless eavesdropping and reporting which modern newspapers practice. Such reticences and reserves as his are called old-fashioned now; but they ought never to go out of fashion.

His books remain: the memory of his personal charm, of his friendliness and varied conversation, will live as long as those live who had the privilege of enjoying them; but the one aspect of him which has been too little dwelt upon, the aspect by which he would prefer to be longest remembered, must not be passed by here. This was his citizenship. He had an abiding sense of duty to his town, his State, his country. In his young manhood he organized and taught a night school. During the Civil War, he went regularly to the city hall to pack boxes for the soldiers; he took part in every movement for their benefit and for promoting patriotic enthusiasm at home, besides editing the leaflets of the Loyal Publication Society—a work of immense service. And thenceforth, although ill-health and aversion for the controversies of the platform kept him out of active politics, he always let his position be known, whether on local or national issues, and, if there were need, he joined in organizing a corrective movement. His attitude in these matters is shown by the fact, for example, that he labored with zeal for the Massachusetts Reform Club, for the Cambridge Hospital for Incurables, for no-license and honest government, and for the welfare of his farmer neighbors at Ashfield. The measure of his influence was given in 1898, when his condemnation of the Spanish War brought down upon him a storm of abuse from all parts of the country. That the sober censure of one private scholar should so infuriate the politicians and the jingoes in and out of Washington, together with the great horde of manufacturers and camp-followers who saw their opportunity in the war, not to speak of innumerable yellow journals which profited by every sensation, and clergymen of many sects who temporarily forgot their worship of Christ, the Prince of Peace, in order to propitiate and exalt the God of Battles—all this, I think, constitutes the highest tribute ever paid in America to the voice of conscience uttered through the lips of one man, indefectible in courage and in moral vision. Happily, Professor Norton lived ten years longer, to see the country which in its wrath had vituperated him, acknowledge his wisdom and regret the consequences of its own folly. Even Senator Hoar, one of the most virulent of his abusers, sought a meeting and apologized to him. The last years were filled with public recognition. Harvard, Columbia, Yale, Cambridge, and Oxford Universities bestowed on him their highest honors. The King of Italy, in acknowledgement of his Dante studies, made him a Grand Officer of the Order of the Crown of Italy. The Harvard Alumni elected him their president, and a member of their Board of Overseers. But what gratified him most was the creation of a fund, by his former pupils and friends, for the preservation of his library at Harvard as a memorial, and the remembrances which distinguished friends and several hundred Harvard undergraduates sent him on his eightieth birthday, a year ago.

And so his life closed amid urbanity, as those who loved him would prefer. In his last weeks he was reading Shakespeare and Scott, and John Mor-

ley's latest volume of Miscellanies, and writing letters full of characteristic cheer to his friends. He had lived his life out, filling it with activity and with public and private benefits, and he welcomed death. Brought up in the simple piety of Unitarianism, instructed from childhood to cherish the reasonableness of religion, endowed with strong religious sentiments—he himself taught a class in the First Parish Sunday-school and edited a book of hymns—he grew naturally into agnosticism, and his passage from the old to the new, being accomplished without wrench, left neither scars, nor bitterness, nor regrets. He had always faced life bravely and cheerfully: what had he to fear from death? He seemed to be the very embodiment of the spirit of Marcus Aurelius, his favorite religious companion. "Habituate yourself," says that sweetest of Stoics, "to the perception of all-pervading change; dwell on it continually, and order your thoughts accordingly; nothing more elevates the mind, and emancipates it from the body. He who realizes that at any moment he may be called upon to leave the world and to depart from among men, commits himself without reserve to justice in all his actions, and to Nature in all that befalls. To what will be said or thought of him, to what will be done against him, he does not give a thought; but is content with two things only—to be just in his dealings and glad at his apportioned lot. Free of all hurry and distractions, he has but one wish—to run the straight course of law, so with a straight course following good." These sentences may serve as a valedictory for Charles Eliot Norton.

William Roscoe Thayer.

Cambridge, Mass., October 23.

RECENT FRENCH FICTION.

Paris, October 10.

Some years ago Mark Twain used Zola's "La Terre" to retort on a French critic of our ancestry-hunting by a slur on millions of French wives and mothers. Since then English readers have been able to learn from other French novelists the high ideal of family life which, through all revolutions, persists everywhere in France. And these other novelists are what Zola never was—part and parcel of the people whom they describe lovingly. Zola, the son of a foreign father, reared by a mother struggling bravely against the poverty which debarred from social life, transferred from the narrow college town to Paris, where poverty and, perhaps, innate Bohemianism kept him in the circle of literary frequenters of cafés and coteries, with a married life that was unconventional—in these circumstances Émile Zola viewed French society from beginning to end as an outsider, and almost as an outlaw. He saw in relief only that which fell in with his own methods of story-writing; he was affected by a definite tinge of animosity against a world of which he was never a part. Those who, for fairness sake or because they like the common people, care to read a genuine novel of the French soil (*roman de la terre*) can do no better than take up "Les 'Pagès,'" by Énée Bouloc, with its preface by the poet Charles de Pomairols (Plon-Nourrit). The author has book-learning enough in economical and social sciences to look closely into the corner of France of which he writes; and he has the love of his own people, which alone can give true knowledge. His theme is "the poetry of a whole race, eager, hard, coarse; but eager only in its toil, hard only toward itself, coarse because we look only on hands and clothes; keeping in its rut, but along the line of duty; jealous and grasping, passionately so, but only for the soil that feeds it—the great race which makes the bread and defends the fatherland." The one corner of France thus described is the old Rouergue of the central south, with characters from the aged Pierrounel of Napoleon's time to the young fellows who seek fortune in the new cities, leaving homes "amid the keen fragrance of broom and fern."

"Un Grand Homme," by Gaston Rageot (Calmann-Lévy), is a novel by a writer distinguished in more serious work. M. Rageot is the professor of philosophy who succeeded so brilliantly some years ago with a book on success; he should know what constitutes the great man—and his method of arriving—in France of to-day. Anatole France's "L'Ile des pingouins" (Calmann-Lévy), as might be expected from the detached pieces of the story which the author has intermittently confided for several years to the Paris edition of the New York *Herald*, is a highly symbolical story of the weaknesses of present society. It has all its maker's likes and dislikes, and, from its wilfully complicated windings, is not the easy reading we associate with the literary reputation of Anatole France. Of course, the wit, the grace of language, the persistent skepticism are the same.

"La Vie secrète" (Perrin), by Édouard Estaunié, is in many ways one of the most powerful of recent novels. This author made a deep impression on his contemporaries of twelve years ago when the question of religious education was becoming uppermost by his third novel, "L'Empreinte"—the "imprint" which persisted in the mental being of his hero from early training in a Jesuit college. The expression was happy, and has entered into current use; the French Academy crowned the work. Other novels have since appeared from his hand, with art criticism and a book of high science in his own field—for in the world of action he is director of constructive engineering at the Ministry of Posts and Telegraphs. This new novel is a strong character description, weaving together for the reader's pleasure and instruction the hidden lives of various French men and women representing the mental divisions so pronounced in modern communities, particularly in France. The religious aunt, perhaps too fossilized for one that acts so independently; the Socialist nephew, who is a doctor; the rich young manufacturer, whose efforts to coöperate on a level with his workmen only set them bitterly against him; the emancipated young woman of university learning; littlenesses of half-developed minds and sway of elementary passions—all furnish many pages of intense interest, written in that clear French, most definite in its shading, which seems peculiar to those who have the "imprint" of clerical education.

The Margueritte brothers were long occupied with this seething of new thoughts against the old. One of them—for they are now working separately—Victor Margueritte, is faithful to his past in "Jeunes Filles" (Fasquelle), a novel whose title shows it deals with the new woman. Paul Margueritte, on the contrary, begins a quite different period of activity, by a romance of adventure—"La Princesse noire" (Juven). "La Folle Aventure," by André Lichtenberger (Calmann-Lévy), is also pure romance of a time when life was largely comic opera, with *précieuses* and *spadassins* and provincial *grands seigneurs*, mighty drinkers and hunters before the Lord. "L'Épouvante," by Maurice Level, is a romance of terror, with an unnecessarily grimacing face on the cover; "Popote," as its name imports, is a good-natured story, by Henri Duvernois (these two are published in book form after periodical use by the correct *Monde illustré*). Marie Anne de Bovet continues the series of her well-known short stories by "La Jolie Princesse" (Lemerre). "L'Été de Guillemette," by Henri Ardel, is of the idyllic present (Plon-Nourrit).

"L'Ile de volupté," by Myriam Harry, is in the usual style of the curiously brilliant cosmopolitan and travelled author. The island, propitious to light and tragic loves, is Ceylon. The absent husband, the present passing lover who forgets, the unhappy wife who cannot forget and dies, are not, as literature, of equal importance with the dainty, sensuous description of voyages over summer seas into cloudless climes. The manner of publication (by Fayard) is interesting as an experiment in France. The volume is octavo like a magazine, with glazed paper, to receive the hundred wash-drawings at which French illustrators are so good; and the price is but one franc fifty—less than half

that of ordinary editions of unillustrated novels. "Le Vaisseau des caresses," by Jules Bois, is less a genuine romance than a dramatic showing forth of what we owe to Buddha—"king of contemporary thought"—under starry nights of Egypt and fragrant dawns of Ceylon, with sentimental adventures in between. The author began years ago with an entertaining book on "the little religions" of Paris; he continued with the mysteries, ill-tasting, of contemporary Satanism; he went on to India, where the filth and fecundity of the religious life of the much-belauded Hindus rather repelled him; but he has evidently yielded to the charm. S. D.

NEWS FOR BIBLIOPHILES.

The dates have now been fixed for the auction, by Sotheby, Wilkinson, & Hodge, London, of Lord Amherst's great library, which was offered in a block in 1906 for about a million and a half dollars. Lots 1 to 450 will be sold on December 3-5; and lots 451 to 1,031 on March 24-27, 1909. In recent years it has been customary to break up great libraries into several sales, but in the old days there was one continuous sale. Topham Beauclerk's 30,000 volumes were disposed of on "Monday, April 9, 1781, and the Forty-Nine following Days (Good Friday excepted)." A list of Lord Amherst's Caxtons was given in this column (August 22, 1907, p. 160). They are seventeen in number, eleven perfect. The most famous and valuable, "The Recuyell of the Historyes of Troye" by Raoul Lefevre, issued probably in 1474, is the first book printed in the English language. It was "translated and drawen out of frenshe in to englisshe by Willyam Caxton, mercer of ye Cyte of London." Further, he tells us that the "transiacion and werke was begonne in Brugis in the Countee of Flaundres the fyrst day of March," 1468, and "ended and fynysshid in the holy cyte of Colen the xix day of Septembre the yere of our sayd lord god a thousand foure honderd sixty and enleven." In the Prologue to the third part, Caxton says:

> For as moche . . . that Age crepeth on me dayly, and febleth all the Bodye, and also because I have promysid dyverce Gentilmen, and to my Frendes to addresse to hem as hastely as I might this said Book, therefore I have practysed & lerned, at my grete Charge and Dispence, to ordeyne this sayde Book in Prynte.

Lord Amherst's copy, the finest extant, was purchased for him by Quaritch at the sale of the Osterley Park library, belonging to the Earl of Jersey, in 1885, for £1,820. It contains on a blank leaf in front the inscription "Sir Th. Fairfax the elder, Knight, oweth this booke." When in 1756 the Earl of Jersey's ancestor, Mr. Child, bought the Fairfax library from Bryan Fairfax, this volume was valued at eight guineas. The Roxburghe copy, which had cost the duke £50, went for £1,060 10s. in 1812, though it lacked the last leaf (an imperfection not noted in the catalogue). The fine Amherst copy may be expected to bring a sum approaching £5,000, and may take its place as the most costly of all printed books. It is far rarer than the First Folio Shakespeare, which now holds that distinction.

Not less than four of the other Caxtons are from the Fairfax and the Jersey libraries. In addition, the collection includes several fifteenth century books from the presses of Wyuken de Worde, Pynson, and Notary, and the Oxford aud St. Albans presses. It contains only Vol. I. of the Gutenberg Bible, the first book printed with movable types; but this volume, described as "absolutely perfect and sound throughout," is of the first issue, and was bought at the sale of the Gosford library in 1884 for £500. Lord Ashburnham's copy of the two volumes, printed on vellum (now Robert Hoe's) brought £4,000 in 1897. There is also a copy of the first edition of Balbus de Janua's "Catholicon," 1460, the fourth book printed with a date, and supposed to be from Gutenberg's press. From Fust and Schoiffer's press are Cicero's "De Officiis," 1465, the first printed edition of any classic; also the edition of 1466, on vellum; and St. Augustine's "De Arte Predicandi," 1466. From Mentelin's first Strasburg press there are two 1465 editions of the same work. The Lactantius, the first book printed in Italy (at the monastery of Subiaco, by Sweynheym and Pannartz, 1465), is a fine and perfect copy, and is said also to be the last book bound by Francis Bedford. The Beckford copy, which sold for £285 in December, 1882, went in the Ives sale in 1891 for $540. The second edition of Lactantius, by the same printers in 1468, after their removal to Rome, is also in the Amherst collection. Another important early printed book is a genuine "block-book," the "Apocalypse of St. John," printed in Holland about 1455 on forty-eight leaves, blank on reverse, but bearing manuscript notes, in exceptionally good condition. It is the second edition, according to Heineken, or the fourth, according to Sotheby; and it was bought at the Crawford sale in 1887 for £500. Five leaves of another edition of the Apocalypse and a single leaf of a Biblia Pauperum are other xylographic productions.

On November 2, Sotheby, Wilkinson & Hodge sell the library of C. W. Cowan, containing a collected set, uniformly bound, of first editions of Dickens, a number of books illustrated by Cruikshank, and a series of sixty-seven autograph letters of Sir Walter Scott, addressed to Charles Kirkpatrick Sharpe, filling about one hundred and sixteen pages, partly unpublished. On November 3, the same firm offers the library of the late Dr. John Newton of Liverpool, containing early printed books, witb woodcuts; a manuscript Book of Hours; the Nuremberg Chronicle, 1493; the first edition of the "Hypnerotomachia Poliphili," Aldus, 1499; the "Schatzbehalter," 1491; and the "Speculum Humanæ Salvationis," Zainer, 1491.

On November 5, the Anderson Auction Company of this city sells a collection from the library of the late Julia W. Bryant, daughter of William Cullen Bryant. There are a number of books with Bryant's autograph, others with presentation inscriptions addressed to him, and presentation copies of several of his own books. Bryant's own copies of his translation of the Iliad and Odyssey, with scraps of poems, notes, etc., in his autograph laid in are perhaps the most interesting volumes. The "Poems," of 1832, 1834, 1842, and 1848, each have Bryant's autograph on the title. The first edition of Longfellow's "Tales of a Wayside Inn" is a presentation copy, as are also the first editions of Dana's "Two Years Before the Mast," and T. W. Parsons's "Magnolia." Included are two travelling desks which belonged to Bryant, and other souvenirs.

On November 4 and 5, C. F. Libbie & Co., Boston, sell the library of the late Albert S. Wait of Newport, including a collection of book-plates formed by Eben N. Hewins of Boston.

Correspondence.

AN INDEPENDENT FOR BRYAN.

To the Editor of The Nation:

Sir: I am probably one of many thousand readers who have for a quarter of a century or more usually agreed with your position in important campaigns. I remember the thrill of satisfaction which went through us who were then young, when, in 1884, Mr. Godkin spoke for Cleveland, as only he in that generation could speak. There was no doubt, no hesitation, in his endorsement. But for nearly three months past I have read your editorial page for reasons to persuade me to support the Republican ticket—in vain.

The great issue, as I see it, is the tariff issue. This is not merely a fiscal, not an economic, but a moral issue. In thirty years, the high tariff has corrupted our political life, debauched our business standards, and hurried forward the expansion of the great Trusts which seem to menace our liberties, and to prepare the field for Socialism and anarchy. It is idle for President Roosevelt to muck-rake the Trusts and leave the tariff alone. Trusts are the children of the tariff smitten with elephantiasis.

Last month, when W. R. Hearst harpooned Senator Foraker, who had for so long enjoyed the monopoly of being the spouting whale of Republicanism, some of us exclaimed with Cowper:

> God moves in a mysterious way,
> His wonders to perform.

Foraker was one of those fire-eaters, who, as Gen. Grant said, did not get heated up until the war was safely over; then he became a blatant waver of the bloody shirt, a pension-monger, a professional patriot. By a perfectly natural transition, his patriotism latterly took the form of watching the Standard Oil's interests, in return for those certificates of deposit which Mr. Archbold frequently refers to in the letters which Hearst, true patriot that he is! has shared with his countrymen. Well, Foraker is harpooned, Quay and Gorman are dead, Cannon is being so hard pressed in his district that respectable men of all parties have cause to hope that he will be beaten. But even so, protection, the Bastille of the Republican party, is unshaken. Senator Aldrich, whose tariff brokerage business probably quadruples that of any other man in Washington, felt so secure of his hold that he spent his vacation in Europe, remote from the searchlight of a political campaign. What hope can you give us that, if Mr. Taft is elected, Aldrich will not continue to dictate

the tariff which we long-suffering Americans shall pay to Aldrich's employers—the protected manufacturers?

And Judge Taft himself—what have we to expect from him in behalf of tariff reform? He made an excellent judge—a non-partisan judge. But in all his political life he has been an obedient Republican. He was singled out for promotion by McKinley—the apostle of protection—and, so far as appears, never in the past dozen years, when he has been a great figure in the Republican party, has he done anything effectual for tariff reform. His friends say that he has held himself in out of loyalty first to McKinley, and later to Roosevelt, but that when he is elected he will think with his own mind, speak with his own tongue, dare with his own will. But history is largely against this pleasant prophecy. History shows that men who reach fifty and more years, without using their powers, men whose excess of deference or of professional courtesy has been a gag and restraint to them throughout their prime, cannot suddenly learn to think, speak, and act for themselves. If Judge Taft is elected I predict that he will be mere clay in the hands of the veteran tariff potters. You will hardly urge that the Republicans will begin in March, 1909, to perform their long-promised, long-deferred miracle—"the reform of the tariff by its friends." Have you forgotten that in a previous Bryan campaign they were loud in their promises, and that after McKinley was elected they laughed with derision at the poor mugwump and anti-imperialist dupes who had been led to support them?

I submit, therefore, that since the tariff issue is the great issue, our first duty is to defeat the Republicans. Elect Taft, and you will have the tariff more firmly riveted on the country. In order to appease the insatiable beneficiaries of the tariff the Republican party has enormously increased the national expenses; it is adding to our national ideals militarism and navalism, requiring hundreds of millions outlay yearly. Through the exorbitant pension list, it has connived at the dishonesty of tens of thousands of unworthy and fraudulent pensioners, and it has undermined and demoralized hundreds of thousands more who were perfectly able to support themselves. A vote for Taft helps to perpetuate these tremendous national abuses. If Taft is elected, the Republican managers will be very quick to proclaim that the country has endorsed their party in everything.

The chief reason urged by the Republicans is: "If you elect Bryan, you will cause a terrible financial panic."

Well, suppose the panic come—has not the nation outlived many panics? And is not mere financial inconvenience infinitely to be preferred to moral degradation? The land is full of men who have experienced hard times in business, but have not sacrificed their honor. But protection, with all that it entails, corrodes, debauches, prostitutes our commercial, our industrial, our political, our civic life. The Aldriches, the Quays, the Cannons, the Gormans, the Forakers, represent the business immorality of America. It is idle to hope that, by electing on their platform Mr. Taft, you will reform that immorality.

But it is urged that Mr. Bryan will be as powerless as Taft against protection, and that personally he is very undesirable. I yield to no one in my microscopic esteem for Mr. Bryan. I think that, for the sober work of statesmanship, we might as well put an over-inflated air-cushion in the Presidential chair. But this is a crisis in which candidates are merely symbols. Now Bryan's election will mean that the American people have turned against protection. It will mean also that we have an Opposition at Washington. For twelve years this country has practically been governed without an Opposition—yet this is the balance-wheel essential to the proper functioning of our political system. The Opposition may be timid and unsatisfactory at first—but if it exists at all, it may be made the instrument for the reforms which you and many of us have preached these many, many years. Can you show cause why we may hope that, if Taft is elected, the tariff evil will be more easily removed? It is in the nature of a cancer to grow, and not to dwindle. By defeating Taft we may not immediately secure tariff reform, but we shall have written our warning on Belshazzar's wall, and we shall have taken an indispensable step forward. What considerations of "averting a panic" or of the personal flimsiness of Mr. Bryan can offset this attainment which may be coupled with the resurrection of a genuine Opposition party in Congress and in the nation?

INDEPENDENT.

Cambrige, Mass., October 18.

MR. BRYAN AS A CONSISTENT REFORMER.

TO THE EDITOR OF THE NATION:

SIR: Will you allow an old subscriber, one who has taken and read your paper almost from the start, and been in general sympathy with its positions, to express his regret at the distinctly partisan flavor you are giving it in the present campaign, and especially at your treatment of Mr. Bryan. I don't object to your support of Mr. Taft; your right to do so is a part of the independent game; but it seems to me it could be done, indeed, that independency requires it be done, without so much injustice to his opponent. As an Independent myself, who after carefully looking the situation over, have decided to vote the Democratic national ticket this year, as is the case with many of your subscribers, I have been pained to read in your issue this week, to go no further back, such flings as "Mr. Bryan is nothing if not a noisy agitator," "the instability and untrustworthiness" of Mr. Bryan," "the most charitable view is that he is a happy thought statesman," "Bryan's comparative indifference through many years to the iniquities of the tariff," "a dangerous demagogue," and a little further back, "a wholly unsafe and untrustworthy political reformer"—indeed, in almost every issue of the *Nation* something in this spirit and this vein. By the use of such language you fail to do justice to yourselves. And you certainly fail to do justice to Mr. Bryan—fail to treat him in the admirable way in which, I am glad to say, you treat Mr. Taft.

Mr. Bryan is a great deal more than a "noisy demagogue," this, too, not only in the estimation of his thick and thin followers, but of such men, if their words mean anything, as Mr. Taft, his opponent, and of such Democrats as Richard Olney, E. M. Shepard, and Judge Alton B. Parker, all three of whom will give him their votes as so much more than "a noisy demagogue" as to be worthy of being made President of the United States.

What evidence have you of his "instability and untrustworthiness?" I do not know of a position or a principle that he has held in the past that he does not hold to now. Indeed, in the very number of your paper containing the words quoted you have an editorial on "What Bryan Could Do," the point of which is fear that as President he will stick to and seek to carry out the things that from the first he has advocated in his speeches—bi-metallism, the government's ownership of railways, and the like. And again in your editorial, September 24, on "The Old Bryan and The New" you say with regard to "the propaganda for half a dozen propositions" of which "In the main Mr. Bryan's career has been made up, "by no sign or word has he abandoned them; in regard to every one of them he stands obstinate, silent, and apparently unrepentant." Pray where does the "instability" come into the career of a man which is made up of the propaganda of half a dozen propositions with regard to every one of which he still "stands obstinate, silent, and apparently unrepentant?" Your idea of stability and trustworthiness seems to be that a man must drag out and present his opinions on every subject he had once stood for every time ever after that he opens his mouth, no matter how far the occasion and circumstances into which they once fitted and which first called them forth may have passed away. Mr. Bryan has evidently more good sense than to do such a thing; is not so pig-headed as you would thus have him be; does not talk silver now because silver is not now a living issue, and because, as he himself has said, the large addition of gold to the currency has taken away the need of it which he felt there was eight and twelve years ago.

On the other hand that he is not a "dangerous demagogue" seeking for selfish ends to adjust his utterances to what is popular for the passing hour, is shown by such things—to mention only two out of many—as his advocacy of bi-metallism at the time of his second Presidential canvass, when his simply keeping hushed about it would have saved him thousands of votes, and again by his speech on the ownership of railroads, two years ago, on his return from Europe, when his words on the subject were a direct slap in the face of his overwhelming popular reception.

Worse still as regards fair treatment of him is your assertion of his "comparative indifference through many years to the iniquities of the tariff," an assertion, as your correspondent September 24 has clearly shown, which is directly counter to the widely open facts of his career. How can you charge such indifference against a man who, on his first entrance at Washington into public life, made one of the most intelligent, intelligible, and convincing speeches on the subject that it has ever called forth, a speech which in this very campaign is reprinted as the expression of his views, and who on every proper occasion since has reaffirmed his position? Does a man once known to be veracious have to go about the country shouting every time he opens his mouth that he

tells the truth in order not to be charged with indifference to the evils of lying? You speak of his "comparative indifference" on the subject. Comparative with whom? With Judge Taft? Well, compare the latter's silence in the past, his hedging on the subject in his recent speeches at the West, his mistakes, if not misrepresentations, as to the relation of Democratic administrations to financial hard times, and his preaching at one place revision, pure and simple, and at others the possibility of revision upwards—all this with Mr. Bryan's record, and say whether the difference between them is not a great deal more than the Nebraska man's "indifference."

It is not necessary for the voter to endorse all Mr. Bryan's positions in order to support him as "a genuine reformer." Worse than an academic visionary is the citizen who is waiting for any real leader upward whose views on all points are in harmony with his own or even with the end ultimately reached. God does not make reformers in that way. Even Mr. Cleveland had his bad break in the Venezuela affair. The man who never dares the wrong will never do the right. All the world's great attainments in science, art, liberty, civilization, and even religion have been made not along one straight road where the end was seen from the beginning, but by feeling for them, often blindly, along false tracks and amid scores of mistakes. A thousand worthless fads are a cheap price to pay for one workable economic truth. There are three great issues overtopping all others in the present political campaign—anti-imperialism, anti-militarism, and tariff revision. Mr. Taft with all his virtues on minor matters is weak and wavering on these great ones. Mr. Bryan with all his vagaries on lesser issues stands as firm, I will not say as a rock, but as a strong, live man, on these that are vital. And that is why I believe he should receive from us Independents not only fair treatment, but vigorous support.

JOHN C. KIMBALL.

Greenfield, Mass., October 17.

REPUBLICAN CONTROL OF CONGRESS.

To the Editor of The Nation:

SIR: Allowing everything you say as between Taft and Bryan for argument's sake, what about the Congressional cabal, Cannon as Speaker, Dalzell, Sherman as Vice-President, etc.? In championing the Republican ticket you help the Republican party retain its supremacy, while it seems to me a change is sorely needed. Taft and a Republican Congress will be in a position to continue indefinitely not merely an absurd tariff, but also high-handed blocking of legislation necessary to protect against the saloon power the territory which has voted prohibition. In both directions we have reasons for expecting better results from a Democratic Congress than from a Republican. Your expectation that Taft as President would have more influence with a Congress of the same party than Bryan with a Democratic House and a Republican Senate is not supported by Mr. Taft's experiences as secretary and administrator of the Philippines. His recommendations have been ignored, even more than the President's. By advocating the election of Taft you are not merely repudiating Bryan, but you thereby endorse and accept in fact the whole Republican policy, tariff and Imperialism included.

Wisconsin, October 19.

BRYAN'S FINANCIAL HERESIES.

To the Editor of The Nation:

SIR: Your criticism on September 24 of the perversion of Mr. Olney from an ardent advocate of the gold standard to a supporter of the high priest of fiatism, rightly emphasizes Mr. Bryan's hallucinations on the subject of sound money as of fundamental importance. In its *immediate* effects, the question of sound money is of greater importance to our country's prosperity than the tariff or any other present political issue; for the reason that the incidence of tariff taxation is indirect; and since the enhanced cost of our supplies is gradual, we are able to adapt ourselves to the increased cost of personal and business expenses. On the other hand, financial panics, which may result, as in 1893, from an unsound currency system, come suddenly upon us, suddenly close factories and industrial establishments of every kind, and instantly throw thousands of wage-earners out of employment.

Upon this vital subject Mr. Bryan is discretely silent, and he assures us that the "money question is a dead issue," because of the increased production of gold. The artful iteration of this fallacy (just as many another untruth, by constant repetition, is finally accepted as fact) seems to have fooled Mr. Olney and other former strenuous opponents of fiat money. As was pointed out in the *Nation* of September 17, in the editorial "The Old Bryan and the New," Mr. Bryan asserted in 1900 that, "although 16 to 1 had been defeated in 1896, that did not end the discussion." Fraught with even more danger was his intimation as to "saving the greenback from impending annihilation." It should not be forgotten that Mr. Bryan has not recanted or changed his financial theories; all he says is that *conditions* have changed. The natural inference is that when conditions revert to what they were in 1896, and at other times of panic or business depression, as inevitably will be the case in this land of speculation and inflation, then, in response to the demand from all quarters for "more money" will come the opportunity for Mr. Bryan to resuscitate his silver sophistries or to propose some other equally vicious form of fiat money.

ALFRED SHERLOCK.

Minneapolis, October 4.

CHARLES ELIOT NORTON AND LESLIE STEPHEN.

To the Editor of The Nation:

SIR: May I call attention to what seems to be Charles Eliot Norton's most characteristic friendship across the waters? In the late Prof. F. W. Maitland's delightful biography of Sir Leslie Stephen, some of the most intimate and characteristic letters are to the late Professor Norton, and Stephen himself recognized that Norton represented the tone of thought about life, art, and letters which was most congenial to himself. Considering that Leslie Stephen was in touch with all that was most distinguished in English life, this was indeed a high tribute. It was a remarkable testimony to the essential unity of the Anglo-Saxon spirit that one of the finest types among Englishmen should have found his most congenial friend in one of the noblest of Americans.

JOSEPH JACOBS.

Yonkers, October 22.

A WHISTLER MEMORIAL.

To the Editor of The Nation:

SIR: Doubtless many of your readers are aware that a memorial to the late James McNeill Whistler, designed by M. Auguste Rodin, is about to be erected in London. The reason for the memorial, the nature of it, and the hopes of those who have worked for it are, however, not so well known.

The memorial was suggested at a meeting held in London shortly after Whistler's death, in 1903. It was called at the suggestion of the International Society of Sculptors, Painters, and Gravers—of which Whistler was the founder and later president, an office he held till his death. This International Society is truly international, and counts among its members such distinguished Americans as John S. Sargent, J. W. Alexander, W. M. Chase, Celia Beaux, Timothy Cole, Henry Wolf, Howard Pyle, Gari Melchers, Paul Bartlett, F. Macmonnies; and the late Augustus Saint-Gaudens was an original member. M. Rodin succeeded Whistler as president, and he was asked to undertake the memorial to his predecessor, and at once consented. The work is now well under way. It has already been exhibited in the Salon this year in Paris. It has taken the form of a life-size figure of Fame, bearing a bust or medallion of Whistler. Those who have seen it pronounce it one of Rodin's masterpieces. The original bronze will be set up in Chelsea, on the Embankment, where Whistler found so many of the subjects of his pictures, near the houses where he lived all his life, and opposite the church from which he was buried. And no more appropriate spot could have been chosen.

Within the last week, the city of Lowell, Mass.—the city in which Whistler was born, in which his birthplace still stands and has been preserved, shortly to be opened as a museum—through its Art Association has secured the American replica of the memorial, and will, by the generosity of the citizens of Lowell, and their generosity alone, erect it in the centre of the city. The sites of both these memorials are now not only definitely settled, but the bronzes are paid for.

But there is still another replica—for the committee arranged that two should be cast if the funds after acquiring the original for London should permit—one for America and one for France. The French critics already are regretting that France has not secured the second replica, and are praising the figure shown in the Salon. Why could not America present this replica to France? There have been international exchanges or presentations of works of art before. Why not again, and with great fitness and honor? Why cannot the artists and the art students of this country, who owe much to France, much to Whistler, much to Rodin, present the memorial to the republic? France has done much for American artists. We

American artists in return have done something for France, but here is a chance to do more, and we owe a great debt still. The sum needed to obtain this replica and present it to France is absurdly small—$5,000 is all that is wanted. Cannot the artists, the art students, and the art patrons of this country raise the amount in a week, as the citizens of Lowell did?

I am sure they can, and now, for art triumphs always over hard times, over wars and rumors of wars, even over elections. Here is a wonderful opportunity to strengthen our artistic ties with France, and to honor two great men—one Whistler, the greatest artist America has produced; the other, Rodin, the greatest living sculptor. In Europe, most of the subscriptions came from artists, art students, and authors, for it must not be forgotten, as it too often is, that Whistler was an author, and a most distinguished one, nor must it be forgotten that he was an American and among the great Americans. Therefore will not American artists and authors do for their own countrymen what Englishmen have done for a foreigner? Among the Englishmen who have contributed are George Meredith, Rudyard Kipling, Edmund Gosse, Austin Dobson, Maurice Hewlett, Sir Gilbert Parker, Bernard Shaw, Sir John Hare, Sir Squire Bancroft, Sir Lawrence Alma Tadema, Sir Herbert Herkomer, Sir Charles Holroyd, Sir Walter Armstrong, Walter Crane, Sir James Guthrie, Roger Fry, John Lavery, and many others. The subscriptions have ranged from sixpence to five hundred pounds.

Will not you take up this matter in the *Nation*, and help us to raise the sum before election day?

JOSEPH PENNELL,
Honorary Secretary Whistler Memorial Committee.

New York, October 20.

[Subscriptions may be sent direct to Mr. Pennell, at the Century Club, No. 7 West Forty-third Street, or to Harrison L. Morris, No. 215 West Fifty-ninth Street.—ED. NATION.]

REFERRING TO THE CHIEF JUSTICE.

TO THE EDITOR OF THE NATION:

SIR: There is a familiar old story of a lord chief justice, who, when called upon to pass judgment on a broker charged with dishonest practice, ruled regretfully that the evidence was insufficient to warrant conviction, but added: "If any one wishes to know my opinion of the defendant, I hope he will refer to me." The next morning the broker's advertisements in the London papers bore the conspicuous addition: "Refers by permission to the lord chief justice."

The tale is brought fresh to mind in reading a publisher's circular received this week. It has the imprint of The Herrick Book & Stationery Co., Denver, and of Keagan Paul, Trench, Truebner & Co., London, and sets forth the merits of a costly book by Allison Emery Drake, Sc.M., M.D., Ph.D., in which is demonstrated, to the satisfaction of the author, the thesis that a great part of the vocabulary of most Aryan languages is derived from Hebrew. From two pages of commonplace notices the longest leaps to the eye by virtue of black-faced type and the appended name of Prof. Walter W. Skeat. As printed, with indications of some omissions, it is an unqualified and enthusiastic endorsement of the book. That the honored dean of English etymologists should applaud so light-heartedly a work which, if accepted as authoritative, would at once relegate to the lumber-room the "Etymological Dictionary," the thorough revision of which, now nearing completion, is to be the crowning achievement of his life, seemed an act of generosity so nearly superhuman as to arouse suspicion, and led to an examination of the original review in the *Academy* of April 11, 1908. It is impossible to believe that any reader could misunderstand Professor Skeat's intention. The clearness of arrangement of Dr. Drake's book and the method of transliterating Hebrew consonants are sincerely praised; but the review as a whole is a sweeping condemnation of the work, couched in terms of rather gentle irony. Brief quotations will sufficiently illustrate the tenor of the review and the method of the compiler of the circular. The sentences omitted in the circular are here printed in italics:

Grimm's Law, as it is called, is really of no value. Just as the schoolboy, when asked whether the sun went round the earth, or the earth around the sun, impartially said that it was sometimes one and sometimes the other; so it is with this famous "sound-shifting."

We doubt whether justice has been done to the root "quatal," to kill, slay. All that is obtained from it is the Gael. "Gaidheal," a Gael, which is entered here "in query, of course, as the real meaning has long been forgotten." But we would remark that it is exactly preserved in the E. word "kettle," with an obvious reference to 2 Kings iv., 40, "there is death in the pot."

We regret that want of space forbids us from doing justice to this great work. *It is quite certain that it must be estimated in one or other of the only two possible ways; either it is the most important book on philology that has appeared of late years, or it is the most worthless.* The author's methods are so clear and explicit that no moderate opinion is possible. *The reader must judge for himself.*

There is an amusing side to this performance that may perhaps mitigate the harshness of our judgment, though the evidence seems sufficient to convict somebody of either gross stupidity or disingenuousness. And let writers, especially of signed reviews, take warning. Ironical praise may easily be perverted to strange uses.

ALBERT K. POTTER.

Brown University, October 17.

"SOCIETY WOMEN."

TO THE EDITOR OF THE NATION:

SIR: Is it not time to make a concerted effort against allowing that most vulgar phrase, "society woman" (or man), to creep into the English language? Incredible as it may seem, it has appeared now and again in quarters that are otherwise above reproach, and when once an indefensible phrase passes beyond the region of newspaper slang, where it had its birth, nothing but distinct and conscious effort can arrest it. Frivolous society is not the same thing as society. It is the social intercourse of *les intellectuels* which constitutes the really important part of society, and to devote the term, unmodified, to describing its noisy froth and foam is to throw away a most honorable and a most useful word to no purpose. Debasing the coinage in speech is (as George Eliot has ardently pointed out) a crime.

There is not the least necessity for the use of the term in this restricted sense. The English language furnishes plenty of good descriptive phrases for the people whom it is sought to characterize. They may be called the "ultra-rich," the "ultra-idle," the "fashionable," the "smart," or the "worldly." It might even be possible to bring back that good old English word, the "worldlings." Any of these terms would do, but "the worldly" is probably the best —*les mondaines* is the word devoted to this use by the French; and Esperanto warns us to put our languages into harmony, where we can actually gain by doing so. Of course, if one goes far enough back, the same objection held originally to considering that the ultra-rich constitute the world, as holds now to considering that they constitute society, but the signification of worldly is so ingrained in the English language that it would be foolish to take exception to it now. The "smart" is a good term in England, but in this country it has acquired a bad connotation.

Collectively, the group in question could be called "the gay world," or "the fashionable world," or "the idle world" (or, with Veblen, "the world of ostentatious expenditure"); while the other and more important group would naturally be called "the grave world," "the serious world," "the weighty world" ("the better world" has been, unfortunately, preëmpted for another sense),—or—here, again, the French have given us the right model—simply "the intellectuals." The word has as good ground for its use as has, for instance, the noun, "the criminal."

It is to be hoped that a word of warning will be sufficient for those who belong to the class in which good English prevails.

CHRISTINE LADD FRANKLIN.

Baltimore, Md., October 18.

Notes.

To their Riverside Press editions Houghton Mifflin Company will add this season three volumes: Shelley's "Banquet of Plato," 400 copies; "A Bibliography of Henry David Thoreau," by Francis H. Allen, 500 copies; and "The Life and Work of Geofroy Tory," by Auguste Bernard, 350 copies. The last-named is a large quarto lavishly illustrated.

This week Houghton Mifflin Company is publishing "The Calico Cat" by C. M. Thompson, "The Home Builder" by Lyman Abbott, "The Poems of Richard Watson Gilder," "Buddhism and Immorality" by W. S. Bigelow, Defoe's "Robinson Crusoe," in four volumes, and "The Story of the Greek People" by Eva March Tappan.

Henry Frowde is adding "The Poetical Works of George Crabbe" to the series of Oxford Poets. The editors, the Rev. A. J. and Mrs. Carlyle, give the author's own text, with the additions and notes made by him.

The John McBride Company announces a new translation of Sir Thomas More's "Utopia," by Valerian Paget, to be published under the title of "More's Millennium."

It has heen put into "thorough-paced modern English."

The publication of the love letters of the Carlyles, recently announced, has been postponed, for the present year, at least, and perhaps indefinitely.

The Clarendon Press (Henry Frowde) has issued two more volumes of Scott's novels in good paper, print, and binding at the low price of fifty cents: "Woodstock," edited by J. S. C. Bridge, and "Rob Roy," edited by R. S. Rait. Both volumes are well illustrated, and provided with notes and glossary. Each editor in a brief introduction tells the circumstances under which the novel was written and the historical facts on which it is based. The edition is particularly valuable to young people who are making their first venture into the field of historical fiction.

Fleming H. Revell Company publishes an "English-Esperanto Dictionary," compiled by Joseph Rhodes, who testifies to his conviction by signing himself "Esperantisto 5260." As a summary of the grammar is included this book will be almost sufficient alone for writing the language. But an Esperanto-English supplement would be needed for reading.

There is no more appealing story in English history than that of Henry the Eighth's great-niece, who, during the brief reign of Edward, passed from the hands of the Seymours to their enemies the Dudleys, was married by the head of the latter house to his son Guilford, taken to the Tower on the death of Edward as Queen Jane, a queen of nine days, and left there as a prisoner under Mary until she and her protectors, if that word be not too ironical, went to the scaffold. It is a pathetic figure, little more than a shadow among the passionate self-seeking realities that thronged the Tudor courts, of which we have only one vivid glimpse, when Roger Ascham found her alone in her father's house, while the others were hunting in the park, a girl of thirteen, reading the "Phædo" of Plato "with as much delight as some gentlemen would read a merry tale in Boccaccio." I. A. Taylor has made what was possible of this slender story in "Lady Jane Grey and Her Times" (Appletons), although "the times" bear, necessarily, a disproportionate relation to the heroine. This lack of balance might have been somewhat reduced if more emphasis had been laid on the religious complications of the day and less on the political, for on that side lay the real concern of Lady Jane herself. In this respect more might have heen made of the Zurich Letters, and especially of the girl's own correspondence with the learned Bullinger. But it is the fault of all these popular biographies to avoid anything that is not superficially interesting.

With Lady Jane Grey and her husband Lord Guilford Dudley, in the Tower, was another son of Northumberland, Robert, who is made the subject of a special biography by Mrs. Aubrey Richardson, under the title of "The Lover of Queen Elizabeth" (Appletons). It takes some courage to continue reading in a book which begins in this key:

> In the great firmament of human personality, no star shines with a fiercer light than Elizaheth, Queen of England. And of the numerous satellites that revolve about her, radiating an effulgence that is

their own and hers, the one whose beams most dazzle star-gazers is Robert Dudley, Earl of Leicester.

That is sufficient warning that, however familiar the author may be with the easily accessible material of Elizabeth's reign, she has little acquaintance with good style. As a matter of fact, she soon forgets this highfalutin and gives a clear account of Leicester's relations to the Queen, and especially of his connection with her intricate marriage schemes. Where it is possible Mrs. Richardson takes a kindly view of the lovers. She exculpates Leicester, rightly we believe, of direct responsibility for the death of Amy Robsart; she makes of Leicester and the Queen mere philanderers, to which one can only say, Perhaps. Our quarrel with her, however, is that she confines herself so closely to "the lover." Leicester's discreditable doings in the Netherlands she slurs over rapidly; she speaks of his influence as chancellor of Oxford, but gives no clear account of the state of education at the university or of the changes introduced; she hints at his interest in literature, but fails to connect him with the work of the Areopagites to which his nephew, Philip Sidney, belonged; she mentions his position as patron of the "Leicester players," but has next to nothing to say of the stage; she even slights the pageant at Kenilworth with its opportunities for gorgeous description. It is always the lover, or lovers, of the great Queen. There are indications that she was prudent in avoiding matters literary. In the Euphuistic jargon of the day Leicester was "eyes" to Elizabeth, Hatton was "lids." "In the entrancing presence of Hatton," she says, "Elizabeth could 'steep her senses in forgetfulness' of every anxious care;" and she thinks that Elizabeth and her court must have been familiar with the words of Ovid which Dryden subsequently rendered "their lids in slumber steep." Doubtless; but it happens there is nothing at all in Ovid about "lids," only "lumina."

There is something piquant in the title chosen by Harry Graham for his book, "A Group of Scottish Women" (Duffield & Co.). The mixture of canniness and independence in the Scotch character promises a store of humorous anecdotes; while for substance there is the full background of history from the days of that Lady Devorguilla who endowed Balliol College in the thirteenth century, through those of the Lady Jane who was repudiated by Bothwell for Mary Stuart, of Elizaheth the wife of the Lauderdale who harried Scotland under Charles II., of the Whig and Jacobite dames of the eighteenth century, down to the Miss Clementina Stirling Graham who died in 1877. It should seem easy to put together an entertaining volume of such material, but as a matter of fact the very license of the *genre* makes it difficult. A reaction takes place in the reader's mind when he sees through the *procédé* and discovers that the author is selecting among materials for the purpose merely of amusing. This is felt most emphatically perhaps in the chapter on the Duchess of Queensberry, Gay's "cheerful Duchess," "Prior's Kitty," who has a place among Scottish women only by virtue of her marriage, and who is included by Mr. Graham frankly on account of the literary anecdotes about her. The sketch of that wilful lady is entertaining, but would be still more so if arranged with some respect for chronology, and if the intent to amuse were a little better concealed. After "the femalc Phaeton," as Prior described her, the most interesting characters are Isobel Pagan and Lady Louisa Stuart. Isobel, who died in 1821, will not be so well known to the readers as most of the other ladies, although she was the author, probably, of the famous ballad:

> Ilk lassie has a laddie she lo'es aboon the rest,
> Ilk lassie has a laddie, if she like to confess 't,
> That is dear unto her bosom, whatever be his trade;
> But my lover's aye the laddie that wears the crook and plaid.

Mr. Graham gives a brief but striking picture of that strange, misshapen, violent creature, whose hovel was the resort of the curious gentlemen of the neighborhood. It is she who put her head into the tent where a worthy divine was holding forth one Sunday at great length, and astonished the reverend gentleman with a nod and the words: Weel, ye're still borin' awa', I see." Mr. Graham gives also a pleasant account of Lady Louisa, the granddaughter of Mary Wortley Montagu, and the friend of Walter Scott. He might have made his chapter delightful if he had quoted more freely from the lady's correspondence.

T. Rice Holmes, to whom we are already indebted for a valuable study of Cæsar's conquest of Gaul, has recently issued a companion volume on "Ancient Britain and the Invasions of Julius Cæsar" (Henry Frowde). The plan of the work, comprising a general account and an appendix of elaborate studies on special points, is essentially the same as that of the earlier volume, but the place of Cæsar in the two books must obviously be different. Tacitus long ago observed that Cæsar showed Britain to the Romans, but did not give it to them, and while his expeditions stimulated trade and intercourse with the Continent, they had none of the wider significance of the conquest of Gaul, which Ferrero has gone so far as to declare the most important fact in Roman history. Mr. Holmes has accordingly sought to place the Roman invasion of Britain in its proper setting by telling with some fulness "the story of man's life in our island from the earliest times," and in the narrative the men of the Stone Age get more space than the Romans. The account of the pre-history of Britain is distinctly readable, and is based upon the results of archæological as well as philological research. Not only has the author worked through the enormous literature of the subject, both British and foreign, but he has kept his head in the mass of technical and controversial detail, so that his conclusions, though sometimes announced with too great positiveness and finality, generally carry weight. In the appendix Cæsar comes to his own, and the topography of his campaigns is treated in great detail. On the two points which have aroused most discussion Mr. Holmes holds that the Portus Itius from which Cæsar set sail must be identified with Boulogne, and that he landed in eastern Kent.

The latest addition to Sir Charles Lucas's series of Historical Geographies of the British Colonies (Henry Frowde) is devoted much more to history than to geography. Canada as the leading colony of

Great Britain has had two volumes allotted to it. Vol. IV., by J. D. Rogers, deals with the geography; while in Vol. V., now before us, Hugh E. Egerton is chiefly concerned with the history of the provinces and of the Dominion. Undoubtedly there is a great advantage in approaching the history of newly settled countries from the point of view of geography. Internal development and relations to neighbors depend so much upon contour of land, upon lakes, rivers, mountains, deserts, and fertile plains, that a knowledge of these physical conditions is indispensable. In the case of Canada, the geographical influence has been very great. Neighbored for nearly three thousand miles by the United States, from which for a vast part of the distance it is divided by no natural barrier, bounded on the north by inhospitable arctic regions, and provided with one mighty highway to the sea, Canada, until the age of railways had well begun, was the country of the St. Lawrence. With this approach to his subject, Mr. Egerton has been able to make his history both more intelligible and more interesting than the historian who gives slighter attention to physical features. But Mr. Egerton has not neglected other sources of information. That he was well prepared to write a history of Canada will be readily acknowledged by students who have profited by his excellent work in association with W. L. Grant in the volume of "Selected Speeches and Despatches Illustrating Canadian Constitutional Development." His clearness and fairness are seen in his treatment of such disputed questions as the settlement of the boundary between Maine and New Brunswick and Quebec, or the difficulties with the United States over the fisheries. Mr. Egerton is not the first historian to do justice to Gov. Carleton; more than one recent writer on the British North American colonies has vindicated the fame of the great Englishman who held Canada for Great Britain during the war of the Revolution. But Mr. Egerton is among the first to assign full and discriminating credit to Lord Durham for his broad-minded and patriotic, though perhaps not always technically legal, management of affairs after the Canadian Rebellion of 1837. Like the previous volumes of the series, Mr. Egerton's "Canada" is eminently readable. Perhaps the greatest drawback to the publication, in a series of geographical handbooks, of such volumes as the present, and as J. D. Rogers's on Australasia, is that their interest for general readers is likely to be overlooked. Certainly it would be difficult to find a fairer or more generally readable history of Canada than is contained in the 350 pages of this work.

For some years the Historical Manuscript Commission of Great Britain has been engaged in the work of calendaring the confidential letters and papers of Lord Grenville, Foreign Minister in Pitt's ministries, 1798-1801, Prime Minister in the "All Talents" Ministry, 1806-1807, and Tory leader until his retirement in 1823. This voluminous correspondence, now preserved at Dropmore Lodge in Buckinghamshire, passed, on the death of Grenville's widow in 1864, to the collateral line of Fortesque, and has been placed at the disposal of the Commission by the present owner, J. B. Fortesque of Dropmore. Five volumes have already been issued, and now the sixth, covering the period November, 1799, to March, 1801, has appeared. The first three volumes deal with papers of the seventeenth century and of the eighteenth until about 1797; the fourth records chiefly the formation of the second coalition against France and the abortive attempts to carry an act of union through the Irish Parliament; the fifth relates mainly to the Continental campaigns of 1799, while the sixth concerns the secession of Russia from the coalition, the new alliance of Great Britain and Austria, the abolition of the Irish Legislature in 1800, the negotiations and military operations of Bonaparte and the allies during the same year, the peace of Lunéville, and the resignation of Pitt's first ministry in February, 1801. The importance of the papers for English and Continental history has already been fully recognized, though the information which they furnish has not been embodied as yet into the histories of the period. The last three volumes are also of value as throwing light on Anglo-American relations, particularly in connection with the Jay treaty and the irritating controversies that arose over the interpretation of some of its clauses. Grenville's view of the political situation in America in 1800, as expressed in a letter to Robert Liston, is worth quoting:

> The whole system of the American government seems to me to be tottering to its foundations, and so far from being able to enforce upon the country good faith towards foreign Powers, I much doubt their power of maintaining internal tranquility.

"A Calendar of Confederate Papers, with a Bibliography of Some Confederate Publications" (Richmond, Va.), is the title of a recent volume which has an interest beyond the actual scope of the work itself. It is the outcome of an attempt to apply modern methods of calendaring historical documents to the record material of the Confederacy. In 1907 a Southern Historical Manuscript Commission was appointed, under the auspices of the Confederate Memorial Literary Society, and a systematic effort was begun to gather and publish documents relating to the war. The commission proposes to locate, examine, and report on large or inaccessible collections, to gather into the Confederate Museum in Richmond as many of these collections, either originals or copies, as possible, and to issue from time to time reports, in the form of calendars, upon selected groups of documents. It is significant as showing the new historical spirit and energy prevailing in the South that within little more than a year after the inception of the enterprise a volume of 600 pages, admirably conceived and executed, should be put forth as a guarantee of good faith. The editor, Dr. Douglas S. Freeman, a graduate of the Johns Hopkins University, has shown great industry, and, in the main, excellent judgment in the performance of the task entrusted to him. Occasional lapses show the handiwork of the beginner in the difficult business of calendaring, but the technique is correct and the annotations illuminating. The list of publications, constituting Part ii. of the Calendar, is a noteworthy addition to bibliographical literature and the promise of an exhaustive bibliography to come is encouraging. Such bibliography should, however, be published as a separate volume. An elaborate index of more than fifty pages completes a work which deserves all praise, not only for itself, but also as representative of a courageous and scholarly undertaking.

With the appearance of the fifth volume of the late E. J. W. Gibb's "History of Ottoman Poetry" his work, so unhappily unfinished, has been put before us, exactly as he left it, by the care of Prof. E. G. Browne of Cambridge. This, undoubtedly, is as it should be. No one could take up Mr. Gibb's personal attitude of complete knowledge, entire sympathy, and yet absolute detachedness, and if Professor Browne's half-promised seventh volume ever appears, giving a complete account of the modern school by a native Turkish scholar, its point of view will, of necessity, be essentially different. A sixth volume is now in the press containing the Turkish text of the poems translated in the whole work. In the present volume only the first 111 pages are by Mr. Gibb. They fall into three chapters; one preliminary on the three founders of the modern school, Shinásí Efendi, Kemál Bey, and Ziyá Pasha; a second on the career of Shinásí Efendi; and a third on that of Ziyá Pasha. There the thread of Gibb's life was cut, and the account of the still more important Kemál Bey remains unwritten. Of the three chapters, that on Ziyá is by far the fullest and most interesting. It contains a very charming little autobiographic sketch of his childhood and childish essays in poetry, and of his playing the sedulous ape to popular poets of his time until the literature of France claimed him and taught a more perfect way. These chapters have all the more interest in that, under the new régime, an indefinite development of Turkish literature may be looked for, and has, indeed, already begun. The last 140 pages of the volume give very full indices to the whole work by R. A. Nicholson.

C. H. Beck of Munich announces as soon to be published the second and concluding volume of Karl Berger's "Schillerbiographie."

The Zeitungs-Katalog, published by Rudolf Mosse, has made its appearance for 1908 with a noteworthy wealth of statistical data on the journalism of Germany. Exclusive of the technical journals, the number of periodicals of Germany has, during the twelve months covered by the catalogue, increased from 3,807 to 3,887. This increase is almost entirely confined to papers that appear six times a week. The largest circulation is reported by the *Berliner Morgenpost*, with about 300,000 subscribers, closely followed by the *Berliner Lokalanzeiger*, with a quarter of a million. The *Vorwärts* of the Social Democrats has more than 100,000, and the city edition of the Cologne *Gazette*, 88,300.

In his "Volk und Schule Preussens vor hundert Jahren und jetzt," Paul Natorf, author of the well-known "Schulpädagogik," sketches the weakness of the educational system of Prussia one hundred years ago and to-day, chiefly as the background for what he regards as an ideal scheme for national popular education. He proposes a plan covering twelve years in all (Giessen: Töpelmann).

A new metrical translation of the Nibelungenlied into modern German by Dr. H. Kamp has just appeared under the title

"Unser Nibelungenlied," in two editions, one with a commentary and one without (Berlin: Mayer & Müller).

R. Rost, editor of the *Augsburger Post*, one of the leading Catholic journals of Germany, has recently published a work entitled "Die Katholiken im Kultur- und Wirtschaftsleben der Gegenwart," in which he attempts to prove that the Catholics are retrograding intellectually and materially, because they devote such immense sums to the luxurious equipment of their churches. Thus *e. g.*, in Prussia, where the Catholics constitute only 43 per cent. of the population, they have in the past decade spent for church purposes nine million marks more than the Protestants. The Cologne *Volkszeitung*, next to the Berlin *Germania*, the leading Catholic political paper of Germany, declares that these facts are correct, and protests especially against the expense of pilgrimages to Lourdes and other shrines, and insists that more money should be given to the Albertus Magnus Verein, the Catholic association that supports poor university students of the Catholic faith in their endeavor to make scholars of themselves in secular as well as theological fields. Although the Catholics constitute one-third of the population of Germany, they furnish only about one-fifth of the students in the universities, technological institutes, and other institutions of higher learning.

Holland is to have its own Hakluyt Society, or Linschoten Society, to use its proper name. It will begin with the "Itinerario" of Jan Huygen van Linschoten, edited by Professor Kern, and will thereafter bring out two volumes a year.

The extent to which the "laicisation" of public instruction is being carried by the dominant party in France is shown by a new edition of the "Tour de la France par deux enfants." This is one of the most widely used schoolbooks, and has been reprinted 330 times. From the new edition every reference to religion has been wiped out. All mention of churches and hospitals called "hôtels-dieu" has been expunged. The picture of Rheims Cathedral has been replaced by a map. In the list of famous Frenchmen the names of St. Bernard, Bossuet, Fénelon, and St. Vincent de Paul are not to be found, and the masterpiece of Puget, the Martyrdom of St. Sebastian, has been taken out.

The death is announced of Hiram Bingham, a prominent missionary to the Hawaiian Islands. Dr. Bingham was born in Honolulu, H. I., in 1831, to which place his parents had gone from America in 1820. He was ordained in this country in 1855, and in 1856 went to the Gilbert Islands as a missionary. He reduced the Gilbertese language to writing, and wrote a number of books in that tongue.

News comes from London of the death on the thirteenth of this month of R. E. G. Kirk, the well-known antiquary and record-agent. He had been connected with the Public Record Office for forty years, and was an unfailing help to searchers. He edited the "Accounts of the Obedientiars of Abingdon" for the Camden Society, and wrote many papers for antiquarian journals.

François Désiré Mathieu, cardinal-priest of Sainte Sabine, has died at the age of sixty-eight in London, whither he had gone last summer to the Eucharistic Conference. He was a member of the French Academy, and the author of several works, including "L'Ancien Régime des Lorrains" and "Étude sur Jean de Vandière."

The death is announced of Emmanuel Pradier ("Georges Pradel"), a well-known journalist of Paris and the author of a number of novels which in their day were fairly popular.

THE VICTORIAN CHANCELLORS.

The Victorian Chancellors. By J. B. Atlay. 2 vols. Vol. II. Boston: Little, Brown & Co. $4 net.

Mr. Atlay's second volume brings his admirable "Victorian Chancellors" to its close. His work is distinguished by conciseness, research, preëminent fairness, and, in short, by every one of the virtues which is not to be found in Campbell's "Lives of the Chancellors." The high merit of Mr. Atlay's workmanship is nowhere better shown than in his life of Lord Campbell. To this interesting piece of biography we purpose to confine our attention.

John Campbell was a representative man. He possessed no touch of genius, even in the modified sense in which that term can be applied to his rivals, Brougham, Lyndhurst, and Scarlet. There was little in his character which could be called strange or out of the way; his powers, though noteworthy, were in kind the talents possessed by hundreds of his countrymen. The peculiarity of his nature was that he exhibited in an exaggerated form all the qualities, good and bad, which have led one Scotchman after another to success in the arduous battle of practical life. He was what we have heard happily called "a very uncommon common man." His ambition was itself common: like scores of men before and since his time, he joined the bar with the determination that he would rise to eminence and become Lord Chancellor. In a letter written to his sister, just when he had abandoned the idea of becoming a minister of the kirk and had resolved to seek success at the English bar, he lays down this maxim: "Say every day 'I will be Lord High Chancellor of Great Britain,' and you will be made a Puisne Judge of the Court of Common Pleas"; and it is plain enough that he had no intention of limiting his success by the acquisition of a puisne judgeship. Thousands of men better and worse than Campbell have, in youth, started in the race for the Chancellorship, and have perceived, as he did, that their end could be gained only by assiduous labors. The trait wherein Campbell differed from the mass of ambitious youths is that, having made up his mind to achieve success, he acted on the principles by which alone success could be gained. He almost literally followed his own maxim. There was not, we may be sure, a day on which he did not in effect repeat to himself, "I will be Lord High Chancellor." He was right, too, in the belief that he possessed the talents necessary for the achievement of his end. He was strong in body and strong in mind. His capacity for work was boundless. His industry was not spasmodic, but assiduous. He was as hard as nails. He was as bold as brass. He knew not the meaning of modesty, of sensibility, or of tact. He was richly endowed with the talent for getting on. He also possessed two admirable qualities which are preëminently Scotch, and demand respect. He knew that success in life depends upon conduct; he foreswore all self-indulgence which could possibly interfere with his ambition. He also felt in the strongest way the ties of kinship. He was an excellent son. He was a good brother, and repaid with ardent and well-deserved affection the essential help given him by his brother, George Campbell, when such help was needed. He was a kind husband and an affectionate father. Unfortunately it is difficult not to feel that with Campbell family affection looked much like clannishness. Still, though clannishness will never be a popular virtue, and though in the case of John Campbell love of home and family contributed to success, the combination of real and self-sacrificing love for his kin, with self-engrossing ambition, ought not to conceal from a critic that in his family relations Lord Campbell displayed the best side of his character.

The talents and virtues on which we have dwelt brought to him their predestined reward. When, at the age of eighty-two, he closed his life, he had achieved three memorable feats. He had, in the first place, more than fulfilled the dream of his youth: he had sat in the seat of the Lord Chief Justice of England. He died Lord Chancellor. He had, in the next place, by sheer energy, rather than by any rich literary endowment, forced his way into the kingdom of letters; his "Lives of the Chancellors" and his "Lives of the Chief Justices" cannot be called classics, but they can still be read with pleasure. He had, lastly, in his letters and memoirs painted a portrait of himself far more truthful than any of the pictures or caricatures he has drawn of his contemporaries. Campbell's "Confessions," for such his "Life" may well be termed, rival the Confessions of Rousseau in self-revelation. Books colored by intense personal feeling have always an attraction. Campbell's autobiographic memoirs and letters have throughout the charm of individuality. To this, and to a high appreciation of the strength of Campbell's family attachments, must be ascribed the attraction which he apparently has for Mr. Atlay,

who ends the life of his hero in these words:

> Many hard things have been said and written about "Jack Campbell," but it is impossible for the student of his letters and his diaries to part from him without a feeling of something very like affection.

Why was it that "hard things were constantly said and written about Jack Campbell?" The answer is that to many of his contemporaries, and especially to his rivals, he appeared to be a selfish and a not very scrupulous intriguer. His career was one of self-centred ambition. To the attainment of success everything except family affection was sacrificed. His ambition was perfectly legitimate, but in men of great ability, especially if they occasionally boast of their public spirit, something more is expected than the mere pursuit of personal success. The element of greatness, which consists in concern about matters beyond the sphere of personal interest, seems to have been lacking in Campbell. In the midst of his career, when he had been Chancellor of Ireland, he published in a most unfortunate moment, but to the delighted amusement of his foes, a eulogy of himself wherein he states that his children "will be better pleased with the obscurity of their father than if he had gained dishonest fame; and they will have the consolation to reflect [*sic*] that he never abandoned his principles or his party, and that by remaining true to the cause of civil and religious liberty he always sought the good of his country and the happiness of mankind." As Mr. Atlay himself tells us, we have here nothing but the pride which apes humility. "What sacrifice," he adds, "it was pertinently asked, did Sir John Campbell ever make to principle? What opportunity of distinction did he ever forego from diffidence? When was he ever prevented from asking for anything he wished by delicacy?"

Every one knew the answer which these questions must receive, and all those who watched Campbell's professional course knew something more. Almost every stage of his progress was marked by suspicion of self-seeking or intrigue. When the Reform Bill was first produced, he believed that it meant revolution, and more than suspected that it would bring ruin upon the Whig Ministry. Within a week or two, he became a supporter of the bill. Not many months passed before he joined the Whig Ministry as Solicitor General. In 1834, he became Attorney-General. His rise was the fruit of some strange intrigue; his predecessor, Horne, was elbowed out of office without obtaining the compensation of even a puisne judgeship. A few years later Campbell demanded, as of right, the vacant Mastership of the Rolls. His strange claim was, he alleged, made in defence both of his own dignity and of the honor of the bar. He called upon the Prime Minister, Lord Melbourne, bringing in his pocket, the resignation of the office of Attorney-General. The resignation was never delivered. Lady Campbell was raised to the peerage, Sir John apparently obtained promise of further advantage to himself. His own dignity, and the honor of the bar were forgotten. Of the miserable management, pressure, or manœuvres, by which Lord Plunket was forced to resign the Irish Chancellorship which he had every right to hold, it is unnecessary to say much. Take the most favorable view possible for Campbell, assume that he had no hand in a discreditable transaction, he at any rate, at no call of public duty, accepted, if he did not thrust himself into, an office which under the circumstances a man of sensitive or of delicate moral feeling would have refused to occupy. He later became Chief Justice of England. To fill this high post, he was well qualified. Unfortunately, his appointment, whether by Campbell's fault or Campbell's misfortune, was connected in the public mind with the pressure which compelled Denman's retirement. It is a relief to know that the offer of the Chancellorship came upon him as a surprise.

Lord Campbell's devotion to literature must, it will be urged, be treated as a set off against the purely personal character of his ambition. Great faults are often pardoned in a man who is a real lover of letters. But Lord Campbell's literary achievements in reality stand on the same footing as his professional triumphs. They prove his astounding energy; they exhibit his restless ambition; they do not show any love of literature for its own sake. He worshipped the muses, if at all, only for what he could get from them. Expressions may be found in his memoirs and letters which suggest that in his eyes a main reason for reading Shakespeare was the conversational advantage of being able to make appropriate quotations. Strange though the assertion sounds, Campbell's "Lives of the Chancellors" lays open to the world some of his worst faults. His "Lives," it has been well said, is "among the most censurable publications in literature. The whole work is disfigured by unblushing plagiarisms, and, as the writer approaches his own time, by much unscrupulous misrepresentation." He is utterly untrustworthy. "No one who has ever followed him to the sources of his information will trust him more." This severe condemnation, Mr. Atlay, a critic as lenient as he is competent, confirms from facts lying within his own experience as a writer. Campbell's Lives of Lyndhurst and of Brougham are among the worst but also among the most interesting of his writings. They are defaced by inaccuracy and misrepresentation; they fully justify the prophecy of Brougham or of Lyndhurst that Campbell would revenge himself upon both his rivals by writing of them with hatred, malice, and uncharitableness, and that he would do this, because "such is his nature." These particular lives are interesting because malignity gives to them a point and wit not commonly found in Campbell's works. They are even more interesting because they show the fundamental defects of Campbell's character.

These defects illustrate and are illustrated by that "Life of John Lord Campbell," which in reality, though not in form, is an autobiography. Take the posthumously published volumes of his "Lives of the Chancellors" and compare them with Campbell's autobiographical memoirs, and Campbell's typical and yet peculiar character stands revealed. You have before you a revival, or a survival, of the Scotch adventurer who, during the sixty years or so which immediately followed the Act of Union, excited both by his virtues and by his faults, the detestation of ordinary Englishmen. Campbell, the last born and the most successful of his class, displayed all its typical traits. Energy, conduct dictated by prudence, intense clannishness, guided him to success, but these qualities brought upon him unpopularity both because they enabled him to elbow his way to greatness, and because qualities creditable in themselves masked closely allied faults. The belief that success is in itself a virtue deprived his ambition of all generosity. Irritation at every obstacle which delayed his rise to wealth and greatness excited in Campbell's mind something like hatred of rivals, who shone by qualities more brilliant than his own clear-headedness and indefatigable industry. If something too like envy disturbed the philosophy and detracted from the moral dignity of Carlyle we can hardly wonder that John Campbell looked with jealousy on the geniality and the genius of Lyndhurst and the rhetoric and the power of Brougham. Nor is it possible that an adventurer of the class now extinct should, in spite of his honest belief in prudential morality, have avoided conduct which excited suspicion and blame.

Mr. Atlay has the weaknesses of a biographer. He retains affection for his hero, to whose faults, however, he cannot shut his eyes. He tells us how Lyndhurst, with characteristic generosity, defended in the House of Lords the most censured, yet assuredly one of the most laudable, of Campbell's acts—namely, the appointment of Blackburn to a judgeship in the Common Pleas. Let our readers listen to Mr. Atlay's comment, and consider all that it implies.

> This was the occasion of his [Lyndhurst's] celebrated and most felicitous quotation

over the attainment by the aged Chancellor of everything that he had ever looked forward to. "We may say of him, in the words of the poet,

Thou hast it now, King, Cawdor, Glamis, all,
As the weird woman promised."

The object of the compliment was happily undisturbed by the unquoted words that follow in the text:

and I fear
Thou play'dst most foully for it.

CURRENT FICTION.

Over Bemerton's. By E. V. Lucas. New York: The Macmillan Co.

An Englishman, who comes back to London after an absence of thirty years in Buenos Ayres; a step-cousin (or some such relation; no matter, she is a charming young woman, and that is all that matters in the end), who helps him to select lodgings, their choice falling upon rooms over a second-hand book shop kept by one Bemerton; an amusing set of relatives into whose family net the idle bachelor is gradually drawn; odd books borrowed from Bemerton and used as the source of whimsical reflections on modern life—there could be no better material for Mr. Lucas's genial, clever pen. Irrelevance and discontinuity are here a legitimate device, but it does seem at times as if Mr. Lucas was irrelevant from haste rather than from design. His hero, for instance, picks up a copy of Giles's "Chinese Biographical Dictionary" and uses it throughout the story as an arsenal of apt anecdotes and apothegms. Any one who is familiar with the wit of the Chinese as reflected in Professor Giles's volumes will be ready to applaud the ingenuity of Mr. Lucas in finding such a chorus, so to speak, for his puppets. The point is that Mr. Lucas in his haste does not appear quite to have appreciated the cleverness of his own scheme; with a little more attention he might have welded his reflections on modern London and these Chinese illustrations into as piquant a compound as has allured the reader for many a year. As it is, "Over Bemerton's" affords enough happy entertainment to make such criticism a little ungenerous.

The Great Miss Driver. By Anthony Hope. New York: The McClure Co.

In this story Mr. Hawkins favors us with neither of his two most familiar veins. He does not offer us the stirring romance which inevitably provokes comparison with "The Prisoner of Zenda"; nor does he indulge in such fantasy as his recent "Helena's Path." "The Great Miss Driver" is the more conventional novel of character and manners, a careful and somewhat elaborate work, on a rather large scale—that is, for these days when brevity is the body as well as the soul of wit. The story is of a young girl who inherits a vast fortune, is in a fair way to establish herself among the county folk, makes what the world cannot but regard as a terrible step aside from the straight road, but, thanks to her money and her cleverness, finally rehabilitates herself. It is a study of character, not a tale of incident; and the characters are well enough drawn to excite interest and hold attention to the end. Miss Driver is the person upon whom the author has expended the greatest effort, but as so often happens in novels, she is less distinct and real than some of the minor figures. Young Lord Lacey, Cartmell the family lawyer, and Lord Fillingford—all are firmly sketched. They stand on their feet and walk about like human beings; while Miss Driver, with all her greatness, still leaves us cold and unconvinced.

But when the worst has been said, the fact remains that Mr. Hawkins is a skilful literary craftsman. In this book he shows less humor and verbal dexterity than he has led us to expect; but he goes about his task with the air of a man who can handle the tools of the trade, and he produces a novel that, if not extraordinary, is at least entertaining.

An Incarnation of the Snow. By F. W. Bain. New York: G. P. Putnam's Sons.

This is a tale of strange terrors and beauties, told in a style rising to a kind of intoxication, by a belated hunter of the Blue Flower who has found refuge from modern civilization in the mountain solitudes of India. The main narrative, called the "King's Amour," is put into the mouth of a swan, who relates it to a lovely lady sitting by a dark blue mountain tarn. Quintessential romance! But the story, passionate, vivid, shimmering though it is with light and color, is symbolical, as the author in his preface takes care to inform us:

What the Swan is to the Lake, what the Moon is to the Sky, what Párwáti (the Daughter of Himálaya) is to her Lord, that is woman to the world: the Haunter, the Indweller, the Ornament, the Fixed-Idea, the Mystic Solitary Swan in the heart of the dark blue lake of Time.

Still another veil must be removed: swan, lake, moon, and sky, the visible universe, time and space themselves are but the illusions with which deity beguiles itself. With this ancient philosophy of illusion the author is infatuated; referring again to the preface we read:

Learn, once for all, that the Ganges is more sacred than the Thames, and that all the London churches contain less religion than Benares, where calm-eyed sages sat of old by the purifying water, repeating: *One is the Deity, but the wise call him by many names:* when Oxford and Cambridge were as yet only for the bittern and the snipe.

These words the narrator heard uttered from the heart of India as he lay at noon alone in profound revery among the high hills on the edge of a dizzy precipice backed by the flaming jungle, listening to time pulsing into eternity. Whatever of fascination and of futility the literature of "escape" has for the human spirit is represented in this book.

Cousin Cinderella. By Mrs. Everard Cotes (Sara Jeanette Duncan). New York: The Macmillan Co.

This is in much the same vein of pleasant satire as Mrs. Cotes's "American Girl in London." It is a narrative of the "monologue" order, the speaker being a Canadian heiress resorting to London for the first time from "Minnebiac, Ontario," with her brother, also unmarried. The plot amounts to nothing—let us admit that she marries a lord, and have done with it—but the humor of the monologue is delightful, just that species of well-controlled inner humor which the English continue to exercise in spite of our lessons in the art of the thump and the guffaw.

Though Life Us Do Part. By Elizabeth Stuart Phelps. Boston: Houghton Mifflin Co.

If Mrs. Herbert Ward were not so anxious to impress upon the world her personal tastes and favorite moral convictions, she might not be tempted to manipulate her material so artificially, and her novels would perhaps reflect something more like an image of life. We applaud her dislike of brutality, intemperance, and other forms of immorality; but we cannot commend the vehicle of her displeasure. Her hatred of cruelty to animals, for example, has resulted in the creation of a dog that never was on sea or land. This remarkable being has a weird power of detecting the Hyde under the Jekyll of the vivisectionist, and nourishes revenge for many years; yet 'tis a creature of the noblest feelings, and, on two occasions, rescues the drowning, and, on a third, prevents a suicide. She dislikes the modern girl with muscles hardened and complexion tanned on the links, and so, to show the ill end of such abandoned creatures, marries the female golf-champion to the wooden abomination, the vivisectionist. The man of her choice is a clergyman with "a great white heart," whose chin points upward, and whose hands are constantly blessing people, in season and out. Her affections are lavished upon an old-fashioned girl of very white mind, sweet—we have it on the writer's authority—and with the power to faint at the appropriate moment, but with little else to recommend her. With some reluctance she gives this lady in marriage to a young physician of agreeable personality, who enters upon the wedded state

in the same refined and exalted mood as that inhabited by his wife. One turns over a page or two, and, lo, it has pleased the doctor's creator to transform that chivalrous gentleman, almost as abruptly as it is here related, into a coarse, disloyal drunkard and wife-deserter. To punish him for this misconduct, so undeservedly thrust upon him, the amiable author shoots him through the head, depriving him of memory, through the throat, altering his voice, turns his hair white, gouges out his cheek, cripples him, macerates him in a shipwreck, and sends him back to his wife repentant. Rather rough treatment from an anti-vivisectionist; but what a lesson for a careless husband!

Value and Distribution: A Critical and Constructive Study. By Herbert Joseph Davenport. Chicago: University of Chicago Press. $3.72.

This volume of 575 closely packed octavo pages is the most notable achievement in systematic economic criticism that has appeared on this side the Atlantic. The author takes rank easily with Boehm-Bawerk and Cannan. It is the irony of fate that the work must be a sealed book except to that inconsiderable number of trained economists who have followed the windings of the higher economic analysis of the past two decades. Even for many of these it will be hard sledding. The style is a bit Meredithian, and the arrangement of the page, where commonly three phases of the topic in hand are synchronously treated, is taxing. Exposition runs in double-leaded lines; misgivings, qualifications, alternative renderings coalesce in single-leaded paragraphs; and the ubiquitous and plethoric small-type footnote pursues a related or collateral query. To read the book is altogether too much like trying to follow Lasker playing three games of chess at the same time. It is quite out of the question to attempt, except in an extended and very technical review, to sift the author's conclusions upon the numerous issues — interpretative, critical, and constructive—which he advances. An indication of his point of view and an opinion thereupon may, however, be essayed in briefer compass.

In general, Professor Davenport challenges the relevancy of the social and technological concepts current in economics, and insists, exclusively, upon the private or acquisitive point of view. In "a competitive entrepreneur society" that only is to be accounted capital which appears "expedient expenditure" from the point of view of expected profit, not that which technologically is capable of increasing society's command over goods. The trade-secret bought up to prevent competition is capital to the purchaser, even if his secret stands as an obstacle to the enrichment of society. Not that Professor Davenport denies that social well-being or technical processes are in themselves of moment. But a consistent logic of actual prices, costs, values, and distributive shares is attainable, he contends, only by conformity to the private, acquisitive point of view, and ideas congruous therewith. As he puts it, "for purposes of competitive production the only important fact for cost is outlay—and not at all the direction of it"—whether for appliances that put a greater product at the service of the consumer, or for an anti-social advantage, so long as the advantage carries the chance for private gain to its possessor. In a manner somewhat akin to David Hume, who reduced knowledge to sensations and impressions, the author reduces economic ideas to categories of private gain predominantly expressed in terms of the monetary standard.

> When . . . legislatures or city councils must be bought, the necessary outlays are, for cost and value purposes, precisely like expenditures for machinery or for the control of patented processes. (p. 153).

Hence, the dominance of the point of view of the profit-seeking entrepreneur. As he says in the preface, the important thing is "to rid the science of doctrines that do not belong to it, *e. g.*, labor-time, labor-pain, utility, . . . the social organism; . . . . the tripartite classification of productive factors." (p. ix). By a curious inversion of Aristotle's dictum, Professor Davenport makes the art of money-making, not only not inseparable from economics but economics' very self. It goes without saying that there attaches no shadow of censure upon the author on the ground that he inculcates for the individual or society the acquisitive point of view. He holds that for a self-consistent organon, the dominance of this point of view is imperative.

It must be admitted that in his searching analysis of various cost theories from Adam Smith to the present day, logical chasms in the authors reviewed are disclosed which render their theories untenable as scientific conclusions. Something similar is true of his effective undermining of modern doctrines of social utility—the notion that society is a great animal and that market prices but reflect the valuations of a corporate consciousness. But if one's judgment is swayed by the incisiveness of the criticism, one's human sympathies go out to most of those whom Professor Davenport dethrones. It was a false theory of relative values that real cost, the exertion of toil and sacrifice, regulates them. But the discarded economic dictum imaged brokenly a sound moral judgment as to work and reward. Abstinence as the alleged source of capital may and does wholly fail to explain the phenomenon of interest, but the strength of the mistaken notion lay in a vital recognition of the difficult individual duty of frugality. It may be indefensible to say with Adam Smith that men acting each in self-interest "are led by an invisible hand" . . . "to advance the interest of the society" to which they belong. But the stubborn tenacity of conviction that private initiative in industry working under reasonable and honorable competition is the best attainable guarantee of social solvency will survive the crumbling away of untenable economic doctrines that have enshrined this belief. Professor Davenport may be right in his cardinal contention. If so it but emphasizes the indispensability of a complementary and authoritative ethics of industry.

The English Factories in India, 1622-1623. By William Foster. New York: Henry Frowde. $4.15.

From January 1, 1622, to December 31, 1623—the period covered by the letters from the East India Company's agents to each other in the East, which are here calendared quite fully—the two events of greatest importance were the taking of Ormus from the Portuguese, and the so-called Massacre of Amboyna.

The first was a high-handed, daring proceeding, for the English had to carry two well-built forts, and at the same time fight the Portuguese fleet. The English sailors, hesitant to engage in an exploit for which they had not been hired, and in which they might easily be knocked on the head, were only with difficulty, by the promise of extra pay, persuaded to embark on the dubious enterprise. Furthermore, the heathen Persians, recently become the allies of the English, were not to be depended upon. Nevertheless the English were determined to fight a good fight, and did so. On April 23, 1622, the Portuguese flag, which had proudly waved for more than a century over Albuquerque's fort, finally fluttered down. The luckless garrison of some 3,000, including women and children, was shipped off to English factories. The English lost only twenty killed, but among them was William Baffin, the Arctic explorer. He was on shore with a battery getting a range "for the better leavelling of his peece," when he "received a small shot from the castle into his belly, wherewith he gave three leapes and died immediatly." The taking of Ormus made the English masters of the Persian Gulf trade, but the cost of the expedition was greater than the actual plunder taken—£18,000 in money and ten heavy guns. When the news reached England, rumor had increased the figure for the plunder to £100,000, whereupon Buckingham, as Lord High Admiral, demanded one-tenth of this sum as his lawful due. Although the company had already, at the suggestion of the King, presented £2,000 to

the Duchess of Buckingham, nothing would satisfy the Duke but he must have his £10,000. The company finally paid it, for otherwise he would have stayed their ships.

Every one knows what an uproar was caused when the news of the Dutch treatment of the English at Amboyna reached London, in May, 1624, fifteen months after the event. A demand for an indemnity from the Dutch was instantly raised and continually repeated for the next thirty years, until Cromwell, with characteristic force, made them pay up. The story of the "Massacre" grew into a veritable legend, to which Dryden, appealing to the English middle-class hatred against the Dutch, gave a final poetic but unhistoric account. The most striking thing about the letters in this volume is that this Amboyna affair is mentioned but once (Matthew Duke, at Masulipatam, to the Surat Factory, September 8, 1623), and then in a most casual, matter-of-fact way. If the Dutch seized without cause a dozen Englishmen, put them to torture, and drove them from their settlement, that was nothing to get excited about. It was only one of the natural vicissitudes of Oriental trade. Such, apparently, was the attitude of men who had lived out in the East and were familiar with the state of constant semi-war and its deeds of violence. But it was a different matter to trades people in London who lived in peace and slept in snug beds. Writers commonly speak of the Massacre of Amboyna as the cause of England's final withdrawal from the Spice Islands. This is an error. The real cause was the inability of the English to compete in trade with the Dutch east of Cape Comorin. Even before they heard of the massacre, the English at Batavia had decided to dissolve all factories in the Moluccas, Amboyna, Banda, and Japan.

There is almost as much about the Dutch as about the English in these letters. The masterful Coen, while Governor of Batavia, did much to increase the discipline, morality, and European population in the Dutch possessions. One of his proclamations that no "marchant or souldier should keepe a wench, but should presentlie marie her or cast her of, caused such a feare that heer are 30 coupells that have joyned in marrage." To the English this seemed practical morality—"a good policie to gaine men perpetually to their service."

Science.

Typhoid Fever: Its Causation, Transmission, and Prevention. By George C. Whipple, with an introductory essay by William T. Sedgwick. New York: John Wiley & Sons.

This is the most important work on the subject, in English, since Curschmann's monograph was translated and edited by Dr. William Osler seven years ago. It differs radically from the earlier work in its method of approach; for it deals with typhoid fever, not merely as a disease of the individual, to be studied and cured by the physician, but as a social phenomenon, to be dealt with on broad preventive lines by the sanitary expert. Thus the book is the expression of one of the most striking tendencies of the last two decades—the growth of sanitation and preventive medicine. The author's experience as biologist to the water departments of Boston and New York and as an epidemiologist in the Kennebec Valley, at Cleveland, O., and elsewhere, make him a worthy exponent of the new departure in science. The present volume, like his earlier works ("The Microscopy of Drinking Water" and "The Value of Pure Water") is sound and scholarly in substance, as well as orderly and pleasing in presentation. He writes primarily for the epidemiologist and the sanitary engineer, on the one hand, and, on the other, for the intelligent physician who wishes to go beyond his immediate concern, the individual diseased body, into the broader biological and sociological facts which underlie the etiology of disease. Even the lay reader, however, will find the work absorbing; for, as Professor Sedgwick says in his introduction:

> There is a fascination, a dramatic interest, in working out, even in imagination, the dark and devious paths and bypaths along which the microscopic parasites that afflict the human race travel to their appointed victims.

Mr. Whipple treats briefly of the typical symptoms of typhoid and its bacteriology, including the new blood tests which are proving of such importance in diagnosis. He then proceeds to his main problem, the natural history of the disease. The statistics of typhoid, which tell "a story of shame in many an American city," indicate a loss of 35,000 lives a year—a loss of which at least three-quarters could be prevented. Typhoid is essentially a disease of warm weather, rising to a maximum in early autumn, except in cities with polluted water supplies, where floods from melting snow cause a characteristic spring epidemic. The disease increases as one goes South, partly because of the high temperature and partly because of the larger proportion of negro population. In Mr. Whipple's book, however, his discussion of seasonal, racial, and geographical prevalence serves only as a background to the central problem—the chain of infection by which typhoid spreads in widening circles from one patient to another. The ingenious diagram which forms the frontispiece puts the matter in the clearest light. At one extreme is the infectious patient; at the other, the susceptible victim. Lines of varying length connect the two, corresponding to the commonest channels of infection: water, milk, contact, flies, shellfish, raw vegetables and fruits, and other factors now unknown. Across these lines of danger are drawn lines of defence. The physician, the householder, and the public authorities form three barriers around the patient to prevent the spread of the typhoid bacillus "at large"; their methods are disinfection and cleanliness in the disposal of excreta. From the point of view of the potential victim the most important weapons of defence are supervision of food supplies and personal hygiene.

Mr. Whipple discusses with admirable clearness and conservatism the life of the typhoid bacillus at large, outside the human body. The germ is a parasite adapted to life in the body, and in water or earth or milk it is in a hostile country and more or less rapidly dies out. The more direct the transfer from one person to another, the greater the danger. In water, for example, the reduction of typhoid germs is so rapid that 90-99 per cent. are gone after two weeks. A few resistant organisms may persist, however, for longer periods and cause isolated cases; while a sudden flood, such as that which washed the contents of an outhouse into the water-supply of Plymouth, Pa., in 1885, may strike down a large proportion of the population. Hence the proper filtration of public water is the only certain safeguard; and Mr. Whipple shows how municipal filters have reduced the typhoid death-rate by four-fifths at Frankfort, Zurich, Hamburg, Lawrence, Albany, Newark, and other places. Milk is even harder to protect than water. As a recent proof of this fact, the Jamaica Plain epidemic in the spring of the present year, in one of the most carefully guarded communities in this country, might be cited. Dealing with the milk question, Mr. Whipple says "the cause of pasteurization seems to be steadily gaining ground. Before many years the general pasteurization of milk in large cities is likely to be as common as the filtration of water." Behind all protection of food, however, lies the care of excreta. If the wastes of human life are not properly disposed of, the infection of food surely results. Dirty hands or flies or some other agent will always be found to complete the vicious circle. In the Spanish war one-fifth of our volunteer army suffered from typhoid, due not to bad water or milk, but simply to camp pollution. As long as typhoid is thus spread by more or less direct contact, the movement for pure water and milk and food must be supplemented by a vigorous campaign against uncleanliness in the disposal of excreta. Mr. Whipple's chapter, "The Typhoid Pa-

tient as a Focus of Infection," is therefore most timely in its clear statement of the imperative need for sewage disposal in general, and in particular for the disinfection of the excretions of the sick.

These general statements of the principles underlying the spread and the prevention of typhoid are supplemented by a summary of the particular circumstances of the more important classic typhoid epidemics, those of Plymouth, Lausen, Lawrence and Lowell, Somerville, Springfield, Stamford, New Haven, Ithaca, and many more. This chapter is followed by a brief discussion of expert methods of studying and controlling epidemics. As Mr. Whipple says:

To trace an epidemic to its source is not so much a study for the doctor as for the statistician, the detective, the bacteriologist, the chemist, and the engineer. The specialist has to be all of these at once.

It is well-merited praise to say that Mr. Whipple's book will help to make more men of this type.

Prof. Harry Snyder presents in his textbook, "Soils and Fertilizers" (The Macmillan Co.), a large amount of well-arranged information which should prove interesting to many general readers. At first sight it seems as if sluggish soil offers little that can engage the attention of those who are not directly or indirectly occupied with farming or gardening. But the soil has a marvellous side. Its remarkable power of separating impurities from water is one of the most puzzling phenomena in nature. If a slow current of foul water passes over and through heavy soil, it emerges sparkling and pure. It has left behind the substances which made it an offence to sight and smell, and these substances speedily become the food of plants. Dirt removes dirt, but just how, nobody can tell. Again, the immense surface of all the particles of soil in a given space is a surprise to every one. Professor Snyder quotes Prof. Milton Whitney of Washington, D. C., as saying that a gram (about fifteen grains) of rich productive soil contains from two thousand million to twenty thousand million particles. Each is irregular in shape, and hence it is impossible to estimate exactly the surface of the whole number taken together; but, if one assumes that these particles are minute spheres, the computation becomes easy. On such a basis it can be shown that a cubic foot of soil contains a surface area of from two acres to three and a half acres. It is among these minute particles that the filtering takes place, and it is here that the activities of roots are displayed. But there are other activities in this workshop: it is here that minute forms of life (certain microbes) are busy in destroying organic compounds with which they come in contact, and out of the constituents building up new compounds. Thus it comes to pass that the subject of fertilizers as well as that of soil itself proves to have many features of attractiveness for the general reader. Of course, in a textbook, many of these topics are discussed in a formal manner, and some of them are touched with merely a slight reference, such for instance, as Darwin's study of earthworms and their relations to the soil; but the treatise is likely to be stimulating and suggestive to many besides the students for whose use it was prepared.

The second and concluding volume of Dr. Hans Solereder's "Systematic Anatomy of the Dicotyledons" (New York: Henry Frowde) increases the indebtedness of botanists to the author and the translators, L. A. Boodle and F. E. Fritch. In our notice of the early volume (July 30, p. 101) attention was called to the thoroughness with which the literature of the subject had been ransacked and coördinated. In this instalment the thoroughness is as marked, and the vast amount of material brought together is made accessible by a copious index. Although it seems a hopeless task to adjust the conflicting terminologies employed by different observers, one can say that the author has gone very far towards complete and satisfactory accomplishment of this result. In a well-proportioned glossary, equivalent terms are placed in instructive juxtaposition, so that any student can form his own opinion as to the synonym. But this is not all: the author has appended what he modestly calls "concluding remarks," in which he has given a masterly exposition of histological morphology. He indicates with clearness the characteristic features of groups which are separated by their anatomical structure, and in this way puts every possible aid in the hands of theoretical and practical students. To the experts who are engaged in the investigation of vegetable substances liable to adulteration, the treatise will be especially helpful. Dr. Solereder's important contribution to our knowledge has been much aided by the effective editorial supervision of Dr. D. H. Scott, who has a remarkable sense of proportion and perspective.

The third fascicle of Oakes Ames's "Illustrations and Studies of the Family Orchidaceæ" (Boston: The Merrymount Press), adds another important chapter to the already voluminous literature of this attractive group. The present fascicle, dealing with certain species from the Philippines, contains descriptions which, from their technical character, cannot be of general interest. But there is one feature of the volume which should be brought to the attention of all lovers of fine etching: The illustrations are worthy of careful study, not only on account of their fidelity to nature, but on account of their effectiveness as simple line work. It is evident that facility in expression increased from the earlier plates as the etching proceeded. The latest illustrations leave little to be desired in delicacy or force.

"Graf Ferdinand von Zeppelin: Ein Mann der Tat," by A. Vömel (Constance: Johannes Blancke), is an interesting story of an interesting character, and is not a mere panegyric. The book contains sixteen full-page illustrations.

Prof. Odilon-Marc Lannelongue has communicated to the Académie des Sciences the results of an entire year's widely varied trials of anti-tuberculous serum on human patients. The experiments have been made on both children and adults by such responsible doctors as Jules Comby, Le Noir, Legry, and Küss. In pulmonary tuberculosis of the first and second degree the results are summed up as follows:

The serum has been used in human beings without danger; and it appears to be, in cases still liable to treatment, a useful aid to ordinary therapeutics. Moreover, it seems to result from certain observations of Küss that the bacilli, under the influence of the regression processus, diminish in number and may even disappear—a result which seems to indicate that the faculties of generation or multiplication of the bacillus are lessened.

This is regarded as a definite advance along this line of research.

The Royal Scottish Geographical Society will confer the society's gold medal upon Lord Avebury, and another gold medal upon Sven Hedin.

Drama.

The Life of Henry Irving. By Austin Brereton. New York: Longmans, Green & Co. $6.50 net.

In the beginning of his preface to these two substantial volumes Mr. Brereton says: "As this book tells the story of the life of Henry Irving, it follows that, in regard to the author, it is almost entirely impersonal." Actually, it is nothing of the kind, being inspired throughout by the zeal of ardent friendship and almost unqualified admiration. No proof is needed of the power and charm of Irving's character beyond the devotion which he excited among those who worked with or under him. As an authoritative record of the actor's professional life and triumphs, both on and off the stage, the book is what it professes to be, setting forth all essential facts with much fulness of detail—including financial statistics of a most interesting kind—and in admirable order. Its unexceptionable sources of information and capital index make it an exceedingly useful work of reference for the student of the theatre. Though on the historical side it is complete and accurate, on the critical it is less trustworthy. Mr. Brereton, of course, has no difficulty in giving chapter and verse for his extracts from the great body of contemporaneous eulogy of which Mr. Irving, more than any other player of his time, was the object; but he is not always judicious or ingenuous in his selections or suppressions. He quotes, for instance, many pages of the inconsiderable rhapsodies of Clement Scott and of innumerable less-known newspaper writers, but only refers briefly and slightingly to the not altogether insignificant minority who declined to swell the pæan of reckless adulation. It is true that he reprints passages from some scurrilous attacks, manifestly grounded in ignorance or malice, to which no sensible person could give any credence, but of the mass of discriminating but not unkindly criticism, which by provoking discussion was of such inestimable value to his hero in his early prime, Mr. Brereton

scarcely gives a sample. This one-sidedness greatly detracts from the value of what is in many respects an excellent piece of work.

No attempt can be made here to follow, even in briefest outline, the course of Irving's full and meteoric career, nor is it necessary. There is nothing equal to it in theatrical history, at all events since the days of Garrick. A poor boy, reared in a little Cornish village, by a choleric old uncle and his Puritan wife, set to work in London, while still in boyhood, with only the rudiments of education and no one to back him, making his way to the stage, in the face of all sorts of opposition and discouragement, and ever struggling onward and upward, until, at the age of forty, he had attained to the dramatic leadership, which he held to the day of his death—and, more than that, to a position of social and intellectual distinction which reflected new credit upon a profession fallen into general contempt—it is a wonderful story. And the most precious moral in it for all actors lies in the opening chapters, an inglorious record of incessant application, unrelieved drudgery, constant disappointment, and dauntless ambition. In these years he enacted four hundred and twenty-eight characters of every imaginable variety. Then it was that he acquired that mastery of the actor's technique, the subtleties of vocal inflection—for he was a most delicate elocutionist in his quieter moments—the extraordinary control of feature, the eloquence of his hands, his picturesque and appropriate attitude, significant gesture, and superb repose. He was a finished artist long before he was recognized as a great actor. That he had genius, if only of that degree which has been described as an infinite capacity for taking pains, is indisputable. But it was the keenness and vigor of his intellect that raised him above his fellows. In this respect, he was an improved Macready. In the realms of the higher tragedy he could not soar with Edmund Kean, with the elder Booth, or with Salvini. In such a part as Lear, he had not the power or the pathos of Phelps or of Edwin Booth.

Nevertheless, Irving, though never a great tragedian, was a great actor in many directions, especially in eccentric, imaginative, romantic, intellectual, and melodramatic parts, and his growth along these lines may be followed by any careful reader of this latest biography. His earlier successes in such purely melodramatic characters as Bob Gassit ("Dearer than Life"), Bill Sykes and Robert Redburn ("The Lancashire Lass") are not particularly significant, except as regards their eccentric quality. From these he advanced to the far finer achievement of Digby Grant, in Albery's "Two Roses," in which his gift of vivid eccentric characterization was brilliantly displayed. Next came his extraordinarily imaginative and melodramatic Eugene Aram, which also comes fairly within the category of the eccentric. This is followed by his masterpiece of Matthias in "The Bells," in which imagination, eccentricity, romance, and melodrama were blended in wonderful combination. There was tragic quality in it also, but not of the highest order. His next triumph was as Charles I., an impersonation full of romantic charm, noble dignity, and exquisite pathos. In his Richelieu again power of eccentric characterization and melodramatic effect were the predominant features. A famous critic remarked that in addressing Baradas—"Thou hast lost the stake"—he illustrated the fascination of the cobra. In "Macbeth" he offered a study of intellectual cowardice, in which terror of the mind overcame the valor of the soldier. His Othello was weak, whereas the intellectual devilry of his Iago was magnificent. Intellectuality, again, was the predominant attribute of his remarkable Richard III. His Vanderdecken was thrillingly weird, romantic, and pathetic. In Shylock, a splendidly intellectual performance, he revealed many of his most striking qualities, but Booth sounded a clearer tragic note. His Hamlet, brilliant in its variety, its originality, its distinction, and its insight, was only melodramatic in the crises where it ought to have been tragic. His Louis XI. was the most perfect example of intellectual, romantic, and eccentric melodrama known to the modern stage. In his Becket there was the elevation of tragedy, without the demonstrative power. It was the suggested might of a lofty intellect that made this impersonation so impressive and also invested Wolsey with a nobility that did not belong to him. The list might be extended indefinitely, without revealing a part in which Irving triumphed solely by force of tragic genius.

The fact is that he was not a man of violent emotions or passions and lacked the necessary organs to give them utterance, even if he comprehended them in all their heights and depths. He had a fine mind, noble instincts and aspirations, the gifts of pathos and humor—especially of the sardonic kind—a rare sense of personality (in spite of his mannerisms), and a wonderful actor's face. The finest side of him was revealed in such parts as Becket, Charles I, King Arthur, Dr. Primrose, Wolsey, and Hamlet—his most perfect embodiments were those of Louis XI, Matthias, Malvolio, whom he dignified with a touch of Quixotic pathos whose beauty and truth Mr. Brereton does not appear to appreciate, and Corporal Brewster in "Waterloo." His absolute failures, during his prime, were very few. All his characters were endowed with a large measure of his own dominating and attractive personality. As a man, indeed, he was almost more remarkable than as an actor. Mr. Brereton's plain records of his energy, his artistic devotion, his courage in times of trial, his prodigality as a host, and the number and variety of his social and other interests excite wonder and admiration. The amount of money that he spent, chiefly, it should be said, upon his productions, was prodigious. His profits on his eight American tours alone amounted to $580,000, and yet he died comparatively poor. But he had raised the stage from a slough of despond, had been honored by learned bodies on both sides of the Atlantic, had enjoyed the friendship and esteem of many of the most notable men of his time, had lived in a blaze of glory, had been knighted by Victoria the Good, and had won a place in Westminster Abbey.

"Shakspere and His Forerunners," by Sidney Lanier; and "A Midsummer Night's Dream," liberally illustrated by Arthur Rackham, are promised this month by Doubleday, Page & Co.

Smith & Elder are publishing a sixth edition of Sidney Lee's "Life of Shakespeare" in its original book form. Mr. Lee has added a new preface, in which he discusses recent discoveries.

Clyde Fitch has written a new comedy, "The Happy Marriage," which will be played in London by Sir Charles Wyndham and Miss Mary Moore. In this city the part of the heroine will be assumed by Miss Doris Keene.

Next month W. S. Maugham's comedy, "Lady Frederick," which has been exceedingly popular in London, will be produced in this city. The principal feminine character—a dashing woman of the world of the type long associated with the brilliancy and varied humor of Mrs. John Wood—will be assumed here by Ethel Barrymore.

Charles Frohman has obtained for England and for America a new play, "Arsène Lupin," a kind of French "Raffles," written by François de Croisset. Its story concerns the meeting of a man and a woman who are both thieves, but who abandon their criminal careers because of their love for each other. Mr. Frohman will produce the piece first in New York.

"The Sway Boat," by Wilfred T. Colby, which Lena Ashwell has produced at her Kingsway Theatre, in London, is described as a poignant and clever little play. It certainly is not in any sense agreeable or edifying. Lady Kilross is bullied by her mother-in-law and taunted by her husband, because she has not provided an heir for the house. Therefore she throws herself into the arms of a lover, with whom, however, she declines to elope. Still, she does not think it right to conduct an intrigue behind her husband's back, and drowns herself, as the best way out of the dilemma. Miss Ashwell is said to find great emotional possibilities in the character of the heroine.

It is announced that John Drew is planning to abandon modern society drama and to appear in "The School for Scandal," and other old English comedies, including "Much Ado About Nothing," in which he will again play Benedick. Such a change

would doubtless help him to get out of the rut into which he has been sinking deeper and deeper for some years.

The announcement is made that Miss Nance O'Neill is to appear as a star in a series of Shakespearean tragedies, beginning with "Macbeth." She has already played the part of Lady Macbeth, with some success.

Fritz Lienhard has in his recent drama "Luther auf der Wartburg" completed his Wartburgcycle and arrangements have been made for its appearance on the Weimar stage this coming winter. The cycle contains also the dramas "Heinrich von Ofterdingen" and "Die heilige Elizabeth."

The new drama "Der reiche Jüngling," by Karl Rösler, the scene of which is laid in the Jerusalem of Christ's day, is to be given for the first time in Vienna.

Music.

Richard Strauss. By Ernest Newman. John Lane. $1 net.

An industrious writer of books is Ernest Newman, yet it cannot be said that he produces too many. Unlike some of the composers he discusses, he never writes a page not worth reading, and seldom one not worth preserving. He is a trained musician as well as a brilliant writer; he has ideas and opinions of his own, and expresses them with vivacity and audacity. His little book on Richard Strauss is one of the best things he has done, yet it is likely to exasperate both the detractors and the admirers of that sensational composer; the one class because of what they will regard as over-praise, the other because of what they will resent as over-censure.

The skeptics will be sure to sneer at the author's reference to Strauss as "the most commanding figure in contemporary music," and accuse Mr. Newman of confounding notoriety with fame; they will laugh at his assertion regarding Liszt, the inventor of the symphonic poem, that his "powers of construction were not equal to his powers of invention"; they will see a grave injustice not only to Liszt, but to Saint-Saëns, in the statement that Strauss carried the symphonic poem—which is the typical modern art form—"as far beyond anything of the kind that his predecessors had written, as Wagner in 'Tristan' had swung himself beyond the ken of all earlier or contemporary composers of opera"; they will hoot at the assertion that Strauss applied the Wagner-Liszt system of theme-transformation "with an audacity and brilliance of which they never dreamt"; and in view of the warm battles that have been waged against and between clever charlatans, they will gravely question the view that the great commotion raised over Strauss proves that he must be a man of "first-rate importance."

The admirers, on the other hand, will be wroth because Mr. Newman, after placing their idol on such a lofty pedestal, riddles him with so many bullets that at the end he presents but a sorry spectacle. What makes this procedure the more interesting is the fact that our author starts out with a page or two of citations—"wild and malodorous language" he calls them—from the book of an American critic who concludes that Strauss is leading music along a path that can only finish "in the corruption and rank odor of the morgue"; and then Mr. Newman proceeds to lay bare the infirmities of Strauss in language which is sometimes almost as livid, though it must be admitted that the American keeps down the loud pedal more persistently. It is the opinion of Mr. Newman that there is a tendency in Strauss to "burden music with extraneous and inassimilable literary concepts"; that in "Don Juan" he sets his foot for the first time on "the false path that has led him into so many marshes and quicksands"; that even in his best work there are "crude deformities in the building that sadly mar the total effect"; that there has "grown up in him a deep love of the grotesque for its own sake (and music happens to be the art in which the grotesque most jars upon us and most quickly wearies us)"; that the marches he wrote for the Kaiser "say next to nothing in a very highly colored way" (Mr. Newman might have said this of most of Strauss's works); that most of his songs represent "a woful waste of time and labor"; that in many of them he "relies on a display of pumped-up excitement that he hopes may be mistaken for genuine passion"; that "the score of the 'Symphonia Domestica,' for example, would sound just as well with a third of the notes and several of the players omitted." The last citation we can make in regard to the "greatest living master of orchestration" is that "he often falls a victim to the modern mania for using a pot of paint where a mere brushful would do equally well, or better."

Mr. Newman says in his preface that he does not know Strauss personally, but maintains that from one point of view this is an advantage to a biographer because it makes possible a more independent critical attitude. The "personal note" is contributed by another London critic, Alfred Kalisch, who defends Strauss against everything, including the charge of commercialism; in doing which he misses the real point. No one chides Strauss for getting all he can for his pieces; what his censors hold up for reprobation is the fact that, although he is very rich (his mother is the daughter of a millionaire brewer and he himself has made a fortune by his pieces), he continues to write potboilers and to choose operatic subjects chiefly because of their sensational advertising value. The story of his life is told briefly, of necessity, for there is little to tell, apart from his evolution from a conservative composer of absolute music to the most audacious and grotesque of programme-music makers. The symphonic poems are not analyzed in detail, but considerable space is given to the operas, including "Salome."

Few names of living French musicians are more widely known than that of Cécile Chaminade, who made her American début last Saturday afternoon at Carnegie Hall in this city. In America, as well as in France and England, her songs and piano pieces have a great vogue in the drawing rooms; statistics of the music trade a few years ago indicated that more of her works were sold than of any other composer for the salon, and in this matter there has probably been no change. This music seems to appeal especially to American women; Chaminade clubs are scattered broadcast throughout the country, and they will as a matter of course welcome the visitor from Paris with open arms. She had a cordial reception at Carnegie Hall, which was crowded. Men were in an even greater minority than usual, there being not more than twenty in that vast audience. It must be frankly said that the men were lucky not to be there, for a less entertaining entertainment cannot easily be imagined. Mme. Chaminade has written one song, the "Sérénade Sévillane," which may be called inspired, but that was not on her programme. The eleven piano pieces and thirteen songs presented were characterized by a singular monotony and superficiality; they were mere musical small-talk. In listening to all this one could easily fancy one's self transported back to the times when Herz and Kalkbrenner and Thalberg and Gottschalk held their own with their drawing-room pieces against Chopin, Schumann, Liszt, and other great men. Mme. Chaminade's music is sometimes piquant, but it is too insipid to be called beautiful; at best there is a doll-like prettiness. And this woman's playing is as unemotional as her music. Composers, in playing their own pieces, often show a lack of the necessary technical skill, but more than atone for this by bringing out details of expression that escaped other performers. This is not true in the case of Mme. Chaminade; she plays neither like a virtuoso nor like a composer. It is a singular phenomenon. But her tour is an assured success.

There are indications that women will some day monopolize chamber music performances. One of the most successful—and deservedly successful—organizations in the country is the Olive Mead Quartet, consisting of four young women who are busy every day of the season, travelling from the Atlantic to the Pacific. The Adele Margulies Trio has a woman at the piano, and last Sunday a new organization, the Maud Powell Trio, had its first hearing at Hermann Klein's popular concerts. The pianist, Miss Anne Ford, was new to the local public, but Miss Powell and Miss May Mukle are among the local favorites, and to hear them together, especially in a novelty by Schuett entitled "Walzermärchen," was a treat.

The Hess-Schroeder String Quartet will give a series of three chamber music concerts in Mendelssohn Hall, in this city, on the evenings of January 14, February 10, and March 3. The quartet is also to give concerts in Boston during the season. No tours will be made by this organization until April, when it will make a four weeks' trip in the Middle West.

One of the most important publications of the autumn will be the fifth and final volume of Thayer's Life of Beethoven. It is based on material collected by Thayer, worked out by Hermann Deiters, and put into final shape by Dr. Hugo Riemann. The volume covers the years 1824-1827. The publishers are Breitkopf & Härtel. Other impending publications by this house are Liszt's correspondence with Carl Alexander, Grand Duke of Saxony, and the third and last volume of Litzmann's biography of Clara Schumann.

Prof. Paul Kleinert, a veteran of the theological faculty in the University of Berlin, in his new volume, "Musik und Religion: Gottesdienst und Volksfeier" (Leipzig: J. C. Hinrichs), discusses the relation of music to the hymnology of the church and to popular song, and especially the services rendered by music to religion.

Art.

Sir Christopher Wren. By Lena Milman. Pp. xii.+367; 64 illustrations. New York: Imported by Charles Scribner's Sons. $2 net.

In every country of Europe the renaissance in architecture, as for that matter the renaissance in literature, has a history of its own. Gothic died hard, and in proportion as it was rooted in the soil, left its traces upon the new pseudo-antique. In Italy and in Spain Gothic was a precarious exotic, and the deracination was easy. The French chateaux, down to Francis I., attest how hard the native architecture died there, and how building was Italianized only by a superficial decorative application to fabrics still essentially native. England had followed France through the mediæval development at the respectful distance of from a generation to a century, and in the same manner followed the new Continental fashion. To the ordinary reader it seems that Wren was the pivot of the transformation from the architecture of craftsmanship to the architecture of formula, and that the importation of classic, like the contemporaneous Gallicization of English literature, was the result of the Restoration. But this is far from being the case. From the death of Henry VIII. to the accession of Charles I. was only eighty years. But the interval had sufficed to complete the transformation through the transitions of Elizabethan and Jacobean. Inigo Jones, brought back to his native land in the train of Anne of Denmark a quarter of a century before Wren was born, was already, by dint of his Italian studies, as convinced a classicist as Sir William Chambers. Wren, however, as court architect—"Surveyor-General of the King's Works"—at the time of the clean sweep of the great fire of London, had probably the most extensive professional opportunity that ever fell to the lot of a single architect. He found the British capital Gothic, and he left it classic. But the battle of the styles, so far as there had been any battle between native craftsmanship and imported scholarship, was lost and won before his time. "Gothick," in his mouth or on his pen, was a badge not only of "bad taste," but of barbarity.

Wren had undergone no apprenticeship in architecture. He designed nothing before he was thirty. He was properly a *cognoscento*, a dilettante. "There I found Dr. Wren and several virtuosos looking upon the paintings," reports Pepys in 1668. The present biographer, writing of him as an undergraduate, notes:

> Among the scanty information we have concerning this period of Christopher Wren's life, there is not a hint or suggestion of any leaning towards art.

Wren was, in fact, rather a scientist than an artist. Mathematics, extending to mechanics on the one side and astronomy on the other, absorbed him. Pepys, again, in 1669, sets down:

> This morning I did visit Mr. Oldenburg and did see the instrument for perspective made by Dr. Wren; and the sight of this do please me mightily.

Appointed to the Gresham professorship of astronomy at twenty-four, and transferred to the Savillian university professorship, warmly praised by Newton as a geometrician, president of the Royal Society, Wren would have been memorable among British worthies if he had built nothing. It was before he had built anything that Isaac Barrow, in language that did not seem hyperbolical to the Oxford of that day, described him as "once a prodigy of a boy, now a miracle of a man."

But, of course, it is Wren's work as an architect that is to justify another biography of him at this day. Lives of architects which are worth writing at all are worth writing over since photography came to let the reader see upon what the claims of the subjects are founded. The material available in this case has been judiciously sifted, and is very well presented. It is hardly to be supposed that any architectural pilgrim will visit all even of the memorable works of Wren that survive, in Ireland as well as in England, at Oxford, Cambridge, Lincoln, Greenwich, as well as in London. The present biographer has an advantage in being at once a devoted admirer of her subject and a churchwoman of the kind to which, as a rule, the works of Wren are anathema. "We cannot all feel warmly towards Wesley or Laud," observes Stevenson. She manages to feel warmly towards Laud, and the execution of Charles is always "the treason of Whitehall." And yet, in the same breath, as it were, the restoration of the north transept of Westminster from what Wren made of it, becomes vandalism. The biography relieves Wren's memory of the common ascription to him of the west front of the abbey, as we know it. Doubtless, Wren's contempt for Gothic proceeded from a deep ignorance and from an insensibility that he shared with his contemporaries. There is a dreadful example of his Gothic at Warwick. But it is reassuring to learn that this particular outrage he did not commit. The illustrations include not only the monuments which posterity is challenged, as in the case of the most famous of them, to "circumspect," but also some quite unpretentious and unfamiliar works. As to these, it is curious to note how modern they look. If one were not told, one would take them for rather humdrum examples of Georgian; or, on this side of the Atlantic, "colonial." Upon the whole, the biography justifies itself. It was well worth doing, and it is well done.

The title of "The House Dignified: Its Design, Its Arrangement, and Its Decoration," by Lillie Hamilton French (G. P. Putnam's Sons), is evidently a variant for that trite phrase, "The House Beautiful." But "The House Swell" seems to be rather what the writer had in mind, or, to use an adjective which she overworks, "The House Important." For the humble dweller in the suburbs, who resorts to his weekly or his monthly for "Hints on Household Taste," will discover at a glance that this volume was never meant for the likes of him. One of George Ade's heroes was advised that the duty of a man who had nothing to do, and was "all clogged up with funds," was to build a country house "and work up features for the Sunday papers." To that young man and that young man's wife this work is dedicated. It is to tell them how they may defy a much more exacting criticism than that of the omnivorous writer for the Sunday papers. The path, indeed, is plain enough. Out of the 75 original illustrations, including European examples, mainly from Fontainebleau and Versailles, 21 represent the work of one firm of architects; and no fewer than 14 show the possessions of one owner, seven being of his town house, and seven of his country house. The moral for the conscientious but distrustful millionaire is tolerably obvious. But the author is careful to explain that money will not do it all. Neither, apparently, will the choice of an architect. The Thoughtful Spender must cudgel his own brains, under the penalty of being found wanting in the estimation of a severe and austere critic, who takes these things with the solemnity of a Hebrew prophet, and is strict to mark iniquity, though, of course, in general terms and without personality.

"Rugs: Oriental and Occidental, Antique and Modern," by Rosa Belle Holt (A. C.

McClurg & Co.), has been issued in a revised and enlarged edition, with thirty-four full-page illustrations, twelve in color, and a map of the Orient. When the book first appeared it was reviewed at length in the *Nation* of November 14, 1901 (p. 383). We then said:

For one who knows nothing of Oriental carpets, to whom Persian, Turkish, Caucasian are but names, who cannot distinguish handmade and machine work, the book is a mine of information. It is, in fact, written for the ignorant but interested public, who are many, and not for the carpet students, who are few. Its importance and worth lie in its putting together in convenient form, systematically and with accuracy, a large amount of practical knowledge on a subject which hitherto, with rare exceptions, has been treated in large expensive publications, often in a foreign language.

Since 1901 a number of other works on the subject have appeared; and in this new edition the author gives us "the results of recent investigations made in the United States, in the art centres of Europe, and in the Orient." The volume is handsomely printed and well indexed.

In Pagasæ, on the Gulf of Volo, in Thessaly, where the Archæological Society of Athens is engaged in research, two towers were recently laid bare, one dating from the fifth pre-Christian century, and the other probably from the first. The latter was built entirely of tombstones which evidently had once stood along the road leading to it. Unlike stones of this sort, which generally have reliefs or inscriptions on the front, these bear colored pictures, like those found near Saida, several years ago, marking the spot where Greek mercenary soldiers were buried. The number of such stones found at Pagasæ is more than a thousand, and many are well preserved. Photographic reproductions of some of these finds have recently been published in the *Ephemeris,* and a solid volume, with complete tablets in colors, is to be issued by the Archæological Society in Athens under the editorship of E. Gilliéron,

The Pennsylvania Academy of the Fine Arts and the Philadelphia Water Color Club will hold under their joint management an exhibition of orignal work in water color, black and white, pastel, drawing with pencil, crayon, or pen, and illustrations in whatever medium, November 23 to December 20. The jury of selection consists of Hugh H. Breckenridge, William S. Robinson, Colin Campbell Cooper, William L. Lathrop, George Walton Dawson, and James Henry Moser.

The Autumn Salon at Paris, begun a few years ago as an experiment, seems to have been accepted as an accomplished fact. This autumn, as usual, the exhibition has been eked out by a retrospective part and a foreign section—Finnish paintings. And there is a bit of sculpture and considerable decorative art. Of the contemporary painters, some are not so young or unknown. Maurice Denis, who for nearly twenty years has been a delight of the Nationale, shows a History of Psyche, made up of great decorative panels, full of nude grace, amid the charm of tender-tinted sky and water, mountain, trees, and flowers. He has already done important work from orders in Germany; and the present series is for a dining room in Moscow. René Piot exhibits another important piece of decoration, for a mortuary hall, in three divisions, Requiescat—In Pace—Miserere Mei. This artist has studied the old fresco masters in Pisa and Florence and Naples for many years. His work is the true fresco painting, meant to be executed on the wall surface, and not pasted on it. The Rest is that of eternal springtime; the Peace is the forgetfulness of the tomb; Mercy is craved for the mortal sins, pride domineering. Maufra has a great marine painting, ordered by the French state to adorn the wall of some public building. The immense advance in quality and variety of French mural painting is due to this buying public at home and abroad—for public buildings and sumptuous residences, with a church or chapel thrown in between. Some of the younger artists have surprisingly good and new work, along with direct insults to eyes and understanding. Such is Henri Matisse, who forgets that beholders are not all fools, and that it is not necessary to do differently from all other artists. The exhibits of foreign artists are in many cases pleasing. John Lavery of Glasgow has a portrait of Pauline Chase as Joan of Arc. The work of the Finnish painters is interesting, and often shows great technical skill; but the paintings are singularly unbeautiful. The figures are of a people without heaviness, but without grace. The landscapes are of dazzling snows or long, strained twilights. The retrospective sections consist of a few samples of El Greco; of forgotten engravers and designers, who deserved better fate, Bresdin and Chifflart; and a complete representation, some 175 works, of all different ages and manners of one painter whose place in historic art is assured—Monticelli. Monticelli will be finally known as a sort of Watteau of the Second Empire—courtly figures in falbalas, painted, not drawn, with what has since been named impressionism, and colored like the landscapes of Diaz. At the Exposition of 1900 a few superb works of Monticelli (who died in 1886) were a revelation to many. It is not probable that any other collection of his works will be made as complete as the present; but, wherever found, they have been shown to be worth studying in the order of time of their painting. They leave permanent impressions of life and nature during the years when France glided from romantic poetry and Corot to the splendors of Imperial country life under Eugénie, with imaginations of Francis the First and his ladies.

The pictures and art objects of Charles Séguin have been left as a bequest to the Louvre. The Museum is to choose from his collection such objects as seem desirable up to the value of a million francs.

The Merwin Clayton Sales Company of this city holds its first auction November 9. The offering will be a collection of Japanese prints, each signed.

The French Académie des Beaux-Arts has awarded two prizes to *pensionnaires* of the Villa Médicis at Rome—the Prix Santour to M. Bussières, an engraver, and the Prix Henner to Jean-André-Édouard Monchablon, a painter.

From Rouen comes the report of the death of Edmond Lebel, honorary conservator of the picture gallery of that city. M. Lebel was born at Amiens in 1834, and studied under Coignet. He was one of the first to introduce engravings into provincial museums, and made the museum at Rouen notable in this respect.

Finance.

LEGENDS OF THE PANIC.

Last Saturday was the anniversary of what economic history will hereafter describe as the "panic day." October 24, 1907, now seems as far in the past as July 26, 1893, September 20, 1873, and October 13, 1857. No event of such far-reaching significance ever occurs without producing a mass of legend. What may be called the folk-lore of a panic is created in the same way as other kinds of folk-lore; namely, through efforts of the ignorant to explain, in a way that appeals to their own imagination, phenomena which they cannot understand. We do not have to go far to find such survivals from earlier panics. Mr. Taft's naïve talk in South Dakota, about the way in which the tariff bill of July, 1894, caused the panic of July, 1893, is a case in point, but it is not the only one. Bryan and "Coin's Financial School" in 1896 told us how the Money Power personally caused the panic of 1893 in order to punish Free Silver and rivet the hold of the Great Gold Conspiracy—a legend which had a vogue even wider than the story of 1873, that "London" deliberately brought on the panic to punish America for growing into so dangerous a competitor.

Naturally, those other legends of secret powers of darkness in the circles of High Finance, who pursue their enemy and crush him, even though a panic be necessary for the purpose, are always present. Wall Street itself knew all about this in 1893 and 1873, and it was almost superfluous for a New York newspaper to revive last week the tale that the panic of 1907 was the engine used by T. F. Ryan to crush his competitors in the street-car field, by E. H. Harriman to get possession of the Georgia Central Railway, and by J. P. Morgan to grasp the Tennessee Coal Company for the Steel Trust. The panic of 1907 has, in fact, an unusually full crop of legends. The notion of a "Roosevelt panic" seems not to have passed into folk-lore; even the simple-minded see the absurdity of supposing that people ran the banks because of the Railway Rate law and the fine on the Standard Oil. But the floor of Congress has heard at least one legend, told with the detail of a Grimm, as to the origin of the trouble last October. Senator La Follette—"proprement nommé," a caustic Paris financial critic remarked, in reviewing the incident—was the authority, last March, for the tale of one hundred millionaires who cornered $500,000,000 cash, precipitated the panic, and then doled out their money at exorbitant interest. People who

think that the Wisconsin statesman's dream is not an article of faith in thousands of humble minds, know little of after-panic legend.

Yet even La Follette's fairy tale had a basis in Wall Street gossip. If not five hundred million dollars, then at least twenty-five millions, were suddenly, as the phrase ran, "thrown into the Stock Exchange" at the instance of Mr. Morgan, when the strain was at its worst. Where had Mr. Morgan been hiding that money, and why? One heard this question often enough, within a stone's throw of Trinity Church. Serious and unimaginative people might reply: what happened at noon on October 24, 1907, was the representation by the president of the Stock Exchange, to the Clearing House committee, that relief must be had at once; that the banks were themselves in unwarranted panic; and that, with $250,000,000 cash still in their vaults, and with reserves barely down to 25 per cent. of deposits, it was their duty to grant credit where it was so desperately needed. Then came the assent of the banks, and the consequent entrusting of the Morgan banking house with the duty of lending $25,000,000 for their account on the Stock Exchange. All this may be recited, and it explains the facts; but how little appeal it makes to the instinct of the picturesque, as compared with La Follette's account! Even in sober history, the report that the Bank of England, in the panic of 1825, applied the Bullion Committee's rule of discounting freely in the crisis, competes very poorly with the tradition of the paying teller who discovered a dusty and forgotten box of one-pound notes in the bank's secret vaults, and used them to save Lombard Street.

Last of all, it would be interesting to learn just how large a portion of the general public still believes that the panic of 1907 was stopped wholly by the personal intervention of Mr. Morgan and Mr. Rockefeller, and how many believe that the Treasury's announcement of its "plan of relief" on November 17, was the cause of the subsequent recovery by the banks. It is not impossible that both these notions will figure hereafter in financial history.

By Ramsey Benson. $1.50.

A man of good sense and humor, with wages of $50 a month and five children, tells of his unusual experiences following a determination to leave the city and farm it in the Northwest.

"Does for the humble workingman what 'The Fat of the Land' did for the well-to-do. Will appeal instantly, and throughout its entire length, to the lover of out-door life."—*Boston Transcript.*

HENRY HOLT & CO. 34 W. 33d St. New York

Now Ready

Lorenzo the Magnificent

and Florence in Her Golden Age.

By E. L. S. Horsburgh, Queen's College, Oxford, Author of "Savonarola." With many Illustrations. 8vo. $4.50 net.

This book is designed to present to the general reader a view of Lorenzo de Medici as the central point of Florentine life during the latter half of the fifteenth century. While entering with some fulness into the political history of Florence under the Medici, and while aiming especially at an impartial presentment of Lorenzo's character, the author seeks to give a vivid picture of Florentine life under Lorenzo, in all its aspects. The art, literature, and philosophy of Lorenzo's age, as contributing to the life of the times, are reviewed, and the manners, customs, costumes, and amusements of the people in all grades of society form the subject-matter of several chapters.

Sole Agents for

CHATTO & WINDUS'S MEDICI PRINTS

Books Paintings — **AT AUCTION** — Autographs Engravings

The Merwin-Clayton Sales Company,

20-24 East 20th Street, New York.

Announce Sales on November 9th, 11th, 12th, 16th, 18th, and 19th. Consisting of

A FINE COLLECTION OF ORIGINAL SIGNED JAPANESE PRINTS, illustrating Folklore and Historical subjects, gathered in the interior of Japan by a Government Employee.

A PORTION OF THE LIBRARY OF THE LATE WILLIAM BERRIAN OF BROOKLYN, comprising a large collection of Americana, together with books on the Far East, First Editions of American and English Authors, Washingtoniana; also **AN UNUSUAL COLLECTION OF BOOK ENGRAVINGS, PORTRAITS, VIEWS,** etc., all admirably adapted for Extra-illustrating.

A FINE COLLECTION OF SPORTING PRINTS AND ETCHINGS, together with **ORIGINAL WOOD ENGRAVINGS (PROOFS)** by the late J. H. E. WHITNEY, **THE WELL-KNOWN WOOD ENGRAVER.**

A PORTION OF THE LIBRARY OF MR. J. de PALMA OF CUBA, including Americana, Lincolniana, Spanish Newspapers, Cook Books, etc.

ALSO IN PREPARATION

THE PRIVATE LIBRARY OF THE LATE JOHN G. HECKSCHER OF NEW YORK CITY, consisting of a **VALUABLE COLLECTION OF ANGLING AND SPORTING BOOKS,** probably the most complete of its kind extant.

THE PRIVATE LIBRARY OF THE LATE HON. HIRAM C. DAY OF BUFFALO, N. Y., Attorney and Counsellor at Law and a Book Collector for 65 years.

MISCELLANEOUS COLLECTION OF BOOKS, including a portion of the **LIBRARY OF DR. THEOPHILUS STEELE** of New York City.

A COLLECTION OF AMERICANA, mainly from private sources.

THE LIBRARY & PAINTINGS OF THE LATE BENJ. BETTS of Brooklyn, N. Y.

DUPLICATES FROM THE NEW YORK PUBLIC LIBRARY.

Also other miscellaneous consignments which will be announced later.

Owners of private Libraries, Executors and Administrators having books to sell; Librarians, Publishers, and Booksellers with surplus stock, are invited to correspond with us.

Books, Autographs and Prints received in large or small quantities.

Catalogues, terms, and other information furnished upon request.

Telephone 567 Gramercy.

OUR LIBRARY SERVICE

We have recently supplemented our service to Libraries, by procuring Out-of-Print and Scarce Books, and by importing English books.

Our Educational Catalogue contains a full list of Supplementary Reading, indicating the grade to which each title is adapted.

Our Clearance Catalogue contains overstock at special prices, and an alphabetical arrangement by authors of all cheap editions of Recent Popular Fiction and Standard Library 12mos in one list.

Our Library Catalogue of 3,500 approved titles, following A. L. A. lines, is of great convenience to small libraries.

Our Monthly Bulletin notices promptly every new book of importance.

These Catalogues are sent on request.

Three notable features of our service are: Promptness, thoroughness, and low prices.

NEW YORK, THURSDAY, NOVEMBER 5, 1908.

The Week.

The return of Gov. Hughes has been in many ways the most gratifying result of the election. Whatever doubts honest men might feel as to the relative merits of Taft and Bryan, whatever misgivings as to the prospect of securing a comprehensive measure of tariff reduction from a Republican administration, there has been no question as to the fitness of Mr. Hughes to be Governor of New York. We need not dwell on his brilliant record at Albany. It is a tribute to his courage and integrity that he was opposed by all the worst elements of both parties. The gamblers and the stock-jobbers struck hands with the machine politicians, Republican and Democratic, in a desperate effort to defeat the one man whom they fear. The returns from the State indicate that Murphy, McCarren, and Conners, hopeless of carrying New York for Bryan, devoted all their energy to Chanler. But over this whole army of evil the Governor has signally triumphed. By a direct appeal to the moral convictions of the electorate, he rallied to his support the intelligent, high-minded voters, and these, we are thankful to say, still form a strong working majority. Thus the Governor goes back to Albany mightier than ever, irresistible, as we trust, in his advocacy of reform of the primaries, reform of the ballot, and other measures that shall weaken the influence of the bosses and the corrupt elements behind them, and shall fortify the principles of representative government.

President Roosevelt's last appointment of a general in the regular army has attracted but slight attention, probably because the choice is so good. He selected Col. Frederick A. Smith, little known outside the army, but within it rated as an officer of unusual attainments and of long and valuable, if quiet, service. The army had grown anxious lest the President should select for advancement some captain whom he met in Cuba. It is only fair to say, however, that the President's last six or seven nominations have indicated a proper desire to recognize the older men. None the less, since it is the unusual which always provokes comment, Mr. Roosevelt will be remembered for a long time in the army as the President who was responsible for the appointment as generals of Capt. Albert Mills, Capt. John J. Pershing, Major Bliss, and Major Duval, and who approved of the advancement to major-general of his personal friend, Leonard Wood. The latter, it should be said, has endeavored to make up for his deficiences in education by hard work and by ceaseless professional activity. Against promotions of this kind the army protested so loudly that they came to an end just two years ago with the advancement of Capt. Pershing, whose chief title to fame is still the fact that he is son-in-law of the chairman of the Senate Military Committee. Such erratic appointments are extremely demoralizing; and the army will look upon Mr. Taft's election as insuring quiet, steady, and sensible development.

The Secretary of the Navy having removed the ban of silence placed upon all officers who attended the recent conference at Newport, it now appears that many of the defects in the new battleships North Dakota and Delaware, alleged by the younger officers, were acknowledged to exist, but that the ships were so far along as to make far-reaching alterations impossible. The conference also hesitated about making changes in the Florida and Utah, on the ground that such action would require a complete redrawing of the plans. So these monsters will take the water admittedly defective and behind the times. But that will not prevent the Navy Department from declaring that civilian criticism of such matters is false and ignorant. This little game will go on until there is a clean sweep in the Navy Department and a complete reorganization. The wonder grows that such a reformer and navy specialist as Theodore Roosevelt has never had time or interest to undertake this pressing task.

When some "experienced" Western lumbermen recently testified that most of the talk about the depletion of our forests is nonsense, they found few believers. Even that small following will dwindle when the United States Forest Service has circulated its latest special report, wherein is made manifest the inferiority of experience to statistics. The bulletin announces:

> We are now cutting timber from the forests of the United States at the rate of 500 feet, board measure, a year for every man, woman, and child. In Europe they use only 60 board feet.

Not even the most cheerful American lumberman pretends that our country is planting new trees as systematically as the Old World. At best, it is urged that second growth often takes care of itself, and that the supply of standing timber is far greater than lay investigators suppose. The enormous difference, however, between the American and European rate of consumption destroys the value of these assurances; for, whether or not there is danger of total exhaustion of the supply of virgin timber within thirty years, as has been estimated, there is certainly wanton prodigality. Only competent regulation can offset such extravagance.

Mr. Hearst's last batch of letters, read on Saturday night, reveal John D. Archbold as corrupting the press. Not that Mr. Archbold would recognize his activities by that name. He undoubtedly felt that he was performing a patriotic duty in subscribing $5,000 to the *Southern Farm Magazine*. It advocated things which he regarded as of vital interest to the nation, and to the Standard Oil. Then there was the Baltimore *Manufacturers' Record*. This offender has long opposed the educational campaign in the South, the movement to suppress child labor, and other enlightened policies. But it has been strong for the tariff, and the vested interests everywhere, and so it was well worth a year's subscription of $3,000. And *Gunton's Magazine!* No one but Mr. Archbold ever dreamed that it was worth $5,000 a year to anybody. The next step proposed by that obsequious friend of the Standard Oil, former Congressman Sibley, was to obtain "a permanent and healthy control of the Associated Press and other avenues" of publicity. With that in its power, Mr. Archbold and Mr.

Rockefeller would be largely freed from such criticism as has irritated them for several years past. But such control would have been a terrible blow at the final bulwark of the American people.

The new Massachusetts savings bank, insurance, and annuity system progresses steadily. Since the Whitman Savings Bank opened its insurance and annuity department in June last, the Bridgewater Savings Bank and the Ludlow Savings Bank have become its agents in their localities. The People's Savings Bank in Brockton, the great shoe town, opens its own insurance department this week. It is through private agencies, however, that the real extension is looked for. Twenty-one business houses have become agents of the Whitman Savings Bank, or have made applications for permission to be its agents. Some of these concerns are of first-rate importance, among them the Regal Shoe Company, the Phelps Publishing Company, and the American Hide and Leather Company. Among the philanthropic organizations appointed agents are South End House, the People's Institute, and the Women's Educational and Industrial Union. One of the largest department stores is advertising its readiness to take premiums for policies, and the Boston Central Labor Union has also become an agent. The labor men in Boston have been quick to see the advantages of the system, and it is proposed that eventually every union shall become an agent. Thus, it is evident that the experiment, while still plainly an experiment, becomes increasingly worth watching.

In the announcement of the Boston *Herald* that it has abandoned its Sunday "comic supplement," there lies a faint hope that American journalism may yet rid itself of a disgrace. A distinct movement against these colored supplements has for some time been noticeable. Educational conferences have resolved against them. Meetings of mothers have protested that their influence is degrading, and have called upon newspapers to discontinue them. Such public objection has been gathering force and volume; and it is in obedience, the *Herald* says, to the appeals of parents and teachers that it has resolved to banish "the clown of the newspaper establishment." Clownish and vulgar, the colored "comics" undeniably are. It is a reproach to our civilization that they should have been allowed to swarm over the land. They are a glory all our own. No other journalism has anything like them. They leave visiting foreigners aghast. For the reproach inevitably runs beyond the individual editor or journal, and is an impeachment of the taste and even common sense of the whole country. Who has not seen intelligent Germans, Frenchmen, and Englishmen completely puzzled by the Sunday "comic"? It is a phenomenon which they cannot in the least understand. They meet Americans freely, and find that they are not so different from other peoples. The average of our taste and manners does not strike them as extraordinarily low; and they are even ready to compliment us, until they see the Sunday supplements! Then they ask if Americans are really grown up, if they are really educated, if they really ever discriminate between what is childish and what is mature, what is tawdry and what is excellent. Material which in no other country in the world would be offered to anybody but infants or idiots, is here gravely thrust upon presumably intelligent readers, and hailed as a great advance in journalism!

We are familiar with the defence of the Sunday comic. It is alleged that the comic supplements always embody "pure morals"! It is said, too, that children require picture-writing of a glaring sort, and the quiet intimation is that most purchasers of the newspapers having Sunday comics are children intellectually. As a matter of fact, we believe, the majority of people throw away the colored supplements along with other rubbish. They regard them as a freak which may possibly interest vacant-minded housemaids or a casual coal-heaver, but which can appeal to no sensible person. A kind of false and hollow prestige has been artificially created about the Sunday comic, which a careful investigation of the facts would, we believe, entirely shatter. The experiment of the Boston *Herald* will therefore be watched with interest. That journal may find that it will gain in prosperity as well as in self-respect by ceasing to affront the taste of its intelligent patrons. The question rests ultimately with the public. Why should Americans tolerate, or patronize, a form of witless and vulgar journalism which could exist nowhere else in the world? The complaint is almost universal that American Sunday newspapers are too bulky. When they seriously set about reducing their dropsical proportions, they cannot make a better beginning than by cutting away the so-called comic supplements, which are really more tragic than comic, and more barbaric than either.

The detailed figures of the general election in Canada emphasize a fact of which the Laurier government has been cognizant since the autumn of 1905—a fact which explains why Sir Wilfrid and Mr. Fielding, the Minister of Finance, were so confident that, in spite of the well-grounded charges of corruption in the Liberal party, the Conservatives would not come into office as a result of the appeal to the constituencies. The returns, taken province by province, show that the farming population of Canada would not give its support to a political party that was pledged to higher duties than those in the tariff of 1906. Three years ago, when the Tariff Commission visited each of the provinces, its members—Messrs. Fielding, Paterson, and Brodeur—were not long in discovering that where the farmers are well organized in farmers' and grain-growers' associations there was the most strenuous opposition to any new concessions to the protected manufacturers of Ontario, Quebec, and Nova Scotia. These organizations are strong in the three prairie provinces, in Ontario, and also in Prince Edward Island; and when the Tariff Commissioners held their public sessions in the centres of population, representatives of the farmers' associations and the granges never failed to put in an appearance. From Calgary in the west to Charlottetown in Prince Edward Island, the case of these farmer delegates, when they came before the Commission, was the same. They were disappointed that the Liberals, between 1897 and 1905, had not carried out the fiscal pledges in the Ottawa Liberal Programme of 1893; they were displeased at the curtailment of the preference on British woollens, made at the instance of the Canadian Manufacturers' Association in 1904; they were hostile to the

bounty system for the iron and steel industry; and they were emphatic in their opposition to any higher duties on imports from the United States.

Many duties were slightly increased at the revision of 1906. There were also numerous inroads on the British preference; but in response to the demands of the farmers' associations some small reductions were made in the duties on agricultural implements. Generally, however, the changes in 1906 were in favor of the manufacturers; and the changes would have been more numerous and of more value to the protected interests, had it not been for the organized opposition of the farmers. It was obvious to any one who followed the public proceedings which preceded the revision of 1906, that the Laurier government went just as far as it dared in making concessions to the protected manufacturers, and also to the bounty-supported iron and steel industries of Nova Scotia and Ontario. But Borden and Foster, the leaders of the Conservative Opposition in the House of Commons, failed to realize where the rural voters of the Dominion stood. Borden and Foster committed themselves and their followers in Parliament to the abolition of the British preference, and to a tariff against the United States as high as Haman's gallows. This policy gained them a couple of seats in Halifax and a seat in Hamilton; but in rural Canada they made no gains.

The longer the German Emperor's "blazing indiscretion" is studied, the more incomprehensible appears his motive. International indiscretions usually turn out to the advantage of some country, or to the furtherance of some policy, but in this case William II appears to have offended everybody and to have gained no conceivable end. In his own Empire, nothing which he has ever done has brought such general disapproval upon him. If he thought to smooth down English public sentiment, his mistake seems just as huge, for the outcry and suspicion of all things German, which have so long marked certain newspapers in England, have been distinctly heightened by the Kaiser's awkward attempt to show that his policy has been pro-British. As for France and Russia, his revelation of their secret diplomatic attitude during the Boer war, has plainly provoked bad feeling, not to say rage. The inevitable effect is to bind closer their *entente* with England, instead of breaking it, as some thought the Emperor's intention to be. Yet it is at home that he will have to face the most serious consequences of his blunder. Von Bülow's proffered resignation shows clearly that the Chancellor perceives the demand of the German people that somebody be punished for a false step which has so hurt the national pride. At the meeting of the Reichstag this week unpleasant questions are certain to be asked, and the whole problem of ministerial responsibility may be raised in acuter form than ever. For a ruler who, whatever his faults of impulsiveness and vainglory, has been supposed at least to know his people well, the German Emperor's gross misreading of public opinion in his own country is certainly extraordinary.

Diplomacy never appeared to better advantage than in smoothing out the Balkan difficulties. For a time it certainly looked as if the prophets of war were at last going to be justified, so sudden and grave were the complications. Hostilities might so easily have been precipitated on the side of either Turkey or Austria, Bulgaria or Servia. But a little time and much patience and an exchange of views among the great Powers, have wrought marvels. It is now certain that there will be a European conference to pass upon the whole question, and the programme for it is nearing an agreement. The speech which the Austrian Foreign Minister made last week puts his country in a more reasonable attitude. Austria is now willing to have the annexation of Bosnia and Herzegovina discussed at the conference, to be sure as an "accomplished fact," but still as a step entitling Turkey to compensation or fresh guarantees. This puts Baron von Aehrenthal in line with the agreement between Russia and England, already announced, and also, in general, with the understanding reached by the Russian Foreign Minister, Mr. Isvolsky, during his visit to Paris. The whole negotiation is a fine example of what can be done in constituting an international tribunal to settle international disputes peacefully, instead of flying to arms to seek a settlement which settles nothing.

There has recently ended at Rome an international congress which was of great interest. The King and the Italian Colonial Institute conceived and executed the scheme of banding together Italians the world over for advancement of their common welfare. One thinks at once of the Pan-Germanic League, the Pan-Slavic, the Pan-Islamic movements, their fanatical race hatred, and imperialistic programmes. Pan-Italianism has only decadent Latin ideals, to wit, peace, prosperity, and culture. The delegates, who came from half a hundred lands, studied the laws of countries with Italian communities, in the hope of protecting Italians, particularly against military service and disfranchisement. They devised plans for installing, wherever there is an Italian quarter of any size, a friendly representative who shall organize clubs, warn against impostors and be socially useful. They struggled with the regulation of emigration, with the idea eventually of blacklisting countries, towns, and employers that treat Italians ill, of making return to the fatherland easy by selling cheap transportation, and of establishing a world-wide labor bureau, with government aid. They suggested the distribution of Dante and Petrarch over-sea, and the teaching of their tongue in the schools of the *stranieri*. And, to hasten the realization of their plans, it was proposed to hold an exposition three years hence, for the display of Italian emigrants' industry and culture. These are great aspirations, perhaps too great ever to be satisfied, but there is nothing in them which need disturb the most timid diplomat. Not even the most ardent *congressista* hinted at political aggrandizement, and the congress opened with explicit disavowals of that aim. How much more profitable than older kinds this modest nationalism is to the mother country, the world is witness. Italy is not spending millions in building up colonies; she lets her sons pay their own way; sends them only a few consuls, advisers, teachers, and books, and sees her banks flooded with deposits from abroad, her spaghetti and chianti exporters worked to distraction, and an army of travellers returning home for vacation to spend a year's savings. Let us allow amply for racial differences; the contrast still reads the Imperialist a sermon.

THE DEFEAT OF MR. BRYAN.

The overwhelming defeat of Mr. Bryan cannot be accepted as an unqualified endorsement of the Republican party and its policies: it is rather a sign that a reassuring majority of our citizens entertain a wholesome distrust of the fluent agitator with his cheap panaceas. In spite of corruption in the Republican organization, the electorate has turned to Mr. Taft as more likely to conduct the government firmly and steadily in a troublous time. Both candidates are men of attractive personal qualities, and on this score there was practically no choice. But Mr. Bryan has been unable to convince the country that he possesses that clearness of mind, soundness of judgment, and executive capacity which are the indispensable qualities of a good President. The people have not forgiven him his advocacy of free silver and of government ownership of railways—not because either of these policies is at present a menace, but because his adherence to them is evidence of the ineradicable mental traits of a visionary. The progress of this campaign—as in 1896 and 1900—served only to deepen the popular misgiving as to Mr. Bryan. Except in 1896, when free silver was the only question, he has failed to stand unwaveringly for definite issues. In 1900 he professed deep attachment to the principles of anti-imperialism and tariff reform; but he soon drifted away from those subjects, and devoted his energies to sweeping denunciations of capital and demagogic appeals to the laboring man. This year he followed the same uncertain course. At the beginning he spoke loudly for anti-imperialism and revision of the tariff, but before long he relegated those topics to the background, fastened his attention to a fantastic and impossible scheme for regulation of the Trusts, and in general fell into his old unstable ways. The result has proved afresh that unless the party in power is hopelessly divided and demoralized, and the country is seething with discontent, an opposition cannot succeed without a clear-cut constructive programme. In tariff reform and economical administration Mr. Bryan had issues to which the Democratic party has been historically attached, but he deliberately threw them away.

It is now plain that from the point of view of mere party tactics, of making the best of a losing fight, the nomination of Mr. Bryan was an egregious blunder. His chances of carrying New York were from the first very slight, and without New York he could not possibly win unless he could sweep a group of large Western States, say Ohio, Indiana, Illinois, and Wisconsin, or else some of the small States. While it was entirely conceivable that one or more of these States, which gave Roosevelt such handsome majorities in 1904, might go Democratic it was not for a moment to be supposed that all of them would slip their Republican moorings. A Democrat like Gov. Johnson of Minnesota, Judge Gray of Delaware, or Judson Harmon of Ohio, that is, a man of steadiness and tested capability would have been far stronger in the East, and especially in this pivotal State, and at the same time, as the vote on the State tickets in Ohio, Indiana, and Minnesota indicates, would have fared better than Bryan in the West. But the Democratic organization, dominated—we might better say destroyed—by Bryan, was in no mood to follow safe and sane guidance. It ran after Bryan and his vagaries, and it lost the support of those large centres of population the votes of which were essential to its success. This is the fourth bitter lesson which the party has had. Its only victories since the civil war were under Cleveland. Its only possible victories in the future, we are convinced, depend upon its return to the leadership of men like Cleveland and to those sound principles by which he triumphed.

To Mr. Taft we look for the fulfilment of those solemn promises—particularly for reform of the tariff—to which he and his party are committed. Notwithstanding the returns from the polls, there is widespread dissatisfaction with the recklessness and extravagance which have been encouraged by twelve years of unbroken Republican ascendency. The huge increase in the cost of government, the enormous sums spent on army and navy, the rapid multiplication of offices—all these things have irritated and alarmed sober and quiet people. More menacing yet has been the open alliance between the protected manufacturers and the Republican politicians for the exploitation of the farmers and the vast mass of the consumers. It is not conceivable that this sinister partnership can continue as in the past. The new and radical element which is gaining control of the Republican organization in the West will fight the stolid "stand-patters" like Aldrich and Cannon, and it may be set down as a certainty that if Mr. Taft does not join with them in the task of setting the Republican house in order and in casting the money-changers out of the temple, some man of foresight and power will come forward to wage the battle in behalf of the people. The great cause will produce the champion, as it produced Lincoln, and later Cleveland. If Taft be not the man, then another. But we believe that Mr. Taft will rise to the wonderful opportunity which the voters of the United States, confident of his integrity and high purpose, now offer him.

REAPING THE WHIRLWIND.

Let me call your attention to the fact that this "night-rider" business is essentially a hopeful development. It is the first fruits of the mob spirit reaching higher with its lawless hand. I have no doubt but that the two prominent lawyers in Tennessee, who have just suffered horribly at the hands of a mob, have many a time shrugged their shoulders nonchalantly over the lynching of negroes. When the mob spirit begins, as it is beginning, to "hoist the colonels by their own petard," the dominating forces of public opinion are going to see what some of us have been pointing out all the time, that the mob that lynched the negro for the *unnamable* crime is father to the mob that lynched him for *other* crimes, and grandfather to the mob that now lynches him for *no* crime, and great-grandfather to the mob that lynches the white man and burns his property.

This extract from a private letter from a prominent Southerner goes to the mark. For years we have maintained that the lynching of negroes in the South must stop, if for no other reason than that lynching of whites was sure to follow. No mob of excited, irresponsible, drunken men, North or South, can be trusted to enforce lynch law with discrimination. Some tried it in Springfield, Illinois, only to find out afterwards that the man originally accused was innocent; they did not confine themselves to seeking him out, but killed, robbed, and destroyed at random. The forces of evil once unleashed, no one can direct and no public sentiment can control, whether in Illinois or in Tennessee or in Mississippi. Granted, if you please, for the sake of argument, that there is a higher Anglo-

Saxon law, which compels short work with the criminal where the "unmentionable crime" is committed, it has long been evident that its self-appointed instruments never stop there. They go from hanging to burning; from killing for rape to slaughtering for an impertinent remark; from lynching men to torturing women; and then, the spirit of lawlessness being well-rooted, they kill whites who have offended them, or who sell their tobacco when and where they please.

The descent of this road to barbarism is facile and swift. Examples of it are more frequent in the South, partly because that region, misled by the cessation of the Ku Klux horrors, believed that lynching could be held in sufficient check. We have in mind a community in northern Alabama where the lynchings and burnings of innocent and guilty alike became so menacing that the neighboring sheriff at Wetumpka found it necessary to form a posse and round up the entire crowd, whose "defence of white womanhood" had created a new sport—nigger-killing—superior to any other local amusement. Twelve white men were sent to the chain-gang or driven away, and there has been peace between the races and obedience to the laws ever since. Two years ago there was reported a horrible case where a negro woman in Mississippi, accused only of being the wife of a man alleged to have done wrong, was tortured as by savages, fine splinters being driven into her flesh and set on fire. Nobody was punished. No community could tolerate such a crime, and not sink in the scale of civilization. Were the law similarly permitted to fall into disrepute and disuse in New York or Massachusetts, we should have our night-riders, too. There is no such thing as saying to lynchers: "Thus far and no farther."

Every one is sorry for the prominent Tennessee victim, Capt. Quinten Rankin, whose murder has stirred that State. But if the active measures against lynching that have followed that crime mean that the sober elements of the South are at last roused, he will not have died in vain. The South has been playing with fire; it has been in the position of the man who takes cocaine to dull a local irritation only to find that his whole system has been ruined. Some striking event has been needed to convince people that lawlessness knows no color line. If out of it all comes the belief that every man, South, North, East, or West, is entitled to his day in court, this country will have taken a great step forward; and more will have been accomplished for the welfare of the South than by the opening of a thousand factories or the building of a thousand miles of railway. For lawlessness costs the South—and every other community where it occurs—in dollars and cents, as well as in the lowering of civilized standards. There must be a far-reaching programme—the arousing of public sentiment, the quickening of courts, the abolition of chain-gangs, the patrolling of the States by well-disciplined constabulary, and, above all, the relentless punishment of lynchers.

But it is not the South alone that cries for reform. We must visit the same condemnation upon mob crime wherever it occurs. For whatever its form, whether it be cattle-raiding in Wyoming or cotton-burning in North Carolina, it is one of the most infectious diseases that can afflict this republic.

THE PROBLEM OF THE UNEMPLOYED.

At the final hearing last week on the New York city budget, several speakers urged that a fund be provided for the unemployed. It was said, and we fear with too much truth, that New York will have to deal this winter with the problem of many men out of work. Other municipalities, and other parts of the country, will be face to face with the same question. During the first year of our business depression, we have got on surprisingly well. Workingmen out of a job have drawn upon their savings, or in the summer months have been able to turn their hand to casual labor. But unless a marked improvement comes, the second winter will bring the pinch, and the question of finding ways and means of meeting the case bids fair to be as pressing with us as it has been in Germany and England.

The difficulty is old and world-wide; its intensity is all that marks off the present crisis from those of the past. Most public men admit that no thoroughly scientific study of the problem has yet been made. This was the burden of Winston Churchill's recent speech on the subject at Dundee. All can see evils; few can prescribe effective remedies. The trouble with most of the proposals to apply temporary palliatives to a disorganized labor market, is that they directly tend to make such disorganization permanent. An inspector of the Local Government Board in England recently reported that "irregular relief work has such charms that numerous instances have been noted of men throwing up regular wages at 18 and 19 shillings a week, to earn 5 to 7 shillings [on part time] in a stone yard." There lies the ever-present danger in "making work." The work is badly and expensively done; and what is really "made" is an addition to the ranks of the habitually unemployed. President Roosevelt took up the topic in his letter of last week, Monday. He too, called for "applied science"; but made a hasty and rather unscientific jump to a conclusion, when he said that "we can solve this problem of the unemployed best by having no more unemployable." If that is anything more than a phrase, or the expression of a pious hope, it must mean that a great many defectives, tramps, loafers, and malingerers are to be either knocked on the head or else miraculously transformed. But even if there were to be, through some magic, no more "unemployable," there would come times with a lack of employment. So the need for the President's applied science would remain much as before.

With or without applied science, the English government is just now taking some practical steps which are of great interest all over the world. Mr. Asquith, not many days ago, made a careful statement to the House of Commons concerning the government's plans. He declared that the emergency, while acute, was temporary, and did not involve any question of party policy. In this, by the way, Mr. Balfour had agreed with him in advance. Some English protectionists, as reckless as they are ridiculous, have been putting it about that there would be no unemployed in England if that country had a high tariff. But Mr. Balfour has sense enough and fairness enough to disown such clap-trap; and in a recent speech at Dumfries declared that a change in the tariff would be no remedy for unemployment or oscillations in trade. Premising, therefore, that the government's measures would not be exposed to par-

tisan attack, Mr. Asquith explained their nature. In the first place, such public works as could be expedited would be pushed so as to furnish more employment. Men would be, for example, engaged at various naval stations in repair work which ordinarily would not have been undertaken till next year. The Admiralty would make haste to place contracts in November which it had not been intended to close till January. Moreover, the War Office was preparing to take on 24,000 recruits in the special reserve between now and next March. Those three items included about all that the government could do directly. Indirectly, it was loaning money to borough governments and other local authorities, in order to promote public improvements which would incidentally provide work. Up to date, this year, such loans had amounted to more than $20,000,000. Out of the money thus made available, projected water works would be constructed, sewers dug, new paving laid, etc.

This general policy of hastening, or enlarging, really useful public works, at a time when men are looking for employment, obviously has much in its favor. It is not "making work," in the futile sense. The thing is to be done, in any event; and if hastening it will help relieve temporary distress, the argument for doing so seems good. On the Continent, municipalities have long adjusted their activity in public works so as to fit the dull time in the labor market. They push improvements more in winter than in summer. Such is, for example, the announced policy of the city of Nuremberg, this year. There can be no serious objection to the plan, thus conceived. But clear-eyed statesmen will not fail to see that the method is both halting and expensive. This was plainly confessed by Mr. Asquith. In loaning money to the local authorities so that they might take on more men, it is expressly stipulated that the government shall bear the extra cost of employing inefficient labor. This is because the unemployed are too often the incompetent. To give work to them means that the labor-cost will be higher. Mr. Asquith said that it would be higher by from 5 to 40 per cent., in different places. That burden is assumed, and there can be no concealing it. Still, as between paying unskilled or lazy workmen more than they are worth, and having to support them outright in poorhouses or by out-relief, the advantage may be on the side of employment, even if costly.

The whole question is most complicated. We can feel our way to its solution only step by step. The first need is undoubtedly a complete exposition of the facts, with a rigorous study of the way in which plans of relief actually work out. Until we get something like that, we should do well to be on our guard against nostrums. Most of them reduce down, as Harold Cox has alleged in Parliament, to "preferential employment for the unfit." But the distress is genuine. The cry of the human will be heard in all our cities this winter. We must not wait for a complete and satisfying solution of the problem before doing what we can, even partially and stumblingly. Charity should be made as intelligent as possible, but the demands upon it in the coming six months are likely to be exceptionally urgent.

OUR DENOMINATIONAL COLLEGES.

"The Relations of Christian Denomination to Colleges," a paper which President Henry S. Pritchett of the Carnegie Foundation read before the Conference on Education of the Methodist Episcopal Church South, has been published in the *Educational Review* for October, and is now reprinted in a pamphlet. The discussion is very suggestive, not only as indicating the reasons why the Carnegie Foundation refuses to aid sectarian institutions, but also as throwing light on large tendencies in higher education. Here, as in his various reports, President Pritchett speaks with candor and courage, and he makes it clear that the whole influence of the Foundation is to be thrown on the side of truthfulness and the highest ideals in education. No one who is familiar with the facts can deny Mr. Pritchett's statement:

> No publications, unless they be those of life insurance companies, have been more misleading than American college catalogues. If any man doubt this, let him visit a number of colleges and compare the claims of the catalogues with the realities.

To make the realities measure up to the claims and to make both what they should be, is the end to which Mr. Pritchett devotes his argument.

He does not for a moment intimate that a denomination may not consistently maintain a college: all he asks is that such relations shall be open and consistent. A church may hold that "in order to carry out its legitimate work and advance its cause, it must control and direct a certain number of institutions of higher learning in which men may grow up trained in its ideals and devoted to its service." Secondly, a church may conduct colleges "on the ground of its fitness and efficiency as an educational agency." There is one other relation:

> A Christian organization may take the position that all colleges and universities, being influential agencies in the training of men, are also agencies for moral and religious influence, and, therefore, the Church will seek by friendly coöperation, by sympathetic fellowship, by all the means of Christian activity, to make itself a religious influence in all institutions of higher learning without assuming their control or support.

The first conception of the college as an agency for advancing the work of the church is, as Mr. Pritchett notes, "clear-cut and consistent." But the difficulties of that method are increasing year by year. The denominational colleges established a century ago, or even fifty years ago, needed no large endowment and no elaborate apparatus in the way of dormitories, laboratories, and libraries, in order to compete with other institutions of higher learning. A college was not quite so simple a thing as Mark Hopkins on one end of a log and a student on the other; but, after all, that definition was not so wide of the mark. But if any one wants a striking object lesson, let him turn to the West. The Mississippi Valley is filled with struggling little denominational colleges. Three or four decades ago, they held their heads up with the best in their region, but now they are completely overshadowed. But few of them can begin to compete with the great State universities either in quality of teaching or material equipment. The better teachers and the brighter and more ambitious youth are inevitably drawn to the universities, and the feeble colleges fall farther and farther behind in the race. Thus the denominations are not getting first-rate men from their own institutions, which, therefore, no longer serve the purpose for which they were intended. These facts Mr. Pritchett substantiates in detail by statistics which must give pause to every advocate of the denominational college; for they make it plain that, as a class, such in-

stitutions, when compared with either privately endowed or tax-supported undenominational colleges, are a lamentable failure. The theory that a church has "peculiar fitness and efficiency as an educational agency" may be dismissed in a few words. It is based on the absurd assumption that a college may properly be controlled by another organization, the primary object of which is not education, but the propagation of a certain religious faith. The secondary object is in the long run bound to be subordinated to the primary. President Pritchett's conclusion, then, is that the wisest way is for the church to exert its influence in the college just as it exerts it in the community "by helpful cooperation, by Christian friendliness, by sympathetic fellowship." From this view, few men who are not passionate sectarians will dissent.

Most denominational colleges were laboring under heavy disabilities, even before the establishment of the Carnegie Foundation. Iowa, for example, has six little Methodist colleges, but were all their resources consolidated, they could not match those of the State University of Wisconsin or of Illinois. With the Carnegie Foundation offering its retiring pensions to the teachers in the non-sectarian institutions, the sectarian will be at a still greater disadvantage. This make-weight would seem almost irresistible. Almost, but not quite; for an endowed institution dies hard. Another twenty or thirty years must probably elapse before the rank and file of the Methodists of Iowa—and their case is typical—can grasp the fact that in maintaining six colleges instead of one they are dividing and wasting their energies. Even then, it will be hard to cast aside local jealousies and formulate comprehensive schemes for consolidation and unity of effort. Common action by denominations which now maintain rival colleges will be still harder. The day when the Presbyterian lion shall lie down with the Baptist lamb is yet far off. But unless differences are sunk and money and energy are concentrated, many of the denominational colleges, so called, will be forced to devote themselves, as some of them do already, to the work of the secondary school, or fitting academy.

THE POETRY OF EUGENE LEE-HAMILTON.

In 1878 there was published at the author's charges "Poems and Transcripts" by a new writer, Eugene Lee-Hamilton. The book contained some ten narratives in blank verse, above a score of experiments in classical elegiacs, a sheaf of lyrics in freer rhythms, and fifteen versions from Goethe and the Italian poets. There can rarely have been a more unpromising first volume. The blank verse has no movement; the elegiacs have the fatal monotony of a form never really adaptable in English; the lyrics are mediocre; only the translations give a hint of technical facility. In short, "Poems and Transcripts" looked sadly like the book of verse that every cultivated Englishman is but too likely to perpetrate at the instigation of his friends. Still, it grew out of strange circumstances, and was the work of no common man. Eugene Lee-Hamilton had early made his mark in diplomacy. His youth had been passed on the Continent, and the chief modern languages were virtually native to him. Thus, in spite of the desultoriness of his schooling, he took the coveted Taylorian Scholarship at Oxford. An opening in the Foreign Office drew him from Oriel, where Cecil Rhodes was a classmate, to a desk in Downing Street. By 1869, his twenty-fifth year, he was an *attaché* at Paris. The post proved most wearing. It involved many changes of place, following the waning fortunes of the Emperor, and during the Commune responsibilities frequently of a heartrending sort. Young Lee-Hamilton recklessly added to arduous public duties severe private studies. The ultimate breakdown was fairly in sight when he was transferred to Geneva, as a secretary to the Alabama Claims Commission. By this time the apprehensions of Downing Street were aroused, for he was sent to Lisbon in the hope of recuperation in that soft climate. There the blow fell in the form of a stubborn fever which left him utterly prostrated in body and spirit. In 1874, Lee-Hamilton was carried to Florence on his back, and placed on an especially constructed wheeled couch from which he never stirred for twenty years. His mother and his young half-sister, who was to become precociously famous as the critic "Vernon Lee," surrounded him with the most delicate ministrations. But his infirmity was of a sort to baffle even the tact and love arrayed against it. The visits of friends, the reading of their letters, had to be measured by minutes. Poetry, his favorite solace, was read to him a few lines at a time. His own poems were built up verse by verse uttered at long intervals. A single line represented not infrequently a day's work. What is right to be told about these twenty bitter years Lee-Hamilton has set down in his poetry with artistic poignancy and restraint. He would have been the last man to submit to any sentimental transference of compassion for his pains to the credit of his writing.

In view of his swift progress in poesy one must regard the reminiscent narratives in "Poems and Transcripts" as perfunctory recreations. Whoever took the dubious hazard of advising him to publish was pretty well justified two years later on the appearance of "Gods, Saints, and Men." None of the twelve narratives and ballads composing this second volume represent him at his best, but we find him at least in command of his medium. The rhymed narratives run off trippingly, are enlivened by a quaint humor, make their dramatic points. Such a character study in blank verse as the "Rival of Fallopius," defending the vivisection of a human subject, is not merely grim and sententious, but has the dramatic verisimilitude for which we usually look to Browning. In the tale "The Fiddle and the Slipper," which it would be hard to excel in its kind, the weaving of the *Dies iræ* into the description of the approach to the scaffold gives a peculiar thrill. It was presumably suggested by the cathedral scene of "Faust," but it strikes for the first time a note peculiarly our poet's.

Naturally, certain literary influences were strong in Lee-Hamilton's beginnings. Goethe one finds always. Rossetti's leading is unmistakable in such a ballad as "The Rhyme of the Reeds"; in fact, Lee-Hamilton must always have found a beacon in the painter-poet. Any direct impulse from Browning I cannot detect. A kindred curiosity in all human matters, an especial connoisseurship in the monstrous passions and ambitions of the Italian renaissance, Lee-Hamilton undoubtedly shared with Browning, but their literary methods are almost antithetical. The appalling discursiveness, the whimsical indirectness of approach, of Browning you will never find in Lee-Hamilton. The two poets touch, and that casually, only in the ballad. Wordsworth at his narrative best is the truer parallel for the austere and pregnant method of the author of "The Emperor on the Ledge" and "The Rival of Fallopius." But I know no poet of our times, great or small, who was more essentially his own man than Lee-Hamilton. He literally grew into the Italy that was read and reported at his bedside, or at best viewed askance when the couch was wheeled into the garden or set bodily upon the family landau. And the moulding influence of Italy is also progressively apparent in his work. One will recall how such an experience chastened the diffuseness of Byron and lent plastic form to the vaporous visions of Shelley. In Lee-Hamilton's case we

see the clarifying process in a fairly miraculous phase. So far as accomplishment went, the paralytic who was brought to Florence at thirty was no poet at all, and the writer of "Poems and Transcripts," published four years later, was that worse thing, an indifferent poet; while the author of "Gods, Saints, and Men" (1880) was a poet to reckon with, and the sonneteer who first addressed the public in "The New Medusa," 1882, gave, as it now seems, substantial gages to immortality. At first glance so strange an apparition troubles all our preconceptions as to the inspirational quality of genius. One mistrusts a little this amazing invalid who made himself a spacious name in poetry by simply pegging away, a line or two at a time, as his pains permitted him. But Lee-Hamilton could have no more reassuring advocate than his own verse.

With "The New Medusa" (1882) and "Apollo and Marsyas" (1884) mastery in the ballad and narrative is confirmed, mastery in the sonnet is clearly forecast. On the strength of the thirty sonnets in these two volumes that sensitive critic, the late E. C. Stedman, hailed the rise of a new luminary. But for the moment we are concerned rather with the semi-dramatic poems, which here reach their culmination. We are face to face with Lee-Hamilton's genius in its most idiosyncratic and perhaps most dubious manifestation. The question whether the world of horrors to which we are introduced in "The New Medusa," "The Idyl of the Anchorite," "The Mandolin," "Sister Mary of the Plague," "Abraham Carew," "Ipsissimus" is a liveable, hence an artistic, world is not readily answered. What warrant has a poet for bringing before us not merely transcripts of insanity, but inventions even more grewsome, and legends to which his imagination has lent a threefold horrific energy? Take "The New Medusa" as a typical example, noting first that in its sinuous triple rhyme it marks a long metrical advance. First comes the idyl—the adventurer who saves and loves a fair castaway, and with her wanders about the Mediterranean. Then his awful nameless suspicion of his mysterious bedfellow:

One night I had a nightmare in my sleep
For vividness and terror unsurpassed.
Methought I felt a snake's cold body creep
About my hand and throat, entwine them tight,
And o'er my breath a hideous mastery keep.
Awhile I lay all helpless in despite
Of agony, and felt the pressed veins swell,
Then forced a smothered cry into the night.
My cry awoke me, waking her as well,
When, panting still with nightmare fear, I found
That the black locks that on her bosom fell
Had crept about my throat and girt it round
So tightly as a while to stop the breath,
While other locks about my arms had wound.

In succeeding nightmares the dread fear approaches reality, until one night the lamp reveals the frightful image of the new Medusa, described by the poet in lines, to me, of a quite intolerable explicitness. This nightly metamorphosis is the penalty of a poisoner. I spare the reader the mad flight of the lover to the wilds and his return for swift vengeance, but one trait truly

For vividness and horror unsurpassed

should be given, so characteristic is it of our author's phantasmagoric energy. The avenger grasps a sword from the wall near which sleeps the loathly form:

I seized it, swung it high and let it fall
Like thunder on the sleeping Gorgon's neck
Before her eye could see or tongue could call.
And, O my God! as if herself a snake
Which, stricken of a sudden in its sleep,
Coils up and writhes all round the injuring stake,
She coiled about the weapon in a heap—

How far the power of this sort of thing redeems its unforgettable repulsiveness depends largely upon the reader's taste and nerves. Mine are not robust enough for the "New Medusa" and three or four of the other tales. To take this attitude towards the more famous ballad, "Sister Mary of the Plague," would, it seems to me, show a certain lack of perception. On the face of it nothing can be more ghastly, more intolerable, than the subject itself—a nun who walks the hospital wards, a ministering angel by day, only to return by night a vampire, draining the life blood of those she tends. Yet the awfulness of this is balanced by the sense that it is a fate and she a product of old unconscious sin; by the shudder with which she learns her own condition, finally by the triumphant irony of the young soldier, who, dying, boasts her kiss upon his neck. It is as if there were an appeal to a hopeful average human nature to which these terrors of the night are not because it will not acknowledge them. In all it seems to me that this ballad is a model of horror distilled into a perfect form of art.

But a precise appraisal of the narratives is the less imperative because better waters lie ahead. The "Imaginary Sonnets" of 1888 mark a bifurcation. The caravels of lyric and drama are to part a little and then sail parallel to the end. To conjure up from the deep of time one hundred souls, to make each of them speak and bow himself off within fourteen intricately rhymed verses—this is no mean achievement. Among so many how shall one choose? Shall I take Henry the First's tragic appeal to the sea that has swallowed his son? Laura's placid acknowledgment of the luxury of votive verse? Sir Thomas More's pathetic farewell to his wife? Galletti's summons of Ariosto to fairyland? Faustus's apostrophe to Helena? Charles Edward's return of thanks to his last friend, his bottle? Any one of these, or of twenty others, would illustrate the extraordinary feat of making the sonnet do the work of the dramatic lyric. Let me choose instead for its cosmic sentiment the sonnet

GALILEO TO THE EARTH.
(1638.)

And yet it moves, it spins, through night and day,
With dumb terrific speed; and town and throng,
Mountain and tossing sea, are whirled along,
And not one drop is lost upon the way.

On Heaven's dustless paths the Lord can play
With heavier balls than ours; and there among
Unnumbered spheres that never can go wrong,
He's hurled us on our course and we obey.

O Earth, I feel thee quiver under foot;
I feel the whizzing of thy ceaseless flight,
As other whirling planets past us shoot;

I feel thee bounding like a ship at night
Through unseen waves. To guide us, God has put
On every skyey coast a starry light.

In the light of his whole accomplishment the "Imaginary Sonnets" seem chiefly a prodigious exercise. The skill with which this literary setting-up drill is conducted may deceive us as to its true nature. One readily forgets how artificial is the compression of these great themes within the miniature frame of the sonnet. Here are Ponce de Leon and Ezelin taken at what later were to become the crises of dramas. Does not this suggest a keen discrepancy between form and material?

For a middle-aged paralytic to dictate painfully line by line a "Fantastic Tragedy" on the Fountain of Youth seems a consummate irony, and I fancy that Lee-Hamilton would hardly have found the audacity to undertake a task of this extent if he had not sensed dimly the obscure return of life to his wasted limbs. However that be, this lyrical tragedy moves in realms of pure romance, unattenuated by the sarcasm that underlies it all. Ponce de Leon is presented not as the mild visionary we think him, but as a grim fanatic. A sorcerer who has exhausted all his arts for the recovery of youth, he at last sets out for the fabled fountain

Beyond the setting sun,
A thousand miles to westward of the west.

After infinite perils from storm, mutiny, and blistering calm, he reaches King Atalpa's realm, an island with a deathless and ever youthful monarch, where legend sets the noble fountain. And here it is eminently characteristic of

Lee-Hamilton's invention that the fountain should be not an enthusiast's dream, but a dire fraud. Atalpa is a title, not a man. The king is ever young because covertly removed and replaced before age can touch him. There is no life-giving fountain, but merely a pool, in the pestilential forest, inhabited by witches and poisoners, all devoted to the cult of the great Murdress. To her, a monstrous flower that feeds on men as the monkey cup does on flies, Ponce de Leon is induced to deliver his daughter as hostage and victim. He himself, ambushed and smitten by a poisoned dart, falls by a common spring, raving for a cup of its water. Against all this deceit shines the frail but heroic form of the daughter Rosita, whom a lover's daring does not avail to save. There is also a villain after Marlowe's heart—the Jew Barabbas was less sinister—in Agrippa, who fastens the delusion upon his master's soul and betrays to the worshippers of the monstrous flower the maiden he himself fails to win. All this is developed in blank verse of surging, lyrical beauty, varied by rhymed choral *intermezzi*. This drama has a quality that I must call operatic, meaning the opera in its most significant phases. By a just and happy instinct, the author dubbed his poem "fantastic." And indeed, though admirably constructed as narrative, it has not the element of suspense that we expect in true drama. The end is foregone, and the action sweeps through increasing, but always gorgeous horror, to an inevitable doom. Nothing of Lee-Hamilton's is more essentially musical. I love to imagine what might have happened had "The Fountain of Youth" come before that rare genius overtaken at its noon by twilight, Edward Macdowell. For years he had sought the compelling theme for the opera that was never written, and who but he could have given musical expression to the oily seas, to the forest haunted by serpents, warlocks, and stealthy warriors leagued in the defence and worship of the Flower of Death? This fantastic tragedy is, possibly, his most individual contribution to English literature. As a large, complicated, and well-rounded structure it has a unique place in his work. "Ezelin," doubtless, would have overtopped it, perhaps does, but "Ezelin" was arrested in the making.

Even before his breakdown, the legend of Ezelin, the atrocious despot of Padua, had attracted Lee-Hamilton, and upon this theme he planned a tragedy that was to be his masterpiece. For more than twenty years the project lay in abeyance, yet not forgotten, for in the "Imaginary Sonnets" one finds Ezelin's apostrophe to his infernal sire in nearly the phrasing of the unpublished drama, while the prologue and one of the choruses were published among the selections in the volume of 1903 (Canterbury Poets). In the same year, disheartened by the fate of the "Fountain of Youth," he cast the matter which lay ready in his mind into the form of a novel. This has the interest of a first draft, but the undertaking was ill-advised, and even the courageous publisher did the author the unintentional indignity of inserting a banal adjective into the title, "The Lord of the Dark (Red) Star." Amid all the distractions of recovered health, and such laborious recreations as the translation of Dante, "Ezelin" remained Lee-Hamilton's chief concern. The manuscript abounds in hints of corrections and amplifications, but in all essentials the work is achieved. Were I to divulge too indiscreetly the character of this remarkable drama, I should ill requite the courtesy that has permitted its reading in manuscript. In its own time it must make its own impression. As a great study in diabolism, the theme was especially congenial. Among the many zealots of the impossible created by Lee-Hamilton, none is more tremendous than this actual son of Satan, conscious of his begetting and determined to work his father's will on earth. And Ezelin's world is pictured as a kind of death-struggle between the organized power of darkness and the meek yet imperishable influences of the Nazarene. The choral and supernatural machinery recall "The Fountain of Youth," the scene shifts between heaven, hell, and an Italy that partakes of both, but mostly of the pit. The march of the *terza rima*, which was curiously chosen as the prevailing form, may be felt in the prologue, "Adalhita," printed in the volume of 1903. "Ezelin" is his most ambitious work, and none displays more fully a certain dæmonic quality in his genius.

"Sonnets of the Wingless Hours," that deathless record of his prolonged death in life, was to be his farewell to the bed and the contracting walls. The pains of his malady began to diminish. After a couple of years of patient effort, the tortured head was raised from the pillow; the resurrection was effected. He walked among breathing men, and dealt with them on their own terms. He renewed the old joys of travel, carrying his pursuit of the fountain of youth as far as Kansas, where he, indeed, found increase of vigor. With life came love. In 1898, Miss Annie E. Holdsworth, the well-known Scottish novelist, became his wife. It seemed as if a kind of royal indemnity had been allotted by fate for the twenty years of dearth. The Lee-Hamiltons divided their time between the charming villa which glimpses the Valdarno from the ridge of San Gervasio and travel to the most romantic sites of Europe.

Before entering the enchanted archipelago of the sonnets one or two minor landmarks ask our gaze. The little volume, "Forest Notes," published in 1899 but written immediately after his marriage, is a kind of gay salutatory to his new life. In it husband and wife set down parallel musings, mostly caught from the New Forest in which the lines were penned. It represents Lee-Hamilton in a gayly reflective vein rare elsewhere in his work. The initial poem, his sestina "To the Forest," seems to me the finest and most spontaneous example of this highly conventional form in the English language. As for the translation of the "Inferno," published in 1898, and of the "Purgatorio," which remains in manuscript, it deserves more attention than it has received. The author adopted the line-for-line system, rejecting rhyme, but preserving the eleven-syllable measure. The version is as faithful as Longfellow's, and more readable.

At last the sonnets. They are the key not merely to Lee-Hamilton's heart, but to a strange twilight world. Their colors glow as do rich fabrics in the premature brown of a December evening. About a tortured singer who wrings a tense peace from restlessness moves a whole world of sprites, products of the wind, the snow, and the firelight; about the narrow couch glimmer from the depths strewn gems and sunken gold. And all these spectral shapes and treasures find their ordered place in that stately labyrinth of the sonnet. It is a world so rich and various that the reader must explore it for himself. The century and more of poems collected under the title "Sonnets of the Wingless Hours" (1894) had been written through the twenty motionless years just ended. They had been spoken line by line from the couch, which he quitted neither night nor day, addressed in the following sonnet:

TO MY WHEELED BED.

Hybrid of wrack and of Procrustes' bed,
Thou thing of wood, of leather, and of steel,
Round which, by day and night, at head and heel,
Crouch shadowy Tormentors, dumb and dread;

Round which the wingless Hours, with feet of lead
Forever crawl, in spite of fierce appeal,
And the dark Terrors dance their silent reel;
What will they do with thee when I am dead?

Lest men should ask, who find thee stowed away
In some old lumber room, what wretch was he
Who used so strange an engine night and day,

Fain would I have thee shivered utterly;
For please the Fates, no other son of clay
Will ever need so dire a bed as thee.

It would be easy to multiply examples of equal quality on themes associated with his affliction, but to do so would

give a false impression. Certain of his friends have unwittingly implied that beyond such prison lyrics there is not much to be noted. The error is a natural product of sympathy, but is perhaps all the more serious on that account. The part of Lee-Hamilton's verse which represents him as a sufferer is small in amount, and could be eliminated without much diminishing his fame. None of the Sonnets of the Wingless Hours, for example, are more admirable than the group based on elvish fancies. This childlike vein might be illustrated by "The Death of Puck," a perfect fantasy, by "The Tiny Skate," "Oberon's Last Assembly," or many another. Probably the best appreciation of Lee-Hamilton, sonneteer, would be simply to reprint from his two hundred and more sonnets those that represent the various phases of his imagination. But so many-sided is his muse that this would be impracticable in the bounds of an essay. I must limit myself to quoting the well-known sonnet, "Idle Charon," which, aside from its beautiful form, displays the peculiar wistfulness with which Lee-Hamilton felt the decline of faith in himself as in the world; and the lines to Baudelaire—a sonnet which for its metrical splendor and sustained and appropriate imagery seems to me unexcelled in the language:

IDLE CHARON.

The shores of Styx are lone for evermore,
And not one shadowy form upon the steep
Looms through the dusk, as far as eyes can sweep,
To call the ferry over as of yore;

But tintless rushes, all about the shore,
Have hemmed the old boat in, where, locked in sleep,
Hoar-hearded Charon lies; while pale weeds creep
With tightening grasp all round the unused oar.

For in the world of Life strange rumours run
That now the Soul departs not with the breath,
But that the Body and the Soul are one;

And in the loved one's mouth, now, after death,
The widow puts no obol, nor the son,
To pay the ferry in the world beneath.

BAUDELAIRE.

A Paris gutter of the good old times,
Black and putrescent in its stagnant bed,
Save where the shamble oozings fringe it red,
Or scaffold trickles, or nocturnal crimes.

It holds dropped gold; dead flowers from tropic climes;
Gems true and false, by midnight maskers shed;
Old pots of rouge; old broken phials that spread
Vague fumes of musk, with fumes of slums and slimes.

And everywhere, as glows the set of day,
There floats upon the winding fetid mire
The gorgeous iridescence of decay:

A wavy film of colour, gold and fire,
Tremhles all through it as you pick your way,
And streaks of purple that are straight from Tyre.

What will strike a practised reader in these sonnets is their ease. Lee-Hamilton found no form of verse amiss, but he is never more himself than in the highly artificial stanza perfected by Petrarch. And this idiomatic command of the Italian sonnet is pretty rare in English. With us it still wears a little the air of a difficult accomplishment. In its finest examples, Milton and Wordsworth, it tends to be a miniature ode. Few English Petrarchans have overcome a certain unnaturalness, a sense of going about a sublime fixed task. This a sensitive reader will feel in Matthew Arnold, and, I think, even in Keats. In Lee-Hamilton none of this. He wrote sonnets as he breathed. With Rossetti he shared an extraordinary power of modulating this instrument of fourteen strings and five permitted harmonies. It obeys him, and, like Rossetti, he takes royal liberties with it. Given the intractable quality of the English language, it is the ability to take these liberties furtively that shows the born sonneteer. In any comparative estimate Shakespeare is naturally set apart. His genius defies parallels; he declined to be bound by the laws of the form. But this much may, I feel, safely be said of Lee-Hamilton, that no English poet has written so many sonnets of the first or nearly the first order, unless it be Rossetti or Wordsworth.

In 1903 the life of the mated poets at S. Gervasio seemed perfected through the birth of a daughter. The child Persis was promptly rechristened by the kindly Tuscans Mimma Bella, the Beautiful Baby, and by that name posterity is likely to remember her brief day in the sunshine. She lived two years, and when she was swiftly taken away it remained for her father, shattered by the blow, to write her elegy. Day by day, and then in the better intervals of ever-increasing weakness and depression, this chaplet of sonnets was put together. Lee-Hamilton outlived by little this memorial to his only child. In two years' time the father lay in the Tuscan earth beside the daughter. So, as we approach Lee-Hamilton's last, and, I think, most perfect work, criticism becomes practically out of the question. A father's grief transpires so directly from the twenty sonnets constituting the elegy "Mimma Bella" that one shares the sorrow, and finds no heart for analysis. It has little to do with the elaborately meditated effects of other English elegies—"Lycidas," "Adonais," "In Memoriam," "Thyrsis." If it recalls worthily their gorgeousness of imagery, and their stately deployment of the brave insignia of grief, it remains as immediate as a song of Burns.

Had we never lov'd sae kindly,
Had we never lov'd sae blindly,

whispers in my ears as I read and reread "Mimma Bella." Or, if one insists on a parallel, one must go to the requiem of Catullus to Manlius. A similar impassioned stoicism underlies Lee-Hamilton's invocation of the shade of his infant daughter. Here is an affliction that rejects both the usual consolations of religion, the very staple of the English elegy, and also the phantasmagoric mysticism with which a Shelley and a Tennyson invest in an alien glamour the grim fact of death. This father faces a remorseless natural order which no God directs in the interest of mourning human kind. For himself, for his only child, death is the end—a physical and complete dissolution of a personality, which can persist only as it replants itself and grows in the memory of those who survive and love. Upon this slender hope of immortality for that child which the kindly Tuscans had rechristened the Beautiful Baby, he flung himself in the last months of weakness and depression. Above her tiny grave, bit by bit, he erected a shrine so exquisite that I cannot think any future time will wholly relegate it to the mortuary obscurity of the great libraries. It is published as yet only in magazine form, the *Fortnightly Review* for November, 1907, from which I quote, and the *Bibelot* for June:

What wast thou, little bahy, that art dead—
A one day's blossom that the hoar-frost nips?
A hee that's crushed, the first hright day it sips?
A small dropped gem that in the earth we tread?

Or cheruh's smiling gold-encircled head,
That Death from out Life's painted missal rips?
Or murmured prayer that harely reached the lips?
Or sonnet's fair first line—the rest unsaid?

Oh, 'tis not hard to find what thou wast like;
The world is full of fair unfinished things
That vanish like a dawn-admonished elf.

Life teems with opening forms for death to strike;
The woods are full of unfledged hroken wings;
Enough; for us, thou wast thy hahy self.

It would be pleasanter, evading the superfluous task of analysis, to reprint many of these sonnets, so tender and intimate in feeling, so ample in phrase, so simple with all their wealth of imagery! For elevation and sustained poetic inspiration I can compare this sonnet sequence—an incident of yesterday's magazine—only with Petrarch's sonnets to Laura "In Morte." It would be bold to assert that Lee-Hamilton's sonnets share

the lapidary perfection of their prototypes; enough to say that they belong to the same realm of the imagination. There is this obvious difference: that Petrarch wrote as a believer. Lee-Hamilton could never set beside a sonnet sequence "In Morte" the crescendo of the "Triumphs." And yet the likeness is greater than the difference. As so many of the poets of our times, he kept, through skepticism, a sort of ineradicable mysticism. His mind refused credence, but when warmed by the imagination it readily sympathized with all that had been believed. The superstitions he had outgrown, perhaps never shared, still captured his heart. It is the ground of his strength, both in the lyric and in the dramatic modes. And this mysticism has a peculiar eerieness, a Celtic inheritance, I suppose, through his Welsh mother. For this kind of unearthly thrill I hardly know where to match the sonnet which follows, with which we take leave of the poet:

Lo, through the open window of the room
That was her nursery, a small bright spark
Comes wandering in, as falls the summer dark,
And with a measured flight explores the gloom,

As if it sought, among the things that loom
Vague in the dusk, for some familiar mark,
And like a light on some wee unseen bark,
It tacks in search of who knows what or whom.

I know 'tis but a firefly; yet its flight,
So straight, so measured, round the empty bed,
Might be a little soul's that night sets free;

And as it nears, I feel my heart grow tight
With something like a superstitious dread,
And watch it breathless, lest it should be she.

FRANK JEWETT MATHER, JR.

NEWS FOR BIBLIOPHILES.

The Anderson Auction Co. will devote next week to the sale of the Napoleonic books, prints, and autographs of William J. Hillis of Albany, together with a small but important collection partly formed by Gen. Daniel O'Connell and shown at the Irish International Exhibition. The rarest and most valuable single book is the pamphlet by Thackeray: "The Second Funeral of Napoleon, in Three Letters to Miss Smith of London, and the Chronicle of the Drum, By Mr. M. A. Titmarsh." London, 1841. This is the book of which Edward FitzGerald wrote:

> Have you read Thackeray's little book, "The Second Funeral of Napoleon?" If not, pray do, and buy it, and ask others to buy it; as each copy sold puts 7½d. in Thackeray's Pocket: which is not very heavy just now, I take it.

FitzGerald's copy, in the Augustin Daly sale in 1900, brought $175, and the Frederick W. French, in 1901, $295. Both were in the original paper covers, but the edges were trimmed; the Hillis copy is in morocco, but is uncut, with the original paper cover bound in. The books with colored plates by Cruikshank, Heath, and other artists, published during the Napoleonic period, always interest collectors, and many are included in the Hillis library, among them Ireland's "Life of Napoleon Bonaparte", 1828, 4 vols.; Dr. Syntax's "Life of Napoleon: a Hudibrastic Poem," 1815; Mudford's "Campaign in the Netherlands in 1815," 1817; Bowyer's "Illustrated Record of Important Events in the Annals of Europe," 1815-16; and Bradford's "Sketches in Portugal and Spain," 1812. Books on Waterloo form an interesting class, as also do the numerous volumes of private memoirs. Some of the pamphlets printed in England at the time are very curious as well as rare, such as: "Atrocities of the Corsican Demon," 1803; "Cause of the Enormities Lately Committed by the French Investigated," 1794; "The Exposé: or Napoleon Unmasked," 1809; and "The First Book of Napoleon, the Tyrant of the Earth," 1809.

The first printed book relating to the witchcraft troubles in Salem was a pamphlet of ten pages by Deodat Lawson; "A Brief and True Narrative of most remarkable Passages relating to sundry Persons afflicted by Witchcraft at Salem Village in New England, from 19th March to 5th April, 1692." The second book was Cotton Mather's "Wonders of the Invisible World," printed in Boston late in 1692, though the title-page is dated 1693. A copy of this excessively rare work will be offered by C. F. Libbie & Co., Boston, in the sale of November 11 and 12. Copies are recorded in the British Museum, Boston Public Library, Massachusetts Historical Society, American Antiquarian Society, John Carter Brown, and Lenox Libraries, and three copies are known in private collections in New York city. Sabin said of it: "Of all the works by the Mathers, this is probably the rarest; it is, perhaps, also one of the most important." Woodward's copy, with the last leaf in manuscript, brought $290 in April, 1869. Brinley's copy lacked nine leaves. A copy with the title defective sold for £16 in London in July, 1892; but this price simply shows that the importance of the book was not understood, and it is probably the same copy (having meanwhile passed through several other hands) which was priced in 1903 by a New York bookseller at $1,500. The book was immediately reprinted in England, Justin Winsor said, "from a duplicate copy of the manuscript"; but several years ago the present writer, having a copy of the Boston edition and one of the first London edition (two others were issued in 1693) side by side, discovered that Dunton, the English publisher, took a copy of the Boston book, broke it into five pieces, and gave it out among two or more printers. Taking the Boston book as a basis, the sections were: (1) preliminary pages and pp. 1-16 of text; (2) pp. 33-68; (3) pp. 69-102; (4) pp. 103-134; (5) p. 135 to end. The first section, when set in the quarto form of the English edition, made the preliminary pages and pp. 1-16 of text. The next page should have been numbered 17, but is instead numbered 33, the number of the Boston book. Space will not permit the enumeration of the various other points of proof.

On December 7-12 Frederick Muller & Co. of Amsterdam will sell an important collection, including early printed books, and books with woodcuts; a few fine books on birds from the collection of C. I. Temmick, including several hundred drawings of Schlegel, Rochussen, Schouman, and other artists; and seven of the original "Jesuit Relations" and other books on America. On December 8 and 9 they sell the library of J. F. A. Lindsen, director of the Utrecht Museum, comprising books on several branches of art.

Lord Amherst's library, the sale of which was noted in this column last week, is rich in early editions of the English Bible, beginning with a manuscript of Wycliffe's original version of the New Testament, written about 1400. There are two other manuscripts of Wycliffe's version, revised by Purvey, of the late fourteenth or early fifteenth century; and two copies, both imperfect, of Tyndale's translation of the Pentateuch, printed 1530-1531, the first edition of any part of the Old Testament in English. The Coverdale Bible, the first edition of the Bible in English, printed probably at Zurich in 1535, lacks only the title, the first two leaves of dedication, and the map, but it is one of the best copies ever offered. The Ashburnham copy, lacking title, brought £820 in 1897; and the Appleton copy, lacking several leaves, sold in this city in 1903 for $3,000. The Coverdale version, which was printed at Southwarke by James Nycolson in 1537, probably the first Bible printed in England, is much rarer, only eight copies being known, all imperfect. The Amherst copy is a large fragment of 316 leaves. Other notable English Bibles in the collection are: Matthew's version, 1537, a perfect copy; the first edition of the "Great Bible," April, 1539, lacking the title to the New Testament; the second edition of April, 1540; the first edition of the "Bishops' Bible," 1568; and the first edition of the Genevan or "Breeches" Bible, 1560. The collection of prayer books and other liturgical works, mostly connected with the Church of England, is equally remarkable. Among them are no less than eight editions of the King Henry VIII "Primer," printed 1531, 1533, 1535, 1538, etc.

The Merwin-Clayton Sales Company holds its first book sale of the season on November 11 and 12, a portion of the library of William Berrian of Brooklyn, including books on India and Egypt, some items of Americana, and a large lot of engravings.

Correspondence.

TALKING FOREIGN LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: The article, "Under-Languaged Americans," in your issue of October 15 brings up the old contest between the grammatical and natural methods of study. Far be it from me to sound again the horn of either faction; but I cannot resist putting into words what, maybe, every teacher knows, but what has not fallen under my eye in print.

One of the leading reasons why our high school children are not taught French or German conversation beyond the "red cow" stage, is that the teachers themselves are unable to go further. They have been ex-

cellently trained under the system that they teach, can give the rules for the omission of the article before a partitive noun, or for the absolute superlative with *am*, but they simply cannot converse with reasonable fluency or correctness of accent. This is particularly true of French. The large number of teachers of German parentage in certain parts of the country entails a slight modification of this statement as regards the latter language. How can it be expected that a generation of teachers trained under the notions of language teaching that have prevailed in our schools and colleges for so many years, should be equipped otherwise than as they are?

There is a remedy. Let these grammarians spend their vacations in Berlin or Paris: they will probably never be able to lick their accent into such shape that it will be classed as a foreign product, but they can at least gain fluency and intelligibility—which are the chief things. But is it not rather unreasonable to ask a teacher who is paid $750 a year to spend $300 of it for the vacation, to gain something which has weight only with interested observers like the writer of your article, and little with the committee on teachers? And is it not natural that a teacher who does save up the $300 should invest it in a six weeks' tour rather than in eight weeks in Paris following the excellent courses of the Alliance Française? Americans have to contend with the natural barriers of distance and cost of passage that their English cousins can almost ignore.

Moreover, we are a very insular people with all our progressiveness. Most of our boys think it a rather foolish business, this French. They regard its ultimate use in travel or business as an extremely remote contingency; they repeat, when urged to acquire an un-American pronunciation, the pleasing fact that one can always get along with English. Many of them cannot understand why the French and Germans do not speak English, anyhow. American boys are no more stupid than English boys, but they have our national peculiarities—which do not tend to make them take on what is an integral part of a foreign life.

The movement must begin higher up. Fathers and mothers have got to encourage in their children the desire to make a few sentences in a foreign language; colleges must require on the part of their language men some facility of expression in the tongue they profess, provide conversation courses for their students, and demand of their feeding schools some attempt at preparation in this direction. It is true that a requirement of this sort would mean the cutting down, in most cases, of the number of pages read that an applicant could present for entrance, for the preparatory teacher has only his so-few periods each week. And yet such a demand is needful to bring about any general movement toward a change of methods.

There really ought to be some place in America where our teachers can hear the French of Paris and the German of Berlin, and be exercised in the use of both. The rank and file of the profession have access to no place where they may acquire in a year or so a reasonable familiarity with the languages they are to teach as these sound upon the tongue of a native. In such an institution there should be a score or more of cultivated Frenchmen and Germans, first class preparatory school men preferably; men with wives and children to whose homes students might have access; men imbued with a crusading zeal against the American accent that assassinates their noble languages. It should be a year-round school; all its servants should be French and Germans, with a common-school education; it should be as thoroughly un-American in language and as thoroughly American in spirit as possible; that is to say, an organized attempt to transplant a bit of Europe into our land, and a business-like endeavor to remove from us what is truly a cause of reproach among the nations.

Why do not several of our great universities try this? And if any one of them is trying it now why do not all modern language teachers know about it? What they need is not lectures on Hugo and Goethe, but the opportunity to hear good French and good German, and to exercise their own under competent supervision, whether the subject of discussion be shoes or ships or sealing wax. Such an institution or such a department of an already established institution would do a magnificent part in raising the standard of modern language teaching in our high and preparatory schools, and—let us bow to the spirit of the hour—it would pay.

ALGERNON COLEMAN.

Norfolk, Va., October 25.

THE RHODES SCHOLARS FROM THE UNITED STATES.

TO THE EDITOR OF THE NATION:

SIR: In relation to the record at Oxford of the Rhodes scholars from the United States, perhaps a word remains to be said.

These students, a fine, manly set of fellows, are not individually the best representatives of their particular States nor of their colleges in America. They are chosen from the list of students taking Greek, a number usually ranging from 1 to 20 per cent. of the men in each institution. Taken as a whole, these are no more likely to stand high as scholars than the representatives of any other group that might be chosen. Good scholars in other fields do not try to "make up" Greek in order to make themselves eligible, regarding such cramming as illegitimate. In general, those students with adequate means have preferred to go to Germany at their own expense, rather than to go to Oxford as Rhodes scholars.

Moreover, the tests by which honors are granted in the English examination system are not of a kind with which most of these had had experience at home, or which is likely to command their respect. To "make up" a subject by the intensive study of a few books with immediate reference to examination, is, rightly or wrongly, regarded in America as a vicious system, not to be commended in its results nor for its results. The whole competitive idea is alien to the best type of school work in America.

Besides all this, the facilities for study at Oxford are great in a few lines only, and these not appealing to the majority of strong men among American college students. In the *Nation* of October 22 Mr. George L. Fox thinks it remarkable that the School of Natural Science at Oxford, with seven distinct lines of examinations leading to a degree, should have attracted but two Rhodes scholars from America. It is perhaps as remarkable that it should have attracted any, for the facilities for work (not for examinations) in this field offered to the Rhodes scholar, are pitifully small in comparison with those of any German university, or any one of a dozen in America. The great value of the opportunities offered at Oxford to men who need just what Oxford gives cannot be questioned, but Oxford at its best represents a highly specialized type of culture, and the strong young men of our American institutions have ideals of another sort. If Oxford-trained men were to meet these on their own ground in the fields, let us say, of pure or applied science, the distribution of "firsts" would be somewhat altered. We are sending good, clean, wholesome boys to Oxford, with occasionally a brilliant one, but are not sending and are not likely to send the strongest type of American scholarship, if scholarship is measured by effective intellectual effort.

DAVID STARR JORDAN.

Stanford University, October 30.

BEAUMARCHAIS AND SYDNEY SMITH.

TO THE EDITOR OF THE NATION:

SIR: Literary tradition credits Sydney Smith with a command of invective that checked the eloquence of a Billingsgate fishwoman:

"Madam, you're a triangle; you're a rectangle; you're a hypotenuse; you're an individual."

"I'm no more an individual than your mother was."

Was Smith simply making use of a stratagem employed with signal success a generation before by Beaumarchais at the Halles centrales in Paris, to ward off a verbal attack from an irate "poissarde": "Vieille onomatopée! s'écria-t-il, infâme catachrèse!"—a volley which is said to have put the enemy to ignominious flight?

R. T. HOUSE.

Weatherford, Okla., October 14.

A MISPRINT IN POPE.

TO THE EDITOR OF THE NATION:

SIR: To the "curious misprints" referred to by Dr. W. J. Rolfe in the *Nation* of October 22 may be added one which has appeared in several American editions of Pope's works, in which, in a line of the "Messiah,"

> Exalt thy towery head and lift thy eyes,

the word "towering" is substituted for "towery," thus spoiling a splendid line and making a needless pleonasm in asking that which is already towering to exalt itself. As Pope wrote the line, and as it stands in the best editions, it is "Exalt thy towery head," *i. e.*, turreted or guarded with towers, answering to the Latin "turrita."

The same error, "towering" for "towery," appears in many successive editions of the Hymnal of the Protestant Episcopal Church in which the passage beginning "Rise crowned with light" is made to do duty as a hymn, though perhaps not well adapted to the purpose. This error appears to have escaped for many years the notice of many revisers of the various editions of this Hymnal.

S. C. CHEW.

Roland Park, Md., October 30.

AWAITS THE INEVITABLE HOUR.

To the Editor of The Nation:

Sir: In your number of October 22, Dr. Rolfe amends the usual reading of the lines from Gray's "Elegy:"

The boast of heraldry, the pomp of power,
And all that beauty, all that wealth e'er gave,
Await alike the inevitable hour,

by making the word "hour" the subject, and thus changing "await" to "awaits." May it not be that the current version is more in accord with the thought than what Dr. Rolfe accepts as the original? The verb, in its usual acceptation, implies that the complement is something in the future, the subject being something present. I find the following examples in the Oxford Dictionary: "The tigre his time awaiteth"; "Gabriel sat . . . awaiting night."

Simon Newcomb.

Washington, October 28.

"IGNORANCE OF THE BIBLE."

To the Editor of The Nation:

Sir: In reply to the letter entitled "Ignorance of the Bible," in your issue of October 22, I would say that there is one influence in operation which may correct the growing ignorance. That is the spread of Christian Science. It is probably safe to say that the average Christian Scientist is at least ten times as devoted to the study of the Bible as the average member of any other Christian denomination.

Homer Reed.

Kansas City, Mo., October 25.

Notes.

The third volume of "The Reminiscences of Carl Schurz," bringing his life down to its close, is nearly ready for publication by the McClure Co. Gen. Schurz died before this volume was completed, but he left a mass of material from which Frederic Bancroft and William A. Dunning have been able to finish the interrupted work.

Longmans, Green & Co. announce the early appearance of Andrew Lang's "Maid of France: Being the Story of the Life and Death of Jeanne d'Arc." The comparison of this work with the biography recently published by Anatole France will no doubt be much in order.

From the same house will come another volume on the Stuart family by Miss A. Shield, whose "King Over the Water" was well received last year. The new work will be entitled "Henry Stuart, Cardinal of York," and will, like the earlier work, have a preface by Andrew Lang.

The twelfth and concluding volume of Swift's prose works in the Bohn Library is announced for immediate publication. The editing, as of the earlier volumes, is by Temple Scott. The edition contains an essay by the late Sir Frederick Falkiner on the portraits of Swift and Stella, another essay by the Dean of St. Patrick's on the relation of Swift and Stella, a bibliography by Spencer Jackson, and a general index to the twelve volumes.

A Norwegian playground two hundred miles north of the Arctic Circle is vivaciously described by Mrs. Aubrey Le Blond in "Mountaineering in the Land of the Midnight Sun" (J. B. Lippincott Co.). The main purpose of the book is to narrate the author's experiences in the ascent of thirty-three mountains, and there is much detail which can interest only the keen mountain climber. In the closing chapter she gives special instructions to those who may be inclined to try the peaks of Arctic Norway. The interest for other readers lies in the fact that the book shows, as no other within our knowledge does, how delightfully a summer can be passed in camp or in one of the little settlements in this region. To most it is simply a land of ice and snow, but Mrs. Le Blond tells of woods "filled with beautiful lady ferns, amongst which when we walked we were hidden to the shoulder"; and of hillsides clad with gorgeous crimson mantles of bilberry making a "perfect combination of stern mountain form and glittering ice, with warm-hued tender lowland beauty held together in an ever-clinging embrace by the fjords." Then, too, the simplicity of the life and its resources in fishing, hunting, and sailing, as well as in climbing, and the kindliness and trustworthiness of the natives, are not the least of its attractions. To the vivid word pictures are added 71 reproductions of photographs, which show not only the wondrous scenery, but also many of the stirring incidents of the ascents.

In his "Foreword" (a most ungentlemanlike word) A. Smythe-Palmer states that the project of his "Ideal of a Gentleman" came to him twenty years ago, and that the present collection (published under that title by E. P. Dutton & Co.) is the fruit of reading through all these years. In fact the sources are abundant, from the Egyptian moralist, Ptah-hotep, B. C. 3300, to poets still living to-day. The extracts from these writers, mostly English, are arranged under fourteen heads, such as "The Historical Idea of a Gentleman," "Definition of a Gentleman," "Ancestry," "Manners and Good Breeding," "The Poets' Gentleman," "Ironical and Abusive Acceptation of 'Gentleman,'" etc. It may be ungrateful to quarrel with a book which is evidently the fruit of much labor, but the plan seems to us essentially faulty. A large part of the quotations might be in another section just as properly as in that where they stand, and altogether a chronological arrangement would have been far more significant than this arbitrary classification. Then we must think there are quite too many passages like those from "The Christian Gentleman's Daily Walk" of Sir A. Edmonstone. From him there are long flabby pages, whereas of Castiglione ("Castilio," he is here put down) there are only four brief paragraphs, although Castiglione is the great authority, in England as in Italy, for what may be called the Renaissance-Platonic gentleman. In like manner the whole subject of love, which, as the author might learn from Chesterfield, to go no further, has played so conspicuous a part in the formation of manners and courtly character, receives scant attention. And there are extraordinary omissions. We can find in the index no reference to such writers as Méré and Richardson, nor have we chanced upon any quotation from them in turning over the pages of the text. Yet Méré's writings on *l'honnête homme*, as our compiler might have learned from Pascal or from Sainte-Beuve, are the richest storehouse of material for the study of that type of gentleman; while Sir Charles Grandison certainly ought to have a place in this company of Christian models. These are no slight blemishes, but on the other hand these 500 pages of close print contain a vast amount of interesting material, some of it brought from out-of-the-way places, and presenting altogether a curious aspect of human nature and human ideals. The book as a whole is apparently meant for edification, and it accomplishes its purpose in the most exemplary sense of the word.

In "Park Street Papers" (Houghton Mifflin Co.), Bliss Perry includes five of his graceful New Year's prologues to the *Atlantic Monthly*, and cordially appreciative essays on Hawthorne, Longfellow, Whittier, Aldrich, and Underwood. The desire to please cheerful readers of sound intellectual tastes, which has shaped his editorial policy, has also, perhaps unconsciously, determined his attitude as a critic. He has the "toastmaster's" fondness for life under its social, cultivated, and genial aspects, and, having a genuine esteem for the characters of his guests, displays at times a toastmasterly indulgence to their literary deficiencies. If long familiarity with the literary has bred in him a slight superiority to literature as such, it has increased his regard for the judgment of the middle class consumers. His own style—direct, racy, never oversubtle—has a kind of case and democratic open-heartedness. He has a keen sense for a characteristic story, an illuminating letter, a chance, telling phrase, and employs them with great skill in bringing out a personality under discussion. These biographical talents, together with a temperamental affinity for the subject, have made his portrait of Longfellow especially interpretative, and sympathetic. But when he concludes the essay with the assertion that "no truer poet ever lived," one feels that he is guilty of an uncritical *non-sequitur;* the logic of his argument demands rather: "No more cultivated and delightful gentleman ever lived." In general, Mr. Perry shuns the fine discriminations of purely literary criticism. If he overrates the poet in Longfellow out of regard for the gentleman, he underrates the poet in Whittier for the contrary reason. In compensation, however, he does hearty justice to Whittier's service as an abolitionist, and delineates with firm hand the rugged, sincere features of the citizen and the man. The sketch of Aldrich with pipe and dog "mitigating the severities" of the editorial den is entirely delightful; and the chapter on Underwood, who just escaped being the first editor of the *Atlantic*, is full of interesting information on the origins of the magazine and its distinguished early contributors. The writers who made the fortune of "4 Park Street" are perhaps still too near to our hearths and hearts to receive their last judgment; pointing out their faults is like pointing out the faults of our fathers and mothers. Emphasizing their human values to the past and present generations of Americans is the much more grateful task accomplished by these papers; after reading them, one turns to Hawthorne, Longfellow, and the rest with a freshened interest and a higher esteem.

"To awaken a vital conviction of the genuine reality of moral problems and the value of reflective thought in dealing with them" is the aim of "Ethics," the latest contribution to the American Science Series (Henry Holt & Co.). And in achieving this aim the authors, Profs. John Dewey and James H. Tufts, have lifted their volume above the level of textbooks. Their success is due largely to their guiding rule:

As against the *a priori* claims of both individualism and socialism, the need of the hour seems to us to be the application of methods of more deliberate analysis and experiment. The extreme conservative may deprecate any scrutiny of the present order; the ardent radical may be impatient of the critical and tardy processes of the investigator; . . . but the cruder method of trial and error and the time-honored method of prejudice and party controversy need not longer completely dominate the regulation of the life of society.

Every form of ethical dualism is attacked. In place of classical oppositions between "the will and the deed," "duty and desire," "the self and society," the authors develop the conception of an "organic," moral life in which "the problem of morality is the formation, out of the body of original instinctive impulses which compose the natural self, of a voluntary self in which socialized desires and affections are dominant, and in which the last and controlling principle of deliberation is the love of the objects which will make this transformation possible." The choice and arrangement of material are admirably calculated to indicate the methods and the general direction of ethical analyses. The book falls into three parts, of which the first records the history of moral evolution, the second introspectively examines the moral life and typical ethical theories, while the last studies the social side of conduct, with particular attention to contemporary problems. From the teacher's point of view, the work is of singularly even merit throughout; but its second and third divisions are most attractive to the general reader. Here are applied two principles which have been counted among the characteristics of pragmatism: the principle that "no moral act is a means to anything beyond itself," and the corollary that every act must be determined by the particular situation which it is called to solve. Against the analyses based upon these, the objection often holds that the crucial task of weighing ends against means has been slighted. An instance of this is the study of the open *versus* the closed shop. The writers say that the right of a small group to exclude others from its benefits depends upon *only* two conditions, viz., a morally justifiable end (such as a desirable standard of living) and the thwarting of this end by admission of outsiders. But how about the methods of securing the desirable standard of living? What if these injure persons outside the group? Such questions should have been explicitly forestalled; for their problem is the most difficult, if not the central one. In waiving them now and then, the authors create the impression that the value of ends may be abstractly computed, a doctrine which none is more eager than they to repudiate. This improper simplification seems due less to false principles than to an almost inevitable lack of special knowledge about some problems. The scientific ideal of letting one's opinion follow facts rather than hopes is never abandoned. The result is a practical, undogmatic view of human conduct.

In a handy volume of a thousand pages the John C. Winston Company has brought out a "Universal Self-pronouncing Dictionary of the English Language," edited by Charles Morris, which appears to us to be excellently devised for speedy reference.

"The International Encyclopædia of Prose and Poetical Quotations," compiled by William S. Walsh, and published by the John C. Winston Company, differs from most books of its class in the kind of quotations included and in the treatment. It in fact combines with ordinary collections of "elegant extracts" something of the book of phrase and fable and something of an author book. Thus, we open by chance to page 103, and find four words: Burns, Byron, Cæsar, Calendar. Under the first two are gathered characterizations of the poets from their own works and from others. Under Cæsar is given, in various forms, the motto "Cæsar's wife should be above suspicion." Under Calendar we have the doggerel "Thirty days," etc., in five variations. Often a doubtful quotation is followed by a brief explanation of its origin. Altogether a cursory inspection of the work gives the impression that it may be more than ordinarily useful. The indexes are full, the printing careful except for the occasional Greek passages which show a sovereign contempt for the rules of accent.

Of the twenty-three papers in the last number of Archæologia (the Publications of the London Antiquaries) more than half are on subjects relating to English history. Among the most interesting are those of St. John Hope on the "Episcopal Ornaments of William of Wykeham and William of Waynfleet," and the "Funeral Effigies of the Kings and Queens of England"; that of the Rev. O. Y. Reichel on "The Treasury of God and the Birthright of the Poor"; and Trice Martin's "Clerical Life in the Fifteenth Century." A large amount of space is also devoted to Roman Britain. St. John Hope and Mr. Ashby contribute two articles each on the excavations of 1905 and 1906 at Silchester and Caerwent; Prof. F. J. Haverfield, Philip Norman, and Mr. Reader write on "Discoveries in Connection with Roman London." Of the remaining papers that of Horace Sandars on "Pre-Roman Votive Offerings from Despeñaperros," is one of the most important.

"The King's Customs," by Henry Atton and Henry H. Holland (E. P. Dutton & Co.), purports to give an account of "maritime revenue and contraband traffic" in England, Scotland, and Ireland, "from the earliest times to the year 1800." The authors are officials in the customs service, and the volume contains a brief—and somewhat pointless—preface by F. S. Parry, deputy chairman of the Board of Customs. Although the book comes to us with the *imprimatur* of the Board of Customs, it cannot be accepted as a satisfactory history of the subject with which it deals. For the period prior to the accession of James I, the authors have "sampled," to use their own expression, the Rolls, the works of Hale and Rymer, and Hubert Hall's well-known treatise; for the seventeenth and eighteenth centuries they have carried their investigations further afield, and have collected not a little new material of interest and importance. In form, their narrative is best described as annalistic, and, along with matters of greater importance, one finds such entries as this:

A Treasury warrant was issued to provide £200 to furnish a regiment of soldiers with new shoes and stockings to replace those worn out in chasing smugglers;

or this:

In 1770, on account of the volume of business, the London commissioners agreed to breakfast together at the Custom-house.

But, while the book cannot be accepted as a history of the customs, it contains a certain amount of valuable new material, particularly upon the subject of contraband trade in the seventeenth and eighteenth centuries. American readers will be most interested in the chapters which deal with the attempts to enforce the regulations imposed upon colonial trade.

"State and People in Early Rome," by Charles W. L. Launspach of the Middle Temple (George Bell & Sons), is one of those books, far too common in England and America, which possess no particular value for scholars, yet do not serve the general reader. Mr. Launspach's thesis is "that the early Roman state was a conscious imitation of the ancient *gens* or family, that its theory of government was founded upon the relations existing between kinsmen, and that these, again, were determined by religious notions which later became transformed through developments within the city and external influences." About this there is nothing very novel, as readers of "The Ancient City" of Fustel de Coulanges will recognize, nor do the citations from Mommsen with which Mr. Launspach's chapters are buttressed make these formulæ of institutional development any more adequate at his hands than they are in the pages of that brilliant French scholar. The author's mind is legal and schematic, rather than historical, and he does not seem to realize that many of the foundations upon which he builds—such as the patriarchal theory, the primitive Asiatic civilization of the Aryans, and the chronology and constitutional history of the early republic—have been seriously shaken by anthropology and by historical criticism. The most substantial chapters are those on family law, which show a fair acquaintance with legal literature, but as a whole the book must be pronounced a belated survival of an earlier stage of scholarship and thought. The problem of the origin of the political and legal institutions of Rome will always possess a certain fascination for students of history and of law, but books like Mr. Launspach's do not bring us nearer its solution. A curiously modern inversion of thought appears in the statement (p. 74) that the Romans "relieved" women of responsibility in public affairs and "deprived them of the political power and influence which responsibility connoted."

The edition of the "Select Epigrams of Martial, Books vii to xii," edited by R. T. Bridge and E. D. C. Lake, was noticed in the *Nation* of March 7, 1907 (p. 221). By bringing out another volume of the "Spectaculorum Liber and Books i to vi," the editors have produced a fairly complete, though cleansed and purified, Martial, admirably adapted for supplementary reading

in the classroom. The same introduction is printed in both volumes. It would have been an excellent device to allure the student into independent reading, if the editors had seen their way to prefixing a translation into easy Latin of Nisard's essay on Martial. The decay of the classics is due in part to the inability of editors and teachers to give to their authors such a living and present significance as Nisard gave to the decadent poets of Rome.

The Latin hymns, especially those of the earlier part of the Middle Ages, exert a perennial appeal, due quite as much to the rugged virility of their fresh inspiration as to the continuing fashion of hymn-singing. Daniel Joseph Donahoe—a lawyer, we believe—has ventured to add to our already fairly rich treasury of English translations from this source metrical renderings of one hundred and sixty Latin hymns, ranging in date from the times of St. Hilary to those of Pius VII ("Early Christian Hymns"; New York: The Grafton Press). Some universal favorites, like Peter Damian's "Gravi me terrore pulsas," the Venerable Bede's "Hymnum canentes martyrum," and Bernard's "Hora novissima," are omitted, but many others of the same class are included, and with them a considerable number of less widely known hymns from the Roman Breviary. Unfortunately most of this last class are of very slender merit. Mr. Donahoe's renderings of the really great hymns fall very decidedly below the level attained by our best translators of the same verse, even when he does not confine himself to a closely literal version of the original. One line may serve as a bad example. He renders the first verse of "Dies Irae," "Day of ire, that direful day," where the jingle of "Ire" and "dire" is disastrous, to say nothing about the adequacy of "ire" in itself. The translator is more at his ease in less high company. The attempt to render elegiacs and sapphics in "the metres of the original" is a failure. Even Tennyson could not have done that. But in general Mr. Donahoe's understanding is correct, his pen facile, his spirit sweet and sympathetic, and his versions eminently readable. The rendering of the "Pange Lingua" of Fortunatus is a good example of the translator's best style.

Since the remarkable success of Dr. Adolf Harnack in his semi-popular lectures on religion, which resulted in his volume "Das Wesen des Christentums," several theological teachers have ventured similar courses, among them Dr. Reinhold Seeberg. No recent German teacher of doctrinal theology with conservative leanings has secured the hearing attained by Professor Seeberg. His sincerity is unquestioned, his learning extensive, his philosophic penetration of high order. His lectures on the plan of Harnack have had wide circulation in Germany, but in their English version, as "The Fundamental Truths of the Christian Religion," translated by the Rev. George E. Thomson and Clara Wallentin (G. P. Putnam's Sons), they scarcely do their author justice. It is doubtful if they will convey much meaning to one who is unfamiliar with current German theological discussion. Their treatment of large topics in metaphysics and theology is much too brief to be clear.

Evangelicalism within the Church of England has found a sympathetic and worthy historian in the Rev. G. R. Balleine's "History of the Evangelical Party in the Church of England" (Longmans, Green, & Co.). In the moderate compass of some 300 pages he sketches the growth and progress of evangelical ideas within the Anglican communion, and estimates the contribution of evangelical churchmen to the cause of English religion. He starts with the Wesleys, Whitefield, and the Oxford Holy Club, and follows the fortunes of the party down to Bishop Ryle and churchmen who are still living. His descriptions of some of the humbler and more earnest evangelical ministers, such as Fletcher of Madeley, are drawn with special care. Mr. Balleine writes as an advocate, though not as a narrow partisan. The weaknesses of the evangelicals, particularly in the early part of the nineteenth century, are somewhat glossed over. The reader of this volume would not suspect that one could write with justice such a scathing rebuke of evangelical superficiality and commonplace as is contained in George Eliot's well-known essay on the sermons of Dr. Cuming. Doubtless Mr. Balleine felt that this side of the case has been presented sufficiently by the opponents of the evangelicals, of whom the English Church has had not a few. It remains true that the present essay does not exaggerate the benefits which English religion has received from the spiritual descendants of the Wesleys.

The attention of those who follow the discussion in England over the position of the national Church, its function in the state, and its part in the religious life of the nation, may well be called to four brief but weighty Hulsean lectures on "The Rights and Responsibilities of National Churches," by Prof. J. Howard B. Masterman of the University of Birmingham (G. P. Putnam's Sons). Professor Masterman's argument for a national Church as essential to the highest development of national life deserves careful consideration. His first lecture, on "The Religious Significance of Nationality," is especially strong. His indictment of the Roman Church as crushing nationality is severe, but his spirit is at all points broad and kindly, and his argument throughout is conducted on a high plane.

In ancient days, maps, crude, perhaps, in some respects, were often enlivened with wonderful pictures that appealed to the imagination; all the beasts of fable were depicted as inhabiting the unknown regions of the earth. Oliver Herford has taken it upon him to restore some of this vanished glamour. "The Simple Jography; or, How to Know the Earth and Why It Spins" (Boston: John W. Luce & Co.) is provided with maps and suggestive illustrations. Thus the White Sea is a rectangle all white; the Red Sea a similar rectangle in red squares. There is an ocean scene in which a liner is shown riding victoriously over a Marcel wave. An effigy of Paderewski serves to illustrate the Magnetic Pole. France is called "the greatest Millinery power on Earth." Under Turkey we read: "The Turks are a fearless people. They have many wives." There are paragraphs devoted to the Folding Beduins and the Hall-Roomanians. In the chapters entitled "Civilization and Powers," Mr. Herford says:

> Each race, however, believes that his own particular tint is the only fit tint for a Civilized Human Being. . . . There is only one way to wipe all the other tints off the Globe. To this end each Family spends most of its money in training vast numbers of slaves in the art of destroying Human Life. These Slaves are called Soldiers. Each Family is rated according to the power of its Soldiers to destroy other Families. Hence the Civilized Powers.

In the chapter on Governments, there is equally keen satire. After defining a Republic as a government by the wealthiest, the author says:

> In an Absolute Monarchy, the People are controlled. In a Limited Monarchy, they are cajoled. In a Republic, they are sold. For the successful operation of Limited Monarchies and Republics it is necessary to delude the Common People into the belief that they are managing their own affairs. This is accomplished by means of a House of Commons, Chamber of Deputies, Senate, Reichstag, Duma, etc. These merry contrivances are designed on the principle of the revolving squirrel cage, furnishing harmless exercise without progression.

Some of the text is rather far-fetched, and some of the puns are venerable. But there is a good deal that is clever and amusing.

Gustav Frenssen's novel, which was such a powerful indictment of the German colonial policy in West Africa, "Peter Moors Fahrt nach Südwest," was reviewed in the *Nation* of April 4, 1907 (page 314). It is now translated by Margaret May Ward, and published by Houghton Mifflin Company.

Detlev von Liliencron will publish in the near future his *Lebensroman* under the title "Leben und Lüge" (Berlin: Schuster & Loeffler). The book contains, among other things, the war diary of Liliencron, here published for the first time, and the author's judgment of himself and other poets.

The Gutenberg Verlag of Hanover, already favorably known for its Bibliothek wertvoller Memoiren, has now undertaken the publication of a Bibliothek denkwürdiger Reisen, to be edited by Dr. Ernest Schultze. The series will begin with Cook's "Voyages," edited by Dr. Edwin Hennig; and Commodore Perry's "Reopening of Japan," edited by Dr. A. Wirth. George Bogle's Mission Journey to Thibet and Thomas Manning's Journey to Lhasa will soon follow.

A "Tagebuch über Napoleons III. Gefangenschaft auf Wilhelmshöhe" is announced by E. S. Mittler & Sohn, Berlin. The author, Count Karl von Monts, as Governor of Kassel in 1870-71, had charge of the Imperial prisoner and reports here with considerable fulness the life of Napoleon during these autumn and winter months. The book is edited by the Count's grandniece, Fräulein Tony von Held.

The title of Udo Gaede's work of nearly two hundred pages, "Schiller und Nietzsche als Verkünder der tragischen Kultur" (Berlin: H. Walther), is practically self-explanatory. The author has discovered a number of striking parallels in ideas and ideals between these two thinkers.

Prof. Gerhard Budde of Hanover, who has already published, especially for the use of students, several outline summaries of the work of non-German philosophers, has now added a "Philosophisches Lesebuch für den deutschen Unterricht" (Hanover: Hahn).

With the coöperation of Prof. Rudolf Eucken of Jena he has furnished an excellent chrestomathy of characteristic extracts from the writings of Leibnitz, Kant, Fichte, Schelling, Hegel, Schleiermacher, Herbart, Schopenhauer, Fechner, Lotze, Trendelenburg, Wundt, Helmholtz, Schmoller, Paulsen, and Eucken. Each selection is accompanied by a biographical introduction.

Meyer's Historisch-geographischer Kalender, 1909, has just been issued by the Bibliographisches Institut of Leipzig and Berlin. The 366 pages contain an excellent and well illustrated review of the affairs of the world. This is the thirteenth issue of this standard annual.

Herder, Freiburg-im-B., has just brought out in four volumes all of Dante's works, with the Italian and German in parallel columns. The translation, which is new, is by Richard Zoozmann.

Dr. Peter Thomsen has undertaken a "Systematische Bibliographie der Palästinaliteratur," of which Vol. I covers 1895-1904 (Leipzig: Rudolf Haupt). Scholars are fortunately in possession of the Palestine bibliography from 333 to 1895, as reported in the former volumes of the *Zeitschrift des deutschen Palästinavereins;* but the mass of material has become so great that this journal could not publish even a selection of the best works in this field, and what the *Orientalische Bibliographie* offers is anything but complete. An index of authors adds to the value of the book. It is Dr. Thomsen's purpose to issue such a bibliography every five years.

The three hundredth anniversary of the death of one of Germany's greatest hymn-writers, Philipp Nicolai, the author of "Wachet auf, ruft uns die Stimme," and "Wie schön leuchtet der Morgenstern," was marked by the publication of two excellent memorial brochures. One, from the pen of Prof. V. Schultze, is entitled "Philipp Nicolai: Zum Gedächtnis seines dreihundertjährigen Todestags" (Mengerinhausen: Wiegel); the other, by Heinrich Hübner, "Philipp Nicolai: Ein Sänger, Tröster, und Wächter der lutherischen Kirche" (Elberfeld: Lutherischer Bücherverein). The second biography, which is more ambitious, is richly illustrated.

Dr. J. E. Belser, member of the Catholic theological faculty in Tübingen, has just published a new commentary on Ephesians, entitled "Der Epheserbrief des Apostels Paulus" (Freiburg-im-B.: Herder). The work is particularly rich in its patristic citations, and is a more valuable contribution to the history of the exegesis of this difficult letter than to the interpretation itself. The author but rarely enters upon the burning questions of modern criticism.

Dr. George G. A. Murray has been appointed to the professorship of Greek at Oxford.

James Inglis, well known as a writer for the press under the pseudonym "Maori," has died at Sydney, Australia, at the age of sixty-two. He had travelled much in India and New Zealand, and turned his experience into books. His publications include "Sport and Work on the Nepaul Frontier," "Our Australian Cousins," "Our New Zealand Cousins," "Tent Life in Tiger Land," "Our Ain Folk," and "The Humor of the Scot."

Reginald Bosworth Smith, for many years assistant master at Harrow School, has died in his home at Bingham's Melcombe, Dorset, at the age of sixty-nine. He was an historian of note, having published "Mohammed and Mohammedanism," "Carthage and the Carthaginians," and "The Life of Lord Lawrence." Of late years he had written chiefly on bird life.

The death is announced, in his eighty-third year, of Charles Aubertin, rector successively of the Universities of Clermont, Poitiers, and Nancy. Besides editions of Latin and French classics, he published "L'Esprit public au XVIIIme siècle," and "Les Origines de la langue et de la poésie françaises."

STUDIES IN AMERICAN HISTORY.

A History of the United States. By Edward Channing. Vol. II.: A Century of Colonial History, 1660-1760. Pp. 614. New York: The Macmillan Co. $2.50 net.

The author begins with an account of the colonial policy of the Restoration, which he finds was determined by the financial needs of the king and his courtiers. Three chapters devoted to the history of New England, Virginia, New York, Pennsylvania, and New Jersey show how this policy was applied, or how it wasn't. What is called "The Gallic Peril, 1664-1689," is the subject of another chapter. Professor Channing thinks the peril was real, being averted only by the skilful negotiation of Dongan, and the loyalty of the Indians—to the Albany trade. This peril was apparently the "one thing needed to induce James to take the final step of consolidating all the colonies north of Pennsylvania" (p. 151), although in another place we are told: "It is impossible to say how far the royal brothers were actuated by fear of French aggression" (p. 166). A chapter on the Stuart Domination in New England and one on the English Revolution in America bring the story down to 1688. The rest of the book, considerably more than half, is devoted to the period from 1690 to 1760, though the early part of this period receives much more attention than the later.

Students of American colonial history have looked forward to Professor Channing's second volume with peculiar interest, because it promised to cover the eighteenth century—one of those important periods about which every one talks and few write. Certainly it has its difficulties from the point of view of presentation: there seems to be no obvious principle of unity which will serve to make the facts either intelligible or interesting. It is more perplexing even than the seventeenth century, and one cannot well say more than that. After 1688 there are no more interesting Puritan experiments in government; no more Quakers hanged; no more revolutions; no one wants soul liberty any longer; liberty to trade is the thing. Events move monotonously, relieved only by quarrels over money or border wars with the French or Indians. What is to be done, then? One way is to settle down to a draught-horse pace and plough through the history of each colony in turn—a tedious business. It has been done, and no one wants to do it again. Professor Channing, we are glad to say, has avoided that. Perhaps a better way would be to regard the colonies as a single part of the British colonial empire, and to seek for the coördinating principle in the conflict of two main tendencies: on the one hand, the policy of the English government and the institutions of colonial control growing out of that policy; on the other, the needs of the colonists and the strengthening of institutions growing out of those needs. Such a method would require immense research, an easy mastery of facts, great systematizing and architectural capacity, and a talent for interpretation in terms of institutional life.

Professor Channing has not followed any plan of this sort, either. He offers a chapter on the Reconstructed Colonial System, and one on the last Navigation Act; three chapters on the quarrels between Governors and Assemblies in Massachusetts, New York, Pennsylvania, and the Carolinas, which for the most part do not get beyond 1730; five descriptive chapters on economic, religious, and intellectual conditions; and two chapters on the rivalry between French and English. The descriptive chapters are excellent, though every one will not agree that there was "no scarcity of metallic money" (p. 496); we should say, rather, that the paper money movement was due in no small measure to the scarcity of specie, and the trade with the foreign islands was necessary to the Northern and Middle colonies because it was the principal means of getting metallic money. The chapters on the French and English rivalry are also excellent—the best account that we have. But, good as these features of the work are, those who have expected from Professor Channing some original grouping of the facts, some brilliant and illuminating interpretation of the colonies as parts of the British Empire, are certain to be disappointed. Professor Channing eschews theories and abstractions and large generalizations, and he does so, we suspect, consciously. "Tendencies" do not mean much to him. If history is the orderly unfolding of any definite plan, historians, one can imagine him saying, have had no luck in finding out what that plan is. He probably has a poor opinion of the *zeitgeist.* To take live facts out of their

personal setting, and group them arbitrarily around legal or constitutional or methodological abstractions, is to take the meaning out of history. It is enough for the historian that he should be very sure of his facts, and then relate them in the order in which they occur, and so far as possible in their personal setting, as clearly, as simply, as interestingly as possible, without technical or pseudo-scientific jargon. Well, Professor Channing *is* very sure of his facts, he has taken immense pains to be sure of them; and he does relate them clearly, simply, and interestingly. The personal element is everywhere present, the legal aspect of things is neglected. The even narrative flows on without storm or stress, following the subject, with clever turns here and there. Professor Channing has the air of saying: "This is what happened in this place, and at this time, to these people; interpret as you please."

But if Professor Channing will not bore us with any philosophy of history, it is a pleasure to record that he by no means measures up to Renan's wonderful standard; his history is not composed "with as much supreme indifference as if it were written in another planet." No! Professor Channing has his likes and his dislikes. He does not like the Stuarts, for example. He has some sharp sentences at their expense. But there are good reasons for not liking the Stuarts; and Professor Channing's not liking them is so far from being a party matter that he does not like the Revolution Whigs either. They gave a show of constitutional action that "savors somewhat of comic opera" (p. 190). It cannot, of course, be denied that the Whigs of 1688 made a show of constitutional action. They made an immense show of it. But the comic opera would have appeared less glaring to Professor Channing, perhaps, if he were more interested in the legal side of history. One might almost say that the legal side of history is one of his dislikes: Prof. Herbert L. Osgood's elaborate work has struck him, for example, principally as containing the best account of Bacon's Rebellion.

Besides the likes and dislikes, one may here and there fall joyfully upon phrases that reveal the survivals at least of certain conventional and comfortable theories. The century from 1660 to 1760, we are told (p. 3), was for England "a positive retrogression." Here we seem to feel a little the breath of the *zeitgeist*. Retrogression from what, we ask. What was the goal? The Reform Bill, perhaps? Or universal suffrage? Or Socialism? There is a difficulty there. Take another example. Had the colonial governors been men of force and character, "they would have exercised an important influence upon colonial life and constitutional development"; but, "*fortunately*, they were usually persons of quite opposite qualities" (p. 247). Why fortunately? We know what Bancroft would have said. Are we to suppose that (to borrow the manner of the immortal Huck Finn), Professor Channing he says the same? Well, it is difficult to write history without having any theory about it. We believe that Professor Channing has some very good theories about it, and only regret that he has concealed the best part of them. That, however, is a small matter. We commend Professor Channing's book to scholar and reader alike: a better one is not likely to appear soon.

The Continental Congress at Princeton. By Varnum Lansing Collins. Princeton: The University Library. $3 net.

In a handsome volume of three hundred pages, Mr. Collins, formerly reference librarian at Princeton, acting under the auspices of the Princeton Historical Association, has dealt with a phase of American history hitherto in large measure neglected. Actuated by local zeal as well as by wider historical interest, he has written an account of the mutiny of the Lancaster and Philadelphia troops in June, 1783, the consequent flight of the members of Congress from Philadelphia to Princeton, and their sojourn there during the summer and autumn of the same year. The story, both in its official and social aspects, is told by Mr. Collins with such thorough knowledge of all the sources of information in print and manuscript, with such a keen sense of the significance of the events, with such an eye to the picturesque and dramatic phases of Congressional life in the rural New Jersey town, and with such attention to matters of style and arrangement, as to make it in all points a model of its kind.

The interest lies mainly in three directions: the story itself, with its vivid portrayal of the personages concerned at work and at play; the official activities of Congress and the business actually transacted at Princeton; and, lastly, the significance of the events from the point of view of our national development. Each of these aspects is amply and admirably worked out. Pages are devoted to ceremonies and celebrations, to the housing of the visitors, to their dress and manner of living, and to the many other social and domestic incidents which clothed Nassau Hall with a new and unexpected glory. The narrative is supplemented with many letters, speeches, and poems, while the appendix contains unpublished documents deemed by Mr. Collins too valuable to be discarded entirely: Boudinot's household accounts with a local merchant, certain lists of Princeton citizens, correspondence with Dr. Thomas Wren of England, to whom Princeton gave an honorary degree, and two commencement orations. The volume is embellished with a number of full-page facsimiles, portraits of Washington, and other pictures. The portrait of Washington, selected for a frontispiece, is appropriately that of Peale, painted during the sitting of Congress, by order of the college, and placed, as the minute of the trustees stated, "in the hall of the college in the room of the picture of the late King of Great Britain, which was torn away by a ball from the American artillery in the battle of Princeton."

Mr. Collins devotes ample space to the business side of the session, and makes it clear that the summer debates, though often conducted in a dilatory and half-hearted manner, were far from fruitless. He summarizes the work of the session as follows:

> The peace establishment problem had not been solved, but Washington had been thanked for his services as commander-in-chief. the Federal residence question apparently had been settled, and a long advance had been made toward the cession of public lands to the United States and the inauguration of amicable relations with the Indians. Important treaties had been ratified, a foreign minister [Van Berckel, the Dutch representative] had been received with due ceremony, and the first halting steps had been taken by the United States toward the occupation of a ranking place among the nations of the world.

These were results of conspicuous moment, yet they appear to have been attained almost accidentally, in no way the outcome of foresight and efficiency on the part of the representatives assembled at Princeton. Though bulking large in a summary, these positive accomplishments are almost lost sight of when followed day by day in the proceedings, where wrangling and jealousy, inertia, and indifference seem, in the eyes of most observers, to hold the more conspicuous place.

In his comments on the historical significance of the events Mr. Collins states nothing that differs essentially from the conclusions of others; but he has laid so firm a foundation of fact upon which to base his opinions that what he says has peculiar force and value. His final chapter contains a brief but thoroughly satisfactory review of the situation, the leading features of which may be stated as follows: A small part of the army, driven to desperation by failure to obtain its pay, rose in mutiny against the power that had called it into existence. Congress, fearing actual physical danger, retired in undignified flight to Princeton. This event made clear, perhaps for the first time to the world at large, how anomalous was the position that Congress occupied—the only central government, yet unprotected by the States whose representative it was and impotent to guard itself against the disgraceful threats of an angry military mob. Such

a beginning of our career as a nation was ominous for the future. The war had developed no permanent solidarity of interests, no largeness of view, no true national spirit. The members of Congress, as formerly at Philadelphia and afterward at Annapolis, viewed their duties at Princeton with exasperating nonchalance, and even in the throes of some definite accomplishment quarrelled and obstructed progress. Little wonder that men like Washington and Hamilton grew indignant at the unwillingness of the members to sink their local interest in a statesmanlike regard for the common welfare, and urged the need of an indissoluble union under one federal head. The great importance of Mr. Collins's work lies in the clearness with which it shows that even before peace with England was more than a rumor, events had betrayed the worthlessness of the Confederation and its impotence in the presence of grave dangers. Yet five disastrous years were to pass before the American people awoke to a sense of their peril and their disgrace.

So admirable a presentation of Congressional life during this period of five months should serve to call renewed attention to the wealth of information that lies buried in the voluminous papers of the Continental Congress now in the Library of Congress, and to aid in bringing about not only their more extended use by historical scholars, but their eventual publication by the government. The journals of Congress, now being published in a new edition, need at every point the illuminating and humanizing elements which the less formal papers furnish. Quite apart from his more immediate purpose of throwing light on a neglected episode, Mr. Collins has presented a convincing demonstration of the value of this and other similar material.

CURRENT FICTION.

Helianthus. By "Ouida." New York: The Macmillan Co.

When Louise de la Ramée ("Ouida") died last January, she left an unfinished story which is here published in a volume of nearly four hundred and fifty pages. We are bound, then, to overlook certain inconsistencies, to ignore some threads of narrative which apparently lead nowhere, and to accept the book with all its imperfections on its head. Taking it as it is, we may regard it as a sort of last will and testament of the author. In spite of defects, perhaps because of them, it smacks of "Ouida" on every page, and is another interesting revelation of her remarkable talent.

The conception is grandiose—the fortunes of dynasties and great nations hanging on the outcome of a love affair between a prince and the daughter of an arch revolutionist. The canvas is ample, stretching across all Europe. But the characters, as in so much of "Ouida's" earlier work, fall short of complete vitality. It would not be fair to say that the members of the royal family of Helianthus—the King, the Crown Prince and Princess, and Prince Orthyris, the hero—are mere types. Yet all of them, and also the beautiful heroine, Ilia Illyris, leave us a little cold. For all the pains that have been bestowed upon them, we do not greatly care what befalls them. More successful, on the whole, is the portraiture of the country in which they live. In description "Ouida" was a writer of no slight power, and she evidently exerted herself in the presentation of Helianthus, which is Italy with something of Greece thrown in for good measure. The blue of the Mediterranean, the massive hills, the groves of olives, and the charming gardens—all are made vivid to the eye in a style whose effectiveness not even "Ouida's" purple patches can seriously impair.

But the prime fault of "Helianthus" as a novel is that for the first half or two-thirds the story fails to carry the reader along. It is, indeed, not so much a story as a political tract, a satire on royalty, imperialism, and militarism. "Ouida" was an intense republican, a passionate humanitarian; and here she gives these qualities free rein. The bickerings, the jealousies, the meannesses of kings, and their gross ignorance of and indifference to popular desires and welfare; the selfishness, the plundering, the cruelty, the murder that are cloaked by such sounding terms as "patriotism," "fatherland," and "national glory"; the relations between Helianthus and its neighbors — Gallia (France), Candor (England), and the Guthonic Empire (Germany)—the outward shows of friendship, the secret malice and plottings—upon all these things the author pours her bitterest scorn. She draws us, for example, this picture of the Emperor Julius (William), the war-lord of the Guthones. It is undeniably a caricature; but the sting lies in the fact that many of the lines are fatally true:

> Julius had a manner of telling his army that he expected it to massacre its fellow-countrymen, whenever desired, which rivalled the finest times of mediæval despotism. He had a felicitous familiarity in his relations with the Deity, coupled with a reverential admiration of himself and of his own acts, his own speeches, his own talents and policies, which John of Gunderöde [King of Helianthus] admired respectfully, though the stolid common-sense of his own temper prevented him from equalling them. To rise to those supreme heights of self-adoration it is needful to have more than one *grain de folie* in one's moral and mental composition.

It would be easy to quote columns of such clever and cutting sentences. But it is already clear that one who cares less for a novel than for "Ouida's" last fierce onslaught on the hypocrisies of our civilization should read "Helianthus."

The Devil. By Adriaan Schade van Westrum. New York: G. W. Dillingham Co.

This is a novel founded upon the version of the Hungarian drama of the same name produced at the Belasco Theatre in New York, and it is illustrated from photographs of several scenes of the play. The task of one who runs dramatic material into the novel mould —much simpler than the opposite process—is to avoid adding too much. In this case the adapter has acquitted himself well; he has supplied costumes, properties, scenery, and business without lessening the objectivity of presentation or impairing the terseness and verve of the dramatic version. With the devil left out, this is the story: A young artist loses his money at Monte Carlo, is set on his feet by a millionaire, makes a reputation by painting his model, abandons her to become engaged to an heiress, whom he also deserts. At the end of the book, he and the millionaire's wife set out on the primrose path. To the eye, the devil appears as the most modern of gentlemen, differing from others only by the superiority of his intelligence; virtually, he is the externalized passion of each character in turn, dialoguing with reason in the critical moment. The admirable technique displayed in the conduct of this embodied evil is perhaps more readily appreciated by the reader of the novel than by the spectator of the play; for the sulphurous personality of such an actor as Mr. Arliss makes one forget the essential subjectivity of the fiend. The disengaged satirical tone of the book and its cynical ending would have commended it to the gentlemen of the court of Charles II.

Gilbert Neal. By Will N. Harben. New York: Harper & Bros.

Mr. Harben's work represents a sincere impulse to express the life of simple people in Georgia, the life with which he is evidently most familiar. His method is movingly ingenuous; he writes not only of the people but from the people. Hence his acceptableness to the popular reader. There is no nonsense about him, no condescension from the sophisticated to the uncouth. When his heroine says, "If she were to die, it would be awful on uncle and the children," she is not employing a form of locution which seems to Mr. Harben either odd or amusing; nor, on the other hand, is he disturbed by the rather florid turns of speech with which his characters are wont to decorate the vernacular. This is not the way the common

people talk, but it is the way they think they talk, or would like to talk, or at all events wish their persons in fiction to talk. If at one moment, we read of a weeping girl, "she pressed her damp face more firmly against his neck," at the next we hear that her hand "had lost the pliancy of grief, which had controlled it only a moment before." We know that we are not dealing with a ruthless realism; and we are prepared for the ensuing cry of the hero: "No, no, no, God forgive me, no! . . . The blackguard lied like a dirty dog, and I wish I'd killed him—killed him!"

The plot of the tale is delightfully melodramatic and Southern. The hero is an honest young farmer, the villain a dishonest young parson. The farmer's sister and the parson's wife are, as it were, the "two little Evas" of town-hall histrionics, and the parson's sister is the dashing adventuress to a miracle. The action turns upon the obvious fact that any honest young man ought to kill his sister's betrayer on sight. In this instance, to be sure, the betrayer does not quite betray, or the killer quite kill; but the intentions of both are of the best. The only human being in the story is one Daggart, village store-keeper and money-lender, and, as he says, "just a natural man, by hunky."

The Leaven of Love. By Clara Louise Burnham. Boston: Houghton Mifflin Co.

The very stylish and coquettish young person on the cover of this book we take to represent the Christian Science heroine. She is a triumphant young person, as the story goes, carrying her amiable evangel to the just and the unjust, unaffectedly happy in leaving everything to God except conversation. She speaks the now familiar dialect of Mrs. Eddy and her band, smiles as persistently as Malvolio, and "demonstrates" a weeping sinew from a young man's wrist, with the nonchalant air of the trained magician. The book has that tone of comfortable liveliness which marks this amiable and prosperous sect. There is much contented basking in the consciousness that here at least is to be found the most profitable of earthly investments.

Chaucer and His England. By G. G. Coulton. 32 illustrations; pp. xii+321. New York: G. P. Putnam's Sons. $2.75 net.

In this book we do not read merely of Chaucer the poet, as in the studies by Lounsbury and others; nor do we read the politico-social history of England in the fourteenth century. The author attempts to portray just that England in which Chaucer lived and wrought. Of course, the poet's personality and gifts are brought out with clearness and force, but the present work is in the main rather about Chaucer than upon him. As such we welcome it cordially. When we weary of the construction of the framework of the "Legend of Good Women," or the niceties of Chaucerian scansion and grammar or the question whether the translation of the "Romance of the Rose" is by Chaucer or by another, we may turn with relief to the broader questions of society, church, state. We have not space for a detailed analysis of Mr. Coulton's work. Even the list of chapter headings would fail to suggest the wealth of material here gathered. We must restrict ourselves, therefore, to selecting a few topics for illustration.

Mr. Coulton knows his poet and quotes him freely and aptly. Yet the manner of quoting is puzzling, not to say irritating. On one page he sets up Chaucerian English, with at least an attempt at exactness; on another page he presents the poet in quite Victorian garb. Compare p. 163:

> And when I saw he wouldë never fine
> To readen on this cursed book all night,

with p. 146:

> He was a very perfect gentle Knight.

or with p. 161:

> This Pardoner answerëd not a word.

One need not be a passed Chaucerian to know that Chaucer never wrote or spoke "perfect"; we urge Mr. Coulton to look up the word in the Oxford Dictionary. Nor did Chaucer write "gentle," but "gentil"; there is a distinction. And "answerëd" for "answerdë" is in disregard of Chaucerian grammar. Sometimes Mr. Coulton gives the references for his quotations, sometimes he does not. Now, although most of us can locate a Chaucerian line at a pinch, we grudge the time. The present reviewer would echo M. Jourdain's exhortation, "Faites comme si je ne le savais pas." The reference, p. 21, to "Chaucer's *contemporaries*, Lydgate and Hoccleve," will certainly trip the unwary; one might as well speak of Dryden and Pope, or Pope and Johnson, as contemporaries.

After Chaucer himself, the author most frequently cited by Mr. Coulton is Langland. This is eminently wise, for the author of the "Vision of Piers the Plowman" not only was a genius after his own fashion and worthy to stand by the side of Chaucer, but presented that aspect of life which the court poet usually ignored. Occasionally, it is true, Chaucer gives a perfect sketch of homely life, notably in the description of the widow and her cottage in the "Nun's Priest's Tale." But in the great main, if we seek to learn how the lower classes moiled and suffered, we must go to the "Vision." And whoever has once read that extraordinary poem will always revert to it with enhanced pleasure and respect. It is, in truth, a bolder effort and moves along broader lines than any single piece of Chaucer's. So many of Mr. Coulton's topics touch upon Langland rather than upon Chaucer that one is almost tempted to change the title of the volume to "Chaucer and Piers Plowman and Their England." On the other hand, Gower, Chaucer's real "contemporary," is cited with comparative infrequence. Gower, we all know, is dry and pedantic, and consequently repellent. We suspect, however, that a minute study of all his writings, Latin and French no less than English, might yield more information than has been commonly admitted.

Chapter xvii., "The Gay Science," goes pretty deeply into the mediæval conception of love. As might have been expected, Mr. Coulton points many a moral by referring to Dante. Though we do not feel called upon to controvert bluntly any of his views on Dante, we take the liberty of believing that Dante stood quite outside and above his world in ethical purity; was, in fact, the quintessence of purity for all time; whereas Chaucer, even at his best, was of the earth earthy. The difference is fundamental and organic. And Mr. Coulton's conception of Emily, in the "Knight's Tale" (p. 222), is to us a puzzle. His words are:

> Chaucer himself could not have made her a Die Vernon or an Ethel Newcome; with fuller modelling and more freedom of action in the story, she could at best have become a sort of Beatrix Esmond.

We are unable, however, to trace the slightest kinship between 'Trix and Emily; the one is caprice incarnate, the other is the good girl who always does what she is bid.

The last two chapters, xxiii. and xxiv., "Priests and People" and "Conclusion," should give us much food for thought. Here we are confronted with the eternal question: What and how much did men believe? What was the Church to the humble layman, what to the scholar and thinker? Mr. Coulton would probably be the last man to assert that he had answered the question definitively; for he is well aware that in such matters there can be no final word. In general his doctrine seems to us true and illuminating. Of Chaucer in particular we may hold that he was at once a believer and a skeptic. Yet on one point, at least, we would join issue with Mr. Coulton. At pp. 36, 72, 312, and perhaps elsewhere, he treats the so-called "Retractation," appended to the "Parson's Tale," as genuinely Chaucerian. Does he really believe this? We do not. The "Retractation" reads more like the pious invention of a later hand.

The index is insufficient for a book of such complexity. Of the illustrations

we are constrained to say that, although they are pleasant to look upon, they do not always illustrate Chaucer or Chaucer's England.

The Strength of Nations. By J. W. Welsford. New York: Longmans, Green & Co. $1.75 net.

This volume presents another "argument from history" to prove that Great Britain is doomed to ultimate ruin, unless she adopts the programme of the "tariff reformers." It illustrates very well the advantages of the so-called "historical method." So long as he confines himself to present-day conditions, the economist is obliged to deal with problems the elements of which are more or less familiar; but if he will go back to remote ages, he can readily free himself from the embarrassments which inconvenient and stubborn facts oppose to the development of preconceived theories. In justice to Mr. Welsford, it should be said that he makes the most of the opportunities which the historical method affords.

He is content to begin with Rome, and does not undertake to show that freedom of trade ruined the ancient monarchies and empires of the East. The Roman Empire, he maintains, declined and fell because of "foreign imports." First, the provinces ruined Italy by supplying her with food and manufactured products, and the provinces, in turn, were ruined by imports from the outlying parts of the world. Constantinople then became the centre of Mediterranean traffic, but neglected "productive" industry for foreign trade, and so, in time, lost her supremacy. Under Charlemagne, "Europe for a short time lost its national character, and became a brotherhood," but this experiment with "the brotherhood of man and universal free trade" ended in war—which shows how wrong the "philosophers" were and are. England became the first true nation, by developing industries and "founding commerce upon production." The Italian cities, on the other hand, some of them "producing towns" and others "trading towns," could form no union; and thus Italy was ruined by "free food, free trade, and disunion." The Hanseatic towns were indifferent to "the interests of German workers," and so the league "was no real union." The German Empire failed to adopt a protective policy in 1523, through the machinations of wicked merchants, who were bringing in foreign manufactures, and thus German unity and freedom were destroyed. Holland developed trade at the expense of industry, and thereby brought about her own undoing. France became strong in the seventeenth century through protection, but sacrificed her advantage in the commercial treaty concluded with England in 1786. This treaty wrought havoc in France and speedily brought on the Revolution, the true causes of which have been wickedly "obscured" by the "free-trade historians." The Revolution, in reality, "began with an influx of British goods," and ended after the sale of such goods was prohibited in 1793.

Thus the story runs, with frequent castigations of Adam Smith, Cobden, and the other miscreants who in divers times and places have plotted against the welfare of their fellow-men and retarded the progress of the race. Foreign trade is a terrible thing except in non-competing products, as in exchange between temperate and tropical regions. To import goods which you can produce yourself, albeit at greater expense, involves waste of energy and tends to depress industry. To draw an income from foreign investments is worst of all, and exhausts the country that receives it, even as Italy was ruined by the tribute exacted from subject provinces. Finally,

> In an economic union of the British Empire, tropical raw material will be linked to British industry, and the new combination will have no need to fear foreign competition.

Mr. Welsford's theories of international trade need not be criticised here. They represent the crudest type of protectionist thought, and may be dismissed without further remark. His appeal to the facts of history is so grotesque as to be positively diverting. The Roman Empire was ruined by free trade! Italy and Germany failed to attain national unity on account of unregulated foreign commerce! The French Revolution was caused by the treaty with England in 1786! Adam Smith was paid by Charles Townshend to visit France, learn the "schemes of the French economists," and then advise the British government in matters of commercial policy! The "Wealth of Nations" "was manufactured mainly for exportation," and served admirably the purpose of compassing the ruin of England's rivals! And our own civil war, we learn, was caused, not by slavery, but by the desire of the South to secure free trade. After reading all this, the critic wonders how Mr. Welsford came to overlook the striking and significant fact that ancient Troy was ruined by free importation of a wooden horse "dumped" on her shores by the wily Greeks. In conclusion it should be observed that our author does not carry his investigation so far as the decade preceding the repeal of the Corn Laws. In the distress of the laboring classes during that period he would have found some useful evidence of the beauties of taxes on grain. But, then, as we have already remarked, the historical method loses many of its advantages as the protectionist approaches times that we know something about.

Science.

Lectures on the Elementary Psychology of Feeling and Attention. By Edward Bradford Titchener. New York: The Macmillan Co. $1.40 net.

"I suppose that every experimental psychologist," our author remarks in one of his lectures, "has, at one time or another, been confronted with the skeptical question: 'What, after all, has the experimental method done for general psychology?'" He adds that, as a rule, it is not easy to find an answer; but for a satisfactory reply he might well have referred his questioner to his own book here considered. It is seldom that one meets an author who is so well equipped for his task by years of labor, and whose studies have left him more keen in the endeavor to view all sides of his subject without bias, and more thoroughly imbued with that power of balanced judgment which alone gives significance to the work of the scientific writer. And such an equipment is the more welcome, for the fields chosen by our author remain in obscurity, while modern research has thrown brilliant light upon coördinate psychological realms of no greater importance.

It cannot be said, however, that the writer is without his own bias. As he himself says:

> If you are favorably impressed by a scientific theory, the facts that support that theory crowd in upon you, while the outstanding facts, those that cannot connect with the trend of consciousness, fail to present themselves; you mean to be impartial, and the conditions of attention make you one-sided (P. 98).

This bias in our author's case is in favor of sensationalism, one to which the psycho-physicist is naturally liable, as in his typical experiments he must of necessity deal largely with sensational data. This bias is shown throughout the book, but has especial influence upon Professor Titchener's discussions in the realm that he designates by the common term "feeling," a word so vague in meaning that it surely should be eliminated from all scientific psychological works where it can be replaced by any other. In the lectures relating to this subject he gives less weight to non-sensational theories of pleasure and pain than is their due, although his eminent fairness of mind prevents him from glossing over the objections to theories in which, as a sensationalist, he would naturally be expected to take a special interest; such, for instance, as Stumpf's theory of *Gefühlsempfindungen*.

A mere glance at the "index of names" will satisfy the reader of the author's erudition, which, it is clear, has been assimilated rather than merely retained. As would be expected from the translator of Wundt's principal

works, he devotes much of his space to a study of this master's views, but he discusses them with no sign of slavish advocacy, giving them, in fact, little more weight than he gives to the opinion of other investigators, not always men of note, whose work appears to him to be worthy of attention. It is natural perhaps that a man of his special training should pay special attention to the thought of German writers; but this predilection has led Professor Titchener to overlook some valuable contributions by men of other nationalities, among which we may mention those of our own Prof. R. S. Woodworth. These are especially important in this connection because they tend to discredit the sensationalist dogma which dominates our author's thought.

The questions which Profeessor Titchener discusses are too technical for detailed treatment here. His general problem is one of problems; his principal aim is to determine what points in his chosen fields demand elucidation, and are worthy of investigation; to explain how they have been treated, and to indicate wherein they lack such clearness as the experimentalist may hope to give to them by his method and mode of approach. And in this attempt the author has been eminently successful. He has laid out enough work that promises important results to keep the psycho-physicists busy for a generation. Collections of classroom lectures are not often inspiring, but this work is a welcome exception to this rule. It must add much to its author's reputation, if for no other reason than that it sets for all other workers in the same realm of science a pace the maintenance of which will call for all their energies.

The Musée Océanographique in Monaco, which is to be dedicated this coming winter, will contain an exceptionally rich collection of specimens of submarine fauna and flora, which are the fruits of the scientific journeys of Prince Albert of Monaco. The prince is having erected in Paris an Educational Institute for Oceanography, which is to coöperate with the Museum.

Dr. Cuthbert Collingwood, a British physiologist, zoölogist, and botanist of note, has died at the age of eighty-one. He wrote many papers for the *Linnæan Transactions* and other scientific journals, hesides his books: "Ramhles of a Naturalist in the China Seas," "A Vision of Creation," "The Bible and the Age," and "From Beyrout to Bethlehem."

The death is announced at the age of thirty-three of Duncan MacNaughten, a Scotch ornithologist, who had already made a name for himself by his studies of bird-life in Scotland.

The death in his seventy-fourth year is announced of Adolf Wüllner, professor of physics at the Technical Hochschule of Alx-la-Chapelle. His "Lehrbuch der Physik," in four volumes, was a popular text-book which had reached a fifth edition.

Dr. Friedrich Bezold, professor of otology at the University of Munich, has died at the age of sixty-six. He had made a special study of the treatment of deaf-mutes, and had written largely on diseases of the ear.

Drama.

The Age of Shakespeare. By Algernon Charles Swinburne. New York: Harper & Bros. $2 net.

It is not easy to give a fair report on this latest incursion of Mr. Swinburne into criticism. Some veneration is due to a name so high among the living makers of literature, even though that name may denote many things distasteful to the present reviewer; yet in strict truth these essays can scarcely be characterized otherwise than as "sound and fury, signifying"—let us say the author's temper more than Shakespeare's age. Here, in nine chapters, Mr. Swinburne sets down his impressions of Marlowe, Webster, Dekker, Heywood, Tourneur, and other selected dramatists. He has himself an intimate familiarity with these writers—it is doubtful if any man of to-day has read them more continually and more enthusiastically than he—and he requires of the reader almost the same sort of knowledge. We can admire this stalwart contempt for the ignorant, yet after all to write as if even the ordinary student held in memory the plots of all these Elizabethan plays so as to understand the critic's passing comment, is to fire much of one's powder into the air. And, to continue the metaphor, Mr. Swinburne, when he is really serious, always discharges two barrels at a shot, one at the subject in view, the other at a supposed adversary. Thus, he is not content with expressing his opinion that Webster was not "morbidly fascinated by a fantastic attraction toward the 'violent delights' of horror," but he must prelude this with the exclamation: "In all the vast and voluminous records of critical error there can be discovered no falsehood more foolish or more flagrant than the vulgar tradition," etc. Well, the vulgar tradition is generally right, and a vulgar critic might, if he dared face the vast and voluminous wrath of Mr. Swinburne, point to many scenes in which Webster revels in the very dregs of physical horror. Again Thomas Campbell once compared Webster and Euripides, somewhat to the advantage of the latter. Beware! Campbell, Mr. Swinburne first declares, is "ignorant and incapable of understanding," and then adds: "As there is no poet morally nobler than Webster, so there is no poet ignobler in the moral sense than Euripides. . . The degenerate tragedian of Athens, compared to the second tragic dramatist of England, is as a mutilated monkey to a well-made man." Such mouthing exaggeration calls to mind a phrase applied to Mr. Swinburne in a recent book—"the howling dervish among critics"; or, is Mr. Swinburne merely ironic, and has he been laughing in his sleeve at us all these years?

It is fair to add that this chapter on Webster, as it deals with one of Mr. Swinburne's enthusiasms, is the least reasonable in the book, without the compensation of that torrential eloquence which, in some of his earlier works—his volume on Blake, for example—gave to "airy nothing" a sublime force. It contains, indeed, the nearest approach to a philosophical idea to be found within these covers—but, then, the idea is forthwith turned to false conclusions. The passage, as typical of Mr. Swinburne at his strongest, may be quoted at length:

> Æschylus is above all things the poet of righteousness. "But in any wise, I say unto thee, revere thou the altar of righteousness": this is the crowning admonition of his doctrine, as its crowning prospect is the reconciliation or atonement of the principle of retrihution with the principle of redemption, of the powers of the mystery of darkness with the co-eternal forces of the spirit of wisdom, of the lord of inspiration and of light. The doctrine of Shakespeare, where it is not vaguer, is darker in its implication of injustice, in its acceptance of accident, than the impression of the doctrine of Æschylus. Fate, irreversible and inscrutahle, is the only force of which we feel the impact, of which we trace the sign, in the upshot of "Othello" or "King Lear." The last step into the darkness remained to be taken hy "the most tragic" of all English poets. With Shakespeare—and assuredly not with Æschylus—righteousness itself seems subject and subordinate to the masterdom of fate; but fate itself, in the tragic world of Webster, seems merely the servant or the synonym of chance. The two chief agents in his two great tragedies pass away—the phrase was, perhaps, unconsciously repeated—"in a mist": perplexed, indomitable, defiant of hope and fear; bitter and skeptical and bloody in penitence or impenltence alike. And the mist which encompasses the departing spirits of these moody and mocking men of hlood seems equally to involve the lives of their chastisers and their victims. Blind accident and blundering mishap—"such a mistake," says one of the criminals, "as I have often seen in a play"—are the steersmen of their fortunes and the doomsmen of their deeds.

That is well said and true, but it is not true that Webster, because he reduces the world to a fingerboard for Chance, is the most tragic of our dramatists and most noble morally. On the contrary, it may be said that chance is essentially non-tragic and non-moral, and that this element of chance in Webster, this dying in the mist, makes him profoundly striking, bewildering, overpowering, but untragical in the sense that "Macbeth" and "Agamemnon" and "Hippolytus" are tragical. The elevation of tragedy, as opposed to the

mere terror or grewsomeness of calamity, is due to the conquest of moral order over chance, to the feeling that the hounds of heaven track their prey with unerring scent through all the hurly-burly of an otherwise incomprehensible world.

We have dwelt thus on this study of Webster because it is the most Swinburnian in the book. Candor will add that Mr. Swinburne becomes more critical just as he becomes less serious and less himself. From the other essays one might pick a number of shrewd judgments on minor points, and of happy discriminations in taste among plays of mediocre significance. As examples of this we may cite his comment on the poems attributed to Dekker, and his praise of Marston's satire of Euphuism. But, as a whole, it can only be repeated that the book must impress any sane reader as the cry of an enraged and baffled romanticism, of a romanticism that, like some wild beast at bay, snaps and snarls at common-sense.

The third volume of the Variorum edition of Beaumont and Fletcher will come from G. Bell & Sons some time this month. The volume contains five plays, viz.: "The Faithful Shepherdess," edited by W. W. Greg; "The Mad Lover" and "Rule a Wife and Have a Wife," edited by R. Warwick Bond; "The Loyal Subject," edited by John Masefield, with an introduction by R. Warwick Bond; and "The Laws of Candy," edited by E. K. Chambers.

To the useful series, French Classics for English Readers (G. P. Putnam's Sons), the latest addition comes in a selection of Molière's plays, translated by Prof. Curtis Hidden Page, with an introduction by Prof. Brander Matthews. The latter sketches the dramatist's career in a rapid outline of some twenty-five pages, in which are condensed, for popular reading, most of the undisputed views concerning Molière's life and work. Each of the eight plays selected is preceded by a brief explanation of its design; here, however, one or two suggestions may be hazarded. It is held by more than one authority to-day that Molière, in "Les Précieuses ridicules," directed his satire not at the genuine great ladies, but against their understudies, so to speak. Fuller comment might also be given on the social conditions which rendered possible the flourishing of so peculiar a type as Tartuffe, and the amazing genius which converts this specific variety of hypocrite into a permanently universal representative. The Englishing of the original is for the most part faithful. Minute comparison of the prose plays here rendered with so well-known a version as Van Laun's demonstrates the unflinching precision of Professor Page's usual method; he rarely grants himself the easy luxury of the evasive paraphrase, and in instances where Van Laun mistranslates supplies the equivalent for Molière's phrase. A good example appears in "L'Avare" (iii. 5), where Harpagon recommends as cheap and filling food "quelque bon *haricot* bien gras," etc. In Van Laun we find the all but incredible blunder of "some good fat *beans*"; to Professor Page the original very properly suggests "a good fat mutton (?) *stew*." Again, in the same play (i. 10), Valère, in a well-sustained sporting metaphor, speaks of characters "qui se *roidissent* contre le droit chemin de la raison." Van Laun has it "set their faces," while in the present translation we read "*balk* at the straight road of reason." Between "flimsy sparks" and "effeminate young beaux" (*damoiseaux floucts*), a reader may hesitate to choose. And in the poetical plays, which are here for the first time reproduced in corresponding English verse, Professor Page has contrived to follow the original almost step by step without falling into that mechanical style which is too often the mark of the translator. At times, of course, the "little less," which seems its inevitable result, implies the sacrifice of some of the epigrammatic pungency, the true flavor of the Molièrean couplet. Contrast

Things are not far advanced yet, in the country

and

La campagne à présent n'est pas beaucoup fleurie,
("Tartuffe," i, 4.)

Or, again:

I must be singled out: to put it flatly,
The friend of all mankind's no friend for me

and

Je veux qu'on me distingue; et, pour le trancher net,
L'ami du genre humain n'est point du tout mon fait.
("Le Misanthrope," i, 1,)

Singularly enough, the translations offered in the latter play, of the "sonnet" of Oronte and the quaint verses preferred by Alceste, have a more genuine smack of the original.

H. G. Voigt, a young and ambitious writer, has recently published (Stuttgart: J. F. Steinkopf) two historical dramas, which, though far from perfect, give promise. One is entitled "Wendungen: Historisch-dramatische Dichtung über die Zeit Gregors VII"; the other, "Perpetua; Dramatisches Gemälde aus der Zeit der Christenverfolgung." The lines are iambic pentametre and very smooth.

The representation of "The World and His Wife," seen here for the first time in Daly's Theatre on Monday evening, has enough of substantial merit to make amends for its minor shortcomings. It is a new and modernized version by Charles F. Nirdlinger of the "El Gran Galeoto," long regarded as one of the greatest achievements of the Spanish dramatist, Echgaray. The theme is the potency for evil in irresponsible and malicious gossip, and it is handled with remarkable ingenuity, verity, and genuine tragic power. In spirit it is a latter-day variation of the story of "Othello," with pharisaical suspicion and credulity the motive, instead of Iago's jealousy and hate. The story is very simple, and, in spite of its rapid development, entirely reasonable. A noble gentleman, devoted to a wife who loves him with equal sincerity, maintains in his household a young friend, to whom he is bound by every tie of affection and gratitude. The three associate on terms of charming and honorable intimacy, without suspicion on the one side, or thought of wrong on the other. But the idle and censorious world soon sees in the youth a lover and in the husband an unsuspecting victim. The latter hears the gossip through the agency of a suspicious and malignant brother, and is so distracted by jealousy that he no longer has any sense of justice. Finally he is fatally wounded in a duel, and dies cursing the unfortunate wife, who had risked even her good name in a final effort to save him. Thus, by force of unavoidable circumstance, the true friend and the faithful wife are driven into each other's arms in self-defence. It is a vital piece which holds the interest unceasingly, and moves with swift and nicely calculated action to a thrilling climax. Mr. Nirdlinger's attempts at the modernization of it are not happy; are, indeed, often out of harmony with the rest of the piece, but he has not interfered with the main outlines, and his version, if unequal, is, at least, theatrically and dramatically effective. Few better plays are likely to be seen this season. The representation is of somewhat more than respectable quality, though not brilliant. Cooper Cliffe gives an able and striking impersonation of the jealous husband—with an undeniable note of Spanish color in it—and William Faversham is, on the whole, satisfactory as the suspected friend. Miss Julie Opp lacks many of the qualities supposed to be inherent in the character of the heroine. The piece was well received on its merits, and is likely to have a long run.

Miss Ethel Barrymore's engagement at the Hudson Theatre in this city will begin on November 9, when she will be seen in the "Lady Frederick" of W. Somerset Maugham. That excellent actress, Jessie Millward, will also have a prominent part in this play.

Miss Julia Marlowe has decided to begin her new season with a production of Mary Johnston's poetic play, "The Goddess of Reason," which is a romance of the French Revolution.

Charles Frohman has the American rights of a new comedy by Alexander Bisson, "The Marriage of the Star," and will produce it before the end of the present season.

The London Play Actors have been giving a performance of "The Maid's Tragedy" of Beaumont and Fletcher, or, rather, of an emasculated version of that powerful and poetic but not too pleasant play. Esme Berenger was the Evadne; Kathleen Rind, Aspatia; Edwyn Holloway, Amintor; and H. A. Saintsbury, Melantius. This is probably the first time the play has had a stage hearing in England since the days of Phelps at Saddler's Wells. For many years it was prominent in the repertory of Macready.

The Dramatic Productions Club, which proposes to continue the work of the extinct Pioneers at the Court Theatre, in London, has decided to deal with the works of British authors only. Its first choice has fallen upon a three-act piece named "Isaac's Wife," by F. D. Bone and William Share. Mr. Bone was the author of a little one-act play entitled "Pride of Regiment," produced some months ago at the London Haymarket. "Isaac's Wife" deals with a phase of military and social life suggested by one of Kipling's earlier stories.

Music.

Personal Recollections of Wagner. By Angelo Neumann. New York: Henry Holt & Co. $2.50 net.

When Wagner produced his four Nibelung operas at Bayreuth in 1876, it was his intention to have a similar festival every year and to reserve those operas exclusively for these occasions. The deficit of $40,000 in which the first festival resulted did not augur well for the success of his plan; he was, however, not ready to give it up when, on August 27 of the same year, the director of the Leipzig Opera, August Förster, asked permission to produce the Ring. Wagner answered: "My work is not finished: the performances have revealed to me many imperfections. Give me time to repeat my work next year here at Bayreuth in a carefully revised form." Five months later, however, having realized the impossibility of giving another festival, he wrote to Förster that he had been compelled to abandon his plan of reserving the Nibelung's Ring for Bayreuth for at least three years, and was willing to let Leipzig be the first to hear that work. The offer was eagerly accepted, but the negotiations were broken off by a misunderstanding. Wagner asked 10 per cent. of the receipts and an *Ehrensold* of $2,400. Förster took this in the sense of an advance payment merely, and when he realized that it meant an extra disbursement he broke off the negotiations; nor was he willing to resume them when Wagner subsequently waived that *Ehrensold;* for Förster's doubts as to the profitableness of this work had grown. But when his season ended with a deficit of 121,000 marks, he was in a mood for listening to the advice of his assistant, Angelo Neumann, and Wagner's offer was accepted; the trilogy was produced in the composer's native city with surprising success, both artistic and financial. When, subsequently, Neumann became manager of the Leipzig Opera, Wagner showed his confidence by allowing him to form a Travelling Wagner Theatre, which gave Nibelung performances in the principal cities of Germany, Austria, Italy, Holland, Belgium, England, and Russia. From 1876 till a few weeks before Wagner's death those two men constantly exchanged letters, which are printed in this volume, and lend it a unique interest, not only because they belong to a period when Wagner was not so prolific a writer as he had been previously, but because they reveal him more clearly as a business man than any other collection of his letters does.

The most important of these letters, however, are those which indicate his attitude toward "Parsifal." At the time when Mr. Conried broke the Bayreuth monopoly of that music-drama there was a great outcry in Germany because of Wagner's alleged solemn declaration that "Parsifal" should never under any circumstances be produced outside of Bayreuth. His real attitude is made clear in a long letter to Neumann dated only a few months before his death (September 29, 1882), which may be commended to those who fancy that a "sacrilege" was committed at our Metropolitan Opera House. In this letter Wagner says that, while he lives, he wants to keep "Parsifal" for Bayreuth; that he knows of no one who could carry on his work there after his death; and that if death or illness should prevent him from continuing that work, he is willing that Neumann should have "Parsifal" for his Wagner Theatre, provided it be kept on its high level.

Neumann had met Wagner before the first Bayreuth Festival. He happened to be in a room at the Hotel Marquardt in Stuttgart on the very day when Wagner, in the adjoining room, received the message from King Ludwig inviting him to come to Munich. Neumann was so fortunate as to be present at the rehearsals under Wagner's direction of two of his operas in Vienna, in 1875, and gives some interesting details. These rehearsals bore fruit, subsequently, at Leipzig, for they gave Neumann a deep insight into Wagner's methods. Nevertheless, when the Ring operas were being prepared in Leipzig, Wagner sent both Hans Richter and Anton Seidl to see that his intentions were carried out. Seidl was his special protégé; and Wagner insisted that Neumann should engage him as conductor:

> I beg you to make this possible. This I urge less in view of Seidl's material interests (for I have at this moment another good place for him) than for the advantage of the Leipzig performances of my operas—and I know what I am talking about. None of the other conductors knows my tempi and the correspondence between the music and the action. Seidl I instructed personally. He will conduct the Nibelungen for you better than any one else. If my word is in this case not sufficient I shall never recommend any one else to you.

Neumann did follow this advice, and had reason to congratulate himself, for without Seidl the Travelling Wagner Theatre could not have won such brilliant triumphs. This truth is enforced by an anecdote told by Neumann. The conservative Ferdinand Hiller, an arch enemy of Wagner, who had written most abusively of the "Tannhäuser" overture, heard Seidl conduct this overture at a concert in Cologne. During the intermission Hiller asked Neumann to be introduced to Seidl, to whom he addressed these manly words: "I have come to tell you that I have to-day heard the 'Tannhäuser' overture for the first time."

Neumann's book is brimful of good anecdotes like this, showing Wagner and his helpers behind the scenes. To cite only one more: At a rehearsal in Berlin Wagner addressed these words to the orchestra:

> I beg you, gentlemen, not to take the *ff* too seriously; wherever there is one, change it to *fp*, and change the *p* to *pp*. Remember that there are so many of you down there and up here only a single human throat.

When this work was first published in German it was reviewed at some length in these columns (see the *Nation* of October 24, 1907, p. 381). The translation by Edith Livermore is generally smooth and idiomatic, but there are some strange and quite inexplicable errors, among them the repeated use of "libretto," or "book," for "Partitur" (score); the transformation of "an important compact" (*bedeutungsvoller Vertrag*) into "a disagreeable encounter." There are also a few injudicious omissions, among which that of two interesting paragraphs about Nikisch is to be regretted.

Mrs. Thedore Thomas has given many of the orchestral scores used by her husband to the Newberry Library of Chicago. The gift includes ten volumes of Thomas's own autograph and manuscript scores. Among them are Bach's "A Stronghold Sure Our God Remains," as adapted by Mr. Thomas, the most important works of the German composers from Bach to Wagner, and works by Berlioz, Rousseau, Rameau, Grétry, Mehul, Paisiello, Palestrina, Cimarosa, Chopin, and others.

Grieg's operatic fragment, "Olaf Trygvason," had its first scenic production on October 8 at the National Theatre in Christiania.

Art.

THE WATER-COLOR CLUB.

It cannot be said that the nineteenth annual exhibition of the New York Water Color Club, at the American Fine Arts building, has anything very remarkable or epoch-making to show. But then the work that is remarkable or epoch-making is always rare, and the collection maintains a fair average, and includes a few things of interest and promise.

Water-color and pastel are dangerous mediums, because so much can be done with them that should not be done. Their possibilities tempt more than one exhibitor to display his own undoubted, though mistaken, cleverness. There is a great deal of this sort of cleverness in the three large portraits of women by Thomas P. Auschutz; they are skilful in their way, even daring, but the same effects would have been much more legitimately rendered with oils. Other work could be pointed out in which the same fault

appears, if on a less elaborate scale; the space covered is out of all proportion to the materials employed, and the quality obtained is the last which should be sought for. On the other hand, there are no better examples of drawings in which water color is used simply and directly than Charles H. Woodbury's two studies of the sea, which have also, in addition to their technical excellence, a distinct charm of color and feeling of movement. Something of the transparency of water is lacking in his Breaking Waves, but the action is expressed with true dramatic force. The Tide and the Cliff reveals the same careful observation, the same power to render movement, and it has besides a very delicate beauty in the quiet sky, with its pale tints of green and rose. Both are among the finest drawings we have seen by Mr. Woodbury.

Nothing in the collection, however, is more interesting than the proof of the increased preoccupation of artists with the beauty of New York. When there are subjects so suggestive and picturesque at home, the tendency to wander to Holland, France, Italy, or wherever it may be, in pursuit of motives that have already served again and again, strikes one as more than ever useless. Colin Campbell Cooper in Afternoon, West Side, New York, suggests admirably the dignity and impressiveness of the skyscraper, like a great white castle, springing high above the mass of rose and white houses, against the pale, luminous American sky. The skyscraper has a distinct character of its own, and Mr. Cooper has had the intelligence to discover it. Moreover, in this drawing, he has set himself an extremely difficult problem of perspective, for he looks both down into the deep street far below him, and up to the cliff-like walls beyond. We question if, actually, it would ever be possible for any one, even the artist, to take in the detail with which he fills the street and the nearer houses, and, at the same time, get so complete an impression of the scene as a whole. Incident must be sacrificed to the aspect of a scene, or else the eye wanders from place to place, finding a dozen pictures instead of one. But in this case the detail has most likely been put in deliberately to help to give the scale. Oliver Ainsley's concern is rather with the illumination of New York on a Summer Night, and the splendor of its lights, flaming from the high houses through the blue and purple shadows. J. E. Jackson is content to see Madison Square from a more conventional point of view, such as the squares and streets of any other big town might have furnished him, the surrounding buildings serving only as a dim background. Altogether the accomplishment so far may be small, but there is promise in the signs that artists working in New York are awakening to the beauty at their door, and seeking their inspiration in it. During the greatest periods of art, the masters seldom troubled to go further astray than the life and the world they knew.

Alexander Robinson relies less upon subject for character, than upon his own vision and methods. Well-worn Dutch and Italian haunts of painters have provided him with his themes. As for his vision, things present themselves to it in blocks of color, often crude and violent; as for his methods, he arranges these blocks in a mosaic of paint, with no great regard for intervening values, something in the manner of Frank Brangwyn. The result is at times brilliant, at times brutal. The other more notable contributions come from Hermann Dudley Murphy, whose impressions of Beach and Lagoon may be reechoes, but are not without tenderness and charm; from Miss Elizabeth Shippen Green, who shows how well she can work in colors for reproduction in black-and-white, and whose delight is in arrangement, in pattern, until it threatens to blind her to everything else in nature; Charles Warren Eaton, whose impressions of night are full of suggestion; and Charles L. A. Smith, whose mannerisms are marked, but not as yet unpleasant. There is good drawing in the foliage in Edward Dufner's Summer Evening, and the serious study of Moon Shadows in Miss Adelaide Deming's drawing has won for her the Beal prize.

Moffat, Yard & Co. will publish Frank Weitenkampf's "How to Appreciate Prints" early this month.

Whistler, that master of terse expression in two arts, seems likely to be the perpetual cause of diffuseness in others. It is rather difficult to see, for example, why Otto H. Bacher's agreeable magazine articles "With Whistler in Venice" should reappear in a large, expensive, and lavishly illustrated volume (The Century Co.). It is a pleasant enough picture that Mr. Bacher gives of "Jimmy" as the chum and tyrant of a group of Duveneck's young pupils at Venice in the year 1880. But the thread of reminiscences is spun out very thin, and nothing seems quite worthy of the dignity of covers unless it be the chapters on Whistler's technical methods in producing the now famous Venetian etchings. Here Mr. Bacher, an accomplished etcher himself, writes with authority, and adds something to Mortimer Menpes's abundant memorabilia of a similar sort. The picture of "Jimmy" running the nitric acid over an unbanked plate is vivid and instructive, suggesting his extraordinary dexterity. Mr. Bacher presents many of his own etchings of Venice, made during his association with Whistler, and if the contrast with a better known "Venetian set" is a bit damaging, Mr. Bacher's firm line bears reproduction far better than the filmy meshes of the Whistler prints. There are facsimiles of notes by Whistler and an interesting photograph of the Renaissance portal portrayed and glorified as "The Doorway." The book will supply a welcome footnote or two for the authoritative memoir of Whistler. Meanwhile, the reproductions of many of the Venetian etchings, each in two states or more, and the story of the Traghetto plate (p. 165f.) may be useful to those who believe Whistler's magic was exempt from painstaking.

Under the title "Ur-Engur: A Bronze of the Fourth Millennium in the Library of J. Pierpont Morgan" (New York: Frederick Fairchild Sherman), C. H. W. Johns of Queen's College, Cambridge, gives "a brief treatise on canephorous statues," including an examination of the Morgan statuette. After describing the Greek canephorous maidens, the "basket-bearers" (who officiated in great festivals), and their artistic representations, he enumerates the similar Babylonian and Assyrian figures, and from a comparison of the two groups concludes that probably the Greek custom is of Semitic origin. The Semitic figures are of two sorts: in one the materials in the basket appear to be for building; in the other they are supposed to be for sacrifice. It is to the latter class that the statuette under consideration belongs. It was bought by Mr. Morgan in 1907, in Paris, and was said to have come from Nippur, and its dedication to Ellil, the god (the Bel) of Nippur, supports this view. It is thirteen and a quarter inches high, and is regarded by Mr. Johns as excelling all similar Semitic figures in grace of pose and feature. He gives an account of the works carried on by Ur-Engur (whose inscription it bears, and who is now regarded as the founder of the dynasty of Ur), with some remarks on the uncertainty of the reading of his name, and on the difficulty in fixing his date, which, however, in any case is very early. Further discussion of the subject may be found in an article by B. T. A. Evetts, in the Proceedings of the Society of Biblical Archæology for February 3, 1891. The material so far discovered does not throw much light on the origin of the basket-bearing, and the derivation of the Greek custom from the Semitic must for the present be regarded as only an hypothesis.

Paul Neff of Esslingen announces for the near future "Volkstümliche Kunst in Schwaben," prepared by Paul Schmohl for the Württemberg Zentralstelle für Gewerbe und Handel, with the coöperation of Prof. Eugen Gradmann. The work will contain more than 500 characteristic reproductions of the best architecture of the country.

The excavations of the Roman Theatre, which was discovered in 1899 in the basement of the Palazzo Reale, at Turin, have been completed during the past summer. The ruins extend through the garden to the Via Venti Settembre, along which, it is now seen, a broad arcade ran. The walls project but little above the level of the street, yet enough remains to preserve the entire ground plan, with the entrances and steps. No inscriptions have been found, except those previously announced. A broad avenue is building, which will lead from the Venti Settembre to the new wing of the palace. When this avenue is completed, the excavations will be opened to the public.

The prizes of the Roux foundation have been announced by the French Institute. In painting, the first prize (5,000 fr.) went

to M. Jacquier, the second (2,700 fr.), to Mlle. Rondehay, and the third (2,000 fr.), to M. Lefeuvre; in sculpture, the first prize (5,400 fr.) went to M. Gaumont, and the second (3,000 fr.) to M. Villard; the first in architecture (2,700 fr.) to M. Tournon, and for miniatures the first (1,000 fr.) to Mlle. Routchine.

The death of Charles Landelle, painter of portraits and of Oriental scenes, removes one of the oldest exhibitors at the Salon, where his first picture was shown in 1841. He was born in 1821, and studied under Delaroche and Ary Scheffer.

The death is also announced, at the age of fifty-seven, of Frédéric Houbron, a member of the Société Nationale des Beaux-Arts, and well known for his clever water-colors.

The Grolier Club of this city will hold an exhibition of etchings by Joseph Pennell November 6 to 21.

The *Athenæum* gives an account of important excavations made by Prof. J. Garstang of Liverpool University at Saktjegözy, in Asia Minor, about thirty miles west of Aintab due north of Aleppo. He has discovered a temple surrounded by a wall two metres thick, the main gate of which is decorated with lions and composite figures consisting of winged human-headed quadrupeds with tails terminating in birds' heads. These and other figures showed unmistakable traces of Assyrian influence in their design, and the deities represented may be actually Assyrian. But the treatment is different from that of any Assyrian sculptures known, and indicates that the work is probably that of Hittite artists about the eighth century B. C. No inscriptions were found. Within the temple walls lies a great mass of broken pottery, with a neolithic floor at the bottom. Among the fragments are some of the Cretan ware, known at Minoan.

Finance.

Dr. Stuart Daggett's "Railroad Reorganization" (Houghton Mifflin Co.) is the fourth volume in the series of Harvard Economic Studies. It treats of seven of the more important reorganizations effected between 1892 and 1896, as well as of the notorious performances in Rock Island in 1902. The seven earlier reorganizations are those of the Baltimore and Ohio, the Erie, the Philadelphia and Reading, the Southern, the Atchison, Topeka and Santa Fé, the Union Pacific, and the Northern Pacific. The author describes the conditions that caused the embarrassment of each road, explains the problems encountered in reorganization, and discusses the readjustments finally effected. Interesting, in view of last spring's developments, is his criticism of the Erie Road:

> The earnings have greatly increased [that is, since 1896], its capitalization has grown in less proportion; but it has not yet a sufficient margin of surplus earnings to meet a decline in prosperity without serious misgivings.

The Rock Island reorganization of 1902 is shown to have been a mere stock-jobbing operation, by which the road "has lost its former stability, and must await a period of lessened earnings with serious apprehension." The concluding chapter discusses excellently the general problems involved in the reorganization of railway properties. Dr. Daggett has made a careful study of an important subject, and has produced a useful volume. It is no criticism of his work to add that "inside" information not yet available to one in Dr. Daggett's position and time for further tests of the stability of certain railway systems will be needed before the final word can be said upon some of the aspects of railway reorganization.

The Macmillan Co. has brought out a third edition of "The Modern Trust Company," by F. B. Kirkbride and J. E. Sterrett. The only material change from the first edition (see the *Nation* of February 8, 1906, p. 118) seems to be the addition of two pages to one of the appendices. In welcoming the first edition we called attention to the failure of the authors to deal adequately with the very important subject of State regulation of trust companies, and expressed the hope that this deficiency would be remedied in subsequent editions of what promised to be, and has actually proved, an exceedingly useful volume. We observe with regret that no effort has been made to improve the book at this point, and this in spite of the fact that the events of the past year have greatly increased interest in the subject. It is necessary, therefore, to repeat our former criticism that, as the book stands, "it fails to give us all that we have a right to expect from a comprehensive treatise upon trust companies."

BOOKS OF THE WEEK.

Christ Legends

By SELMA LAGERLOF, author of "The Wonderful Adventures of Nils." Translated by Velma S. Howard, with decorations by Bertha Stuart. $1.25 net.

Hamilton W. Mabie in the *Outlook:* "Selma Lagerlöf is regarded by many students of Swedish literature as the foremost living Swedish writer. She is certainly the most popular Swedish author and there seems to be a feeling that when the time is ripe, she will be awarded a 'Nobel' prize."

One of the publisher's advisers says: "Full of charm and beauty. They are clear, vivid, picturesque, and very human . . . a really well written book for younger people."

HENRY HOLT & CO. 34 W. 33d St. New York

Now Ready

Memoirs of Comte de Rambuteau

Translated from the French by J. C. Brogan. With Notes and Introduction by Georges Lequin. 8vo. Fully illustrated. $3.50 net.

A record of the experiences of the writer, who was Chamberlain—and an admirable master of ceremonies it would seem—to Napoleon I. In it the first Emperor of the French is seen in his familiar and everyday relations, and a detailed and animated account of the way in which the Court informally amused itself or entertained in public and official functions is given. For the light these memoirs throw upon the character of Napoleon and those about him, and for the picture they present of French society, they are well worth the attention of all interested in the social life of the period with which they deal, and of the great personages who played their parts in it.

THE AMERICAN COLLEGE

By ABRAHAM FLEXNER

A remarkable study in contemporary education, citing a recent report of President Pritchett of the Carnegie Foundation that the American college shows serious weaknesses, and contending that the college is PEDAGOGICALLY DEFICIENT, and that students emerge "flighty, superficial, and immature." A chapter entitled "The Way Out" proposes a definite and feasible program for reform in both college and secondary schools.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 12, 1908.

The Week.

Mr. Taft's speech at the dinner of the Commercial Club in Cincinnati last Thursday night was excellent. The mixture of good humor, modesty, and serious purpose was admirably fitted to produce the right effect. Mr. Taft said nothing new, nothing which he himself had not said many times during the campaign, but the reiteration, not by a candidate but by a President-elect, has great weight and hits the temper of the country perfectly. People will be confident, after the election, that what they hoped before is true—namely, that the new President is a calm and sagacious man, who will preside with firmness, yet with intelligence and caution, over a nation facing a struggle back to normal conditions in industry and finance. We believe that recovery was on the way, in any event. Bryan's election would probably have checked it for a time, how long it is impossible to say. Yet there can be no doubt that Mr. Taft's success at the polls, with his reaffirmation of his determination to allow no obstacle to be placed in the way of honest enterprise, will help the natural process of restoration. Sentiment has so large a place even in business affairs! If men fear that they are going to be ruined, often they *are* ruined. On the other hand, if there is a general expectation of better times, the higher courage and the brighter hope will do much to make the times better. It is in the light of these elementary truths that Mr. Taft's speech appears so reassuring.

Not the least gratifying feature of the election was the complete frustration of the hopes which Bryan pinned to the labor vote. People express surprise that organized labor could not be "delivered" by Gompers *et al.*, but when was it ever delivered? The uniform history of attempts to make or break candidates at the word of command by labor leaders, shows that, in this country at least, the thing cannot be done. Rival leaders always jealously spring up to contest the right to speak for the organization; the members suspect personal motives or pecuniary corruption; divisions and recriminations ensue, and the whole affair breaks down. Gompers ought to know, for he has tried the same plan before, against Mr. Littlefield and other Congressmen, and abjectly failed. His pitch of arrogance this year was only preliminary to the deepest humiliation he has yet experienced. He led Mr. Bryan to think that 80 per cent. of the labor vote would go to the Democratic candidate. No precise figures can be had, but judging by this city, nothing like that proportion went to Bryan. All of his grovelling before organized labor profited him nothing. Judge Taft's manly stand was both better morals and better politics.

Mr. Hearst cannot even claim to have defeated Bryan and Chanler; for the little fringe of votes which his personally conducted Independence League cast was negligible in the large result. This is a severe blow to an impudent charlatan, who has been boasting about the irresistible political power of his newspapers. He and his hirelings have talked as if, when his various newspapers spoke, 5,000,000 readers said amen, and 1,000,000 voters rushed to record their approval at the polls. That humbug is now exploded.

President Roosevelt did well to defer till after the election any public utterance on the attempt to appeal to religious prejudice against Mr. Taft in the campaign. This was a force subtly at work in many parts of the country, particularly in the Middle West, and if the result had been close, might easily have turned the balance against Mr. Taft in critical States. The fact was well known to newspaper correspondents and other sounders of public sentiment. They found many acknowledged instances of pious Republicans who would not vote for Mr. Taft because he was a Unitarian, and they suspected the existence of many more. Yet this was an issue which could hardly be much talked about while the campaign was in progress. Openly to attack or rebuke the ignorance and intolerance which would transform a Presidential election into a test of orthodoxy, might only have made matters worse. Mr. Taft's complete silence on the subject was both dignified and well-advised. It all along remained true, nevertheless, that one of the strongest grounds for the hopes of Mr. Bryan's friends lay in the appeal which was quietly made in his behalf on the score that he was a devout Trinitarian. There never was a more plausible or fetching campaign document than one which was circulated by the million in the West, and which dealt with Mr. Bryan as "the squarest Christian I ever knew." One page had a picture of "the little church by the cornfield," where gospel hymns were often sung to the leading of "Mr. Bryan's clear baritone voice." There was no mention of Mr. Taft or of Unitarianism, but the appeal was all the more taking for merely showing how good a Presbyterian Mr. Bryan was, and how good a Methodist his wife. This document fell in admirably with the class feeling which it was sought to arouse in Mr. Bryan's interest; for in many Western towns and villages, a Unitarian is looked upon not only as an infidel, but an aristocrat. This whole play upon religious prejudice was most artful; and it is one cause more for rejoicing that Mr. Bryan's defeat was so overwhelming that no one can say a single State was won for him by an appeal that ought never to be made.

In dismissing the matter as "an outrage," the President seems certain that it is a "foul slander" to affirm that a Roman Catholic, otherwise well fitted ror the Presidency, could not be elected. We wish that the facts were so, but fear that they are not, as yet. Archbishop Ireland ought to be a good witness regarding anti-Catholic prejudice in politics; and he has recently testified on the other side. It is an ideal state of things which President Roosevelt assumes, not the actual world of inherited and inveterate theological animosities. They die hard. We have lately seen their ugly survival in England. And we strongly suspect that, if occasion arose in this country, we should see the unhappy spectacle repeated which Sydney Smith described, of politicians bawling that Protestantism was in danger, in order to get for themselves places and pensions. Yet the po-

sitions which the President lays down are impregnable. With no established church or religious tests in our government, a candidate's or a President's private belief, or lack of one, ought never to be urged against him as a political argument. To prove this, Mr. Roosevelt did not need to cite the miscellaneous religions represented in his Cabinet. It is clear that the President has the broadest and most comprehensive spirit, theologically. We might well sigh, "Oh, si sic omnes!" but the late campaign shows that all are not so, and that we have yet much to do in this country before religious suspicions and jealousies and intolerance are banished from our politics.

By their votes on the divorce law referendum the citizens of South Dakota have materially helped to clear the American name of the disrepute into which "divorce mills" have brought it. The scandalously lax statutes do not represent public opinion any more truly than the "jokers" in corporation laws do. Like the latter, they have been foisted upon the public by interested parties. Once on the statute-books, only organized effort could expunge them. The evil had to cry out on the street in order to provoke its cure. It has cried out, and the South Dakotans have voted that divorce-seekers must live a year in the State and present their cases only at regular terms of the court. Although the new law seems to vary in some important details from the uniform statute drafted by the national divorce congress, it approaches the latter in spirit and effect. The first conspicuous result of the campaign against easy-going morality is surely not the last.

We fear that Representative Fowler of New Jersey is not the Jack to kill the Giant Cannon. A man of indisputable ability and of value in the House in matters financial, he cannot be compared in personal popularity to the "Old Man," as the Speaker is affectionately called. Indeed, as matters stand now, it will take hard work to defeat Mr. Cannon. His personal friends return to the House in troops, with the appeal, "Do not break the old man's heart by turning him down." It will be pointed out that his constituents rallied to him in extraordinary numbers, and that this is probably his last term. Moreover, the Speaker will have the remainder of the existing Congress in which to strengthen his fences. Even Senator La Follette, who has campaigned openly against Cannon, and is pushing Congressman Cooper of Wisconsin for the Speakership, only ventures to prophesy that Mr. Cooper will "eventually succeed Cannon." Yet one part of Congressman Fowler's letter asking for votes against Mr. Cannon, has much force. Another term of so narrow and reactionary a Speaker would surely endanger the next House. In spite of the great sweep for Taft, the Republicans lost eight or ten Representatives; and in the elections of 1910, might easily lose control of the House entirely. This would prevent Mr. Taft as President from having a Congress in sympathy with him politically.

New York's United States Senators have been such a public disgrace that no change can fail to be for the better. Compared with Platt and Depew, Woodruff thinks that even he would appear a statesman. This has been the danger, regarding the election of Platt's successor. As in the kingdom of the blind the one-eyed is king, so after these years of horrible misrepresentation of the Empire State in the Senate at Washington, there was a chance that some brainless product of machine politics might set himself up as a fit candidate, only because he was not so unspeakable as Platt. But the confident mention of Secretary Root's name has already been taken, not only in the State, but throughout the country, as promising to end the intellectual and moral barrenness of New York's representation in the Senate. For sheer ability, no man stands higher in Washington. The keenest foreign ministers are more impressed by his mental power than by that of any other member of the government. In two high offices—the War Department and the Department of State—he has displayed his qualities of broad comprehension and penetrating analysis, combined with an extraordinary business faculty. In point of equipment for duties in the upper house—provided his health be firm—Mr. Root would overtop any Senator New York has had since Evarts. The only questions to be raised are those respecting his political eligibility and his activities and affiliations as a corporation lawyer. But whatever the final choice of the Legislature, the discussion of the Senatorial succession has done good. It has brought out the fact that the people are in no mind to see the Taft and Hughes victory in this State "tapered down to Tim," or any other nonentity. The signs are bright now that New York will insist upon having a Senator who can hold his head up among his fellows, and enable her to hold her head up among her sister States.

The murder of ex-Senator Carmack because of editorial utterances displeasing to the murderer and his father, is but another illustration of that intolerance of criticism, free thought, and free speech which remains in the South as a heritage of slavery. It is five years since Mr. Gonzalez, editor of the Columbia, S. C., *State*, was similarly butchered by Lieut.-Gov. Tillman; and since then there have been other cases, in which the principals were of lesser political or social importance. Sooner or later, the whole South must come to a realization of the injury such crimes do, for the progressive minority is already awake to the facts. But as this latest murder shows, the road to enlightenment and tolerance is yet long and arduous. The newspapers of last Tuesday reported that twelve men had "met death in Birmingham, Alabama, by pistols within the last eight days." The county in which this city is situated is known to fame as having annually more murders than occur in a year in the entire British Isles. Of what use are courts and law officers if private vengeance is to be supreme?

The conviction of Charles W. Morse and Alfred H. Curtis, on the charges of misappropriating funds and falsifying accounts in the National Bank of North America in this city, is a fit sequel to the panic of 1907; and the exemplary sentence of fifteen years' imprisonment, for Morse, the chief offender, is severe but, we believe, salutary. The penalty has not been hastily imposed in the heat of excitement and anger aroused by the panic itself. A year has elapsed; and the fury which is determined to find some scapegoat, no matter whom, has died out. Mr. Morse did not cause the panic, in the sense that no such disaster would have occurred without his peculiar activities; but that

those exploits immediately precipitated the catastrophe there can be no dispute. His punishment should be a sharp warning, not only to speculating bank owners and officers, but to financial adventurers like those who on the witness stand last month confessed with cynical effrontery their participation in Morse's speculations, at a time when every well-informed man knew how Morse had obtained the money for these ventures. We believe also that the conviction and sentence carry their warning to others than the group of stockjobbers who victimized this particular chain of banks, and shared in this particular gamble on the Stock Exchange. During seven years past, the public has had repeated evidence of use of fiduciary funds, directly or indirectly, to promote the reckless speculations of millionaire operators who control great institutions. The diversion of life insurance surpluses to such base uses is an old story; but it is not the only one. We do not suppose that the officers of powerful banking institutions which equipped the great Wall Street speculations of 1899 and 1901 and 1906 resorted to the clumsy practices of Morse and Curtis; but the moral responsibility of these bankers is much the same as that of the unlucky culprits in the Bank of North America, who transgressed the law and were caught.

The death of ex-President Palma will not ripple the political waters in Cuba. A man of mediocre ability, he was chosen President because he appeared to be safe and sane, and, owing to his long residence in the United States, free from party entanglements. The collapse of his government in the autumn of 1906 was really pitiful. It is only fair to say, however, that his life had been threatened by men now living in Havana, and that his Cabinet had proved treacherous to him. Perfectly honest himself, he could not detect the dishonest even in his immediate neighborhood. But as the work of reconstructing Cuba has gone on, the Americans who are in charge of it have been compelled to ask themselves whether the impossible was not demanded of Palma. Certain it is that the reorganization by Gen. Wood had not been thorough enough. What Cuba needed most of all was modern laws under which the people might become accustomed to free institutions. Now under Gov. Magoon the right laws have been drawn, but our troops are to leave in February before the American officials themselves have had a chance to see how the laws work in practice. It will take a President of great force and ability to run the new machinery and keep the repaired ship of state afloat.

Whenever Europe is passing through a critical time, the Guildhall speech of the English Prime Minister is waited for with peculiar interest. Mr. Asquith's remarks Monday night, at the inauguration of the new Lord Mayor of London, were distinctly reassuring. He forecast the speedy rolling away of the war clouds in the Balkans. With friendly words for Turkey and Austria, Russia and France, he did not fail to assume a conciliatory attitude towards Germany. The Prime Minister bore testimony to the spirit of friendship which the Kaiser had shown on his visit to England a year ago, and also in all the diplomatic negotiations that had followed, and protested against the notion that there was any movement in Europe to "isolate" Germany. This, however, will not prevent Germans from believing that they are isolated, diplomatically; and they will see fresh proof in the significant sentence appended to the French note on the Casablanca affair, that Great Britain and Russia were aware of the contention of France, and cordially supported it. All the sharper, therefore, have been the questions put to Prince Bülow in the Reichstag. To the proceedings and speeches in that body, the attention of Europe is now transferred.

"I represent the better minority, the Germans who love peace," declared the Kaiser in his famous interview in the London *Telegraph*. But his most devoted followers, the Conservative party, emphatically deny that he represents them at least. He cannot dismiss Baron von Marteuffel's stinging reproof as the malevolence of an enemy. The men who have stood by the Kaiser through thick and thin "express the reverential wish that greater reserve be displayed in the future" in the Imperial utterances, "which not infrequently bring our foreign politics into a difficult situation." And when in the Reichstag on Tuesday he was the general target for a fierce assault, the Chancellor was forced to reply that the Emperor would in future "exercise the reserve which, in the interest of a uniform policy and the authority of the crown, is indispensable. If this proves not to be so, neither I nor any one of my successors could take the responsibility." The Kaiser seems temperamentally incapable of heeding this warning, but he can scarcely fail to perceive in it the drift of his people toward responsible parliamentarism. If his meddling with foreign affairs is at last frightening even those who worship him as the appointed of God, the chances for a ministry responsible to the Reichstag have suddenly improved. If that comes, the Kaiser may flatter himself that he did more than anybody else to accomplish such a result.

In dealing with the difficult question of the unemployed, careful investigation and thorough sifting of vague assertions are the beginning of wisdom. This was well shown in the debate in the Commons, on the government's proposals for the relief of the unemployed. Keir Hardie produced some astounding figures of the number of men out of work. By a system of deduction from reports of trades unions, he concluded that 750,000 skilled men were out of employment. But it could "safely be set down," he said, that the number of unskilled workmen was twice as great, namely, 1,500,000. This calculation gave 2,250,000 men out of a job; and by a "very moderate estimate" of those dependent upon them, the appalling total of 6,750,000 as the real number of people involved. But these figures were riddled in the reply by John Burns. He showed that every test of statistics discredited Mr. Hardie's swollen statement, and contended that, to accede to the demands made in the name of humanity and the duty of the state, would "make for universal bankruptcy in the interest of universal loafers." Mr. Balfour intervened in the debate to charge that the high percentage of the unemployed was "largely due to the want of confidence inspired by the government." But Mr. Asquith silenced him by showing that the figures were "much higher" in 1879, under the Tory government of Lord Beaconsfield, and also in 1887 when Salisbury was Prime Minister.

A TRIUMPH OF INDEPENDENCE.

That the election of 1908 establishes a high-water mark of independent thinking and voting, is, all in all, its most gratifying feature. If the returns mean anything, it is that the old cry of "the party, right or wrong," has lost most of its potency. Of this fact there is evidence on all sides. Every one is acquainted with life-long Republicans or Democrats who for the first time supported candidates of another party. The old fear of splitting a ticket has disappeared—witness the extraordinary variety of ballots which delayed the count in Ohio. The man who deliberately bolts his party's nominees is no longer stigmatized. The respectability of independence is now well established.

The wholesale voting against Bryan in the four States which went for Taft but chose Democratic Governors is, of course, the most striking indication of the progress we have made since the Blaine-Cleveland campaign of 1884. The voters who have grown up since then cannot realize the bitterness with which the original Mugwumps were assailed for their "treachery" to the Republican party. Carl Schurz, George William Curtis, and the other leaders of the movement were vilified from one end of the country to the other. In stalwart party organs, like the New York *Tribune*, they were described as "perverts" who had "set up a new standard of private morality and civic virtue." Such attacks can no longer be made on the armies of those who choose their candidates because of character rather than party tags. No newspaper to-day would, like the Chicago *Tribune* of 1884, speak of political independents as "brawling Pharisees and canting hypocrites." As a matter of fact, too, the influence and circulation of the independent newspapers have grown steadily, and it is the hidebound party organ which to-day is held in contempt.

But the extent of the independence displayed in this election is more significant than the mere vote against Bryan. For it must be remembered that, if there was much bolting in 1896, there was then great public excitement; the duty of defeating Bryan was urged as an act of the highest patriotism. This year there was no such appeal. The vote against Bryan was not due to any single and threatening heresy. It was a deliberate verdict upon the man himself, all of his beliefs, and his character, as revealed during the last twelve years. We should have had every reason to be proud of the electorate's discrimination and judgment had we nothing to record beyond this anti-Bryan vote. But many other instances may be cited to prove the emancipation of the voters. In almost every State, the man behind the ballot proved his ability to see through the pretences of demagogues, the wiles of politicians, the humbug of partisan pleas, and to act for himself.

The most amusing example comes from Georgia, which had a Vice-Presidential candidate in the defender of lynching, John Temple Graves. Time was when the Georgia newspapers displayed considerable uneasiness over the Hearst-Hisgen campaign. But when the votes were counted, Mr. Graves rejoiced in the suffrages of precisely *eighty-five* of his fellow-Georgians. More inspiring was the success of Judge Ben B. Lindsey, in Denver, against both machines, all the bosses, and corrupt corporations by no less than 10,000 votes. The choice in Cincinnati of Henry T. Hunt, a Democrat, and a graduate of Yale, less than thirty years of age, as prosecuting attorney, in the face of the opposition of Boss Cox, showed that there, too, the rascals could not carry off a minor office by howling for the national ticket. In Delaware, the virtues of a minor candidate were recognized in the hurly-burly of a Presidential campaign by the choice of a Democrat, Andrew G. Gray, son of Judge Gray, as attorney-general, in the face of a Republican majority of 2,500. In New Hampshire, Taft received 20,000 majority, but Quinby, the machine candidate for Governor, only 5,000. In Michigan, Taft ran 127,500 votes ahead of the Republican candidate for Governor; and in Illinois 175,000 votes ahead of Bryan, while Gov. Deneen had but 20,000 more than Adlai E. Stevenson. In Missouri, conditions were reversed: Hadley, a Republican, was elected Governor by 17,000, while Taft went in by only 4,200. Here in New York, aside from the triumph of Hughes, the election to Congress of Senator Foelker, and the defeat for re-election by 800 votes of Senator Wemple, who opposed the anti-gambling bills, are pointed illustrations of the new political conditions our bosses find it so hard to understand. Wemple was beaten by 800 votes in a district that went 4,000 for Hughes—plain proof that he misrepresented his constituency last spring. Indeed, we could fill several columns with cases that are quite as striking.

Surely, these results assert anew the vigor of our citizenship and the essential wisdom of our electors. They should afford fresh inspiration to reformers everywhere by their convincing demonstration that American voters are exercising more intelligence and discrimination than ever before.

THE DEMOCRATIC PARTY.

Talk of reorganizing the Democratic party is inevitable after such a defeat. Little of it, however, has gone beyond generalities and platitudes. These it is, of course, difficult to avoid. When you say that, in a country where government by party is established, there is need of a strong Opposition, to which rule can safely be entrusted in case those in power prove recreant, you have merely stated an undisputed thing. Everybody agrees to the principle. It is only over the application that differences arise. Yet we must be concrete—even personal—if we are to get on a single step; and granting that, for its own sake and the good of the nation, the Democratic party ought to be strengthened, the first question is plainly that of leadership. It is necessary to decide, at the start, which Democratic leaders are to be cherished and followed, which to be discarded.

First among the latter, every clear-eyed Democrat places Mr. Bryan. The demonstration is complete that his party can never be restored to anything like its old strength so long as he continues to clutch the leadership. He said last week that he could not go out of politics, if he wished. That may be true; for even if, as has been suggested, he turn preacher and become a Methodist bishop—and a splendid one he would make!—he would still be a politician. But there ought to be some way of preventing the blight of his Presidential candidacy from defeating his party in advance once more. If Mr. Bryan were the devoted Democrat he professes to be, he would take himself out of the way. But since such self-abnegation is not to be expected, the South, in this matter, should take a prompt initiative. The Southern States are prac-

tically the only ones left in the Democratic electoral column, yet it is probable that nowhere is Mr. Bryan more distrusted and disliked. Southern leaders speak of him with the greatest bitterness, yet in three campaigns they have lain down before him. It is now time that they made a stand. Their plain warning that he can never again have the votes of Southern delegates in the national convention, would go far toward removing the incubus of his possible candidacy.

Coming nearer home, the need is urgent of getting rid here in New York of the men who have aspired to lead, but who have actually wrecked, the Democratic party—the brutal and illiterate Conners, the treacherous and greedy Murphy. If these creatures had been successful, they would have remained abhorrent to honest men; defeated and discredited, they should speedily be ousted from party control. In their case, reorganization of the Democracy means something like fumigation. Thousands of Democrats would hail the expulsion of such vermin. Some of them, we understand, are already conferring about the best way in which to tackle the job. The lately and quietly formed "Cleveland Democracy" in this city seems to have been intended not merely for the campaign, but for the time of party purification afterwards. The work must be undertaken by somebody. Just as Democratic success in the nation is impossible with Bryan at the head of the party, so is it in New York until Conners and Murphy be made to walk the plank.

Signs of party cheer are not wanting in the West. In the very moment of repudiating Bryan, the Democratic party gained several Representatives in Congress, with one United States Senator, and won notable victories in critical gubernatorial contests. The election of Judson Harmon as Governor of Ohio shows how Democratic and independent votes can be got for a man of ability, character, and steady convictions. In Indiana, too, the Democratic party proved that it was regarded as an eligible alternative to the Republican, when the people desired to rebuke and expel the latter. Gov. Johnson in Minnesota displayed his extraordinary hold upon the confidence of the best people of his State, by winning his reëlection with a majority of 27,000, although the State went for Taft by 90,000. If either Johnson or Harmon had been the Presidential nominee in place of Bryan, the story of last week would have been very different.

The moral of their success is the lesson for Democratic reorganizers. What is wanted is, first, clean and enlightened leadership, such as Gov. Johnson's or Judson Harmon's, and then a clear and honest appeal to the average decent citizenship. We have had enough of trying to win by truckling to the labor vote, or scheming to get the gamblers' vote, or boasting of the support of ruffians. On top of disgrace, that has only brought defeat. To reorganize means to exorcise the evil men and the evil doctrines which have steadily pulled down the Democratic party from its prestige under Tilden and Cleveland.

THE BATTLESHIPS AGAIN.

It is difficult for a layman to follow the ins and outs of the battle of the battleships. Not long ago it was announced that the Newport conference of naval officers, called last summer to take action on the charges of defective construction brought by Henry Reuterdahl and Commanders Sims, Hill, and Key, had found most of the complaints well-grounded, but had refused to order radical changes because of cost and delay. An official summary of the findings, published on Saturday, must, however, have produced on the average man the impression that the plans were, in the main, satisfactory, though in a number of specific instances the critics of the present plans were upheld.

The fact is that in the designs of the new Delaware and North Dakota many defects were admitted; but to remedy them all would have cost an enormous sum, particularly in the case of the North Dakota, which was launched Tuesday, and would probably have delayed the ships for a year. For instance, the conference voted that the five-inch battery of this vessel was too low to be used efficiently in "*ordinary trade-wind weather*"; yet this is the battery relied upon for defence against torpedo attacks. Commander Key's particular plan for the mounting of these guns was rejected, but his criticism that they were also protected by armor that was too thin, as well as wrongly placed, was upheld; for the conference recommended that in the Florida and Utah, the latest monsters, there be eight inches of armor instead of five. And Commander Key's contention that the No. 3 twelve-inch turret should not be set between the engine and boiler rooms, with the powder magazine completely enveloped in steam pipes, was sustained to the extent of urging that in future designs no magazine be allowed so close to steam pipes. The conference also sided with Commander Key in the matter of splinter-proof armor for ventilators and the inferior calibre of the main battery guns as contrasted with those of the newest English ships; and condemned the location of the twelve-inch turret No. 4 on the North Dakota and the Delaware.

As to the armor belt, Commander Key was not supported in his argument that it should be five feet below the water-line, and at least eight inches above. The conference voted to place the belt six feet below the water-line, but adopted the following resolution:

> Resolved, That the lower edge of the main water line armor belt should be placed with reference to that water line at which the ship is most likely to float when engaging in battle.

The significance of this decision appears from the fact that Rear-Admiral Evans maintains, with Mr. Reuterdahl, that the armor belt was too low, and Rear-Admiral Sperry reported that several of his ships show an overdraught of about two feet at full load. Where does this testimony leave Rear-Admiral Brownson and the other chiefs of bureaus who have so strenuously maintained that our vessels were beyond improvement? That officer asserted on December 21 last year that the Reuterdahl charges were "ill-natured, ill-considered, and absolutely untrue in all important particulars"; and added his belief that "our water-line armor theory and practice are correct." He will hardly ascribe to ill-will or ill-nature the fact that 90 per cent. of the officers of Rear-Admiral Sperry's fleet approved the criticisms of Commander Key. To the outsider, then, the result of the Newport conference seems clearly to indicate that the honors of the engagement rest with the critics; and the votes of the conference advising no alterations in plans of ships now under way are merely a refusal to interfere seriously with their progress and to increase their estimated cost.

In view of these facts, it is vain to affirm, as some of the newspapers do, that the North Dakota is so infinitely superior to the Dreadnought as to make comparisons impossible. Her armor and two of her turrets are misplaced, a magazine is encased in steam pipes, her secondary battery is unusable in ordinary trade winds, her armor for those guns three inches too light, her ventilators and uptakes insufficiently protected, her main guns admittedly inferior to those of English ships of her class. To apply superlatives to such a ship is ridiculous—particularly as she is to have only a twenty-knot speed. The English Invincible made twenty-eight knots on Saturday for a period of eight hours, and has run twenty-five knots an hour with only seven-tenths of her power. But, then, as we are giving our new torpedo-boat destroyers only 29½ knots, from three to five knots less speed than the new British and German boats of this type, it doubtless seems to our mossback Navy Department quite proper to have battleships eight knots slower than those of the British Admiralty.

THE RETIREMENT OF PRESIDENT ELIOT.

The announcement that President Eliot is to retire next March will come as a shock to thousands of persons who have never even seen University Hall. The country has come to look upon him as a great natural force, like the Gulf Stream, unwearied by the flight of time, unworn by incessant activity. Yet at the age of seventy-five even the strongest man is entitled to throw off some of his burdens. This is not the occasion to review President Eliot's career as a whole; for he has, we trust, years of beneficent toil still ahead of him; our purpose is merely to touch on a few of the aspects of his administration at Harvard, and the causes which have made his the most notable career in the history of American education.

President Eliot would be the first to point out that he was fortunate in both the place and time of his labors. Harvard was the oldest college in the United States; it had the longest tradition of culture; it was at the centre of the most highly educated and thoroughly civilized part of the Union. Then, too, he assumed the presidency in 1869, just at the beginning of that period of enormous agricultural and industrial expansion which followed the civil war. America was growing rich rapidly, and Harvard has shared this prosperity. Other colleges have also had their part in this general advancement: why has Harvard taken the lead? Why is it the foremost university in America to-day? There can be but one answer: Because President Eliot has displayed in extraordinary measure the qualities of a great leader. The graduates of Harvard, in their letter on his seventieth birthday, said: "With prophetic insight you anticipated the movements of thought and life; your face was toward the coming day." This is perhaps the best definition of a leader—a man who sees in the long march of events the coming of the inevitable, and sets himself to hasten it.

President Eliot foresaw the coming of the elective system. It had, indeed, already come, here and there, in a limited way. Many educators, however, were not aware of the fact; others caught half-glimpses of the movement and stubbornly—shall we say blindly?—resisted it. He perceived the impending revolution and unhesitatingly cast his influence for it. He was quick to observe that, with the development of scientific research in its many branches, with the quickening interest in historical studies and economics, in the fine arts, and in modern languages—that under these circumstances the old hard and fast curriculum was bound to break down; that it had broken down. No college could pretend to minister to the intellectual needs of mankind which confined its students to the narrow round of the classics, mathematics, cut-and-dried philosophy, and a smattering of physics and chemistry. The new wine was bursting the old bottles. President Eliot dared greatly. Under a storm of criticism he boldly converted Harvard into an experimental laboratory for the application of the elective system. That experiment has not yet ended. We may not have mastered all the principles involved; we are still overwhelmed by the mass of details to be coördinated and subordinated. But whatever final results the centuries may bring, we can say now that President Eliot achieved a success which astonished his supporters and confounded his opponents. Practically all the colleges of America have followed the example which he set at Harvard.

The elective system is based on the theory that the best educational product is to be obtained only when student and teacher enjoy the widest intellectual freedom; and to this theory President Eliot has adhered with unswerving consistency. Indeed, he is often accused of pushing it to extremes. The student is allowed unrestricted range in the choice of courses; the professor's academic freedom has, as President Eliot himself once expressed it, been subject to only two limitations, "those of courtesy and honor." Then, too, in picking his faculty the president has followed a policy equally liberal. He has never shown that suspicion or dread of unusual intelligence, that predilection for mediocrity, which marks some of our heads of universities. He has selected the ablest men he could find, whether graduates of Harvard or not, and Harvard has thus escaped the blight of inbreeding. And all these policies have been carried out with wonderful executive skill—keen judgment of men, grasp of detail, foresight, patience, steadiness, and tolerance.

To find a man who can fill President Eliot's place is, of course, impossible. His attention to public questions and his utterances on such subjects as labor and its rights have made him the foremost private citizen of the United States. But it will take a long time for the next president of Harvard to establish such a reputation. Even the administrative work will have to be rearranged; for the giants who can lift the load to which his shoulders have grown accustomed are few. Nor are Harvard's problems all solved. The practical application of the elective system is full of difficulties. The system has been abused at Harvard and elsewhere. Small institutions of limited resources, ambitious to present an imposing list of courses in the catalogue, have sacrificed the instruction in the old studies with well developed disciplines, in order to spread the teaching thin over a broad field. If Harvard has been able to escape this form of enfeeblement and demoralization, it has had other troubles to contend with. Committees of the faculty are still trying to devise means by which students shall not divide and dissipate their energies in too many directions, or shall not slip

through on "soft" courses and practically avoid all study. These, however, are minor matters; for if Harvard can maintain a distinguished faculty, can make the conditions of life and teaching at Cambridge so attractive as to draw to service there the finest minds and characters in America, the rest will be comparatively easy. This, then, is one of the most formidable tasks of President Eliot's successor. To accomplish it will mean, as the letter of resignation puts it, both "greater labors and satisfactions."

RECENT GERMAN FICTION.

It is not often that one meets in current German fiction a work untainted by the decadent tendencies of the young generation, and yet in harmony with the spirit of the time. The latest novel by Carl Hauptmann, who is lecturing in this country under the auspices of the Germanistic societies, answers this description. Though four years the senior of Gerhart Hauptmann, Carl did not make an impression on the public until after his brother had reached the climax of his power in "Hannele." Those who read Carl Hauptmann's philosophical treatise, "Die Metaphysik in der modernen Physiologie" (1893), little suspected that his next production was to be a play that would rank him as a rival of his famous brother. "Marianne" (1894) established his position, and his second drama, "Waldleute" (1895), more than fulfilled the promise of the earlier play. "Sonnenwanderer" (1896), a volume of poetical prose, or a collection of lyrical sketches rather than a work of fiction, justified all claims of his admirers. In this book the intimate sense of nature and the strong emotional quality had a ring of sincerity which differentiated it from the writing of the majority of his colleagues; for, while their outlook upon the world was circumscribed by the metropolis and was based upon the teachings of Nietzsche, Carl Hauptmann had come into close touch with the simple folk of his native soil and in the primitive phases of their life had begun to trace the eternal problems of the human race. With admirable force he succeeded in embodying the occult powers of nature in the sinister figure of the blacksmith in his "Bergschmiede" (1901). Against the background of the never-ending struggle for daily needs he gave us curious glimpses of the inner life of the people in his book of short stories, "Aus Hütten am Hange" (1902). Alternating with what might be called prose poems of a strange, elusive beauty, his portraits of the peddler, the shepherd, and the vagabond in "Miniaturen" (1904) stand out with a realism convincing but never repulsive. Upon a sympathetic understanding of the common people is also based the novel "Mathilde" (1902), a simple transcript from reality of a life which, though not without sin, contains an element of dignity and nobility.

The latest work by Carl Hauptmann, "Einhard der Lächler" (Berlin: Marquardt & Co.), sounds a strong personal note. It is not difficult to trace in the art of the hero, a painter whose delicacy of line and color irritates his more robust masters, elements derived from the author's own sensitive art. Nor is it improbable that the philosophy at which Einhard arrives after the painful struggles of his youth bears some resemblance to the poet's own reading of life. Though the story opens with that conflict between father and son, the subject of many recent works which are not inappropriately styled tragedies of youth, the character of Einhard is strongly differentiated from that of other rebels against the traditions and conventions of family and school. Einhard Selle is not so much a child of modern culture as of nature: witness his frequent flights into the wilderness and the solitude of mountains or moor. Indeed, he comes late to his Plato and Spinoza. Not a saint, but just a man human enough to feel his kinship with the lowliest, Einhard Selle, the artist whose *chef d'œuvre* is his life, the sage who meets every phase of his existence with the smile of acceptance, is a character of a quality rare in modern fiction. Upon the large canvas of the two volumes the author has limned the figures of men and women in all walks of life with the firm and sympathetic touch of one who knows and understands. Einhard's father, the man of duty who had dreamed but once in his life; the worthy provincial lithographer in whose shop Einhard is to learn to walk the straight and narrow path; the teachers and students at the academy; the golden-haired Dorothea, whose matter-of-fact attitude disillusions the sensitive artist—all are striking delineations. The action of the story, it must be added, lags towards the end.

The most original work of fiction recently published in Germany is "Die Insel der Seligen" (Berlin: S. Fischer), by Max Burkhardt, novelist, dramatist, and critic. It is a book full of surprises. When the reader in an early chapter is treated to double murder and robbery, he expects a contribution to picaresque fiction. As the trial is recorded with an intimate knowledge of technical details, the book approaches the *Tendenzroman;* for the defendant is convicted and sentenced to the death penalty on purely circumstantial evidence. But on the eve of the execution a Cabinet crisis raises to responsible ministerial positions men who are opponents of capital punishment, and who substitute deportation to a criminal colony established on one of the Dalmatian Islands. There the convicts are free to live and administer justice among themselves. The climax is reached when the father of the humanitarian scheme, the Minister of Justice himself, falls into disgrace and is deported to the scene of his experiment. There he finds that, though he had denied the right of the state to kill, in his colony the individuals themselves resort to the death penalty for offences against life and property. Serious as is the problem involved, humor enters largely into the treatment, and makes the curious book fascinating reading.

Hans von Hoffenthal's new novel, "Das Buch vom Jäger Mart" (Berlin: Egon Fleischel & Co.), did not severely tax the author's inventive powers; it is a familiar story, but charmingly told. The titled land-owner, covetous of the peasant neighbor's strip of soil needed to complete the outline of his estate, is an old acquaintance; so is the stubborn rustic, who even in the face of poverty will not cede a foot that had belonged to his forefathers. Nor is the friendship between their sons a novel feature. The interest rests solely in the sympathetic unfolding of the character of the son of the peasant. There is no ranting against the prerogatives of the aristocracy and against army life; yet the experiences of this youth, Martin Insam, are not without a serious message. The very happy ending, however, is too gross a concession to the taste of the average reader. Another subject that enjoys considerable attention from German novelists of the day is the nobleman in peasant garb. Such is the hero of the posthumous work of a woman hitherto hardly known outside of the magazine world of her Swiss home, Frau Maria Schlumpf. "Der Weibermann" (Egon Fleischel & Co.) merits the appreciative introduction by Ernst Zahn; for it is a book of unusual strength and singular simplicity. It speaks well for the author's gift of characterization that the reputation of her hero as *Weibermann* rests upon far more solid ground than the charms of the conventional "ladies' man." He is the friend and adviser of the women of his neighborhood, because they intuitively recognize the force of his character, and feel that his arm is to be relied upon in the hour of need. He has strength without hardness. The woman who is his counterpart has more hardness than strength. Headstrong, haughty, and passionate, Crescentia obeys solely the voice of her pride, while Wolfgang is the man of duty, and, above all, duty towards others. There is a third remarkable character in the book—Frau Lisabeth, widow of the *Hochbühlbauer*, not unwilling to pose as the woman needing a man's help in the management of her affairs, and yet resenting Wolfgang's quiet, masterful ways when he assumes the tasks imposed upon him

by the deceased. The delicacy with which the author touches the eternal femininity of the sturdy *Hochbühlbäuerin* shows no little insight and admirable artistic tact. By far the most ambitious of these stories of rural life is Frau Clara Viebig's "Das Kreuz im Venn" (Egon Fleischel & Co.). Its five hundred pages suggest the large canvas and the broad treatment of her earlier works. Unlike "Einer Mutter Sohn" and "Absolvo te," this novel is concerned less with individual characters than with a whole community. Situated in a picturesque valley, with its vast stretches of lonely heather and silent pine forests, the town of Heckenbroich is periodically menaced by an epidemic of typhoid. But the simple peasant population and the native authorities protest against the establishment of waterworks, urged by a minority which is ready to accept innovations coming from a larger world. While the burgomaster places his trust in God and in the perfect wholesomeness of the waters of the Venn, and with his pious wife plans new and larger gifts to the church, the people drudge in the factory, and the convicts sent by the government to begin drainage work set about their tasks dumb and sullen as beasts beaten into submission. When the epidemic is finally over, the burgomaster is more popular than ever; for has not his wise economy saved the community from the unnecessary expense of establishing the waterworks? His trust in the power of the church, the only pillar of society, is stronger than before. Thus life in the village unfolds itself in scenes of striking contrasts, which give full play to the author's realistic manner.

Protest against the conventions of healthy bourgeois society is not a new note, but it enters unobtrusively yet effectively into the spirit of "Friede Wend," by Sofie Jansen (Egon Fleischel & Co.). The story is that of a child whose mother had trespassed against the hallowed traditions of her patrician family by marrying an artist. When the mother found that she could not strike root in the alien atmosphere of her husband's world in Düsseldorf, she returned with her child to the parental roof. The child, however, is made to suffer for the sins of the father it has never known. Friede feels that in the esteem of her numerous uncles and aunts, and even her grandmother, she is not on a footing with her cousins. When from her joyless girlhood she grows up to a hopeless womanhood, she is still thrust into the background, until one of the cousins, after long years of waiting, makes her his wife. But her child dies at birth, her health gives way, and she finally takes refuge in suicide. The strength of the work lies in graphic descriptions of life in the old house which seems a relic of the past, and is thus symbolical of the attitude of its inmates towards life. The ever-present family which is the chorus of Friede Wend's tragedy, presents a variety of types drawn from life with amazing skill. It is a first work that deserves notice. Margarete Böhme's new novel is no less original than her "Tagebuch einer Verlorenen," and is far more likely to be legitimately successful. "Apostel Dodenscheit" (Berlin: F. Fontane & Co.) is the story of a man who, like Friede Wend, has to suffer for the unfortunate marriage of his mother—the daughter of a Hamburg merchant-prince who had eloped with her dancing-master. The training which Kola Dodenscheit receives from the tutors appointed by his family and duly acquainted with his history, is of the kind that makes rebels. But, arrived at manhood and independent of the family, the rebel turns reformer. He who had never known happiness, now attempts to bestow it upon others. In his position as editor and lecturer in Berlin, that hotbed of new movements, he meets men and women equally devoted to ideals. Such types the author observes keenly and portrays admirably. The book is quite out of the ordinary both in matter and manner.

Among the very latest novelists to arrive, Otto Gysae shows a marked individuality. A seeker for unusual problems and characters, he has also evolved a manner of his own. He avoids the obvious as assiduously as Henry James, and presents his portraits of men and women and his situations in a similarly suggestive though sometimes irritating style—fragments of sentences, phrases apparently disconnected, isolated words which, when viewed alone, sound meaningless. Yet life pulses strongly through the pages of "Die silberne Tänzerin" (Munich: Albert Langen), and the men and women are of flesh and blood and enlist our sympathies or awaken our antipathy as if they were real and we were witnessing the grim tragi-comedy of their existence. Frau Ante, delicate, sensitive, an alien in the world of material comfort and moral complacency into which she has married, and Erik Termonde, who flees from that world into which he had been born to his bachelor home, the exquisitely appointed residence of a man devoted to a superior art of living, are figures one does not easily forget. Other portraits are sketched with a subtle touch of caricature. Martin Beradt, another newcomer, has some traits in common with Otto Gysae. His "Go" (S. Fischer) is as much the tragedy of a woman's soul as of a child's. Mother and son, of morbid disposition, live in a world the husband and father knows nothing of; for he is of the kind that sees only the gross material facts of life and craves nothing that cannot be grasped through the medium of the senses. It is not surprising that the real world which the boy finally enters when he is sent to school, involves him in bewildering and fatal conflicts that finally tempt him to suicide. Despite skill of narrative and characterization, this first work provokes regrets that the author should have chosen such a lugubrious subject. The ugly, the evil, and the morbid, cultivated by the literary revolutionists of the eighties from sheer reaction against their predecessors, like Wolf and Baumbach, is still a powerful influence with the young generation. While in all these books the characters are more interesting than the plot, in "Tröst-Einsamkeit," by Fedor von Zobeltitz (Egon Fleischel & Co.), it is the skilful invention that holds one's attention in spite of the tax upon the reader's credulity. The book contains, however, some fine bits of characterization. The chapters in the Dutch capital, where Graf Dahlum attends a family reunion and is made to feel like an outsider because he had settled in Germany, are delightful. The humor of the author makes even the improbable romanticism of the latter half of the tale palatable.

The stort story is represented by several volumes worth mention. Hermann Bahr, novelist, dramatist, and critic, like Burkhardt, calls his collection "Stimmen des Bluts" (S. Fischer). It affords glimpses into curious by-paths of the soul—morbid idiosyncrasies, inexplicable impulses, strange and appalling sensations. The characters are all more or less abnormal. Occasionally the tension is relieved by a touch of humor, as in "Lenke" and in "Erinnerungen," which is the most enjoyable of the sketches. But the dismal and the uncanny impression produced by the suggestion of some hidden sinister power—the voice of blood which is the voice of fate—prevails throughout; and the stories are not likely to appeal to any but the ultra-modern taste. Max Hochdorf properly calls his book "Dunkelheiten" (Egon Fleischel & Co.), for he, too, limits his efforts to the description of gloomy scenes and the treatment of psychic, if not psychopathic, problems. One of the tales, "Arete," with the scene in Athens, and the main characters an artist monk and his sinful model, is worked up to a fine dramatic climax. "Der Stoiker" is gruesome; "Das Wunder der Mona Erika" suggests Gottfried Keller in the vigorous and realistic treatment of the romantic subject. Max Grad, one of the cleverest writers of short stories among the women of Germany, is sane and sincere, and rarely strays into the labyrinth of exceptional problems. Her tales of ordinary people and ordinary lives are told with simplicity and ease, and not without some fine poetic qualities. She has a fund of humor, too, and one of her most delightful characters is Factotum Wohl-

fahrt, a quaint figure in a little German university town. Her "Lebensspiele" (Egon Fleischel & Co.) is the most enjoyable of recent books of short stories.

A. von Ende.

NEWS FOR BIBLIOPHILES.

In the current number of the *Library*, W. W. Greg has a second article on "Certain False Dates in Shakespearian Quartos." His preceding article was noted in the *Nation* of May 21. He has now made drawings of the various watermarks (twenty-three in number) which he has found in the paper of various copies of the nine quarto Shakespeares under discussion. The only conclution he can come to is that the printer of the books was using up a most remarkable lot of small remnants of different kinds of paper. He has given up the, at first glance, very strong evidence of a cracked woodcut ornament, as he has found several instances which "estahlished the astonishing fact that the cracks in the block opened and closed and the breaks grew greater and less quite irrespective of the date of printing."

Vol. XIV of "American Book-Prices Current" is now in the hands of subscribers, a full month earlier than it has ever heen issued hefore. The volume is practically the same size as last year, 12,700 lots of books and autographs heing recorded. These have been selected from about 116,000 lots, described in 169 catalogues. The edition printed has been based, in recent years, upon the number subscribed for upon going to press, one hundred copies being printed in addition to the number actually subscrihed for. This year the edition is 675 copies.

The first part of the lihrary of Henry W. Poor, comprising 1,046 lots, will be sold by the Anderson Auction Co. of this city November 17, 18, and 19. The catalogue, 194 pages, contains about thirty reproductions of title-pages and bindings. A considerable number of important early printed hooks will be offered, among them the "Catholicon" of Balbus de Janua, printed at Mainz by John Gutenberg, 1460, but with the first fifty-one leaves supplied from a later edition; Cæsar, the third edition, Rome, Sweynheim and Pannartz, 1472; Dante's "Divina Commedia," Venice, Vindelin de Spira, 1477; the first edition of the "Imitatio Christi," Augsburg, Zainer, about 1471; Plutarch's "Vitæ Illustrium Virorum," Venice, Jenson, 1478, one of the most beautiful books from this press; and a Latin Bible, Nuremherg, Koberger, 1477. There is also a long series of hooks from the Aldine presses, including the first Aldine Sophocles, 1502; Homer, 1504; Lactantius, 1515; Æschylus, 1515; and Livy (in five vols.), 1518-33. Some of the notable volumes of early English poetry are: Allot's "England's Parnassus," 1600; Chaucer's Works, Kele's undated edition, about 1545, and Kyngston's, 1561; Gawin Douglas's translation, "The Bukes of Eneados," 1553; Phaer and Twyne's translation, "The whole xii Bookes of the Æneidos of Virgil," 1573; Gower's "De Confessione Amantis," 1532, the Lefferts copy; and Spenser's "Colin Clouts Come Home Again," 1595. There are several rare books on gardening: the first edition of Parkinson's "Paradisi in Sole Paradisus Terrestris," 1629; Barker's "Country-man's Recreation," 1653-54; and Redouté's "Les Roses," a large paper copy, with plates in two states and with two of Redouté's drawings. There are only a few important items of Americana, one, however, Penhallow's "History of the Wars of New England, with the Eastern Indians," 1726, seldom offered, is in the original sheep. Beverley's "History and Present State of Virginia," 1705; Hennepin's "New Discovery of a Vast Country in America," 1699; McCall's "History of Georgia," 1811, 2 vols.; and Ethan Allen's "Reason the Only Oracle of Man," 1784, are other rare pieces of Americana. Among rarities in modern first editions are "Sir Hugh the Heron," 1843, Dante Gabriel Rossetti's first puhlication; FitzGerald's "Rubaiyat," 1859; and Poe's "Tales of the Grotesque and Arabesque," 1840, two vols. Another interesting item is a folio volume containing autograph letters of thirty-four Presidents.

Stan. V. Henkels, who is now connected with the auction house of Samuel T. Freeman & Co., Philadelphia, will sell on November 19 and 20, books from the libraries of C. T. Bratten and Virginia C. Boggs. A set of the original Townsend edition of Cooper; Ben Jonson's Works, 1616-1640; Lodge's "Portraits," a large paper set; McKenney and Hall's Indian Tribes, 3 vols., 1836; and Roberts's "Holy Land, Syria, Idumea, Arabia, Egypt, and Nubia," six vols., 1842-46, are likely to interest collectors.

A collection of autographs to be sold at auction in Berlin on November 23, 24, and 25, by J. A. Stargardt, contains a large number of letters hy Goethe, Schiller, Heine, Herder, Klopstock, Tieck, Wieland, and other German writers, as well as a few English autographs, among them those of Darwin, Pope, and Carlyle. Among manuscripts of musicians are fine letters or documents of Wagner, Beethoven, Chopin, Haydn, Mozart, and Schumann.

On November 23, 24, and 25, Sotheby, Wilkinson & Hodge, London, sell a collection of books and manuscripts, including important works on natural history; first editions of Dickens, Thackeray, and Lever; Burton's Arabian Nights, the original edition; a complete set of *Bentley's Miscellany*, 64 vols.; first edition of the Nuremberg Chronicle, 1493; Heppelwhite's "Cabinet Maker's and Upholsterer's Guide," 1789; a fourteenth-century manuscript of Glanville's "De Proprietatibus Rerum"; Ptolemy's Geography, the editions of 1490 and 1511, as well as the 27 maps, without text, of the exceedingly rare edition of 1478. The original manuscripts and drawings of several important works on plants, birds, etc. are offered, containing altogether 3,840 original water-color drawings.

The Lord Amherst Library, the sale of which has been already noted, is especially rich in old herbals and other books on gardening and the agricultural arts. The list contains Anthony Askham's "Little Herball of the Properties of Herbs," 1550, the Wilbraham copy, lacking one leaf; the first edition of the Great Herball, 1526, also a later edition, 1561; three editions of Dodoen's "Niewe Herball," 1578, 1586, and 1595; three editions of Gerard's "Herball," 1597, 1599, and 1633; Tusser's "Hundredth Good Poyntes of Husbandry," 1562, and three editions of his "Five Hundred Points of Good Husbandry," 1577, 1580, and 1586; and Mascall's "Booke of the Arte and maner howe to plant and graffe all sorts of trees," 1572. The library contains few important items of Americana, the best a perfect copy, with the two exceedingly rare maps, of "A True Discourse of the Late Voyages of Discoverie for the finding of a Passage to Cathaya, by the Northwest, under the command of Martin Forbisher Generall," 1578. This book is by George Best, who accompanied Frobisher on all of his three voyages. The Amherst copy, formerly Heber's and Lord Crawford's, brought £100 in 1887, and there is no more recent record of sale at auction of a perfect copy. The maps are almost always lacking. Cunningham's "Cosmographical Glass," 1559, contains on page 200 "A Particular Description of Suche Partes of America as are by travaile founde out." De Quiros's "Descriptio ac delineatio Geographica Detectionis Freti," 1612, contains the first printed account of Hudson's discovery of Hudson's Bay. We also note the rare Paris edition, 1587, of Peter Martyr's "De Orbe Novo"; Monardes's "Joyful Newes out of the New-found World," 1578; Hakluyt's "Voyages," 1598-1600, with the rare "Voyage to Cadiz," but as usual, without the map; Ptolemy's Geography, editions of 1490, 1508, 1513, 1525, and 1548; and a set of "Purchas his Pilgrimes," 5 vols.

Correspondence.

JONSON AND MILTON ON SHAKESPEARE.

To the Editor of The Nation:

Sir: In his notes upon Milton's poem, "On Shakespeare, 1630," Prof. David Masson remarks:

> One might almost suppose, from the wording of these lines, that there was a proposal, in or about 1630, to erect a London monument to Shakespeare. It may be, however, that Milton had no such suggestion to move him, but merely thought for himself that Shakespeare did not need a monument. (Cambridge Edition, Milton's "Poems," III, 162.)

Indefatigable student though he was, Professor Masson seems never to have noticed —nor, as far as I can discover, has any one after him pointed out—the interesting parallelism between this poem by Milton and lines 19-24 of Ben Jonson's "To the Memory of my Beloved Master, William Shakespeare." Jonson's verses were prefixed to the First Folio of Shakespeare's works, Milton's to the Second Folio, which appeared nine years later. For comparison I place the lines together:

JONSON.

My Shakespeare, rise! I will not lodge thee by
Chaucer, or Spenser, or bid Beaumont lie
A little further off, to make thee room:
Thou are a monument without a tomh,
And art alive still, while thy book doth live,
And we bave wits to read and praise to give.

MILTON.

What needs my Shakespeare for his honoured bones
The labour of an age in pilèd stones?
Or that his hallowed reliques should be hid
Under a star-ypointing pyramid?
Dear son of memory, great heir of fame,
What need'st thou such weak witness of thy name?
Thou in our wonder and astonishment
Hast huilt thyself a livelong monument.
For whilst, to the shame of slow-endeavouring art,
Thy easy numbers flow, and that each heart

Hath from the leaves of thy unvalued book
Those Delphic lines with deep impression took,
Then thou, our fancy of itself bereaving,
Dost make us marble with too much conceiving,
And so sepúlchred in such pomp dost lie
That kings for such a tomb would wish to die.

It will be noticed that Milton's poem is in the same metre as that of Jonson's, the heroic couplet. The address to the poet is the same in each, "My Shakespeare." And the subject is the same in each, the most fitting "monument"—the same word being used in each poem—for Shakespeare. Jonson affirms that the poet is "a monument without a tomb," alive still in his living book, and in the appreciation and praise of his readers. Milton asserts that, though Shakespeare is dead—thus correcting Jonson—yet he is not in need of any such "weak witness of his fame" as a memorial of "pilèd stones," but that he has built for himself "a livelong monument" in the "wonder and astonishment" of those who read him, bereaving them of their fancy in such a way as to make them "marble with too much conceiving," and so to lie

sepulchred in such pomp . ..
That Kings for such a tomb would wish to die.

Such being the striking parallels between the two poems, it seems to the writer that the probable origin of Milton's lines was as follows: Milton, in looking over the First Folio, came upon Jonson's verses. As he read them, his own imagination kindled and he developed his own poetic conception, which he felt to be an advance upon Jonson's, and to put the truth more accurately than his. When it became known that a second edition of Shakespeare's plays was to be issued, Milton sent the lines to the editors in the hope that they might have the same place in the new edition which had been occupied, in the earlier volume, by the poem which had suggested them.

Whether all this be true or not, it seems at least probable that Jonson should have the credit of inspiring the later and greater poet.

EDWARD S. PARSONS.

Colorado College, Colorado Springs, October 26.

"SELF-COVER'D" IN "LEAR."

TO THE EDITOR OF THE NATION:

SIR: The compound adjective "self-cover'd" in the passage,

Thou changed and self-cover'd thing, for shame,
Be-monster not thy feature. ("Lear," iv., 2, 62-63)—

part of a speech of Albany to his wife, Goneril—has always been a crux in Shakespeare exegesis, and many attempts at explanation have been made or emendations of the text proposed, which will be found recorded in the notes on this word in the "New Variorum." All of these, whether explanations or emendations, are more or less labored and forced, and none of them is convincingly satisfactory. We wish to offer for the consideration of Shakespeare students an emendation which has occurred to us and which, we believe, is not only more plausible than any yet advanced, but also very likely restores the text to its original form. It has the transcendent merit of rendering the meaning of the line perfectly plain and simple, with the additional merit of improving it metrically.

It is our notion that the syllable "dis-" was dropped out, either through a printer's or through a copyist's error, and we would therefore substitute for "self-cover'd," "self-discovered," meaning self-revealed. That this omission may have occurred is rendered all the more probable by the fact that the passage of which these lines form a part is one of those not found in the folios, but in the quartos, which, as is well known, are notorious for misprints, printers' sophistications, and the like, and the texts of which, moreover, were very probably taken down in shorthand at a performance.

(1.) With regard to the meaning of the line with the text changed as we suggest, it is clear that Albany regards his wife as changed in character from the woman he married and that he calls her a self-discover'd, *i. e.*, self-revealed, thing, because by her actions and words she has just disclosed her true nature.

(2.) The addition of the syllable "dis-" creates no metrical difficulty, as might at first blush seem to be the case, but, as we find on examination of the readings of the quartos, on the contrary results in a decided improvement of the verse. As the line now stands "changed" must be made a dissyllable and the stress in the second foot must fall on the unimportant word "and." We find, however, that one of the two quartos of 1608 prints the word "changed," "chang'd," showing that the printer understood it to be a monosyllable. Assuming, as we well may, that this is right and making our suggested emendation, we scan the line thus:

Thŏu chāng'd ănd sēlf-discŏvēr'd thĭng, fŏr shāme,

which obviously makes the line a better one and which, as we have shown, admits of a plain and simple interpretation of it.

FREDERICK W. KILBOURNE,
LUCIUS H. HOLT.

Springfield, Mass., October 28.

SOME LINES FROM TENNYSON.

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 22, Dr. W. J. Rolfe, writes in a letter entitled, "Some Curious Misprints" (p. 382): "Tennyson said that he had almost rather sacrifice the sense than have two s's come together." Yet the following line occurs in the "Leonine Elegiacs":

The ancient poetess singeth
That Hesperus all things bringeth

On page 383 Dr. Rolfe says that when the "Palace of Art" was first printed (1832), the following stanza was inserted in a footnote, but was afterward suppressed:

She saw the snowy poles and moons of Mars, etc.

But the suppressed line really spoke of the "poles of *moonless* Mars!"

DANIEL HOLSMAN.

Philadelphia, October 28.

TO THE EDITOR OF THE NATION:

SIR: If I wrote "moons of Mars," instead of "moonless Mars," it was a slip of the pen. The point of my comment on it was that the poet changed it after the moons were discovered. If he had written "moons of Mars," it would have been as remarkable as Swift's anticipation of the discovery. I give the early reading correctly in the notes of my "Select Poems of Tennyson" (1885).

Tennyson's remark on the sibilants was made to his friend Knowles in referring to "In Memoriam" (xl), where the first edition had "In such great offices as suit." The poet said when reading the passage to Knowles: "I hate that. I should not write so now. I'd almost rather sacrifice a meaning than let two s's come together." This collocation of letters occurs, however, occasionally in his latest revised text; and there is at least one instance in "In Memoriam," where (cxi) "for fashion's sake" is still the reading; the other line (in xl) now reads, "In those great offices that suit." In cxi the poet might have read, "fashion sake," as Shakespeare—whose archaisms he occasionally copies—does in "As You Like It," iii, 2, 291. He also has "for heaven sake" ("John," iv, 1, 78), "recreation sake" ("I Henry IV," i, 2, 174), and "digestion sake" ("Troilus and Cressida," ii, 3, 190); as elsewhere "sport sake," "credit sake," "safety sake," etc.; to say nothing of cases with sibilants, as "conscience sake" (still allowable) "goodness sake," "Venus sake," etc.

W. J. ROLFE.

Cambridge, Mass., November 3.

IGNORANCE OF THE BIBLE.

TO THE EDITOR OF THE NATION:

SIR: The Rev. Herbert A. Jump does good service in your issue of October 22 by adding his testimony to that of many other protestants against the "vast and growing national ignorance of the Bible." This he illustrates by some telling instances which could no doubt be duplicated all over the country. It is not desirable, however, to underestimate the forces which tend to abate this ignorance, and your correspondent seems to do this when he says that the millions of copies printed by the Bible societies "are being circulated for the most part in foreign lands as accessories to the missionary activity of the Church." This is quite contrary to the fact..

The annual report of the American Bible Society for 1908, a fairly typical year, shows the total issues of the society at home and abroad to be 1,895,941 Bibles, Testaments, and portions (*i. e.*, single books), of which 989,321 were issued from the Bible House, in New York, and 906,710 by the society's agencies abroad. Some of those printed in New York were sent abroad and some books were imported from other publishers abroad and from the society's own foreign agencies, but in round numbers nearly or quite half of the total were actually used in this country. The total output for ninety-two years is 82,316,323 copies, and probably much more than half of this vast number have remained here to enlighten our national darkness rather than the darkness of China or Africa. Without attempting to estimate what private publishers are doing (which represents a very substantial addition to these figures), the American Bible Society, with its auxiliaries, has been ministering for nearly a century to the American people. Its books go, of course, to certain special and otherwise neglected classes, to prisoners in penitentiaries and reformatories, to charitable institutions, to soldiers and sailors, to the blind, and in general the friendless and neglected, whom it is ready to supply gratis if necessary; but also a large proportion of this forever circulating library passes directly into the homes,

churches, and schools, especially the Sunday-schools of the "forgotten millions" of whom President Eliot once wrote, the "plain people" of the nation. The Sunday-school class which your correspondent is teaching is quite possibly supplied with these books which go to tens of thousands of Sunday-schools which would otherwise go untaught, and perhaps he has one of our pulpit Bibles in his church.

The limitation on the usefulness of the American Bible Society to the American people, is not its activity in foreign countries, where it is as much needed as here, and we trust not the "salaried secretaries" to which your correspondent alludes, but chiefly the too scanty and uncertain revenue which continually cripples its activities and forbids their enlargement. There is now a prospect of better things. The largest sum of money so far as we know ever offered to any Bible society by a living donor is now offered by Mrs. Russell Sage, who proposes to give $500,000 on condition that the society can secure subscriptions for $500,000 more before December 31, 1908, the whole $1,000,000 to be used as endowment, thus securing in larger measure what your correspondent evidently desires. Contrary to some newspaper statements, the money is not yet "rolling in." As usual, the poor and moderately rich are the first to give, but large givers have yet to appear. The Bible Society being a millionaire in its issues, quite naturally feels that millionaires in money might like to support it. Now is their opportunity! We beg leave, therefore, to invite all the friends of the Bible, rich and poor, from Maine to California, to share with us the honors and privileges of the campaign which did not end November 5, but must be continued until the whole amount is secured.

We are well aware that the mere circulation of the Book is of little use unless it be accompanied by other means of grace. If there could but be a renaissance of some almost forgotten customs in American life! —a revival of family worship, for instance, making the Bible a household book; a revival of Sabbath keeping; or perhaps (in spirit) an American reproduction of the Cotter's Saturday night, where even the *Nation* might be accompanied by the Book which it so aptly and so often quotes; in short, a general return to the pure and undefiled religion of an elder day—then, Sunday-school classes in Maine or elsewhere could not achieve such miracles of ignorance as your correspondent portrays. The Bible Society has indeed a great trust to administer. Does it not deserve the support, not only of all good Christian men, but all good American citizens?

JOHN FOX.

Bible House, New York, November 6.

DE GUSTIBUS.

TO THE EDITOR OF THE NATION:

SIR: In a note which appeared in your issue of October 29, regarding the autumn Salon at Paris, there occur the two following sentences:

Some of the younger artists have surprisingly good and new work, along with direct insults to eyes and understanding. Such is Henri Matisse, who forgets that beholders are not all fools, and that it is not necessary to do differently from all other artists.

Will you allow one of the fools whom Matisse has thoroughly taken in to protest against these phrases? They are more hackneyed than the oldest mumblings in the most archaic extant rituals. There is nothing so hoary in the sacrificial Vedas. They have been uttered with head-shakings in Akkadian, in Egyptian, in Babylonian, in Mycenæan, in the language of the Double-Ax, in all the Pelasgic dialects, in proto-Doric, in Hebrew, and in every living and dead tongue of western Europe, wherever an artist has appeared whose work was not as obvious as the "best seller" and "fastest reader." Of what great painter or sculptor or musician of the last century has it not been said in the cant phrase of the Boulevards—"C'est un fumiste. Il cherche à épâter le monde"?

Henri Matisse seems to me to think of everything in the world rather than of the need of "doing differently from all other artists." On the contrary, I have the conviction that he has, after twenty years of very earnest searching, at last found the great highroad travelled by all the best masters of the visual arts for the last sixty centuries at least. Indeed, he is singularly like them in every essential respect. He is a magnificent draughtsman and a great designer. Of his color I do not venture to speak. Not that it displeases me—far from it. But I can better understand its failing to charm at first; for color is something we Europeans are still singularly uncertain of—we are easily frightened by the slightest divergence from the habitual.

Fifty years ago, Mr. Quincy Shaw and other countrymen of ours were the first to appreciate and patronize Corot, Rousseau, and the stupendous Millet. *Quantum mutatus ab illo!* It is now the Russians and, to a less extent, the Germans, who are buying the work of the worthiest successors of those mighty ones.

B. BERENSON.

Boston, November 3.

THE EXCAVATIONS AT ALESIA.

TO THE EDITOR OF THE NATION:

SIR: I was a little astonished on reading the letter about Alesia (October 1, p. 322). The site of Cæsar's Alesia has not been "identified by a military explorer," but has been known as such since the sixteenth century; the "military explorer" alluded to, the late Col. Stoffel, did not even identify the traces of Cæsar's trenches around Alesia, because these trenches had been discovered by Creuly, Saulcy, Bertrand, and others before Stoffel came to work at Alesia. The statuette mentioned further on is that of a *dead* Gaul, not of a *reclining* Gaul; casts of it may be procured from the Museum at Saint Germain. Lastly, M. Déchelette never claimed for himself the discovery that Gallic pottery had found its way to Italy and to Pompeii; I do not know what M. Ferrero said about that, but if the error be his, it remains no less an error. M. Déchelette has very carefully stated the facts, "Vases ornés," I., p. 95, and, with his usual honesty, given due credit to Dragendorff.

SALOMON REINACH.

Saint Germain en Laye, October 15.

TO THE EDITOR OF THE NATION:

SIR: I am grateful to M. Salomon Reinach for commenting with his undisputed authority, on the details of my letter. I did not intend attributing the discovery of Cæsar's Alesia to my "military explorer," who is simply the *chef de bataillon*, Espérendieu; his energy and perseverance in these recent years have made the success of the present excavations, of which alone I was writing and which are indeed "identifying" these remains of Roman Gaul. Signor Ferrero, whose "Alésia" I am much astonished M. Reinach did not notice on its appearance in the Paris *Figaro* (September 11), certainly does attribute to M. Déchelette a discovery—"one of the most important among those of which archæology has boasted for fifty years: he has been able to prove that many vases, apparently Greek, which have been found in the European provinces of the Empire, even in Italy, had been manufactured in Gaul."

My own aim was to draw attention to excavations which are not so well known to your readers as to M. Reinach, and especially to the use made of them by Signor Ferrero in illustrating the part played by Roman Gaul in the rise and decline of the Empire.

S. D.

Paris, October 30.

Notes.

Houghton Mifflin Company announces for next week the following books: "University Administration," by President Charles W. Eliot; "The Teacher," by Prof. George H. Palmer and Alice Freeman Palmer; "Accounts: Their Construction and Interpretation," by Prof. William M. Cole; and "A Concordance to the English Poems of Thomas Gray," edited by Prof. Albert S. Cook.

The third volume of "The Cambridge History of English Literature" will be published this month by G. P. Putnam's Sons. By the same house announcement is made of three new issues in the Cambridge English Classics, viz.: "The Plays of Beaumont and Fletcher," Vol. VI; "Giles and Phineas Fletcher's Poetical Works," Vol. II; "George Gascoigne's Works," Vol. II; and "The Clerk's Tale and the Squire's Tale" of Chaucer.

The Club of Colonial Reprints, Providence, R. I., announces as its fifth publication: A Scheme for a Paper Currency, together with two petitions written in Boston Gaol in 1739-1740, by Richard Fry; with an introduction by Andrew McFarland Davis. According to the circular issued by the club:

This "Scheme" was not known to Mr. Davis to be still in existence when he prepared his "Currency and Banking in the Province of Massachusetts Bay" or his "Tracts Relating to the Currency of the Massachusetts Bay," and its publication adds one more to the series of original pamphlets available for study by those who wish to understand the sad experiences which taught the people of Massachusetts, a hundred and seventy years ago, that an unsound currency is an affliction which injures every class in the community.

The edition is to be limited to one hundred copies.

The fun of Edward Lear's "Book of Limericks" is still fresh enough to warrant a new edition of the volume by Little, Brown & Co. Besides the "Books of Nonsense," with their incalculably absurd pictures and

limericks, the volume contains the "Nonsense Songs" and "Laughable Lyrics."

Three volumes of the new Oxford Thackeray (Henry Frowde), to be completed in seventeen, bring before us "The Yellowplush Papers," etc., "The Paris Sketch Book," etc., and "Barry Lyndon," etc. They are printed on the opaque India paper and in the clear type to which the Clarendon Press has accustomed us. The illustrations, however, are in many cases made from bad plates. As for the material, it is the old Thackeray canon established since 1886, with a few additions from more recently discovered sources. The editor is quite right in saying that much of the new matter attributed to Thackeray is of doubtful authenticity, and that still more of it is trivial and unworthy of preservation. Professor Saintsbury, upon whose judgment the selection rests, has also furnished introductions, sketching the author's life and commenting critically on his works. Professor Saintsbury is an agreeable toastmaster at such a banquet. He touches lightly and passes on. Occasionally, as in his remarks upon the "Meditations at Versailles," he comes close to the secret of Thackeray's charm. He does not conceal the faults of taste and judgment in that much-disputed piece, but he still sees that it "has a scornful, melancholy magic of style that atones for much, and the whole article is full of wonderful broken lights of phrase and portraiture." We shall await with curiosity Professor Saintsbury's introductions to the greater works.

"The Life of Napoleon Bonaparte," by S. Baring-Gould, comes to us from Frederick A. Stokes Company in a new and cheaper edition. It is in a single volume, well printed and very fully illustrated. Mr. Baring-Gould does not write as a specialist, but he has the power of sustaining interest in a narrative.

For those going abroad at this season of the year we may recommend the sixth edition of Eustace Reynolds-Ball's "Mediterranean Winter Resorts," published by Brentano's. Morocco, Algeria, and Egypt are included in the itineraries, as well as the European coasts.

It is evident from the enormous output of books of travel that the modern author has missed the irony of Heine's caustic remark, when informed by Gautier that he intended to visit Spain in order to write a book on that country: "How will you manage to write a book on Spain after you have been there?" To record passing impressions, to describe the scenic panorama, to gather material for a historic background, and to make judicious use of the camera is all so temptingly easy that to-day Heine would probably say, "How could you do otherwise?" Journeys through Persia by automobile and across Europe in a motor-boat are, however, of sufficient novelty to justify two volumes which have just been issued by D. Appleton & Co.: "Through Persia in a Motor Car, by Russia and the Caucasus," by Claude Anet, translated by M. Beresford Ryley; "Across Europe in a Motor Boat: A Chronicle of the Adventures of the Motor Boat Beaver on a Voyage of Nearly Seven Thousand Miles Through Europe by Way of the Seine, the Rhone, the Danube, and the Black Sea," by Henry C. Rowland, illustrated by Herbert Deland Williams. Both books are decidedly interesting and amusing. M. Anet conveys the distinct impression that he has really been to Persia. He possesses style, not that of Anatole France, but style, nevertheless, that light touch and delicate fancy of his race which charms. For one who was so short a time in Persia he has caught to a remarkable degree the spirit of that land of incongruity and paradox. No modern book presents so graphic and so true a picture of Iran and its people, or conveys more information than is unobtrusively scattered through this record of personal experience. In spite of Heine's fling at the trutbfulness of the traveller-author, M. Anet's volume can be honestly recommended by one who knows the route he followed, as a work in which veracity has not been sacrificed to imagination. An excellent series of practical suggestions for a motor journey to Ispahan is found in the concluding chapter. Mr. Rowland's narrative is a more matter of fact one, abounding in technical details of a struggle with a refractory engine and a storm in the Black Sea which ended in the loss of the Beaver and the narrow escape of its occupants. The book has also its humorous side, an Anglo-Saxon humor enlivened with slang and an occasional oath, in sharp contrast to the Gallic flavor distilled by M. Anet, who had two charming and intrepid feminine companions. Mr. Rowland's story, like his journey, is rather for the sterner sex, but is graphically told and holds the reader's interest to the end.

Crete has, during recent years, eclipsed Cyprus in the interest of students and travellers; but a welcome will be found for the massive volume "Excerpta Cypria," issued as "materials for a history of Cyprus," by Claude Delaval Cobham through the Cambridge University Press (New York: G. P. Putnam's Sons). The book, of over 500 quarto pages, is made up of extracts in English dress concerning the character, history, and antiquities of the island, gathered from the works of eighty different travellers of varied nationality, ranging in date from Strabo to the second half of the last century. A few documents are included, and a rather full bibliography appended, including one on the not yet forgotten Cesnola controversy. The book is eminently readable, and the translations are made in good style, and, so far as tests have been possible, with reasonable accuracy. But the compiler's assertion that within the range of the individual excerpts nothing has been omitted which directly concerns the island is not quite true, at any rate of the quotation from Strabo.

Part 3 of the Publications of the American Archæological Expedition to Syria in 1899-1900 (Greek and Latin Inscriptions, by Prof. William Kelly Prentice, of Princeton University) bas now been issued by the Century Company, in the same stately form as the preceding volumes already noted in these columns. The title suggests baldly technical material and treatment; but though the editor's work is thorough and scholarly, the volume, which is richly illustrated from photographs and drawings, will be of interest to many others than epigraphists, and the consistent translation of the individual inscriptions will render them serviceable to readers whose knowledge of the original tongues has acquired the honorable debility of age. Many of the inscriptions, and the very agreeably written introductory chapter on their character and purpose, throw an extremely valuable light upon the ritual and manner of life and thought of early Christian communities in the Syrian East.

Although ostensibly intended primarily for Bible students, "The History of tho Ancient Egyptians," by Dr. James H. Breasted, professor of Egyptology in the University of Chicago, is suited to a wider circle. It is to some extent an abridgment of his larger "History," which appeared three years ago; but it contains also the results of discoveries made in the interval. Professor Breasted is one of the most competent, if not the most competent man now living, to write such a book. He has gathered, while working under the auspices of the German government, a complete collection of the hieroglyphic texts of an historical character, and has issued a translation of them in five large octavo volumes. Upon the basis of this great *corpus* his histories have been written, and to it the reader is constantly referred. Under these circumstances it seems quite superfluous to say anything further in commendation of the volume, except to remark that the story is told in a plain and lucid style, without ornamentation, and with the earnestness of a man who has something to tell and is intent merely upon the telling. The size of the book makes it convenient for the pocket, and it is safe to say that it will be seen much more often than the larger book, in the hands of those who are making the Nile trip, and who wish to be as well informed as possible regarding the history revealed by the texts and monuments of Egypt. (The Historical Series for Bible Students. Charles Scribner's Sons.)

From so charming an essayist and accomplished a versifier as Austin Dobson, the recent "De Libris: Prose and Verse" (The Macmillan Co.) is a distinct disappointment. The volume contains a dozen pieces of prose, evidently the gleanings from a year or two of casual contribution to newspapers and magazines. Some of the articles are palpable book reviews, and are no better than many others of their kind. On the eighteenth century, Mr. Dobson writes with uncommon fulness of knowledge, and his papers "Bramston's 'Man of Taste'" and "Fresh Facts about Fielding" are not without value. The two little essays on Kate Greenaway and Hugh Thomson are appreciative and at the same time discriminating. The chief interest in them, however, lies in the illustrations—drawings by Miss Greenaway and Mr. Thomson never before published. But of the papers as a whole, it may fairly be said that they lack distinction of substance or style. The verse is even farther below the standard. Some of the stanzas doubtless served their purpose, when read at a dinner, but they are not what we expect from the author of "Old-World Idylls" and "At the Sign of the Lyre."

"The Reminiscences of Lady Randolph Churchill," by Mrs. George Cornwallis-West (The Century Co.), could hardly be other than entertaining. She lived for many years among the most distinguished people in Europe, and noted not only their political significance, but their clothes, manners, and temperaments. She has avoided duplication of her son's life of his fath-

er, and has abstained from reference to intimate personal concerns. Mrs. Cornwallis-West is able to write with such detachment of Lady Randolph Churchill as to exploit somewhat drolly her beauty and personal charm. Among the illustrations we have her in every aspect, in infancy, at ten years old, by Sargent, in fancy dress, in a riding-habit, as a Red Cross nurse. The letters printed and the conversations quoted abound in allusions of the sort that people usually leave their heirs to publish. Doubtless, however, considering the temptation, Mrs. Cornwallis-West wonders at her own moderation. There is nothing ill-natured in the book, and apparently nothing indiscreet. Admirers of Mr. Bernard Shaw will be interested to know that on receiving an invitation to lunch after a very slight acquaintance he responded by telegraphing: "Certainly not; what have I done to provoke such an attack on my well-known habit?" To which Lady Randolph replied: "Know nothing of your habits; hope they are not as bad as your manners."

"Oxford in the Eighteenth Century" (Putnam), by A. D. Godley, is one of that class of books, rapidly increasing in number, which are almost spoiled by spurious vivacity. Mr. Godley has gone through the material dutifully, he writes with a sense for English rather above the average, he has an attractive theme, but he mars all by the supposition that it is dull to be orderly, and that the reader's mind cannot dwell on one subject more than five minutes. When he forgets himself and, as in his sketch of Hearne, tells a straightforward story, he is interesting. For the most part he bustles about among hints and half-told anecdotes and apologetic allusions in a manner that tires without instructing, and teases without amusing. Here and there comes in a good story, such as that related by Pastor Moritz, in 1782, who, coming late at night into the Mitre Inn, "saw a great number of clergymen, all with their gowns and bands on, sitting round a large table, each with his pot of beer before him," discussing theological and other topics, until "when morning drew near, Mr. M—— suddenly exclaimed, 'D——n me, I must read prayers this morning at All Souls'.'" In which story the accent should properly be placed on the "theological" as much as on the "beer"; for it may be suspected that there are not many clergymen to-day who would have the spirit for such doughty discussions any more than the stomach for such potations. With all his diligence Mr. Godley has missed some of the most characteristic events of the age, as, for example, the expulsion of George Selwyn, in 1745, for participation in the unholy rites of the Franciscans, as related in a letter of Capt. Nicholson. Now and then we question his statements, as when he says that "few so far mortified the flesh as to take a walk." In dates and facts he is generally accurate, but he has erred in ascribing the writing of "Terræ Filius" to 1726. It was written in 1721, and published in book form in the later year.

Number XXXVI of the Yale Studies in English (Holt & Co.) contains a translation of Alain de Lille's "Complaint of Nature," made by Douglas M. Moffat, professedly in the service of Chaucer students. "The theologian," as the translator observes, "whose great stores of recondite learning made him the 'Doctor Universalis' of his day, the 'Alain who was very sage,' the 'Doctor SS. Theologiæ Famosus,' is now known chiefly because of two lines in the blithe and famous poet of Early England." That is true for England and America, no doubt, but the rhapsody "De Planctu" contains more than one passage, notably the opening description of Nature, of a curious beauty worth reading for its own sake.

The old controversy as to the authorship of "The Burial of Sir John Moore," usually attributed to the Rev. Charles Wolfe, is revived again in "The Writer of 'The Burial of Sir John Moore' Discovered," a little volume by R. C. Newick (Bristol, England: T. Thatcher). Mr. Newick believes he has found new material in a private library of manuscripts recently given to the public at Bristol. He charges Wolfe with being an impostor, and says that a certain "soldier of the Ninth Regiment," named Joseph Wolfe, was the real author. In support of his statement, he examines the incidents in the lives of Charles Wolfe and Joseph Wolfe. Although the former was seventeen at the time of Sir John Moore's death, and likely to be impressed with such an event, Mr. Newick holds that Joseph Wolfe was the only survivor who brought back the details of the burial, and that Charles Wolfe could not possibly have acquired the facts so as to write as he did with historic accuracy.

Whatever one may think of some of the ideas which have prevailed in the Student Volunteer Movement for Foreign Missions there can be only admiration for the devotion with which some of the young people whom it has stirred to missionary endeavor have striven for their ideals and the enthusiasm with which they have pursued their high calling. One of the most noble of these youth was John Lawrence Thurston, whose brief and self-sacrificing life is described in "A Life with a Purpose," by Henry B. Wright (Fleming H. Revell Co.). He was a member of the Yale Missionary Band, which preached foreign missions with great enthusiasm in many cities, and later he went to China, where he was stricken with tuberculosis when he had scarcely begun his work. By singular winsomeness of character and unusual intensity of zeal and largeness of plan he effected, even in his brief months of service, a large amount of good.

For over thirty years, in Auburn, N. Y., and Chicago, the Rev. Dr. Herrick Johnson was a forcible and inspiring teacher of methods in preaching, and in the Christian ministry. His sage counsels, distinguished by rugged common sense, are gathered up in "The Ideal Ministry" (Fleming H. Revell Co.). The volume is largely occupied with suggestions as to preparation for preaching and the composition and delivery of sermons.

On September 3 (p. 215) the *Nation* printed a review of Count Vay von Vaya's "Nach Amerika in einem Auswandererschiffe," a book of interesting impressions of this country gained by an Hungarian prelate who accompanied a band of emigrants. We are glad now to see the book in English, published by E. P. Dutton & Co. as the "Inner Life of the United States."

The first volume of Ernst Schultze's "Kulturgeschichtliche Streifzüge," entitled "Aus dem Werden und Wachsen der Vereinigten Staaten" (Hamburg: Gutenberg Verlag), is really little more than a collection of twelve essays, written in journalistic style, on certain phases of life and thought in America. Four are devoted to the Indians, one to Booker T. Washington, while probably the best deals with the American theatre.

Baron Helfert, the eminent Austrian historian, continues at nearly ninety years of age to produce books that would do credit to a writer half a century younger. His "Geschichte des lombardo-venezianischen Königreichs" (Vienna: Hölder) deals with the Risorgimento period on which he is one of the recognized authorities. It contains a review of the history of the kingdom in the period following the downfall of Napoleon, making use of many interesting documents. Among them are some extremely curious police reports concerning Caroline, wife of George IV of England.

The veteran Austrian author, J. Schipper, bas just published a collection of papers entitled "Beiträge und Studien zur englischen Kultur- und Literaturgeschichte" (Vienna: Stern). The first half deals chiefly with the universities—material gathered during the writer's visit to Great Britain as the official representative of his government at the fourth centennial of Aberdeen. The second half consists largely of Shakespeare studies.

In the series Sammlung Göschen (Leipzig: Göschen), Ludwig Salomon has published a work of 186 pages, called "Allgemeine Geschichte des Zeitungswesens." As the author of the excellent "Geschichte des deutschen Zeitungswesens," in three volumes, completed only two years ago, the writer is exceptionally equipped for this summary of the newspaper publications of all the peoples of the earth.

Waldemar Schütze sufficiently explains the character of his new work, "Schwarz gegen Weiss," in his sub-title, "Die Eingeborenenfrage als Kernpunkt unserer Kolonialpolitik in Afrika" (Berlin: Schwetsche & Sohn). In many respects the author's judgment on the negro and the possibility of his becoming fully civilized is anything but enthusiastic or hopeful.

It was hardly wise to publish all the letters, reviews, and essays of the late Conrad Ferdinand Meyer, as Adolf Frey has recently done in his two volumes, filling eleven hundred pages, entitled "Briefe Conrad Ferdinand Meyers: Nebst seinen Rezensionen und Aufsätzen" (Leipzig: Haessel). A large amount of this matter is new and interesting, especially Meyer's correspondence with such men as G. Kinkel, Wolfgang Menzel, F. Th. Vischer, and especially L. von François; but not a few of the youthful and family letters could have been omitted.

The "Einführung in eine Philosophie des Geisteslebens," by Prof. Rudolf Eucken (Leipzig: Quelle & Meyer), is a summary of the philosophy of the famous author intended chiefly for the general reader and written with special reference to the problems and perplexities of the times. In connection with this book, attention should be called to a study of Eucken's philosophy in its relation to that of Kant, published as a brochure by Kurt Kesseler, "Die Vertiefung der kantischen Religionsphilosophie

durch Rudolf Eucken" (Breslau: Kreuschmer).

The Kirchliches Handbuch (Freiburg-im-B.: Herder)), a new venture by the Catholic theologian, H. A. Krose, S. J., and in its first volume covering the years 1907 and 1908, is evidently intended as a Catholic rival to the famous Protestant Kirchliches Jahrbuch of Pastor J. Schneider. It contains full statistics and reports of the Catholic Church, particularly in Germany. Among the valuable features of the work are the statistics of Catholic foreign mission work, something that heretofore has been difficult to secure.

The economic and social philosophy of the Church Father Augustine, especially in its bearings on the teachings of Christianity, has recently called for two works of considerable value. Prof. Theodor Sommerlad's volume "Das Wirtschaftsprogramm der Kirche des Mittelalters," which appeared some months ago, aimed to prove that the ideas of Augustine on economic and social problems were a great departure from the gospel teachings. Now Prof. Ignaz Seipel, in "Die wirtschaftsethischen Lehren der Kirchenväter," published by Mayer & Co., Vienna, as one of the Catholic series Theologische Studien der Leo Gesellschaft, edited by Albert Ehrhard and F. M. Schneider, endeavors to defend Augustine against this charge.

Prof. Adolf Ehrhard of the University of Strassburg, in his last volume, "Das Mittelalter und seine kirchliche Entwickelung," in the series, Kultur und Katholizismus (Munich: Kirchheim), attempts to give a popular exposition of the evolution of mediæval civilization. According to Ehrhard, this whole evolution is the result of the relations, sometimes friendly, mostly hostile, between Pope and Emperor, or, as he puts it, of the two fundamental factors of the middle ages: the Germanic-National and the Latin-Catholic. He writes from the point of view of the Papacy, but his book, taken as a whole, cannot fail to impress through its originality and pleasant style.

In the Classiques Français of Messrs. Putnam the "Satires, Épîtres, et l'Art poétique" of Boileau make a book even pleasanter in type than other volumes of that dainty series. But it does not seem to us that the preface of Augustin Filon adds to the value of the edition. Boileau, he says, was not a poet, although a great writer in verse; neither was he a critic, although "un homme de goût, dont les opinions ont fait loi, et qui, venu à son heure, a orienté la littérature française dans une direction où l'attendaient ses plus grands succès." To try to support such a paradox as this is merely to waste, or pervert, words.

We have received from the Florentine publishers Bemporad a tiny pocket encyclopædia, "Enciclopedia Tascabile Bemporad," which has many features to recommend it. Resembling the little manuals of information that are sold on our railway trains, it is much better done. Geography, politics, and natural science, including agriculture, domestic economy, physiology, and medicine, occupy most of the 364 pages. On the biographical side it is weak. Of interest is the select vocabulary of sport, almost exclusively English. Its general accuracy speaks well for that of the more serious sections. The editor is of advanced, not to say revolutionary, views, actually advising his fellow-countrymen to sleep with the window open. For the desk the little book will hardly replace the indispensable small Larousse, but for travellers it is distinctly useful.

A somewhat detailed report of a human sacrince occurring among the Bagobos around Mount Apo in Southern Mindanao is given in the editorial notes of the *Philippine Journal of Science*, Section A, Vol. III, No. 3. The affair was thoroughly investigated by the district governor, and the facts were obtained from his report, which forms the most circumstantial account of an event of this kind that has ever been made. The French scientist Montano and the German scientist Schadenberg made brief investigations among the Bagobos over twenty years ago, and certain Jesuit missionaries, especially Fathers Gisbert and Doyle, have written of their customs. But many exaggerated stories about the Bagobos are afloat. The reports of the Jesuit fathers having established the fact of human sacrifices among them, some careless writers have gratuitously added cannibalism. This charge the Bagobos themselves deny, and there is no evidence at all to support it. Their victims, when the occasional human sacrifices occur, are slaves (members of a neighboring unwarlike tribe), and are usually aged or decrepit. In this latest case, the first authenticated human sacrifice in some years, the victim was a deaf and partly blind slave boy of eight years. The sacrifice was arranged primarily in behalf of two widows, in order that the spirits of their departed husbands might cease from troubling them and allow them to obtain new husbands. Moral suasion and instruction, with force in the background, are being applied to break up this custom, as has been done in the case of the head-hunting tribes of northern Luzon.

A Simplified Spelling Society has been organized in England. Prof. W. W. Skeat of Cambridge is president. The vice-presidents include Sir James Murray, editor of the Oxford Dictionary; Sir William Ramsay, of University College, London; and Dr. F. J. Furnivall. The secretary is William Archer.

The Rev. Abram Herbert Lewis, a prominent Seventh-day Baptist, died at Watch Hill, Pa., November 4. He was born at Scott, N. Y., in 1836, was graduated from Alfred University, and studied at Union Theological Seminary. After some years as an active pastor, he became corresponding secretary of the American Tract Society; he was also for a time the editor of the *Sabbath Outlook* and a member of the staff of the *Philanthropist*. Among his books are: "Sabbath and Sunday: Argument and History" (1870), "Biblical Teachings concerning the Sabbath and the Sunday" (1884), "A Critical History of the Sabbath and the Sunday in the Christian Church" (1886), "A Critical History of Sunday Legislation from A. D. 321 to 1888" (1888), "Paganism Surviving in Christianity" (1890), "Swift Decadence of Sunday: What Next?" (1899), and "Letters to Young Preachers and their Readers" (1900).

John Harvey Treat, author of a number of books and pamphlets on genealogy and history, died at Pittsfield, N. H., November 8, at the age of sixty-nine. After graduation from Harvard he engaged in business at Lawrence, Mass., for a number of years. He had given to Harvard a large entomological collection, a good many books, and a fund for the purchase of works illustrating the history of the Roman catacombs. He was author of "Notes on the Rubrics," "The Catholic Faith," "The Treat Genealogy," "Truro Baptisms," "Ancestry of Col. John Harvey," "The Catacombs of Rome," and "History of the Tombs of the Apostles Peter and Paul."

Prof. Lewis Campbell, the distinguished Greek scholar, has died at the age of seventy-eight. His education was received at Glasgow and Oxford universities, and he was appointed to the professorship of Greek at St. Andrews in 1863, retiring as emeritus in 1892. His chief work is the edition of Sophocles, published by the Clarendon Press, in two volumes—a work which in taste and judgment ranks well with Jebb's edition, if not above it. Other publications are "Æschylus in English Verse" (1890), "Guide to Greek Tragedy" (1891), "Life of Benjamin Jowett" (with E. Abbott, 1897), "Religion in Greek Literature" (1898), "Letters of B. Jowett" (with E. Abbott, 1899), "Tragic Drama in Æschylus, Sophocles, and Shakespeare" (1904), besides various school editions and minor works.

Archibald John Little, traveller and author, died in London November 5 at the age of seventy. He was born in London and at the age of twenty-one went to China and established the Chungking Trading Company. He was a frequent contributor to periodical literature; among his books may be mentioned "Through the Yangtse Gorges," "Mount Omi and Beyond," and "The Far East."

The death is announced of Robert Fitzroy Bell, secretary to the Scottish Universities Commission. He was the founder of the *Scots Observer*, to which W. E. Henley contributed some of his most characteristic writing.

ENGLISH PROSODY.

A History of English Prosody. By George Saintsbury. Vol. II. From Shakespeare to Crabbe. New York: The Macmillan Co. $3.75 net.

This second volume, a book of nearly 600 pages, confirms the opinion that Professor Saintsbury is here in a field peculiarly suited to his talents. In his other exhaustive work, "The History of Criticism," where the estimation of purely literary values was crossed by many currents of philosophy and history, he was pretty nearly at his worst—he can at will sound the depths of bathos—and left one always with an uneasy feeling that, in summing up the work of any critic, he was perhaps missing precisely what that critic stood for. In his present work, granted his manner of treatment, the reverse is true; one feels that he almost always selects what is salient and deals with it adequately. It is the fact that a good deal must be granted. As a book of reference for the student who wishes statistics, definitions, tabulations, and the

like, the work is next to useless. Characteristically enough, the two chapters which deal with the prosodical theorizers of the sixteenth and eighteenth centuries are decidedly the poorest in the volume. Here Professor Saintsbury's touch-and-go flippancy is not entertaining, but annoying. Perhaps no one could lend much human interest to the metrical discussions of the Areopagites in the days of Queen Elizabeth, or to the treatises of Bysshe and his followers under the Georges; but at least one might give a clear notion of just what these misguided gentlemen were doing and saying, whereas Professor Saintsbury, it must be admitted, only adds his own perfunctory pertness to the reader's probable ignorance.

In these things Professor Saintsbury is weak, but they are a negligible part of his plan. He is strong in his treatment of metre from the purely literary point of view, as the means for producing certain æsthetic effects. So frankly does he merge prosody in this larger field that it is often almost lost to sight, and there are scattered through his pages innumerable bits of general criticism as keen as are to be found in any of his supposedly less technical treatises. As an example of excellent criticism, where the metrical point of view is still kept, we may mention his paragraph on Jonson's famous lyric, "Drink to Me Only with Thine Eeyes," put together from fragments of Philostratus. "The triumph, the charm," he says, rightly, "is in the way in which bits of mere prose are turned into a magical unity of living verse. The single trochee at the beginning, never repeated *as a foot*, but thrown back to by the trochaic words 'only,' 'nectar,' 'rosy, etc.; the subtle beauty of the four-times-repeated rhymes, each of the resonant and suggestive quality, in the even places, and the long-distanced ones in the odd; above all, the ineffable and almost intolerable cadence and soar of the whole, are things that cannot be admired, studied, rejoiced in too much." Again the whole section dealing with Prior is admirable for its union of metrical and æsthetic judgment. One feels here how intimately associated are the mechanical instrument of verse and its poetical effect. It follows as a result of this method of criticism that Professor Saintsbury is most precise, not when he is defining, but when he is describing metrical impressions by means of metaphor. It is not every critic who could make the contrast of Shakespeare's and Milton's blank verse as vivid as this:

> That marvellous billowy flow of verse on which Shakespeare floats us, with an occasional break or ripple, but mostly "too full for noise or foam," is not what Milton aims at. His verses do not float; they march, and march magnificently, quickening and slackening, altering formation slightly, but always with more touch of mechanism in them than we find in Shakespeare, with more of the earth, and less of the wind and the water, if with hardly less of the fire, in their composition.

This is something more than an irrelevant purple patch; it is a climax to Professor Saintsbury's regular mode of approach.

There are three great moments in the prosodic history of the period, each of which Professor Saintsbury treats, again granting his method, with equal judgment and knowledge—the development of blank verse, of the Caroline lyric, and of the heroic couplet. Blank verse introduces us to the Elizabethan drama; and here, we think, Professor Saintsbury is stronger in his brief estimations of some of the minor poets, particularly Marlowe and Chapman, than of Shakespeare, where his paragraphs sprawl in a certain disarray. From the utter decomposition of blank verse under Suckling and the other Caroline dramatists, he then passes to Milton, where he is at his best, and very good. Here a definite problem keeps him to the point: whether Milton admitted extra syllables into his lines; or, to give a specific illustration, whether he read his verse

> May I | express | thee unblamed? | since God | is light.

or

> May I | express | th' unblamed? | since God | is light

The question touches the root of prosody and compels Professor Saintsbury to come closer than anywhere else to developing a tangible theory. He has first to repudiate the accent-counting tribe, who mark off a certain number of accented syllables in the line—five or four or three—and let the rest of the syllables huddle about as they will. For these gentlemen, these theorizers driven to madness by the goad of Teutonic chauvinism, he has ridicule and regret. He perceives rightly that they are the victims of pedantry and of perverted hearing. "I have," he says, "no organs which will enable me to patter or skate over three short syllables in

> ănd ĭn lŭxū | rious cities where the noise,

till I clutch, panting, the blessed *u* of *-u*rious.'" And he likens this kind of scansion "to a drunkard staggering from post to post"—or better:

> But the most perfect simile to my fancy is one the material of which most people know who have been unlucky enough to be quartered in a railway hotel on the side overlooking a shunting yard. They will remember how, in the dead waist and middle of the night, they were aroused, and kept awake till it was time to get up, by something like this—
>
> RAM!.....ra-RAM!....ra-ra-ra-RAM!....
> RAM-ra-RAM!..ra-RAM-ra!....RAM!

The simile is as characteristic of Professor Saintsbury's prose as of the theory he is combating. He is emphatically right, we think, in making the foot the essential factor of rhythm, and in insisting that such a line should be considered as made up of five parts, thus:

> And in | luxu | rious cit | ies where | the noise.

But at this point he comes into conflict with a contrary set of theorizers, more common in the past when pedantry consisted in enforcing a rigid regularity, than to-day when pedantry oftener swings to an impatience with all rules whatsoever. In Milton's day, and for long after, most practicers and students of blank verse regarded it as made up of feet of two syllables each, without exception. If an extra syllable tried to get in, it was either repressed by hypostrophation, or, if that was impossible, regarded as a sheer interloper. Any one who has read the books printed at the time knows with what riotous tyranny the apostrophe is used to delete offending syllables, reducing *the* to *th'*, *be* to *b'*, *countenance* to *count'nance*, etc. Milton's own poems were so printed, and might lead one to suppose that he admitted no exception to the normal ∪ — | ∪ — |. Against such a supposition Professor Saintsbury has marshalled an array of examples from "Paradise Lost" and "Paradise Regained" which ought to convince any fair-minded reader that Milton's verse is full of the most exquisite substitutions of trochee and anapaest and spondee for the regular iamb. We should differ with Professor Saintsbury on a minor point only, which is perhaps a mere matter of words. It seems to us probable that Milton himself looked upon these substitutions as irregularities introduced to prevent monotony; that he did not regard the anapaest "thee unblamed" as an equivalent of the iamb "th' unblamed," but as a permissible suspension of the smooth flow of the rhythm. In many substitutions, where the utterance of three syllables cannot be crowded into the normal time of two, this is undoubtedly true in fact; in other cases it would mean that Milton's ear and theory were not in agreement. This whole discussion brings us to the verge of that awful abyss at the bottom of which lie whitening the bones of so many prosodists: What is the *foot*, and what, if anything, is quantity? Professor Saintsbury, with his usual jauntiness, waives the question; but he promises a chapter to it in his third volume, and until then his critic must also suspend judgment, although it may be said that many sentences in the present volume point in the right direction, while a few are ambiguous.

Over the treatment of the Caroline lyric and the heroic couplet we must pass rapidly. Professor Saintsbury is never more eloquent than when he discourses on the beauty of the "common measure" as used by the Carolineans. The peculiar qualities of that stanza are really a discovery of his own, and

he is within his right in adopting a boastful tone when analyzing them. Of the development of the couplet he gives the best account extant, particularly in his skilful discrimination between the two currents in the seventeenth century, the one, of which Chamberlayne is the leader, tending toward excessive enjambment; the other, including Waller, working for absolute regularity. The second movement won the day, as every one knows, with the Restoration poets. Despite his notoriously romantic sympathies, he deals pretty fairly with this stopped couplet, which in comparison with its freer sister was likened by Keats to a rocking-horse beside Pegasus. Over Dryden, at least, he is enthusiastic, even if Pope is manifestly antipathetic to him and Goldsmith he absurdly underestimates. And some of the shrewdest of his remarks touch on the inevitable harmony of phrase and idea with the form of this metre. In enumerating the advantages of the stopped couplet within its own field, he, however, fails to lay sufficient emphasis on its value in that moral criticism of life which was the first aim of the eighteenth century, and he misses altogether its usefulness in tiding the poet swiftly and neatly over the uninteresting points of a narration. Had he seen these two qualities of heroic verse, he would have had a better word for Crabbe.

These three—blank verse, the Caroline lyric, and the heroic couplet—are the main themes of Professor Saintsbury's second volume, but many minor movements are included. He is excellent, if a little too indulgent, over the Elizabethan sonneteers; has many suggestive observations on the eight-and-seven-syllable lines; shows how the anapaest was first really dignified by Dryden and Prior; falls foul of the lyric of the eighteenth century, utterly missing, as some will think, the true qualities of Gray and Collins. On the whole, the book is wisely planned and executed, and makes good reading even of prosody.

CURRENT FICTION.

The Diva's Ruby. By F. Marion Crawford. New York: The Macmillan Co.

This is the third, and we hope the final, appearance of the least readable of Mr. Crawford's heroines. As "Fair Margaret" she was bad enough; as "The Primadonna" worse; and as the Diva she is a sheer weariness of the flesh. It is sad to find this skilful *improvvisatore* reduced at last to such feeble inventions. His air of nonchalance, of the popular performer who may safely do his second-best, increases almost as rapidly as the list of his works. Really, there is little to be said of such story-telling as this; an able-bodied, intelligent, grown man ought to be in better business. One cause for gratitude we have here: the famous Paul Griggs, official strong man of Mr. Crawford's fiction, is permitted a needed rest. It was painful to find him in "The Primadonna" once again trotted out and put through his weight-lifting exercises. Rufus Van Torp, the American financier, is the only person in the present tale with any pretensions to human reality, and he is as much bogy as man. In fact, he is a Paul Griggs of the financial world, one of your ugly heroes with a will of iron, who bowls over whatever obstacles come into his path by dint of sheer "cussedness." At the end of "The Primadonna," it will be recalled, Margaret Donne (or Madame Cordova) accepted Logotheti, the Greek-Parisian and financier, and the rival of Rufus Van Torp for her hand. But Rufus did not know when he was beaten, and it would seem to be an object of the present tale to show what happens when Yankee meets Greek. It must be said, however, that fate holds as strong a hand against Logotheti as Van Torp's. The peaceful adjustment of the difficulty, at least, is due to the affair of the rubies. The ruby story has the elements of a brilliant and fantastic romance, and it is a disappointment, after the first chapter, to be brought back to Madame Cordova, Mr. Rufus Van Torp, and their not very thrilling amours.

It may be said, further, that Mr. Crawford ought to brush up his American slang. It is all very well for Van Torp to say of a certain mildly amusing Mrs. Rushmore, "She's got the celebrity habit"; but when he says, by way of explanation, "She's a dandy after lions," he is voicing the mere invention of an exiled fancy.

The Trail of the Lonesome Pine. By John Fox, jr. New York: Charles Scribner's Sons.

It is melodrama—granted; but melodrama of so high a grade, so joyous an enthusiasm, and so compelling an interest as to give its reader an hour of uncritical pleasure. The life depicted calls for dark shadows and for splashes of color, and Mr. Fox has spared neither the one nor the other. On the first page, June's red gown strikes the keynote sustained through the book. Some of the characters grow wearisomely blatant, but the majority of the participants in the Falin-Tolliver feud furnish a skilfully subordinated, though lurid, background for the principal theme. John Hale, a young engineer, looking for coal in the mountains of Kentucky, finds simultaneously an apparently rich vein of cannel and a beautiful young mountain girl. He makes the most of both treasures, the coal by mining, the girl by education. The coal proves but a pocket, and he becomes poor in purse, though by personal sacrifice he keeps June in happy ignorance at school. When she returns, exquisite and accomplished, and finds her benefactor and betrothed a poor man, coarsened by toil in manner and appearance, it seems for a time that he is to be beggared in heart as well. June's native nobility, however, rises to the recognition of his, and we leave the pair holding fast their long-deferred happiness. This story is delightfully set among the mountains, which the writer, as usual, describes with intimate knowledge and love.

Angel Esquire. By Edgar Wallace. New York: Henry Holt & Co.

Thoughtless people often confuse the detective story with the dime novel. As a matter of fact, most dime novels are not stories of crime and bewilderment, but tales of adventure, in which the interest is sustained by nothing but the sheer swing of the action from page to page. The publishers of "Angel Esquire" are in error, therefore, when they describe the book as a "rattling good detective story." It is not a detective story, but that much rarer thing, a dime novel as well written as detective stories have been since Poe and Conan Doyle showed us how. There is in the book but one attempt at employing the machinery of mystification and prolonged suspense, and that is quite unsuccessful. On the contrary, we have from chapter to chapter a succession of conflicts and heroics which are of the very essence of the dime novel. There is a brilliant outlaw who is good at heart and holds a roomful of cutthroats at bay until some one puts out the lamp; there is a detective who pulls the good outlaw through a secret door just as he is about to be bludgeoned to death; there is a wicked lawyer who has turned his house into a labyrinth of secret closets, traps, and sealed steel chambers in which he does away with his enemies by flooding the room with the fumes of hydrocyanic acid. To tell of such things with really exceptional literary grace, as the author has done in the present instance, is even harder, we imagine, than to raise the detective story to the level of literature.

Amabel Channice. By Anne Douglas Sedgwick. New York: The Century Co.

Miss Sedgwick has gone over to the enemy. We have grown used of late years to the division of new fiction into the exclusive categories of the "quite clever and dreary" and the sweetly flat. The keen and subtle analysts, the unflinching realists, the genuinely powerful portrayers of passionate emotions and dramatic situations have so long concentrated their energies on what the average reader, with half-shrinking fascination or wearied dislike, denominates "unpleasant" that we have almost for-

gotten that "strong" applied to a modern novel can mean anything but strong-smelling, and that though ginger may be hot i' the mouth, gingerbread is none the less good wholesome food. Almost—but Miss Sedgwick's novels, exquisitely subtle, penetratingly analytical, undeniably original, still from time to time unfolded their delicate charm to prove that there remained one writer whom no one could call obvious or *banal*, and who yet could find endless material for her talent in the characters and feelings of men and women unstained by the grosser vices. Now she has fallen from her high estate. In "Amabel Channice" we have the woman with a past, the illegitimate child, the lustful man of the world, the fashionable beauty unashamed of a twenty-years' liaison—in short, the same sickening old stock-figures we have come to expect in "powerful" fiction. Tbis is not to say that Miss Sedgwick does not wear her rue with a difference. There are taste and dignity in her handling of her theme; there is fine character-drawing in the portrait of her unusual heroine; above all, there are the rare insight and sense of spiritual values which, on the whole, constitute Miss Sedgwick's chief distinction, in her treatment of the relations between her characters, especially at crucial moments. But oh, the pity of it!

Salthaven. By W. W. Jacobs. New York: Charles Scribner's Sons.

The author is here at his most characteristic. The growth of his familiar episode into a book has not impaired its quality. His droll figures and his inventive ways of involving them in adventure seem inexhaustible. We meet again his mariners ashore indulging in every conceivable wile and eccentricity; his dames, buxom, coy, or flirtatious; his land oddities of many sorts; and two young persons of positive attractiveness, the rough-running of whose love is the pretext for the continuous vaudeville of the story. Through all the new varieties of mask, the voice remains the voice of Jacobs. There is provender for all his many readers from the enthusiastic admirers to those who simply do not mind him.

The Description and Natural History of the Coasts of North America: Acadia. By Nicolas Denys; edited by William F. Ganong. [No. 2 of the Publications of the Champlain Society]. Toronto: The Champlain Society.

No more interesting or important work bearing on the early history of Canada could have been selected by the Champlain Society for publication at the time of the Quebec Tercentenary than this painstaking account of the geography and natural history of what is now Nova Scotia and New Brunswick, with parts of Quebec and Maine; nor could there be a better editor than Professor Ganong, whose studies of the times of Denys and the principal theatre of his American adventures have made him the first authority on this and kindred subjects. It is strange that a definitive edition should have been delayed so long, when we reflect that Denys's narrative has, from the moment of its publication in 1672, been the storehouse from which later writers have borrowed.

The parentage and youth of Nicolas Denys are somewhat obscure, but he was born at Tours in 1598 of a family closely allied to the lesser nobility, if not actually noble itself; and the lack of education shown in his journals indicates that he probably ran away to sea at an early age. We first hear of him in 1633 at Port Rossignol, near the present town of Liverpool, in Nova Scotia, where, in company with several other Frenchmen, he established a deep-sea fishery. From this time until his death in 1688, probably at Nepisiguit, in the present province of New Brunswick, he spent his life on this side of the Atlantic, and almost entirely in the then French province of Acadia (including Nova Scotia and parts of the adjacent provinces, which went under the name of L'Amérique Septentrionale), acting for the most part as agent or partner of adventurous Frenchmen, whose influence at court had secured grants of land and privileges, the inevitable vagueness of which led to never-ending bickerings and even bloody quarrels among the grantees. His days were filled with adventure, success alternating with failure, hardship, and even imprisonment. The culmination of his career came in 1654, when he was appointed by the King to be Governor and Lieutenant-General over an immense tract, embracing half of Acadia and the whole island of Newfoundland, together with a monopoly of the fisheries on the coasts of Acadia "as far as Virginia." With his wife and two children he reigned at Saint Peter's like an independent prince. His cast of mind, however, and his objects in life were always more commercial than political; his attention was wholly occupied with the Indian trade and the fisheries. In 1667 his prosperity suffered a severe reverse through a controversy with a rival, La Giraudière, in Nova Scotia; and the next year the destruction by fire of his entire establishment at Saint Peter's brought on his financial ruin. Soon afterwards he returned to France, where he published his book, and where he continued to reside for some years, leaving his son to represent him in Acadia. The latter part of his life was spent in more or less successful attempts to secure regrants of lands and privileges which had lapsed on account of his inability to fulfil the conditions of his original charter. The final result of all these negotiations was the formal revocation of all his charter rights and the grant, in their stead, of an extensive seignoury at Mirimichi, which, however, was not actually confirmed until after the death of Nicolas, when his son Richard inherited the estate.

Denys, as has been indicated, was a man of no education, and his book possesses no charm of style; but his omnivorous eye and his painstaking, businesslike method of observation and narrative have resulted in a mass of information in regard to the geography, resources, and fauna of the old Acadia. Professor Ganong's superb volume comprises an historical introduction, a bibliography, a bibliographical description of Denys's book (this part contributed by Victor H. Paltsits), a full list of collateral documents, an excellent translation of the two original volumes, sense for sense rather than word for word, and, finally, Denys's original French text. The well-reproduced illustrations consist mainly of title pages and cuts from the original work, and photographs of the sites of many of Denys's establishments. There are also a dozen helpful maps. Professor Ganong has used as the basis of his task the copy in the Harvard University Library, and he has wisely reproduced it "in every particular, letter for letter, misprints, errors, and all, as nearly as modern type can be made to do so."

General History of Western Nations from 5000 B. C. to 1900 A. D. Part I.: Antiquity. By Emil Reich. 2 vols.; pp. xxvi.+485; x+479. New York: The Macmillan Co. $4 net.

These two volumes belong to the author's projected "Bibliotheca Historica," which is to comprise three elaborate historical atlases, two volumes of source material, and a series of monographs, centring about a "General History." The last-named work, beginning with the two volumes here under review, will be continued in a volume on Christianity, and several others will be required for bringing the subject down to the opening of the twentieth century.

A noteworthy feature of the present work is its iconoclasm. The author has nothing good to say of current methods of historical research. For instance, he sets it down as a fault of recent historians that, while recognizing the importance of personality for well-known times, they have absolutely eliminated it from pre-history. Lycurgus, Theseus, and Romulus have been abolished, and the institutions ascribed by the ancients to their authorship are now declared to be the result of long developments. But this theory of development is, in the eyes of Dr. Reich, effectually opposed by the typical fact that Moses could have done for Israel what we know

Mohammed did for the Arabs. The author attacks, too, the current economic theory by means of a counter-proposition that economic causes were not active in ancient Greece and Rome. Race, which still receives much attention from historians and archæologists, is unimportant; for people are speedily remoulded by every new environment. Craniology, which was to give us the clew to the beginnings of history, has no scientific foundation. The evolutionary theory, implying general progress, has not been proved:

> It is more (or perhaps less) than doubtful whether we are really superior to the Greeks, or even to the Romans; and whether the festival day of mankind was in Athens under Pericles or in New York under Mr. Cleveland.

This destructive spirit runs throughout the work.

But the author is equally active in the reconstruction of history on principles which are in great part new. He aims "to do for history what Bichat has done for anatomy, Bopp and Pott for linguistics, or Savigny for Roman law." His treatment is general, not in the sense of being a summary, or digest, of special histories, but rather of a study of general facts. History he regards as a unit; its process is one paramount current—the Europeanization of all humanity. Europeanism may be analyzed into three principal elements, Hellenic civilization, Roman polity, and the Christian religion. The growth of a nation, like that of an individual, is largely the result of conflict. Those nations have developed most which have had powerful enemies to contend against. The intellectual superiority of the Phœnician, for example, is to be explained by the nearness of great powers in the valleys of the Nile and Euphrates; that of Hellas is due to the ever-present danger from the Orient. The chief influence on a nation, at least in the early stages of its existence, accordingly, is not geographical but geo-political. An exposed nation is not only stimulated by conflict, but gains inestimably by the influx of strangers:

> The foreigner, whether he arrives in compact masses or individually, is one of the richest types of history. As a rule his very status as a foreigner quickens his energy, his wits, and endows him with a certain superiority over the native population, from whose national weaknesses he is often free.

Secondary to geo-politics are economic conditions, the relation of man to woman, personality, and ideals. These are specifically the five forces which, in the view of Dr. Reich, have had most to do with shaping the destiny of every nation.

The value of these synthetic principles, whatever it may be, is largely offset by the glaring faults of the work. It contains many errors of detail; long periods, like that of the emperors, are inadequately treated; the theories it upholds are often pushed to extravagant lengths; and the spirit of the author is unnecessarily combative and egotistical.

Rousseau and the Women He Loved. By Francis Gribble. New York: Charles Scribner's Sons. $3.75 net.

Mr. Gribble has seen fit to attach a sensational title to a book of real importance. The fact that, however one approaches Rousseau, whether biographically or critically, one runs against the women he "loved," so far from justifying mention of them, makes it redundant. Mr. Gribble argues wittily in defence of it, maintaining that you have but to murmur to yourself "Charles Darwin and the Women he Loved," or "Immanuel Kant and the Women he Loved," to see by contrast how philosophical a conception is hidden behind the present title. A suspicion of the commercial motive lurks, however, in the mind.

A new life of Rousseau might have been predicted at about the present time. Since Morley's was written, a good deal of fresh biographical material has come to light, necessitating in some instances a fresh critical estimate. Lemaître's brilliant book of a year or two ago, which is likely to give form to the popular judgment for some time, rather irritatingly ignores these accessions to knowledge, although some of them at least had come to his notice; and while Lemaître disclaims the title of a biography he argues a good deal from biographical premises, sometimes unsound. His primary confession, "J'ai pu me tromper sur quelques faits," must, in fact, recall the famous exordium of Jean Jacques himself: "Commençons par écarter tous les faits." Mr. Gribble is, of course, not without obligations to M. Lemaître. His philosophical and literary conclusions are generally in accord with those of the French critic, and add but little to the body of current opinion. A difference of religious feeling, it is true, leads the two writers to different estimates of such matters as the discussion with the Archbishop of Paris, but they look at their subject with the same air of mingled pity and disgust, and treat it with the same epigrammatic finality. But Mr. Gribble has been at pains to use the facts which M. Lemaître presented in so little detail. The most striking innovations are perhaps three.

In the first place, the whole question of Rousseau's life at Les Charmettes is revised in view of the documents published by M. Mugnier. Among these is the lease of Les Charmettes, the scene, according to the "Confessions," of an idyll. But this lease shows that Madame de Warens took possession of Les Charmettes, not in the summer of 1736, as Rousseau says, but two years later; in other words, after Wintzinried had become his rival. In the dry light of this fact, the whole story of the "Confessions" fades away. Other evidence helps to show that, instead of being the chosen comrade of Madame de Warens in her retreat from the world, he was an awkward third party, often left to himself in paradise, and living at the expense of a woman whom he had ceased to interest. Les Charmettes is doubtless still a shrine for sentimental pilgrims; but these must henceforth realize that it was the scene of one of the greatest love stories of literature, not of history. Mr. Gribble believes that its composition, when Rousseau was old and unhappy, when his mind was weakened, when he realized that he had never attained the happiness he had dreamed of, was a half-unconscious effort at self-consolation. He had pretty nearly come to believe that he had had a romance, as George IV came to believe that he had charged with the Guards at Waterloo.

Mr. Gribble makes full use, too, of the family papers published in 1904 by Auguste de Montaigu, a descendant of Count de Montaigu, the ambassador to Venice, whom Jean-Jacques, his secretary, abuses so freely in the "Confessions." Rousseau's well-known account of the matter gives him the centre of the stage; he was practically the head of the embassy, was intrigued against, was unjustly and insolently dismissed and robbed of the salary that he had earned. After one hundred and thirty years, the ambassador's version came to light. He had written home that his worthless secretary was dismissed for insubordination, for forging custom house certificates, and for general impudence. His salary was withheld until certain just claims on it had been satisfied. Among other things, Rousseau had presented bills for expenses he had not incurred. As luck will have it, Rousseau corroborates the charge by writing in the "Confessions": "From Lyons, I should have liked to take the Mont Cenis road in order to pay a passing visit to my poor mamma." The inference is that he did not go to Chambéry, but he said that he had been there and was allowed his expenses for the journey. The memorandum is in the Montaigu archives.

The most important and wide-reaching contribution of the last few years to Rousselliana is Mrs. Macdonald's discovery of the alterations made, in the handwriting of Grimm and of Diderot, in the manuscripts of Madame d'Épinay's "Mémoires," to conceal their treacheries toward Rousseau; yet this discovery is dismissed by Mr. Gribble in a footnote with the remark that it is "a fine piece of literary detective work, though it need not make as much difference as

she thinks to our estimate of Jean-Jacques's character." That is as may be. Perhaps our estimate of Rousseau's conduct in the actual affair of Madame d'Houdetot, with its ramifications as recounted by himself does not need the sinister coloring of Madame d'Épinay's version. But when we note that the main phenomenon in his psychological history is the gradual growth in his mind of a persecution-mania, which finally clouded his whole sky, it is surely worth while to find that no man had ever better cause for first entertaining the idea. Rousseau was treated by this group of friends as a sensitive child is often treated by shrewder companions. He was habitually teased and mystified. By the cruel coöperation of his playmates, he was always "it." His uneasy sense of the untrustworthiness of his friends is substantiated by Mrs. Macdonald's researches; and seeing the lengths to which they were willing to go, we must admit that a stronger head than Rousseau's might have received from the events which led to his leaving the Hermitage a tendency towards the *folie de la persécution*.

Of Rousseau's incontestable place among the forces that have influenced history, Mr. Gribble is somewhat impatient. He seems to ask himself how it can be. The "Contrat Social" commits suicide by self-contradiction; "Émile" embodies a system which can only be carried out in circumstances so abnormal as to be virtually unattainable; the "Nouvelle Héloïse" limps along from one dilemma to another, improvising a new theory of life when the old one has landed the story in an *impasse*. And yet the publication of these absurdities has changed the aspect of a great many things. Nature and women and the whole plight of mankind are seen under a different light. Mr. Gribble gives it up; he says it is "genius," and lets it go at that. M. Lemaître also gave it up; when he compared the meagre fund of thought in Rousseau's work with the immensity of its influence he declared him to be "strange, mysterious, tragically predestinate, and, much more than he to whom Renan applies the formula, 'créé par un décret spécial et nominatif de l'Éternel.'" Rousseau is, in fact, a nightmare to the quantitative critic. He analyzes him into so many parts of Montaigne, so many of Tronchin, so many of Madame de Sévigné, or what not, and is powerless to explain why a combination of these relatively peaceful ingredients becomes a source of prodigious radio-activity. The truth is that even people whose business is with style do not fully recognize how mighty a matter it is. Doubtless, the style of a great writer, even more than the voice of a singer or the beauty of a woman, is the better for the accompaniment of reason; but, after all, it is, like them, independent of it. A man who could write like Rousseau needed not to be a thinker. He could have persuaded his world to ancestor-worship or to Christian Science, to celibacy or to polyandry, to a diet of nuts or to cannibalism, for 'tis style that makes the world go round.

A Motor-Flight Through France. By Edith Wharton. New York: Charles Scribner's Sons. $2 net.

Mrs. Wharton's new book is brought out in a handsome, dignified form which suggests her "Italian Backgrounds," but, unfortunately, in the place of Peixotto's charming drawings, it is weighted down, both literally and metaphorically, with many stupid, obvious photographs on heavy glazed paper. Was Mrs. Wharton too indifferent to the outward form of her book to make any choice of illustrations? One suspects it, for something of the same indifference, the same formlessness is true of her own part in the work. The enormous overplus of material, the crude arrangement in three unrelated, unbalanced narratives, the absolutely abrupt ending, as of a letter of which the last page has been lost, all insistently suggest the pot-boiler. There's odds in pot-boilers, however, and no one but Mrs. Wharton could have written one like this. If she has neglected form in the mass, she never ceases to be the artist in detail. Never has her felicity of expression, her choice of the one right word, been more evident or more sure. The sentence we italicize in the following excellent sketch applies very neatly to the author's own style:

> Save in the church itself, how frugally all the effects are produced—with how sober a use of greys and blacks, and pale high lights, as in some Van der Meer interior; yet how intense a suggestion of thrifty compact traditional life one gets from the low house-fronts, the barred gates, the glimpses of clean bare courts, the calm yet quick faces in the doorways! From these faces, again, one gets the same impression of *remarkable effects produced by the discreetest means.*

The more one appreciates Mrs. Wharton's rare powers of analysis and of imaginative reproduction, the more one wishes she had concentrated them upon one region and given us a picture of a French province as complete and unforgettable as that of Northern Italy in her "Valley of Decision." In elaborating such a study she would have had time to record more of such shrewd and pleasant reflections as those which occur to her as she contemplates the nose of the sculptured Cardinal in Rouen Cathedral:

> We live in the day of little noses: that once stately feature, intrinsically feudal and aristocratic in character—the *maschio naso* extolled of Dante—has shrunk to democratic insignificance, like many another fine expression of individualism. And so one must look to the old painters and sculptors to see what a nose was meant to be—the prow of the face; the evidence of its owner's standing, of his relation to the world, and his inheritance from the past.

But the motor is waiting, and Mrs. Wharton and her reluctant readers must rush on. For motor-travel as a means of seeing the country she makes an ingenious plea, but her own tale refutes her. Nowhere does she remain for more than the briefest of impressions, and again and again she is whisked past the very places she longs to see. And the reader, most of all, is left lamenting.

In recounting such tours as these, much space is naturally given to architecture, and here Mrs. Wharton frankly and engagingly owns herself an amateur, pleading cleverly for "the kind of confused atavistic enjoyment that is made up of historical association, of a sense of mass and harmony, of the relation of the building to the sky above it, to the lights and shadows it creates about it—deeper than all, of a blind sense in the blood of its old racial power, the things it meant to far-off minds of which ours are the oft-dissolved and reconstituted fragments." Strong in her confidence in this "lesser yet legitimate order of appreciation," she does not hesitate to use the word "Gothic" in the good old "literary," unstructural sense—as in her description of Beauvais; indeed, one almost wonders that, being thus free from bondage to the precisians, she does not pause to worship the wonderful appealing "Gothic" of St. Ouen at Rouen, a Gothic just touched with coming decadence, a pathetic grace like that of Fletcher after Shakespeare, or that she fails to see in the grave front of Noyou, austerely bare, a kinship in spirit if not in structure to the grim Norman abbey-churches at Caen.

To sum up, one may say that this is a book to give keen pleasure to all who have themselves visited the scenes which Mrs. Wharton recalls so surely and charmingly, but that it is too wide in scope, too crowded with detail, too hasty in movement, to be very satisfactory to the untravelled.

Science.

"Medical Inspection of Schools" (New York: Charities Publication Committee) is "one of the by-products of the research supported by the Russell Sage Foundation for the purpose of studying so-called 'retardation' among school children." The authors, Dr. Luther H. Gulick, former director of physical training in the New York public schools, and Leonard P. Ayres, superintendent of the Porto Rico schools, 1906-1908, are at once statisticians, critics, and practical advisers. The volume brings together substantially all the methods and

details of medical inspection practised in European and American schools. Charts and forms used in discovering and following up physical defects and disease are reproduced; laws governing school physicians are accurately reported; and four typical systems of administration explained. Not a few significant conclusions are drawn. For instance, the investigators favor the creation of a medical staff, which shall be under the control of the educational authorities, and which shall be charged with the duty of examining pupils for non-contagious defects. To the layman the most surprising verdict, however, is that reached in the study of retardation and physical defects. It is shown that children outgrow many of the afflictions which interfere most seriously with learning:

> No other conclusion seems possible as an explanation of such great falling off as we have in the case of enlarged glands, with which 40 per cent. of the six-year-old children suffer, but which are found present in only 12 per cent. of the sixteen-year-old ones; or in that of defective breathing, where the reduction is from 21 to 10 per cent.; or in that of adenoids, with a fall from 23 to a little over 2 in the same years.

This statement exposes the fallacy in those much-aired statistics which, by reckoning chiefly with the two lowest grades, register a terrifying percentage of defectives among New York city school children. Cautious without quenching enthusiasm, lucidly exhaustive and admirably arranged, the monograph will assist not a little in the great work, scarcely begun, of supplying the sound body that is needed for the sound mind.

A very good teacher may find a few helpful suggestions in A. Davison's "Human Body and Health" (American Book Co.), but the pupils for whom it seems to be intended will find much of it decidedly misleading. The book is abundantly illustrated, yet many of the pictures, despite a general typographical excellence, can only confuse the student; a few are admirable, a large number ridiculously unclear or wrong. Here and there the author shows familiarity with recent progress, as, for example, in describing the movements of the stomach and Schaefer's method of artificial respiration, which, however, is not fully and correctly explained as to its practical application. Each chapter ends with some "suggestions for the teacher" which must cause the reader to suspect that neither author nor teacher has a call to teach physiology. Last of all comes a sort of glossary containing several curiosities, the chief of which is that "Mas'saging" is "pressing or squeezing any part of the body in a definite way," a most comprehensive definition.

Old English gardens are at once brought to mind by the title, "Holly, Yew and Box," by W. Dallimore (John Lane Co.), but the volume deals with these three elements of the garden, rather than with the garden itself. The illustrations of English holly trees are exceedingly effective, and indicate the high value of these plants in the construction of picturesque combinations. The minor illustrations, which show the great variety in shape and margin of the holly leaf, will surprise every reader who has seen only the common forms used for Christmas decorations. When to the wide differences in shape one adds the wider differences in the color of the leaves, it is easy to see why the group should have attracted such careful attention from the late Mr. Moore and the author of this treatise. The volume contains much besides a mere botanical review of the holly. The patient box, which has borne so much mutilation from formal gardeners, and the sombre yew also, find here congenial treatment, but they and a few other evergreen trees are kept a little out of proportion by the greater space deservedly assigned to the hollies. Lovers of trees and of the folk-lore of trees will find in this work much of deep interest.

Otis Tufton Mason, since 1884 curator of ethnology in the National Museum, and since 1902 head curator of the department of anthropology, died at Washington, November 5. He was born at Eastport, Me., in 1838, and was graduated from Columbian University. He was a member of many scientific societies in this country and Europe. Among his writings are: "The Hupa Indian Industries," "Woman's Share in Primitive Culture" (1894), "Origin of Inventions" (1895), "Primitive Transportation," "The Land Problem," "Cradle of the North American Indians," "The Antiquities of Guadeloupe," and "Aboriginal American Basketry" (2 vols., 1904).

News comes by cable of the death, November 8, at the age of sixty-one, of Prof. William Edward Ayrton, electrical engineer and inventor. He was educated at University College, London, was from 1873 to 1878 professor of natural philosophy and telegraphy at the Japanese Imperial College of Engineering, and since 1884 professor of electrical engineering in the Central Technical College, South Kensington. His publications include "Practical Electricity" (eleventh edition), and many papers in scientific journals.

Drama.

VICTORIEN SARDOU.

Victorien Sardou, the dean of French dramatists, died November 8 after an illness of several months. His death causes the sixth vacancy this year among the forty "Immortals."

For nearly fifty years Sardou was prominent among the dramatists of France. He was born in Paris in 1831, the son of a professor who wrote classical books for students. From the first, therefore, he lived in a literary atmosphere. As he grew up, he began to study medicine, but a little later turned to history. He was desperately poor, and in order to continue his study he was obliged to give lessons in history, philosophy, and mathematics—he had been educated in the College of Henry IV—and to write occasional articles for reviews and newspapers. In these varied occupations he laid the foundation of that mass of miscellaneous information, especially historical and archæological, which was of such value to him in after life. Soon he was led to try his fortune in the theatre. His first attempt was a serio-comedy entitled "Les Amis imaginaires," some of the ideas of which he afterwards worked up in "Nos Intimes." What became of it, no one knows. His second venture, when he was only twenty, was more ambitious, an historical tragedy, called "La Reine Ulfra." He dedicated it to Rachel, but she would not listen to it. "No, no," she exclaimed; "a piece laid in Sweden is impossible; tell the young man to write a Greek tragedy, and, perhaps—who knows?—I will play in it.'

In 1854 he completed a piece, "La Taverne," which was accepted at the Odéon. Some one in authority thought that it would be a good idea to get the word "students" into the title, and so the piece was announced as "La Taverne des étudiants." Unfortunately, the students conceived the notion that the piece was an assault upon them, and they practically hissed it from the stage At last Sardou had a stroke of good fortune. Being poor, he had, of course, got married, and his wife, Mlle. de Brécourt, brought him to the notice of her friend, the famous actress, Déjazet, who then directed the theatre that bore her name. She took a lively interest in his work, produced a number of his plays with success, and so started him upon his career. His "Candide" at once made him a man of mark among contemporaneous playwrights, and he confirmed good opinions with "Les Premières Armes de Figaro." He next made a hit with "Les Gens nerveux," in which he had Theodore Barrière as a collaborator. But the triumph which he won with "Les Pattes de mouche" was all his own. This play, known on the English stage as "A Scrap of Paper," was recognized immediately as one of the cleverest of modern comedies. It was evident that a new master in the art of stage situation and plot development had arisen.

It is not necessary to enumerate all Sardou's plays. A mention of the most successful will suffice. His comedy, "Les Femmes fortes," was well received, but was excelled in almost every way by "Nos Intimes," a comedy which held its own for many years upon the French stage and has been adapted repeatedly. His "Les Diables noirs" was suppressed by the censor; but he was soon to the front again with a variety of plays, including "La Famille Benoîton," which is generally admitted to be one of his best works. This also has been adapted under a number of titles. Among the pieces next in order were two of his sensational social plays, "Séraphine" and "Fernande," both well known in this country and England. After the war, when political animosities were bitter, M. Sardou brought out a political comedy, or lampoon, called "Rabagas," dealing with contemporaneous personages and events, with a boldness and clearness of allusion and a vigor of caustic comment which were

often the cause of riotous demonstrations. Gambetta was the object of some of his fiercest attacks. The piece was played all over France, and provoked disturbances wherever it was heard. This was followed at no long interval by his "L'Oncle Sam," which was suppressed by the censor on the ground that its ridicule of republican institutions would give offence in the United States. This advertisement only attracted attention to the piece, which, after a few judicious emendations, was produced in this country with considerable success. He then entered upon a period of brilliant invention, in the course of which he wrote the romantic melodrama, "Ferréol," which had a long run at the Union Square Theatre in this city; "Dora," famous here as "Diplomacy"; "Daniel Rochat," in which the question of religious marriage was argued; and "Divorçons," one of the cleverest and most cynical of comedies. In 1881 he began a new phase by writing a series of plays for the use of Sarah Bernhardt and other star performers. The first four of these were "Fédora," "Théodora," "La Tosca," and "Cléopâtre." For Coquelin he invented "Thermidor," with its theatrical use of revolutionary records; for Réjane, "Madame Sans Gêne"; for Henry Irving, "Robespierre," and the pretentious but sadly inadequate "Dante."

Even this long list does not begin to exhaust the tale. Sardou wrote librettos for the musical stage, fairy pieces, theatrical recollections, a novel or two, and various addresses, including that which he delivered when admitted to the French Academy in 1878. He was also a competent stage manager. He conducted his own rehearsals, and no detail of the representation escaped him. A natural actor, he interpreted each of his characters for the instruction of the professional performers.

So copious and so varied was his output; so constant his popularity after his early years of failure; so substantial his acquirements that his name is surrounded by a certain glamour, which makes it difficult to see him in his true proportions. Of his commanding abilities, his wide and curious, if not always profound, learning, his keen power of observation, his satirical and humorous gifts, his grasp of life in all its external phases, his rare faculty for devising and solving dramatic problems, and his extraordinary sense of theatrical situation, there can be no question. He was a master of the mechanical arts of play-building. Yet he will never be accorded a high place in the ranks of creative dramatists; for he was not a creator in the true sense of the word, as he dealt with incident rather than character.

It is no disparagement of his great natural gifts to say that he was fortunate in his time and his opportunities. The French stage was well supplied with dramatists when he came upon the scene, and, although he was too capable to be exposed to the temptation of plagiarism, he was too alert not to avail himself of the lessons taught by the best contemporary models. One can trace in his plays the influence of Augier, Feuillet, D'Ennery, Dumas, Belot, Meilhac, Halévy, Scribe, and others. He did not, however, obliterate the memory of the predecessors in whose footsteps he followed. His social plays will not bear close comparison, except in the matter of construction, with those of the younger Dumas; he never wrote a better melodrama than D'Ennery's "Les Deux Orphelines," or a more effective theatrical romance than Feuillet's "Roman d'un jeune homme pauvre." The best work of Augier—such plays as "L'Aventurière," "Le Gendre de M. Poirier," or "Les Effrontés," for instance—possesses qualities beyond the range of his capacity. Then, too, his several plays for star performers were marvellously adapted to their purpose; but in spirit and quality they were essentially theatrical and commercial.

Thus it was, that for the theatre of high ideas, in spite of his fertile fancy and executive genius, Sardou did little. He was an opportunist, prompt to recognize and eager to gratify the cravings of a popular taste, without seeking to elevate or direct it. The scope of his ambition may be calculated from the size of his fortune. As a theatrical artificer he was supreme, but mechanics are not the whole of drama.

THREE NEW FRENCH PLAYS.

PARIS, October 24.

The Paris season has opened with three diversely noteworthy plays, among others which do not rise above the average level of stage amusement. "Le Bon Roi Dagobert," by André Rivoire (at the Théâtre Français) is a poetic, if not a theatrical, event. The author is the most taking versifier of his generation of poets—a man of thirty-six—the youngest generation being made up of poets of twenty. He describes his work as a "fantasie"; translated, with the daintiness of the verse vanished and the light love comedy coarsened, it might seem little more than an operetta among plays. The piece uses the popular legend of the old Merovingians as the author's poem "Berthe aux grands pieds" had already done. Every French child knows about the good King Dagobert, so absent-minded that he put on his breeches wrongside out, and his prime minister, the good St. Eloi, whose business it was to put everything right. I doubt if even a dark-age saint would stand moral sponsor for the fantastic young King's absent-minded love between his Queen and her handmaiden, ending in packing the Queen back to Spain and "off with her head!" for the handmaiden. The command is executed as it was for Alice in Wonderland, to the relief of the audience, who actually are moved by the poetic fancies and the refined acting. It is doubtful if an Anglo-Saxon audience would rise to the poetic point of view, which, in the absence of the light gayety of the verse, might be quite lost in what would be thought the essential impropriety of the story.

"L'Émigré," by Paul Bourget (Théâtre de la Renaissance), has been done by the novelist without collaboration of any professional playwright. It is done over, rather than extracted, from the novel. The story is known: a noble, whose ancestors for a thousand years have served France, is a forced emigrant, so to speak, in his own country, the Republic having no use for Frenchmen like him. His son, in spite of tradition and education, takes up with the new order, even when Church and Army—all that remains vital of the old—are attacked. Paul Bourget's theory of "L'Étape," that in families there is no profitable leaping up or downward across intermediate stages, gives him the tragic story: this renegade to his order is not its genuine scion; an adultery long past explains how he came into the species; and his marriage, after reconciliation, takes him away from it, leaving the old marquis the last of his race. Paul Bourget has made visible efforts to portray fairly the two Frances, and his play has interested, without leading up to incidents which sometimes make the French stage resemble a political hustings. Can it bring Old France and New nearer to believing in the good faith and real merits of the other?

"Israel," by Henry Bernstein (Théâtre Réjane) has naturally less literary merit than the two other plays and more theatrical mechanism. It has also six letters in the title, to which this successful playwright seems to hold. It is a bold attempt on the part of an Israelite author to bring the French Jew and the anti-Semite Frenchman face to face on the stage. The plot is nearly a counterbalance for Paul Bourget; the young hero, noble in name, "vive-l'armée!" and anti-Semite, learns that he is the adulterous son of the Jew—and commits suicide. Of course, the piece is not evolved so baldly as that; there is brought out in action an entire theory or Aryan and Semite, and particularly the idea that there are Jews on both sides of everything. The play well wrought, with Réjane at her tragic best, could not prove a failure; but it has given offence, which outside of divided France could not be understood. Even M. Bernstein seems unconscious of it, which is just as well for the play's fortunes.

S. D.

"The American Stage of To-day" (Small,

Maynard & Co.) consists chiefly of the reviews—with amplifications and additions—written by Walter Prichard Eaton in his capacity of dramatic critic of the New York *Sun*. Mr. Eaton is a young man of much natural ability, fortified by extensive reading, who has a copious vocabulary, a fluent and attractive style, a pretty wit, the courage of his opinions, and a fine contempt for those who do not happen to agree with them. But he is lacking in catholicity of taste, breadth of view, and power of comparison. Nevertheless, his essays, with their curious admixture of common sense and vagrant or flippant fancy, provide excellent entertainment and contain a variety of wholesome truths about existing theatrical conditions. But the brilliancy of expression is seldom attended by corresponding solidity of judgment. Mr. Eaton's admission that "he has no hard and fast theory of the drama" is significant. He adopts for his motto "Scire quod sciendum," and, in his zeal for what he calls realism—a term which in so far as it applies to the theatre is sadly in want of scientific definition—seems to think that nothing that is human should be alien to the stage. This, of course, would open the floodgates. He holds that the ideal of the modern theatre is the recreation of reality "as surely, as vividly, as directly as possible." In common with other advocates of the decadent stage, he fails to perceive that to restrict the theatre under the false pleas of truth and realism to the reproduction of the actual, or, rather—for such is the "progressive" tendency—of whatever is strange, repellent, or abnormal in vital experience, would be to strip it of imagination, destroy its chief claim to be counted among the arts, and leave it without excuse for existence. All true lovers of the theatre cling to "one hard and fast theory" about it, and that is that it ought in itself to exemplify a combination of all the arts, and be one of the most powerful moral and educational influences at the disposal of civilization. Unfortunately, few contemporary writers about the stage are old enough to have good standards to judge by. This is proved by the extravagant laudation bestowed upon the inferior performers of the present day. They find the poetic drama dull because it is no longer capably interpreted.

The highly praised "Lady Frederick," one of the earliest comedies of W. S. Maugham, which has had a year's run in London, was presented in the Hudson Theatre of this city on Monday evening, and failed to justify all the high expectations founded on reports. It is a piece of no particular brilliancy, originality, or purpose—bearing many marks of juvenile imitativeness and inexperience—but it is a not unskilled variation of an ancient theatrical theme, is written with considerable smartness—of a somewhat cheap order—and contains some effective theatrical situations. A reformed rake of mature years is called upon by his sister to rescue her son from the clutches of a woman whom she believes to be a mere adventuress. He recognizes in the enchantress a brilliant Irish woman, with whom long ago he was deeply in love himself, and attempts to influence her first by means of cajoleries and then by veiled threats. She retaliates in kind, and, having compromising letters in her possession, proves a formidable antagonist. The duel is lively while it lasts, but in the end she displays great magnanimity, disillusions the amorous youth by revealing the secrets of her toilette, and disproves the most damaging reports about her own character. Thereupon the reformed rake marries her himself. This is a story of the theatre, not of real life. Both the incidents and the personages have often done duty before. Mr. Maugham's use of them is that of the clever amateur and the dialogue which he has written, although full of humorous lines, savors too strongly of the lamp, to create the impression of spontaneous wit. Moreover, it loses much of its legitimate point at the Hudson through incompetent utterance. Miss Ethel Barrymore has the beauty but none of the brilliancy—either of mood or manner—appropriate to the adventuress, and Bruce McRae is hopelessly miscast as the man of the world. The only really satisfactory performer is Miss Jessie Millward, and she has little to do and no one to play up to her.

St. John Hankin is the author of a new one-act comedy, called "The Burglar Who Failed," which has just been produced with success at the Criterion Theatre in London. It is the story of a housebreaker who, while in the pursuit of his regular business, is confronted by a muscular and courageous young woman, who beats him into subjection with a hockey-stick. Then he becomes penitent, tells a pitiful tale about his professional discouragements and the difficulties of reformation, and so works upon her sympathies that she connives at his escape and gives him the promise of honest employment on the morrow. The burglar was represented by that excellent comedian, Ferdinand Gottschalk.

Many of the leading actors and actresses of the British stage have decided to give a matinée in His Majesty's Theatre, London, November 30, in recognition of the dramatic art of Italy, as represented by Adelaide Ristori, to whose memory a monument is to be erected at her birthplace, the village of Cividale, in Italy. The programme is being arranged by H. Beerbohm Tree in coöperation with Sir Squire Bancroft, Sir W. S. Gilbert, Sir John Hare, and Sir Charles Wyndham. The list of the committee includes the names of practically all the distinguished actors on the British stage and of many eminent painters.

Music.

A NEW OPERATIC POLICY.

Operatic managers and their press agents have a habit of magniloquently proclaiming each new season as the most brilliant ever planned. For once this assertion may be accepted as an approximation to the truth. The constellation of operatic stars to be seen and heard during the next twenty weeks at our Metropolitan and Manhattan Opera Houses is dazzling. Leoncavallo lamented not long ago that it was useless to write any more operas in Italy until New York gave back to that country the great singers whose patriotism could not resist American dollars. Germany laments the loss of her best singers, and so does France; while we have so many of these great vocalists that some of them will get what nas been wittily called "hush money," since it will be impossible, especially at the Metropolitan, to give the guaranteed number of appearances, which nevertheless must be paid for. Among the noted singers to be heard this season are Destinn, Eames, Farrar, Fremstad, Gadski, Morena, Sembrich, Gay, Homer, Bonci, Burgstaller, Burrian, Caruso, Schmedes, Reiss, Campanari, Goritz, Feinhals, and Scotti, at the Metropolitan; and Melba, Garden, Tetrazzini, Labia, Zenatello, Dalmores, Renaud, Sammarco, Gilibert, and Dufranne, at the Manhattan.

Notwithstanding this array of talent, the singers are by no means to have everything their own way. Heretofore it has been generally the policy to trust to the fact that, in the opinion of the large paying public, "the singer's the thing," and the opera of secondary importance. But of the present season the popular singers are not to be the only feature; we are to have a number of new and interesting operas. For this reform Oscar Hammerstein is responsible. His surprisingly successful experiment of producing operas by Charpentier, Debussy, and Massenet that had been previously shunned, refuted the inveterate belief that the public does not want operatic novelties. Pleased with his success in venturing where Mapleson, Grau, and Conried had feared to tread, he is about to make his local patrons acquainted with Massenet's "Grisélidis" and "Le Jongleur de Notre Dame," Breton's "Dolores," Jan Blockx's "La Princesse d'Auberge," which will be absolutely new here; and Massenet's "Manon." Saint-Saën's "Samson et Dalila," and Bizet's "Les Pêcheurs de perles," which to most of our opera-goers will be as good as new. It is to be regretted that to these he is going to add the morbid "Salome" of Richard Strauss.

It is probable that even if Mr. Hammerstein had not set a good example, the new managers of the Metropolitan would have paid more attention than their predecessors to fresh works. The versatile Andreas Dippel is in sympathy with operas of all schools, new and old, and Mr. Gatti-Casazza, during the ten years of his management of La Scala in Milan, made a specialty of producing new operas in Italian, French, and German. The joint managers have been casting about for unfamiliar operas to enliven the stale Metropolitan repertory, and their promises, most of which will probably be kept, are certainly alluring to those who believe that in music as in literature and the drama new productions should have a hearing. Of special interest will be

D'Albert's "Tiefland," the most successful German opera since Humperdinck's "Hänsel and Gretel"; Humperdinck's new opera, "The Children of the King," which is to have its first performance here on any stage, probably under the composer's own direction; and Goldmark's "The Cricket on the Hearth." Italy will be drawn on for two works new here—Puccini's "Le Villi" and Catalani's "La Wally"; while Paris will contribute its latest success, Lapana's "Habanera." Bohemia is to be represented by Smetana's "The Bartered Bride," and Russia by Tchaikovsky's "The Queen of Spades." "The Pipe of Desire," by Prof. F. S. Converse of Harvard, is also promised. This will be, as the prospectus says, "the first work by an American composer to be heard at the Metropolitan Opera House." One cannot help wishing that this honor had been bestowed on the "Azara" of Professor Converse's predecessor, John K. Paine.

The difficulty of launching new operas successfully in this country has been due largely to lack of good singers and to the fact that production has been delayed till near the close of the season, when it was almost impossible to give the requisite number of repetitions. Over and over again it has been shown that even such operas as have inherent vitality have to be kept on the stage for a time at a loss, before the public patronizes them to a profitable extent. The Metropolitan can afford to take the risk of such loss, though it is not great, because the subscription there is so large as almost to cover the expenses in any contingency. The conditions, then, are full of promise to composers. Nothing stimulates production like encouragement. Debussy, for example, allowed his pen to rust because no one seemed to want his "Pelléas et Mélisande"; but he set to work at once when he heard of the happy fate of his work in New York, which led to its acceptance at a number of German opera houses; and he has already promised the Metropolitan managers two new scores, one on the subject of Tristan, the other based on a tale by Edgar Allan Poe.

The new operas will not only be sung by leading artists, but they will have the benefit of the improvement made in the choral and orchestral forces. The managers of the Metropolitan, having *carte blanche* in the matter of expense, have engaged two choruses and two orchestras, one for works in Italian and French, the other for the German operas and those that are to be sung in English. This will insure the advantage of division of labor and give more time for rehearsing.

With a performance of Puccini's "Tosca" the season of grand opera was opened at the Manhattan on Monday night. The experience of two seasons has taught Oscar Hammerstein that if he would succeed he must produce operas with an ensemble of stars. He had four on this occasion—Maria Labia, Giovanni Zenatello, Maurice Renaud, Charles Gilibert, and with the aid of Cleofonte Campanini, they gave one of the best performances of Puccini's opera ever heard here, although this work is one of the trump cards of the Metropolitan. Zenatello is no Caruso, but at times, he comes very near being one; he sang the part of the lover admirably. In the rôle of the Sacristan, Gilibert showed once more that in the hands of a great artist no part is small. Renaud had to contend against the Scarpia of Scotti, one of the strongest impersonations to be seen at the Metropolitan. He could not surpass this vocally, but in make-up and action the Frenchman was even more remarkable than his rival; his Scarpia was the sanctimonious, lascivious, and cruel "cross between a confessor and a hangman," as Sardou's imagination conceived him. Special interest attached to the Tosca of Signora Labia, the young Italian soprano, who won fame in Berlin, and who made her American début. She emphasized the appealing, womanly side more than her predecessors, Ternina and Emma Eames, did. Her voice is of beautiful quality, and endowed with genuine dramatic feeling.

Edward MacDowell had a premonition that he should not live after his forty-fifth birthday. He was always distrustful of his powers, and severely critical toward his own music; some time before his mind began to fail he destroyed all the manuscripts he did not wish to leave behind. He spared, however, "Lamia," his third symphonic poem, and his widow, a few months ago, placed it in the hands of Arthur P. Schmidt of Boston, who published it. As soon as it had left the press, it was produced at a concert of the Boston Symphony Orchestra; the same orchestra played it in this city last Saturday afternoon, and on the previous evening it was performed at one of the People's Symphony Concerts in Carnegie Hall. The impression made at the first hearing was that the piece was well worth producing, and this impression was deepened at the second hearing, when the superior membership and training of the Boston orchestra enabled the conductor to reveal the youthful MacDowell's astonishing instinct for rich, varied, and appropriate coloring. The composition is an embodiment in tones of the moods inspired by the story of Lamia. MacDowell was not a believer in the Berlioz-Strauss style of programme music which attempts to follow such a story step by step; his symphonic poem is therefore simply an attempt to produce in the hearer's mind a succession of moods or emotions such as are aroused by reading Keats's poem; and in this endeavor he has succeeded admirably. The melodies and harmonies are not so individual as those in his last sonatas and songs; but they are, nevertheless, fascinating, and it is likely that "Lamia" will be heard hereafter quite as often as his other orchestral works.

The dancing of a Beethoven symphony by Isadora Duncan at the Metropolitan Opera House last Friday afternoon surely was something new under the sun. It remained for this American woman to accept literally Wagner's remark that that master's seventh symphony is "the apotheosis of the dance" and to endeavor to reflect in her bodily movements and facial expression the emotions suggested by the music. Beethoven did not even use a poetic "programme" for his symphonic works except in the "Pastoral," and that he did in an apologetic manner. What he would have said to Miss Isadora Duncan's execution of a mimic-saltatorial programme can only be imagined by those who know in what strong language he sometimes expressed himself. The combination spoiled the music, from which it distracted attention, without offering as a substitute anything worth looking at more than ten minutes, for Miss Duncan's mimic gifts are limited. She copies her postures from Greek statues and vases, and apparently sees no incongruity in associating these with modern German music. She is to appear next Saturday in a series of dances illustrating the music in Gluck's "Iphigénie en Aulide." Here, at any rate, the subject is Greek and the incongruity of the procedure will be less obvious.

Wassily Safonoff will begin the sixty-seventh season of the New York Philharmonic Society with two concerts at Carnegie Hall Friday afternoon and Saturday evening. There will be many new players in the orchestra. Arthur Hartmann, who has not hitherto been heard in this city, will be the violin soloist. The programme comprises Toccata in F, Bach-Esser; overture, "Manfred," Schumann; concerto for violin, No. 3, B minor, Saint-Saëns; and tone poem, "Thus Spake Zarathustra," Richard Strauss.

August Vianesi, the first conductor of the Metropolitan Opera House, died in this city November 3. He was born eighty-one years ago in Milan and was selected by Victor Maurel to go to Paris to conduct the performances at his Théâtre des Italiens. His success was so great that he was invited to become first conductor at the Opéra in Paris. Then in 1883 Henry E. Abbey brought him to this country, but at the end of the season he returned to Paris. When Abbey & Grau resumed the management of the Metropolitan, Signor Vianesi came back to New York. Later he conducted the French opera in New Orleans. For the last ten years he had been teaching in New York.

Art.

Allgemeines Lexikon der Bildenden Künstler von der Antike bis zur Gegenwart. Unter Mitwirkung von 320 Fachgelehrten des In- und Auslandes, herausgegeben von Dr. Ulrich Thieme und Dr. Felix Becker. Vol. II. Leipzig: Verlag von Wilhelm Engelmann; New York: G. E. Stechert & Co.

Vol. II. of the Thieme and Becker Lexicon of Artists (see the *Nation* of May 21, p. 474) leaves us in doubt as to the possibility of completing the work in twenty volumes, as proposed. If A takes up at least a volume and a half, so that the second volume only brings us to Bassan, there would seem to be a deliberate purpose of crowding

the later parts of the alphabet in the fashion, say, of the French "Biographie générale"—a plan by no means praiseworthy. But everything in the two volumes as we have them affords great hope for the completeness and excellence of the whole work.

This second volume does not contain so many celebrated names as the first. Antoine-Louis Barye, sculptor and painter, is perhaps as important as any, and he receives nearly three columns. Good judgment is shown in avoiding the natural tendency to assign too much importance to the small bronzes which, of all Barye's work, are best known outside of France. The larger monuments are well appreciated, though not all of them are described—we do not find mention of those set up in Baltimore by Henry Walters. Fra Bartolommeo della Porta properly calls for more extended treatment, not so much because of higher rank in art, as because of the vast amount of information accessible in relation to that typical painter of the early Italian renaissance. The article, signed Fritz Knapp, takes up five pages, including the brief list of the works contained in different galleries of Europe. It is curious to note that nearly two hundred persons are entered under the names "Bartolommeo" and "Bartolomeo," so that it becomes the student to remember the familiar surname of the one great man "of the city gate" in Florence. Arnolfo di Cambio, the architect, receives nearly nine pages by K. Frey, and this, although the first sentence declares: "Ueber Sein Leben und seine Werke besteht spärliche Kunde." One of the purposes of the Lexicon, however, as stated in the first preface, is to treat fully the biographies of artists upon whom little has been written, while less space is allotted to artists, even of importance, who have been the subjects of much discussion. But it is evident that, with great buildings to be described, the church of Santa Croce, the new cathedral at Florence, and tombs at Orvieto and Rome, much is to be said of the artist, even if the details of his life are meagre.

Among Americans, George Grey Barnard, the sculptor, receives a column by Edmund von Mach. We are inclined to regret the brevity of this contributor's notice of Paul Wayland Bartlett, a sculptor strong in completed work and strong in promise. His work, in collaboration with J. Q. A. Ward, as in the great pediment of the New York Stock Exchange, does not seem to be mentioned. Several American architects have brief notices—Grosvenor Atterbury, D. Maitland Armstrong, and James D. Baker; but one of the most admirable designers of modern times, George Fletcher Babb, is omitted from the list. The late Henry O. Avery is named as an architect, and his father, Samuel Putnam Avery, as an engraver, which indeed he was, in his youth; but it is perhaps a matter of regret that the father's great services as art collector and patron, and as founder of the Avery Architectural Library, a memorial to the son, should receive no mention at all. It is, however, a question how far other than purely technical production should be considered in the Lexicon. Thus, in the long notice of Adam von Bartsch, space has been reasonably well apportioned between the little-known engravings by that artist and the renowned Dictionary of Engravings; but the bibliographical account of the great book in its twenty-one volumes has been less interesting to the writer than the judicious and careful work as draughtsman and engraver on copper. The Avery Library, indeed, would not deserve mention but for its unequalled excellence and extent, and its unique quality as being limited, by severe regulations, to architecture and the arts of decorative design.

Korean and Japanese art is treated under the names of Arihisa, Ariië, Ariyasu, Asa, and Baiitsu, and these articles are accompanied by bibliographies and lists in which European as well as Oriental books are named and paintings of importance are catalogued. The art, revived in very recent times, of printing in full color from mezzotinted plates, is recognized. Four lines signed by E. Richter are devoted to S. Arlent-Edwards, who lives in Williamsbridge, N. Y., and has made a reputation by his large mezzotint engravings printed in strong and vivid colors.

English names and titles in this volume seem to be given more accurately than in the first; and yet it is hard that Douglas Jerrold's name should be printed with two curious blunders, occurring as it does in the bibliography which follows John Wykeham Archer, the English engraver and painter.

The *Rassegna d'Arte* for October contains an important article by Francesco Malaguzzi-Valeri on Campione, Lake of Lugano. This village contains numerous remains of old sculpture, which are fully illustrated, but curiously enough almost nothing by those stonecutters that made its name famous in the fourteenth century. A series of frescoes representing the story of John the Baptist reveals the influence of Giotto, and may be dated within a generation of his time. A Last Judgment, signed Lanfranco and Filippo di Veri, of Milan, 1400, has many northern characteristics, and seems a kind of anticipation of the manner developed by certain Lombards and Veronese of the fifteenth century.

The *Zeitschrift für Geschichte der Architektur*, a monthly magazine under the editorship of Dr. Fritz Hirsch, has just completed its first year of existence. In the list of contributors are such names as Joseph Strzygowski and Wilhelm Dörpfeld. Among the varied contents of the first year, there is a series of interesting articles on the primitive aspect of the exterior of the Theodoric tomb at Ravenna by Strzygowski. The *Zeitschrift* also brings carefully prepared reports and bibliographies from France, Belgium, Italy, America, etc. The English and American section is in the hands of Morton H. Bernath of New York city. The publisher is Carl Winter's Universitätsbuchhandlung, Heidelberg.

One of the most interesting archæological achievements in recent years was the opening of the Sancta Sanctorum, the ancient private chapel of the Popes, near (formerly in) the Lateran in Rome. It had long been known in scholarly circles that the chapel contained treasures that might throw much light on mediæval Roman art—a chapter by no means sufficiently known. Hartmann Grisar, S. J., professor in the University of Innsbruck, whose reputation rests on his monumental work on Rome and the Popes during the middle ages, at last received from Leo XIII and afterwards from Pius X, the permission not only to enter the chapel, but also to open the altar, and its thirteenth century grating, behind which is the treasury. The contents surpassed all expectations. Many products of ecclesiastical art, such as jewelry, ivory carvings, pixides, enamels, and textiles almost perfectly preserved, were brought to light. These furnish excellent illustrations of the activity of Byzantine artists in Rome, from the ninth to the twelfth century. The results of the investigations of Father Grisar, together with excellent reproductions of the important pieces, are contained in his recent volume "Die römische Kapelle Sancta Sanctorum und ihr Schatz: Meine Entdeckungen und Studien in der Palastkapelle der mittelalterlichen Päpste". (Frieburg-im-B.: Herder).

Hans Mackowsky's "Michelangelo" (Berlin: Marquardt & Co.) is a substantial volume of more than four hundred pages, containing sixty-one reproductions of the works of Michelangelo, by heliogravure process, with a scholarly, yet popular, discussion of the artist. The book contains a good index.

Among the recent accessions to the Metropolitan Museum of Fine Arts are fifteen pictures willed to it by Mrs. Martha T. Fiske Collord. They consist of two small studies of Italian peasants, by William M. Hunt; George H. Boughton's The Edict of William the Testy; specimens of Daubigny, Neuville, Detaille, Gérôme, and Meissonier; Munckácsy's The Music Room, and a little water-color by Fortuny, Moors on Horseback. A marble group by Rodin, La Main de Dieu, has been presented by Edward D. Adams, a member of the board of trustees.

Among the exhibitions at the dealers' galleries in this city are prints by Albrecht Dürer at Frederick Keppel & Co.'s, till November 30; engravings by Lucas van Leyden at Ederheimer's; and etchings by several men, including D. Y. Cameron, at Wunderlich's.

Antoine-Auguste-Ernest Hébert, the historical painter, died in Paris November 5. Born at Grenoble in 1817, he became a pupil of David d'Angers and Delaroche; in 1839 he gained the Prix de Rome; later he received the grand cross of the Legion of

Honor. Among his better-known pictures are The Cup Found in the Sack of Benjamin, Tasso in Prison, The Daughters of Alvito, The Virgin in Paradise, Spring, and The Kiss of Judas.

The death of the Danish artist, Lorens Frölich, is reported to have occurred the 25th of last month, on his eighty-eighth birthday. He had illustrated many books for London and Paris publishers, and the National Museum in Fredericksborg Castle contains a series of frescoes by him on the Danish Conquest of England.

Finance.

THE MARKETS AFTER ELECTION.

It is a familiar habit of the American business community—which is at heart always optimistic, and rightly so—to fix an absolute date, in cases of depression, for the resumption of full activity and prosperity. Sometimes that date is "after the January settlements"; sometimes it is "when the harvest is assured"; sometimes, as in the present instance, "after the election." All such exact pinning down of expectations, where the practice is general, leads inevitably to the postponing of plans or orders until the time thus designated, and therefore to a sudden increase afterward. On occasions the rest of the chapter has proved tbat the business community was right in fixing revival thus contingently; on occasions the event has turned out otherwise. Election news, as the sequel proved, was the real and immediate turning-point for trade in 1900; it was not in 1896. How about 1908?

Mr. Taft's election was expected, and, on the Stock Exchange, at any rate, it had been "discounted." But there are two other considerations. One is, whether, even with the anticipative rise in stocks and increase in merchandise orders, there was not a great body of financial and industrial activity which had been held back so long as any uncertainty remained. Secondly, although Bryan's defeat had been generally looked for, so complete and overwhelming an overthrow had by no means been predicted. It will, therefore, be necessary to inquire, not only to what extent uncertainty as to the election had been a blight, but whether the resounding verdict for conservatism does not introduce a new and "undiscounted" factor. The second is an interesting question. What does the vote, taken by itself, signify from the financial point of view?

With the party in power during the recent panic winning in the electoral college a majority so near to that of the prosperous year 1904, it is reasonable to ask whether such apparent absence of a "discontented vote" does not indicate that the notion of hard times and consequent discontent have been imaginary. This view can hardly be assumed off-hand. By the really accurate test—the popular plurality—Mr. Taft's lead seems to have been less by at least a million votes than Mr. Roosevelt's of four years ago. If this estimate be correct, then half a million votes have theoretically swung to the other side; which is exactly what happened after the panic of 1893. The difference is that the defection in 1908 came from a previous plurality of 2,500,000, whereas the plurality of the administration party, prior to the election of 1896, was only 369,000. It is remarkable, however, that this loss, as compared with 1904, was heavier in the agricultural States, where there is little or no after-panic adversity, than in some of the Eastern industrial centres. Thus, in Iowa, Kansas, Minnesota, and the Dakotas, Taft's pluralities were less than half of Roosevelt's, whereas in New York, Connecticut, Rhode Island, and Massachusetts, pluralities appear to have actually increased. This is a perplexing outcome, from the point of view of industry as well as politics. Whether it means that Eastern wage-earners are not so badly off as was supposed, or only that distrust of Bryan has been cumulative among Eastern voters, is not clear.

The question as to the permanent effect of the vote on industry is quite as complicated. It is generally admitted that a certain amount of orders was deferred by merchants and middlemen until after election. This could not have been done, and it was not done, in 1904, because demand from consumers was so large that retailers did not dare to let their stock run low. It was easy to do this year, because demand was slow and doubtful, and manufacturers were able to make quick deliveries. It followed logically that the demand, as soon as the satisfactory result was known, should be not only urgent and general, but should be large in proportion as orders which should normally have been executed in October were put over until after November 3. How large these actual postponements were, no one can tell exactly, the next few weeks may throw some light upon the matter. But, in any case, the more important problem is, what will happen when the merely deferred orders have been filled? If the consumer's attitude is the same as a month or two ago, then, once the merchants' shelves and yards are as well stocked as at the opening of autumn, we shall necessarily see "dull trade" again—as, for instance, when the four weeks of postponed purchases, following the Presidential vote of 1896, had been completed. There remains, on the other hand, the possibility that the consumer has himself been timid. It is conceivable that he has hitherto refrained from making purchases, not because of poverty, but because he feared bad times as a consequence of Bryan's possible election. If so, then the upward movement may be indefinitely prolonged.

BOOKS OF THE WEEK.

Atkinson, Eleanor. Boyhood of Lincoln. McClure. 50 cents net.
Austen, Jane. Mansfield Park. Dutton. $2.
Bachelor Belles. With Illustrations by Harrison Fisher. Dodd, Mead. $3 net.
Bacon, Josephine Daskam. An Idyll of All Fools' Days. Dodd, Mead. $1.25.

LOCY'S BIOLOGY AND ITS MAKERS

By WILLIAM A. LOCY, Professor of Biology in Northwestern University. 123 Illustrations, 460 pp., 8vo, $2.75 net; by mail, $2.88.

Contents (in Brief)

PART I.—The Sources of Biological Ideas Except Those of Organic Evolution

I. An outline of the rise of biology and of the epochs in its history.
II. Vesalius and the overthrow of authority in science.
III. William Harvey and experimental observation.
IV. The introduction of the microscope and the progress of independent observation.
V. The progress of minute anatomy.
VI. Linnaeus and scientific natural history.
VII. Cuvier and the rise of comparative anatomy.
VIII. Bichat and the birth of histology.
IX. The rise of physiology.
X. Von Baer and the rise of embryology.
XI. The cell-theory — Schleiden. Schwann. Schultze.
XII. Protoplasm the physical basis of life.
XIII. The work of Pasteur, Koch, and others.
XIV. Heredity and germinal continuity—Mendel, Galton, Weismann.
XV. The science of fossil life.

PART II.—Doctrine of Organic Evolution

XVI. What evolution is: The evidence upon which it rests, etc.
XVII. Theories of Evolution — Lamarck, Darwin.
XVIII. Theories continued—Weismann. De Vries.
XIX. The rise of evolutionary thought.
XX. Retrospect and prospect. Present tendencies in biology.

The 123 engravings embrace portraits of the founders of biology and pictures from their works of epoch-making importance. Many of the portraits are rare, and, taken together, they form an interesting collection of biological subjects the like of which has not heretofore been brought together.

"Whether the reader be layman, or a college student, or a biologist whose life work is nearing completion, this summary of achievements will be an inspiration. Introduces us in a charming way to the human side of the scientists. A well chosen reading list, an excellent index."—The Nation.

"Should be in every high school library, and in the hands of every teacher of Biology. The plan of writing the story of the progress of biological science around the lives of its leaders is ideal, and Dr. Locy has succeeded in so choosing his material and style of presentation as to realize this plan most perfectly. . . . The great characters of the story take their successive parts; enter and exit as the needs of the unfolding drama of the progress of this science of biology, in its reading for human life, require. Such a book is literature and science."—G. A. Brown in School and Home Education.

HENRY HOLT AND COMPANY 34 W. 33d St., NEW YORK

Ready This Week.

The Blackstick Papers

By LADY RITCHIE

(Anne Thackeray Ritchie)

Crown, 8vo. Illustrated. Probable price, $1.75 net. A collection of essays by Thackeray's accomplished daughter. These essays deal with men and books and other matters, and are written with much of the grace and charm which characterized her famous father's "Roundabout Papers."

G. P. PUTNAM'S SONS, NEW YORK and LONDON

NOW READY

In Morocco with General D'Amade

By REGINALD RANKIN, lately a War Correspondent for *The Times*, Author of "A Subaltern's Letters to His Wife." With Map, a Pen-and-Ink Sketch of Abd-ul-Aziz by W. B. HARRIS, and numerous Illustrations from Photographs. 8vo. $2.50 *net.*

LONGMANS, GREEN, & CO., New York

WHY WORRY?

You need not, if you read Dr. George L. Walton's new book on the subject. Cloth, $1.00 net. Postpaid $1.10.

J. B. LIPPINCOTT CO., Philadelphia.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 19, 1908.

The Week.

The hearings on the tariff by a subcommittee of the Ways and Means have now been in session at Washington for more than a week; and it is hard to say whether they should be characterized as a tragedy or a farce. If the intention is to find out the attitude of the country or the drift of public opinion, the proceedings are a farce. When Cobden was agitating for the repeal of the corn laws in England he complained bitterly that the people who came forward to besiege the members of Parliament were those whose selfish interests led them to protest against any change. The men whose pockets were filled by the tariff were loud and active, while the consumers, who suffered under the weight of an indirect and invisible tax, were relatively apathetic. This human trait is certainly receiving fresh illustration at Washington. No one has spoken in behalf of the "forgotten millions," although Mr. Taft is reported as "expressing the conviction" that the consumers "should take steps at once to secure presentation of their views." Of the business men who have thus far addressed the committee, a small minority is willing to have lower duties. Most of the others, not content with present conditions, want the rates raised. Their arguments are a striking exhibition of the greed which produces a tariff and is in turn nourished by it.

Stewart Chaplain and John E. Pennock, for example, representing the Semet-Solvay Company of Syracuse, makers of coke and its by-products, admit that, under the present law, the retort coke ovens used in extracting these by-products have increased in the past twelve years from 400 to 3,000, and that no difficulty is experienced in finding a profitable market for the whole output. And yet these men urge that the various coal-tar products be taxed so that the manufacturers may "have a wider market and make more at it." George R. Bower of the Henry Bower Chemical Company of Philadelphia likewise confesses that fertilizers are profitably manufactured in this country. and yet he wants more protection in order to get still greater profits. N. B. Arnold of the Keystone Varnish Company of Brooklyn thinks that American manufacturers, without any protection, would be perfectly able to compete with the foreign product; nevertheless he would keep the present duty of 35 per cent. Again, I. F. Stone, Frederick Schoelkopf, and S. Hartford of Buffalo, makers of coal tar colors, ask to have the duty on their product raised from 30 per cent. to 40, and some of their raw material put on the free list—this in the teeth of an admission that under the Dingley schedules they have doubled their plants and their profits. Then the people interested in the mining of barytes, an earth from which white lead is manufactured, wish the duty raised from 75 cents a ton to $5. The prospect of a long and acrimonious fight against lower rates is certainly not a pleasant one for Mr. Taft to face; but at least it will afford him an opportunity to show at once of what stuff he is made. If he and his trusted advisers lack the intelligence and courage to pass a law that shall fairly fulfil the promises of his party, his administration will be written down at the start as a failure; and thousands of citizens will be driven to the conclusion that the Republican platform was a sham, and that the only hope of relief lies in reorganizing the now demoralized and impotent Democracy.

Mr. Bryan's detailed comment upon the election, in the *Commoner*, shows him in a very amiable light personally, but plunged in darkness politically. He takes his defeat in manly fashion, submits cheerfully to the popular verdict, and says that no one need worry about his future. But then he goes on to argue that the result of the voting was "a mystery." He says with truth that the campaign was regarded as uncertain; that there were many indications of a drift to the Democracy; and that the Republican managers were worried. But there was no mystery after the returns were in. The uncertainty before the election was wholly about the silent vote; but the result showed that it was chiefly against Bryan. In some districts in this city he did not get half of even Parker's vote. Thousands and thousands of Democrats and independents all over the country said nothing, but firmly made up their minds never to vote for Bryan. The only mystery is that he cannot see this fact.

In connection with the New York Senatorship, an active politician is reported as saying: "Chloroforming of Little Tim is now in progress." This medico-political way of snuffing out Mr. Woodruff's Senatorial aspirations cannot be agreeable to the chairman of the State Committee. Indeed, he has rallied to his support the Republican Senators and Assemblymen from Kings County, and he is making some show of resistance. Yet the political doctors who are standing about him know that it is only a question of time when he will take the chloroform easily. They have, according to the most approved modern method of administering anæsthetics, made the process pleasant for him by first allowing him to have a little laughing gas. Under this exhilarating influence he has seen the Senatorial toga dropping gracefully over his flowered waistcoats; and when his anæsthetization is complete, and he wakes up to behold another wearing it, he will not need to ask the conventional question, "Where am I?" He has been there so many times before that he will know.

We would not make merry over the repeated disappointments of Woodruff. He may possibly be philosopher enough to agree with Lessing that the joys of pursuit are greater than those of attainment. But there are serious moral and political lessons in his career. For one thing, it illustrates the ingratitude of the party machine. The ingratitude of republics is nothing to it. Woodruff has worked for the organization with slavish subservience, all these years. His convictions and his purse have been at its service. Yet its rewards have not been for him. A purely ornamental and extinguishing office, like the Lieutenant-Governorship, may be flung to him now and then, but the real prizes have always been reserved for others. Satan

asked with insinuating malice if Job feared God for naught. Woodruff has certainly feared the machine for naught. It may be a kind of forced disinterestedness which he displays, but it would be hard to name a man who has worked harder in politics and got less. This Tantalus experience to which he has been condemned, conveys its own warning. Woodruff is a horrible example of what a boss like Platt can do with a rich young man. Platt was always scheming, in the heyday of his power, to entangle such men as Woodruff. They were to go into politics, especially to put their money into politics. They were to grovel before the big bosses; to be admitted to party consultations; to be made captains first of fifties and then of hundreds; to be allowed to pose as political oracles; to sit on platforms and to be very busy and conspicuous at conventions. The implication was, too, that they might entertain high political hopes. Platt would give it to be understood that, in his opinion, Woodruff was the kind of young Republican who would go far. But it was never seriously meant. Governorships, Vice-Presidencies, the Senatorship, have all been jerked away just as Woodruff thought he had his hand upon them.

Mr. Root could leave no better legacy to his successor in the State Department than some formal embodiment of our friendship with Japan. Whether it be treaty, joint declaration, or a mere exchange of notes, an arrangement that shall publicly summarize the results of our negotiations with Japan during the last two years might free us for a time from such performances as those of Hearst and Hobson. The time is favorable for calm deliberation. The Pacific fleet is getting further and further away from Japan, and the chances of Togo's blowing it up are lessening. Hearst's showing at the polls has not been such as to encourage his editors to loud insistence on any of his favorite policies. More important still, the Japanese Government has given repeated, unmistakable proofs of its desire for peace and a policy of non-aggression. Yet such conditions may be patent enough to the thoughtful public, without keeping the sensational journalist from his firebrands. He finds his opportunity in the general ignorance of our exact relations with Japan. Put down in black and white, the evidence of our being on good terms with that country might help toward a continuance of our friendly attitude.

Secretary Metcalf's resignation can hardly be said to weaken the Cabinet despite the usual eulogies from the President; and it is idle to attempt to conceal the differences which had arisen between him and Mr. Roosevelt. Mr. Newberry is the sixth Secretary of the Navy to sit in Mr. Roosevelt's Cabinets, his predecessors having been John D. Long, Justice Moody, Paul Morton, Charles J. Bonaparte, and Mr. Metcalf —six in seven years. Several of them were not in the office long enough to master the business. The natural result of such changes is inconsistency of policy. The real head of the department is likely to be the Chief of the Bureau of Navigation, or, rather, there are several heads—the departmental clique—who can see no possibility of bettering the Department or any of its methods. It is to be hoped that Mr. Taft will be able to find a man who will hold the place until the end of his administration, and radically reorganize that Department. Possibly, Mr. Newberry may be the man. He has, at least, shown that he is broader and abler than the retiring Secretary.

The Postmaster-General's latest plan for reducing the huge deficit in his department will not be adopted except over the dead bodies of statesmen-lobbyists of the school of T. C. Platt. Mr. Meyer's proposal sounds innocent enough. He would establish a local parcels post in the rural delivery service, enabling the farmer to get his small household supplies, and relieving the country storekeeper of much work. This arrangement would accommodate 18,000,000 people and yield an annual revenue, Mr. Meyer estimates, of about as many dollars. But there are the express companies. Their business, to be sure, could not be much affected by the local distribution of local supplies through letter-carriers. But suppose the parcels post is given a fair trial in the villages; in a few years there will be a demand for the delivery of packages from village to village, then for an extension over wider zones, and finally the whole country will invite the express companies to make competing and reasonable rates. The Postmaster-General's proposals, therefore, will be fought to the bitter end by the same interests which have kept the Government out of international agreements for a parcels-post.

The Liberal victory in Cuba on Saturday is perhaps the logical outcome of the American government's policy of reconstruction since the fall of the Palma administration. José Miguel Gomez and Alfredo Zayas, now chosen President and Vice-President, respectively, were foremost among those who brought about the revolution of 1906. Their election is, therefore, a ratification, so to speak, of that movement. At the same time, it is only proper to point out that their opponents, Gen. Menocal and Dr. Rafael Montoro, represented more stable elements in the community, the land and property owners, who have everything to gain by honest government and tranquillity. They are also abler and better balanced men, though no one can deny Señor Zayas's ability as a lawyer. But if we are inclined to think that Cuba would have fared better in Gen. Menocal's hands, we are none the less earnest in hoping for the success of the Republic, so soon to be reconstituted. It will have the moral support of the government at Washington, and should have that of all loyal Cubans. The quiet and orderly manner in which the elections were conducted is a favorable augury, as are also the assurances of Gen. Menocal that there will be no revolution by the Conservatives. Under these circumstances, every one who has at heart the welfare of free Cuba should be ready to coöperate with Señor Gomez. Another collapse of the Republic might have serious consequences for the United States and Cuba alike.

Unfortunately, the best elements in Cuba have not yet come forward to assume their share in the work of governing. Even Gen. Menocal was reluctant to stand as a candidate. He was doing well with his large business enterprises, had lost one fortune for the sake of the Republic, and felt that he might therefore be allowed to remain in peace. But when he finally became a candidate, the rapid growth of his party gave rise to hope that men of ability and standing would hereafter

take a part in politics. There is every reason why patriotic and high-minded Cubans should do so. Cuba will not be actually free until an orderly and honest government has been established for at least ten years, and the minority has learned to abide by the arbitrament of the ballot. The problems confronting the Cuban people are very pressing and complicated. The difficulties before Messrs. Gomez and Zayas are intensified by the recent entire reconstruction of the body of law under which Cuba has lived. Again, the treasury is in by no means so favorable a position as when the Americans intervened. The surplus has gone and a $20,000,000 bond issue is talked of. And, finally, the rich planters of all nationalities hope for annexation, that their profits may be greater and their property more secure. Whether, under such circumstances, the Americans should withdraw as early as January 28 next has been a mooted question. Some believe that, to insure order, a small American military force should be left in Cuba; others long for a minister-resident, with the powers of a Cromer, to see that the resuscitated infant republic makes no missteps for a full dozen years to come. But those who feel as we do that there would be better prospects before the new government if a longer time for preparation had been taken by Mr. Roosevelt and Mr. Taft, must bear in mind that the Republic might at best have to stumble a half-dozen times more before achieving success, and that there is nothing like trying to stand alone in order to learn how. Moreover, the early withdrawal of the troops proves to the world once more the sincerity of our intention to give Cuba her liberty. And the more the Cubans are studied, the less easily can one picture them an integral part of the American Union.

If the laborer is worthy of his hire, he certainly is of his minimum wage; and $1,200 a year for a clergyman living in New York city is now fixed by the Episcopal Diocesan Convention as that minimum. It would about rank the clergyman with the bricklayer, while leaving him worse paid than the carpenter or electrical worker. At the same time, he is compelled to adopt a mode of life more expensive than that of the skilled artisan, whose income is as great or greater. For married clergymen, the Convention established $1,500 as the minimum. Even this advance will mean a struggle to make both ends meet. The sufferings of the under-paid, of which we hear so much, are often most acute in the case of educated people. Ministers and teachers are really among the neglected classes, as regards money rewards. Statistics show, we believe, that the average salary of clergymen, the country over, is less than $1,000. But in a rural parish, where living is cheaper and where the salary includes a certain amount of land and other incidentals, it is possible to exist on a money income that would mean starvation in New York city.

Lawrence University, at Appleton, Wisconsin, will henceforth be known as Lawrence College, if the board of trustees acts favorably upon a petition presented by the Alumni Association. We chronicle this isolated phenomenon in the history of American higher education, because it is astonishing in itself, but, more than that, because it is not the act of some eccentric benefactor who has hit upon this peculiar condition for lending spice to his charity. In cool blood, or at least in a state of such coolness as is conceivable at an alumni banquet, Lawrence University's graduates have decided that Alma Mater should no longer sail under false colors. Yet the institution has an attendance of nearly 600, and a faculty of thirty-three, which, as Western universities go, is doing well; and it is reported to maintain a college of liberal arts, supplemented by "schools of expression, commerce, music, and correspondence."

As if to express, mathematically, the result of the tension between England and Germany, Premier Asquith announced last week in the Commons a new definition of the "two-Power standard" for the British navy. It is two Powers plus 10 per cent. That is, England must have a total of fighting ships not only equal to those of any two nations, but one-tenth as many more. The statement was greeted with cheers from all sides of the House. Doesn't Mr. Asquith wish that he might get such cheers for his measures of educational and social and temperance reform! Those are hooted at and fiercely attacked, but the moment the appeal is for fresh burdens of taxation in order to prepare for war, party lines are broken down and everybody applauds. The Conservatives rush in effusively to hold up the hands of the Liberal Ministry, just as the Republicans in Congress hastened to "stand behind" President Cleveland when his Venezuelan message hinted war with England. That, however, did not prevent the Republicans from going ahead to turn the Democrats out of power, and Mr. Asquith's temporary popularity for intimating that six or seven Dreadnoughts are at once to be built, will not stay the efforts of the Tories to deprive his party of office. Yet the person really to thank for the extension of England's two-Power standard—which is so obviously a sliding scale, and may next read two nations plus 25 per cent.—is the German Emperor. He would not meet Sir Henry Campbell-Bannerman's proposal for limitation of battleship building in 1906, and by his subsequent indiscretions has induced the English people to prove to the world that they can build battleships better and more rapidly than any other country.

Civilization brings with it the vices of civilized man; and Japan, having acquired the former, is to-day working to suppress the latter. Race-track gambling, which has come into vogue in late years, is now the object of the Japanese reformer's assault. Since the judicial authorities stamped out the Formosa lottery, zeal against the bookmakers has been redoubled. One of the leaders in the movement is the Osaka *Asahi*, a newspaper which seems to have borrowed Gov. Hughes's arguments. In Japan, as here, the betting at the races is a pure gambling operation, in which the bookmaker is almost certain to win; politicians assist him in evading the law; and the government has been accepting the plea that the business must continue "in order to improve the breed of horses." Luckily, the law forbidding gambling is so explicit that the public prosecutors and courts are in a position to proceed against offenders without waiting for further legislative enactments. And in some towns, according to the *Asahi*, they are doing so with gratifying results. In many respects, this Japanese crusade is even more remarkable than the Chinese war on opium; for gambling is an inherited Asiatic weakness.

KAISER AND REICHSTAG.

Emperor William's exceedingly bad quarter of an hour in the German Parliament last week, has its outstanding personal aspects. It also means much for constitutional development in Germany. Personally, it was without question the deepest humiliation which the Kaiser has had to undergo during all his reign. In the house of his friends, he was abandoned to his enemies. Not one voice was raised in his defence. Parliamentary immunity itself was strained in heaping reproaches upon him. His ministers sat silent while representatives of all groups attacked him. When the very Chancellor of the Empire came to speak, it was in an apologetic tone, without enthusiasm, and with the distinct intimation that the Kaiser must mend his ways or the government could not be carried on, whether by the present ministry or any other. And in the interview which Von Bülow had with the Emperor on Tuesday, the latter was compelled to approve the position taken by his Chancellor. The Kaiser heeds public opinion, and will meddle no more in foreign affairs. To so proud a man and so haughty a monarch as William II, all this must cause a mortification beyond words.

But his feelings, after all, are of less account than the attitude of the German people. They are plainly thinking, not so much of the rebuff to a blundering Emperor, as of the duty of asserting their rights, and securing a better control of their own government. For the present, the insistent demand is that the Emperor leave the conduct of German diplomacy to the responsible officials in charge of the Foreign Office. This demand is, we see, already conceded. But behind that point lies another—that the rule of personal whim must cease, and that the responsibility of the Ministry to the Reichstag, rather than to the Kaiser alone, must be obtained and established. It is in this view of the case that the proceedings in the Reichstag take on their deepest significance.

The break with the divine-right theory could not be more absolute. We shall hear no more speeches from William II maintaining his old favorite theme that the Hohenzollerns are the Lord's anointed, to do with Germany what they please. Only eleven years ago, at the dedication of the monument to William I at Coblentz, the Kaiser spoke of his grandfather as one who "ascended the throne as the chosen instrument of the Lord"; and then he went on to give his own ideas of "kingship with its heavy duties, its never-ceasing, ever-active toils and labors, its awful responsibility to the Creator *alone*, from which no mere man, *no Chancellor or Minister, no popular Parliament, no people*, can absolve the ruler and prince." One could cite a dozen more such expressions of mediæval notions from the public utterances of William II. It is safe to say that he will not repeat them for some time to come. True, in 1892, he assumed an heroic pose in referring to "fault-finders" and "grumblers," and declared that to all their complaints he would "reply calmly and firmly. My course is the right one and I will continue to steer it"; but a sentiment too mighty for him is evidently astir in Germany to-day.
